This bill will cause a slight loss of revenue to the U.S. Treasury. But the amount is minor. In most cases couples will continue to be taxed as married persons, because this is usually advantageous. Only in a minority of cases will S. 1475 reduce revenues to the Treasury. But it is just those cases that constitute the marriage penalty. To relieve the penalty in the first year of married life seems imminently reasonable to me, and for that reason I am today introducing S. 1475.

Mr. President, I ask unanimous consent that the text of S. 1475 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1475

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) paragraph (1) of section 143(a) of the Internal Revenue Code of 1954 (relating to general rule for the determination of marital status) is amended to read as follows:

"(1) The determination of whether an individual is married shall be made as of the close of his taxable year, except that if—

"(A) one spouse dies during the taxable year the determination shall be made as of the time of that death, and

"(B) an individual and his spouse were not married to each other at the beginning of the taxable year, then, at the election of the taxpayer and his spouse, the determination shall be made as of the beginning of the taxable year.".

(b) The amendment made by this Act applies with respect to taxable years beginning after December 31, 1977.

By Mr. WEICKER:

S. 1477. A bill to amend the Civil Rights Act of 1964 to make it an unlawful employment practice to discriminate against indivduals who are physically handicapped because of that handicap; to the Committee on Human Resources.

Mr. WEICKER. Mr. President, today I am introducing legislation to make it an unlawful employment practice to discriminate against any individual who is physically handicapped. Specifically, this bill would amend title VII of the Civil Rights Act of 1964 to protect the physically handicapped from job discrimination in both public and private sector employment.

By passing the Civil Rights Act of 1964, the Congress put itself and the Nation on notice that discrimination based on race, color, sex, religion, or national origin would not be tolerated. And, since the enactment of that landmark legislation, many minority groups have made significant progress in achieving equal opportunity in housing, employment, and education. One group, however, not in-

cluded in that legislation—the physically handicapped—continues to be the victims of discrimination, particularly in seeking employment.

Like all Americans, the physically handicapped want to play an integral role in our society. To a large extent, this means having the opportunity to engage in meaningful employment. Through such employment, they derive a sense of self-worth and dignity. Yet, time and time again, they are denied the opportunity to make their contribution to society regardless of their skills or talents.

America's physically handicapped deserve better than being treated like second-class citizens. The handicapped do not want sympathy—they do want opportunity. Knocking down the barriers to equal employment opportunities will allow every American to reach their potential.

By Mr. HATFIELD (for himself and Mr. PACKWOOD):

S. 1478. A bill to provide improved authority for the administration of certain National Forest System lands in Oregon; to the Committee on Environment and Natural Resources.

Mr. HATFIELD. Mr. President, today I am introducing legislation to provide for the management of the Bull Run Reserve in the Mount Hood National Forest in Oregon.

The need for this legislation is brought about by a Federal court case which interprets strictly the 1904 Bull Run Reserve Trespass Act.

In 1892, the Bull Run Reserve was created by President Benjamin Harrison, pursuant to the act of March 3, 1891, which gave the President authority to "set apart and reserve, in any State or territory having public land bearing forests, in any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations." The area includes 137,420 acres of federally owned land and 4,660 acres of privately owned land. The watershed of the Bull Run River consists of approximately 68,000 acres within the reserve. It is this watershed which serves as the source of potable water for the city of Portland and the metropolitan area. Watershed protection was a primary purpose of the reserve when it was created and has always been recognized as such by the managing agency, the U.S. Forest Service.

Unlike other reserves established pursuant to the 1891 act, which became the Nation's national forests, the Bull Run Reserve remains in a special category, because of the Bull Run Reserve Trespass Act, passed in 1904 for the purpose of prohibiting unlawful entry upon the lands within the reserve.

The purpose of this 1904 act was to protect the integrity of the watershed area from grazing and other unauthorized uses.

Since the creation of the reserve and the subsequent Trespass Act, management of the lands within the reserve has reflected the principles of multiple use and sustained yield, which includes timber, recreation, and wildlife management, when consistent with watershed protection. In the case of timber, a sale occurred in 1925 and, by 1958, 180 million board feet of timber had been harvested from the national forest lands within the reserve. Between 1959 and 1976, about 900 million board feet were harvested within the national forest lands in the Bull Run Reserve and about 90 million board feet were harvested on the nearly 4,000 acres of lands owned by the city of Portland within the reserve. This timber sales program has been consistent with the findings of the Solicitor of the Department of Agriculture and by the Comptroller General of the United States, both of whom agreed that entry into the reserve for such purposes was permissible if authorized by the Secretary of Agriculture.

In the case of recreation, legislation was introduced in the 86th Congress to exclude the portions of the reserve outside the watershed area for public recreation use. The Agriculture Department indicated that such legislation was not necessary, because on the basis of previous legal opinions, it had the authority to permit the uses of the resources within the reserve. As a result, the legislation was not passed, and the Forest Service issued an order allowing recreation use of 42,500 acres outside the watershed but within the reserve for recreational purposes.

As a result of these activities, nearly 400 miles of road have been constructed within the reserve, 62 miles of which are open to public use; and other improvements have been made on the lands within the reserve for other purposes. It is essential, Mr. President, when examining the issues relating to management of the Bull Run Reserve, to make the distinction between those lands which are the actual watershed for the Bull Run River, which have been closed to the public except for specifically authorized purposes, and the lands outside the watershed, but still within the reserve. When consistent with the need to maintain excellent water quality within the watershed area, timber harvesting has taken place, although the area has been closed to use by the general public. Outside the watershed, general multiple use—including timber harvesting, recreation, and watershed and wildlife protection—has been the rule since 1959.

In 1973, a lawsuit was filed against the Government contending that the 1904 Trespass Act was being violated by the Forest Service's management policies. The U.S. District Court for the district of Oregon found in favor of the plaintiffs, and in November of 1976 a final judgment and decree was entered. All timber sales and all recreation use within the entire Bull Run Reserve—including the lands outside the watershed—have been terminated.

It is clear, Mr. President, that the court decision, although it may well be justified on the basis of the earlier Trespass Act, is not in the public interest. Outside the watershed, there is absolutely no reason that recreational activities and some timber harvesting cannot take place. These lands ought to be managed under multiple use and sustained yield principles, and had the Congress not been told in 1959 that the Secretary of Agriculture already had the authority to allow for these uses of the nonwatershed lands, it probably would have passed legislation to allow these uses at that time.

Therefore, Mr. President, I am introducing today along with my colleague, Senator BOB PACKWOOD, legislation which would establish a Bull Run Watershed Management Unit within the Mount Hood National Forest, the boundaries of which would exclude the areas outside the watershed. Under this act, those lands outside the watershed would be managed as other national forest lands are managed. The lands within the 95,382-acre unit established by this legislation would be managed for multiple-use purposes "except to the extent that such is found by the Secretary to significantly affect adversely the quantity or quality of the water produced thereon for the use of the city, and other local government units and persons using such water under agreements with the city." This legislation makes it clear that water quality within the watershed is the primary use of the Bull Run Watershed. In addition, these lands would be managed in consultation with the city of Portland. The Bull Run Trespass Act would no longer be necessary and would be repealed.

In addition to the legislation I am introducing today, which is also being introduced in the House of Representatives today by Congressman ROBERT DUNCAN of Oregon, I have been working with Mayor Neil Goldschmidt of Portland, the Portland City Council, and other interested parties on other approaches to this issue. I will continue to work with them in the development of legislation which addresses their concerns.

It is my hope, Mr. President, that this legislation will receive early and careful consideration by the Congress. Without it, an important area within our national forests will be lost to the public, which owns it. In particular, the Lost Creek Nature Trail and Picnic Area, which is the only recreation area in Oregon for handicapped persons, including the blind and those who are confined to wheelchairs, will be closed unless legislation is enacted.

Mr. President, I can say that there is virtually unanimous agreement that the boundaries of the reserve ought to be revised as proposed by this legislation. The opinion concerning use of the lands within the watershed area, which would constitute the management unit created by this legislation, is not unanimous; but through the hearing process, I am confident that any issues surrounding activity within the watershed lands can be resolved. The management of our public forests ought to be undertaken by the management agencies that Congress has established to do the job, rather than the courts. The legislation I am introducing would accomplish this, while recognizing the important values which led to the creation of the Bull Run Reserve in 1892.

Mr. President, I ask unanimous con-

sent that a background report prepared by the Forest Service and the text of the legislation be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REPORT ON EXISTING LAW GOVERNING TRESPASS UPON THE BULL RUN RESERVE, MT. HOOD NATIONAL FOREST CLACKAMAS, HOOD RIVER, AND MULTNOMAH COUNTIES, STATE OF OREGON, DECEMBER 1976

THE BULL RUN RESERVE

The area in Oregon that is commonly referred to as the Bull Run Reserve contains 137,420 acres of Federal owned land and 4,660 acres of private owned land. The Federal land was reserved from the public domain lands of the United States in 1892 and later joined with other reserved lands to become what is now known as the Mt. Hood National Forest, a unit of the National Forest System administered by the Forest Service, U.S. Department of Agriculture. Unlike other forest reserves that were assimilated and renamed as National Forests, the identity of the Bull Run Reserve has been maintained. This has occurred indirectly through the existence of a Federal statute that prohibits unlawful entry upon the lands that were once within the official boundaries of the Bull Run Reserve.

The Bull Run Reserve portion of the Mt. Hood National Forest encompasses approximately 68,000 acres of the watershed of the Bull Run River. This watershed serves as the source of potable water for the Portland metropolitan area. In 1888, and prior to the establishment of the reserve, the City of Portland purchased rights to the water from the Bull Run Water and Power Company. Either the Company or a predecessor in interest appropriated such rights pursuant to a 1866 Federal statute of general application which permitted persons to acquire interests in water sources on public domain lands distinct from the lands themselves.

THE BULL RUN RESERVE TRESPASS ACT

Nature of the Trespass Act

Trespass and entry into the Bull Run Reserve for the purpose of grazing stock is prohibited by 18 U.S.C. 1862, a Federal criminal statute that originated in 1904. The first part of the statute provides that whoever knowingly trespasses upon any part of the reserve or enters thereon for the purpose of grazing livestock shall be subject to a fine and imprisonment.

The second part of the statute states that it shall not apply to forest rangers and other persons employed by the United States to protect the forest, or to Federal and State officers and employees of the water board of the City of Portland, in the discharge of their duties.

To the extent deemed permissible under the statute, through legal opinions by the solicitor of the Department of Agriculture and the Comptroller General of the United States, the Federal owned lands within the Reserve have been administered by the Forest Service for the protection, management and utilization of their water, timber, recreational and wildlife resources in accordance with the laws and regulations applicable to the rest of the Mt. Hood National Forest and all other National Forests.

Background of the Trespass Act

In 1891, Congress enacted a law which authorized the President to reserve public lands bearing forests. Pursuant to that Act, the Federal owned forest lands comprising the Bull Run Reserve were reserved by Presidential Proclamation of June 17, 1892.

This forest reserve was the fifth of the many established pursuant to the Act. It was from these reserves that the great portion of the present National Forest System was created.

The Bull Run forest reserve was set apart in response to a request from the water board of the City of Portland in order that the City's proposed water supply might be protected. The protection afforded by forest reserve status principally amounted to a guarantee that the Federal owned lands would not be sold to private individuals or homesteaded. Homesteading and sale would have likely led to the elimination of much of the forest cover and it was recognized in those times that the water absorption and retention capacities of forest cover were indispensable in mountainous areas for reducing erosion and maintaining desirable conditions of waterflow. Homesteading and sale could have resulted in land use practices that diverted water or caused degradation of water quality.

The 1891 Act which authorized the establishment of forest reserves did not provide any direction on how they were to be administered. Specific authority for the protection, management, and utilization of Bull Run and all other forest reserves was eventually delegated to the Secretary of the Interior by Congress under the Act of June 4, 1897. The Act described the purposes of forest reserves as being to improve and protect the forest within their boundaries, to secure favorable conditions of water flow, and to furnish continuous supplies of timber for the use and necessities of the citizens of the United States. Among other things, the Act authorized the sale of forest reserve timber, provided direction that reserves be protected from fire and depredations, and authorized their occupancy and use under regulations.

Shortly after enactment of the Act of June 4, 1897, the Secretary of the Interior issued rules and regulations for the administration of the forest reserves. Early administration efforts encountered many obstacles. One of the major obstacles was open defiance of the Secretary's rules and regulations. In 1903, the Commissioner of the Department of the Interior agency that administered the forest reserves wrote:

"The grazing question is the most perplexing one with which this office has to deal in connection with forest-reserve administration. Those persons who have been in the habit of ranging their stock upon the lands included within a forest reservation are insistent on continuing the practice after the reserve is established, some of them going to the extent of openly defying all rules and orders from the Department prohibiting grazing therein."

Attempts were made to stop this defiance by criminal prosecutions of the trespassers. However, the United States District Court for southern California ruled in 1900 that the provisions of the 1897 Act which authorized the Secretary to issue rules and regulations and made violations thereof a crime were unconstitutional because they constituted a delegation of legislative power to an administrative officer. Trespass cases were also prosecuted before United States District Courts in northern California, Arizona, Utah, and Washington. All of those courts agreed with the southern California court that the provisions were unconstitutional. Because the government had no opportunity to appeal under existing law, it was not possible to bring any of these cases before a higher court. As a result of the enactment of the Criminal Appeals Act of March 2, 1907, the government was eventually able to bring a trespass case before the Supreme Court. In 1911 the Supreme Court ruled in favor of the government, on the basis that the authority given to make rules and regulations for the occupancy and use of the forest reserves is a constitutional delegation of administrative authority, not a delegation of legislative power.

As a consequence of the Federal District court rulings, the government was left without a reliable legal remedy for protecting the forest reserves from trespass during the period from 1900 to 1911. Its only other recourse was the long and cumbersome process of obtaining court injunctions. In the case of grazing trespass, this was a very inadequate remedy, since most or all of a grazing season might elapse before an injunction could be obtained and served. The Department of Justice recommended that Congress pass a specific trespass act making unauthorized grazing of livestock within forest reserves a criminal offense. Congress did not act on the recommendation.

It can be concluded that the lack of authority in the executive branch of the government to effectively prevent trespass on the forest reserves was of considerable concern to the City of Portland. Their purpose of having the Bull Run watershed closed to settlement in 1892 would have been compromised by uncontrolled grazing and other unauthorized private uses of these lands in 1904. It can be readily understood why the City may have been led to seek a solution like the one that was recommended by the Department of Justice. Likewise, it can be readily understood why a major western city like Portland was successful in getting Congress to enact a special trespass act for the Bull Run Forest Reserve when, at the same time, Congress would not enact such law for general application to all forest reserves.

When viewed in historical perspective, the 1904 Bull Run Forest Reserve Trespass Act strongly appears to have been enacted in reaction to a law enforcement vacuum, and not to have represented substantive conservation policy, or (except in respect to grazing), a deliberate action to broadly limit the application of the administrative authorities available under the Act of June 4, 1897.

PAST ADMINISTRATION OF THE BULL RUN RESERVE

Administration of the Bull Run Forest Reserve, like the administration of all other forest reserves, has been of a progressive nature, evolving from a period when it was necessary to direct the principal effort at protecting forest resources from fires and unauthorized uses to the recent period where emphasis was also placed on the utilization of resources on a sustained-yield basis.

Early period 1892–1930

During the period 1892–1930 Federal administration of the Bull Run Reserve focused on protective measures. A forest fire detection system was developed and maintained. The system included lookout stations, trails, and telephone lines. Between 1909 and 1912, attempts were made to reforest 1,900 acres through seeding. These efforts met with partial success. Approximately 7,500 acres of privately owned land were acquired within the Reserve by exchanging other National Forest lands or timber. In 1925, a 1,816,050 board foot timber sale was made within the Reserve. The sale was located below the City of Portland water supply intake, and was made after a joint field investigation by representatives of the City Water Bureau and the Forest Service. After the enactment of the trespass act in 1904 the reserve was closed to public access and no recreational use occurred.

Transition period 1931–58

By the late 1930's, the protection aspects of National Forest administration were generally established and under control. There was a general feeling developing at that time that more intensive management of the National Forests, and the utilization of their various renewable resources on a sustained-yield basis, would be in the public's interest. These conditions, coupled with a greater need for timber products during World War II and thereafter, resulted in a rather abrupt

expansion of the resource management and utilization aspects of National Forest administration in the 1940's and 1950's.

The substantial timber, recreation, and wildlife resources of the Bull Run Reserve were eventually recognized as being suitable for making important contributions in support of multi-resource and sustained yield management objectives. Such contributions could not be made, however, unless the public (including contractors and their employees) could be allowed within the Reserve. Prior to this period, the protective administration of the Reserve was generally consistent with the most restrictive possible interpretation of the trespass act; i.e., an interpretation that would prohibit public entry under any conditions. Before taking action to expand resource management programs within the Reserve, the Forest Service asked the Solicitor of the Department of Agriculture whether the trespass act prohibited all persons except those specifically mentioned in the act from entering the Reserve and thus precluded the sale of timber or other similar activities. In an opinion dated April 19, 1943, the Solicitor advised that the statute should be construed as prohibiting unauthorized entry. Hence, it was held that other persons could enter the Reserve if they obtained permission from the Secretary of Agriculture. In 1958 this opinion was also rendered by the Comptroller General of the United States. The Comptroller found that permission may be given for persons to enter the Reserve for all multiple use purposes.

Subsequent to the Solicitor's opinion, a moderate-level timber harvesting program was initiated. By 1958, 180 million board feet of timber had been harvested from National Forest lands.

Between 1934 and 1955, 2.5 million board feet of timber were harvested from lands within the Reserve that are owned by the City of Portland.

Recent period 1959–76

The period 1959–76 may be considered as the period when the management of renewable resources within the Reserve was purposely integrated with the management of resources within the rest of the Mt. Hood National Forest. This development acquired impetus in 1959 when the City of Portland and various citizen groups urged that portions of the Reserve be opened for public recreation use. A bill was introduced in the 86th Congress to exclude these portions from the application of the provisions of the trespass act. While not objecting to the bill, the Department of Agriculture reported (on the basis of the previously mentioned legal opinions) that it had ample authority to permit the use of the resources within the Reserve. In August 1959, the Forest Service issued an administrative order permitting the general public to use 42,500 acres of the Reserve for recreational purposes, including hunting and fishing. The lands opened to general public use were located outside the drainage of the Bull Run River. The administrative order did not affect the status of the rest of the Reserve. Any entry upon the remainder without express permission from the Forest Service was still considered to be trespass.

Within the areas opened by the administrative order, 3 campgrounds and 94 miles of trails for recreation use have since been constructed.

During this period, timber harvesting has been conducted throughout the reserve on a sustained yield basis. Approximately 600 million board feet of National Forest timber have been harvested within the drainage of the Bull Run River and 300 million board feet have been harvested outside the drainage. In addition, the City of Portland has made arrangements with the Forest Service to assist them in managing 3,980 acres of City lands for timber utilization purposes. A total of 90 million board feet of timber have been harvested from City lands since 1934.

Approximately 384 miles of road have been constructed within the Reserve. These roads support timber harvesting and fire protection programs. Also, 62 miles of these roads are open to public use.

In addition to the improvements that it has developed, the Forest Service has authorized others to locate improvements on National Forest lands within the Reserve. These include a flume (Portland General Electric Company), 17 miles of powerline corridors (Bonneville Power Administration), a log scaling station (Columbia River Log Scaling Bureau) and roads for access to private lands.

LITIGATION

Lawsuit and trial

In July 1973, a lawsuit was filed against the Supervisor of the Mt. Hood National Forest and other Forest Service officials (Miller et al. v. Mallery et al., U.S. District Court. D. Oregon. Civil No. 73–609) Plaintiffs contended, among other things, that certain actions of the Forest Service in the Bull Run Reserve were in violation of the trespass act. Plaintiffs sought an injunction against timber harvesting and recreation use within the Reserve. The Federal defendants' defense was basically grounded on the argument that Congress meant only to prohibit grazing and entry into the reserve which was not authorized by the Secretary. The Court ruled that recreational use and sustained timber harvesting within the Reserve were prohibited by the trespass act, and that under the act there is a duty to exclude from the Reserve all persons except Federal and State officers and employees of the water board of the City of Portland in the discharge of their duties.

Final judgment and decree

In November 1976 the Court entered a Final Judgment and Decree in favor of plaintiffs. The Court permanently enjoined and prohibited all recreational activities within the Reserve and all future timber sales except such sales as might be required to remove dead, diseased, insect infested, and wind blown trees necessary for the protection of the forest. The Court also appointed a Special Master in perpetuity to overseee Forest Service compliance with the Decree.

SUMMARY AND CONCLUSIONS

The Federal District Court of Oregon has spoken to the issue of what the special trespass act for the Bull Run Reserve means. Execution of the trespass act in accordance with the Court's interpretation will essentially preclude administration of the Reserve for timber and recreational purposes. The trespass act will henceforth clearly take precedence over the Multiple-Use Sustained-Yield Act which directs the Secretary of Agriculture to manage National Forest resources in combinations that will best meet the needs of the American people. Some specific effects of the application of the act are described below:

1. Programmed timber harvesting within the reserve will be reduced by an estimated 97 percent. This will result in an annual $5 million reduction in National Forest timber receipts, $1¼ million of which would have been distributed to counties within the Mt. Hood National Forest for schools and roads. If alternate sources of timber are not available to forest products industries, the reduction could also entail the loss of 250 forest products industry jobs and a payroll of $2.3 million.

2. Recreational use of 44,000 acres for camping, hiking, horseback riding, hunting, fishing, and touring have been terminated. Recreational facilities and improvements, including 3 campgrounds and 71 miles of trails are closed to public use.

3. Approximately 62 miles of roads are closed to public use.

4. The Act has the effect of narrowly restricting the use of Federal lands within the Reserve, whereas no comparable restrictions are imposed by any law upon intermingled non-Federal lands which (for the most part) are clustered around the reservoir and headwork facilities of the City of Portland's water supply system.

The prohibitive and use-denying effects of the Court interpreted meaning of the trespass act requires an evaluation of whether these negative effects are offset by tangible benefits.

The arguments used by those who seek closure of watersheds and reservoirs are commonly based on the proposition that recreation and timber harvesting cause increased water pollution. However, facts support the opposite position that, under responsible and knowledgeable administration, such activities are compatible with the protection of water quality and quantity. Scientific studies have found that recreational use of watersheds has little or no effect on water quality. Likewise, studies have shown that properly conducted timber harvesting operations do not accelerate soil erosion significantly above the normal geologic rates. Research conducted by the U.S. Public Health Service on three watersheds within the States of Oregon and Washington concluded that, within the capability of measurement, the quality of water within a watershed that was closed to the general public was not significantly different from the quality of water within a watershed that was completely open to public use. Such technical evidence is supported by a trend in State policies and practices toward more recreational use of municipal watersheds. Moreover, it is particularly significant that 17 years of intensive resources management by the Forest Service within the Bull Run Reserve has not resulted in any known degradation of the City of Portland's water supply.

Facts and experience point to the conclusion that the trespass act, according to any interpretation has ceased to serve any real or useful purpose. As currently interpreted by the court, the act precludes the most judicious use of the land and causes an unreasonable and unwarranted shelving of National and local assets and opportunities. The public is denied the benefits of its property without valid reasons.

S. 1478

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

PREAMBLE

The Congress finds that the nation and the world are entering a period of scarcity of resources essential to the well-being of our people and of the very elements on which we depend for the production of such resources; that it is vital to the present and future needs of the nation that we nurture and use wisely our resources, restricting our access to all for the benefit of one or more, only for compelling reasons; that management and use of such renewable resources are political questions appropriately to be decided by representative assemblies and that the courts should not be burdened by such responsibilities; that an area of land in the State of Oregon known variously as the Bull Run National Forest and the Bull Run Forest Service is now managed under terms of a federal court decree issued pursuant to turn of the century law which does not appropriately address present and future needs and opportunities for the protection, management and utilization of the renewable resources contained therein.

DESIGNATION OF UNIT

SEC. 1(b) There is hereby established, subject to valid existing rights, a special resources management unit within the Mount Hood National Forest, State of Oregon (hereinafter referred to as the "Unit"), comprising approximately 95,382 acres as depicted on a map dated April 1977 and entitled "Bull Run Watershed Management Unit, Mount Hood National Forest," which is on file and available for public inspection in the offices of the Chief, and the Regional Forester—Pacific Northwest Region, Forest Service, Department of Agriculture, minor adjustments in the boundaries of which may be made from time to time by the Secretary of Agriculture (hereinafter the "Secretary") after consultation with the City of Portland (hereinafter the "City") and appropriate public notice and hearings.

(b) The Unit shall be administered by the Secretary of Agriculture in accordance with the laws, rules, and regulations applicable to National Forest System lands except as otherwise provided by section 2 of this Act.

MANAGEMENT

SEC. 2(a) The renewable resources of the National Forest System lands within the Unit are to be developed and administered by the Secretary in accordance with the principles of multiple use and sustained yield as set forth in the Multiple-Use Sustained Yield Act of 1960 (74 Stat. 215, 16 U.S.C. 538, as amended); except to the extent that such is found by the Secretary to significantly affect adversely the quantity or quality of the water produced thereon for the use of the City, and other local government units and persons using such water under agreements with the City (and the Secretary shall take into consideration the cumulative effect of individually insignificant degradations), in which case the management plan shall be altered to eliminate such adverse effect by application of different techniques or prohibitions of one or more such multiple uses so that the unit is managed so as not to significantly affect adversely the health and safety of the ultimate consumers of such water, *Provided, however,* That use of such water for the production of energy is deemed consistent with the purposes of this Act.

(b) The policy set forth in Subsection (a) shall be attained through the development, maintenance, and periodic revision of land management plans in accordance with procedures set forth in Section 6 of the Forest and Rangeland Renewable Resources Planning Act of 1974 (88 Stat. 477, as amended; 16 U.S.C. 1604), through the maintenance of systems for monitoring and evaluating water quality, and through supporting scientific research as the Secretary may deem necessary after consultation and in coordination with the City. In the development and revision of land management plans for the Unit, the Secretary shall provide for public participation and shall consult and coordinate with appropriate officials and advisors of the City, and shall consider such data and research as the City may collect through its own monitoring systems and scientific efforts, if any. Such plans shall be prepared by an interdisciplinary team; be embodied in appropriate written material, including maps and other descriptive documents; and be available to the public at convenient locations. The initial plan or plans shall be completed as soon as practicable after the enactment of this Act, but not later than September 30, 1979.

(c) The Secretary or his representative shall, upon request, meet at least annually with appropriate officials of the City for the purpose of reviewing planned management programs and assuring that their respective management and operational activities within the Unit are appropriately coordinated. The Secretary is authorized to enter into cooperative agreements with appropriate officials of the City to effectuate activity coordination.

(d) The Secretary is authorized to promulgate regulations for controlling entry into the Unit by persons other than:

(1) employees or contractors of the City engaged in the inspection, maintenance and improvement of the City's facilities;

(2) (i) Federal, State, and local government officers and (ii) employees thereof acting in an official capacity;

(3) Federal, State, and local government permittees and contractors conducting authorized activities;

(4) members of advisory groups formed pursuant to this Act or ordinances of the City in the performance of their official duties.

Provided that no regulation promulgated pursuant to this Subsection shall prohibit ingress and egress to non-Federal lands or to authorized occupancies on, or uses of, Federal lands. Except in emergencies, regulations promulgated pursuant to this Subsection shall be put into effect only after consultation with the City.

EFFECT ON OTHER LAWS

SEC. 3 (a) Nothing in this Act shall terminate any valid lease, permit, contract, patent, right-of-way, or other land use right or authorization existing on the date of approval of this Act.

(b) Nothing in this Act shall in any way affect any law governing appropriation or use of, or Federal right to, water on National Forest System lands; or as expanding or diminishing Federal, State or local jurisdiction, responsibility, interests or rights in water resources development or control.

(c) Section 1862 of Title 18 of the United States Code is hereby repealed.

(d) Except as otherwise provided in Section 3(b) hereof, this act shall take precedence over and supersede all State and local laws dealing with or affecting the subject matter of this Act.

(e) Challenge to actions taken by any governmental unit or official under the provisions of this Act shall not be sustained by any court except upon a showing of arbitrary, unreasonable, capricious or illegal action or an absence of substantial good faith compliance with the procedural provisions hereof substantially prejudicing the rights of an interested party.

By Mr. CHURCH:

S. 1479. A bill to amend the Social Security Act to provide for the coverage of certain drugs under part A of the health insurance program established by title XVIII of such Act; to the Committee on Finance.

EXTENSION OF MEDICARE COVERAGE TO INCLUDE ESSENTIAL OUT-OF-HOSPITAL PRESCRIPTION DRUGS

Mr. CHURCH. Mr. President, on behalf of Senator WILLIAMS and myself, I introduce for appropriate reference a bill to extend medicare coverage to essential out-of-hospital prescription drugs.

Inadequate income in retirement is undoubtedly the No. 1 problem affecting older Americans. An effective income strategy is, therefore, essential to improve the economic well-being of the aged.

But at the same time, it is vitally important to plug up some of the drains upon the elderly's limited income.

Perhaps the classic example is the high cost of health care.

Medicare clearly represents one of the landmark legislative achievements for older Americans.

However, hearings conducted by the Committee on Aging make it abundantly clear that today—12 years after medicare was enacted into law—medical costs represent one of the major worries of the elderly.

Many Americans now believe that medicare pays for almost all of the aged's health care costs. Older Americans, though, know better.

Several crucial gaps in coverage still exist. One of the most serious is out-of-hospital prescription drugs.

As things now stand, medicare is crisis oriented. It provides reasonably good coverage for hospitalization. It covers most prescriptions administered while patients are hospitalized or confined in a nursing home. However, protection is not available for aged and disabled beneficiaries requiring medicines on an outpatient basis.

This gap in coverage must be closed. The bill that we introduce today is designed to broaden medicare coverage to include out-of-hospital prescriptions for crippling or life threatening conditions.

This protection, in my judgment, is not only indispensable for older Americans, but it is also long overdue.

In 1975, the aged's drug expenditures exceeded $2.6 billion, or $118 on a per capita basis. The overwhelming proportion was paid by the elderly themselves.

Private per capita drug and drug sundry costs for older Americans amounted to $102 in fiscal 1975.

Quite often this expenditure falls most heavily upon those who can least afford it—the low-income aged who suffer from chronic conditions.

Prescription drug costs for medicare beneficiaries with chronic conditions are typically about three times as great as the rest of the population.

Drugs and drug sundries account for more than one-fifth of the aged's health care expenditures which are met by private payments.

A recent social security report reveals that the elderly spend more on prescriptions from their own pocketbooks than any other expenditure except nursing home care.

Several distinguished groups—including the White House Conference on Aging, a Presidential Task Force on Aging, the 1971 Social Security Advisory Council, and national senior citizen organizations—have urged that medicare coverage should include essential out-of-hospital drugs.

Some hospital stays are prolonged simply to permit medicare beneficiaries to be reimbursed for their medicines. This practice is clearly wasteful. At the same time, it drives up medical expenditures because institutionalization is the most expensive form of health care.

Mr. President, I consider coverage of essential out-of-hospital prescription drugs to be the top legislative priority for medicare beneficiaries.

For these reasons, I urge prompt and favorable action on this measure.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1479

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 226(c)(1) of the Social Security Act is amended by striking out "and post-hospital home health services" and inserting in lieu thereof "post-hospital home health services, and eligible drugs".

(b) Section 1811 of the Social Security Act is amended by inserting "and eligible drugs" after "related post-hospital services".

(c) Section 1812(a) of the Social Security Act is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and "; and

(3) by adding after paragraph (3) the following new paragraph:

"(4) eligible drugs.".

(d) Section 1813(a) of the Social Security Act is amended by adding at the end thereof the following new paragraph:

"(4) The reasonable allowance, as defined in section 1813, for eligible drugs furnished an individual pursuant to any one prescription (or each renewal thereof) and purchased by such individual at any one time shall be reduced by an amount equal to the applicable prescription copayment obligation which shall be $1."

(e)(1) Section 1814(a) of the Social Security Act is amended—

(A) by striking out "and" at the end of paragraph (6);

(B) by striking out the period at the end of paragraph (7) and inserting in lieu thereof "; and"; and

(C) by inserting after paragraph (7) the following new paragraph:

"(8) with respect to drugs or biologicals furnished pursuant to and requiring (except for insulin) a physician's prescription, such drugs or biologicals are eligible drugs as defined in section 1861(t) and the participating pharmacy (as defined in section 1861(dd)) has such prescription in its possession, or some other record (in the case of insulin) that is satisfactory to the Secretary."

(2) Section 1814(b) of such Act is amended—

(A) by inserting "(1)" after "(b)",

(B) by inserting "(other than a pharmacy)" immediately after "provider of services",

(C) by redesignating paragraphs (1) and (2) as subparagraphs (A) and (B), respectively,

(D) by redesignating clauses (A) and (B) of paragraph (1) as clauses (i) and (ii), respectively, and

(E) by adding at the end thereof the following new paragraph:

"(2) The amount paid to any participating pharmacy which is a provider of services with respect to eligible drugs for which payment may be made under this part shall, subject to the provisions of section 1813, be the reasonable allowance (as defined in section 1822) with respect to such drugs."

(f) Section 1814 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"Limitation on Payment for Eligible Drugs

"(j) Payment may be made under this part for eligible drugs only when such drugs are dispensed by a participating pharmacy; except that payment under this part may be made for eligible drugs dispensed by a physician where the Secretary determines, in accordance with regulations, that such eligible drugs were required in an emergency or that there was no participating pharmacy available in the community, in which case the physician (under regulations prescribed by the Secretary) shall be regarded as a participating pharmacy for purposes of this part with respect to the dispensing of such eligible drugs."

(g) Part A of title XVIII of the Social Security Act is further amended by adding after section 1818 the following new sections:

"MEDICARE FORMULARY COMMITTEE

"SEC. 1819. (a)(1) There is hereby established, within the Department of Health, Education, and Welfare, a Medicare Formulary Committee (hereinafter referred to as the 'Committee'), a majority of whose members shall be physicians and which shall consist of the Commissioner of Food and Drugs and of four individuals (not otherwise in the employ of the Federal Government) who do not have a direct or indirect financial interest in the composition of the Formulary established under this section and who are of recognized professional standing and distinction in the fields of medicine, pharmacology, or pharmacy, to be appointed by the Secretary without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. The Chairman of the Committee shall be elected annually from the appointed members thereof, by majority vote of the members of the Committee.

"(2) Each appointed member of the Committee shall hold office for a term of five years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the Secretary at the time of appointment, one at the end of each of the first five years. A member shall not be eligible to serve continuously for more than two terms.

"(b) Appointed members of the Committee, while attending meetings or conferences thereof or otherwise serving on business of the Committee, shall be entitled to receive compensation at rates fixed by the Secretary (but not in excess of the daily rate paid under GS-18 of the General Schedule under section 5332 of title 5, United States Code), including traveltime, and while so serving away from their homes or regular places of business they may be allowed travel expenses, as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

"(c)(1) The Committee is authorized, with the approval of the Secretary, to engage or contract for such technical assistance as may be required to carry out its functions, and the Secretary shall, in addition, make available to the Committee such secretarial, clerical, and other assistance as the Formulary Committee may require to carry out its functions.

"(2) The Secretary shall furnish to the Committee such office space, materials, and equipment as may be necessary for the Formulary Committee to carry out its functions.

"MEDICARE FORMULARY

"SEC. 1820. (a)1() The Committee shall compile, publish, and make available a Medicare Formulary (hereinafter in this title referred to as the 'Formulary').

(2) The Committee shall periodically revise the Formulary and the listing of drugs so as to maintain currency in the contents thereof.

"(b)(1) The Formulary shall contain an alphabetically arranged listing, by established name, of those drug entities within the following therapeutic categories:

"Adrenocorticoids,
"Anti-anginals,
"Anti-arrhythmics,
"Anti-coagulants,
"Anti-convulsants (exceeding phenobarbital),
"Anti-hypertensives,
"Anti-neoplastics,
"Anti-Parkinsonism agents,
"Anti-rheumatics,
"Bronchodilators,
"Cardiotonics,
"Cholinesterase inhibitors,
"Diuretics,
"Gout suppressants,
"Hypoglycemics,
"Miotics,
"Thyroid hormones,
"Tuberculostatics,

which the Committee decides are necessary for individuals using such drugs. The Committee shall exclude from the Formulary any drug entities (or dosage forms and strengths thereof) which the Committee decides are not necessary for proper patient care, taking into account other drug entities (or dosage forms and strengths thereof) which are included in the Formulary.

"(2) Such listing shall include the specific dosage forms and strengths of each drug entity (included in the Formulary in accordance with paragraph (1)) which the Committee decides are necessary for individuals using such drugs.

"(3) Such listing shall include the prices at which the products (in the same dosage form and strength) of such drug entities are generally sold by the suppliers thereof and the limit applicable to such prices under section 1822(b)(1) for purposes of determining the reasonable allowance.

"(4) The Committee may also include in the Formulary, either as a separate part (or parts) thereof or as a supplement (or

supplements) thereto, any or all of the following information:

"(A) A supplemental list or lists, arranged by diagnostic, prophylactic, therapeutic, or other classifications, of the drug entities (and dosage forms and strengths thereof) included in the listing referred to in paragraph (1).

"(B) The proprietary names under which products of a drug entity listed in the Formulary by established names (and dosage form and strength) are sold and the names of each supplier thereof.

"(C) Any other information with respect to eligible drug entities which in the judgment of the Committee would be useful in carrying out the purposes of this part.

"(c) In considering whether a particular drug entity (or strength or dosage form thereof) shall be included in or excluded from the Formulary, the Committee is authorized to obtain (upon request therefor) any record pertaining to the characteristics of such drug entity which is available to any other department, agency, or instrumentality of the Federal Government, and to request suppliers or manufacturers of drugs and other knowledgeable persons or organizations to make available to the Committee information relating to such drug. If any such record or information (or any information contained in such record) is of a confidential nature, the Committee shall respect the confidentiality of such record or information and shall limit its usage thereof to the proper exercise of its authority.

"(d)(1) The Committee shall establish such procedures as it determines to be necessary in its evaluation of the appropriateness of the inclusion in or exclusion from the Formulary, of any drug entity (or dosage form or strength thereof). For purposes of inclusion in or exclusion from the Formulary the principal factors in the determination of the Committee shall be—

"(A) the factor of clinical equivalence in the case of the same dosage forms in the same strengths of the same drug entity, and

"(B) the factor of relative therapeutic value in the case of similar or dissimilar drug entities in the same therapeutic category.

"(2) The Committee, prior to making a final decision to remove from listing in the Formulary any drug entity (or dosage forms or strengths thereof) which is included therein, shall afford a reasonable opportunity for a formal or informal hearing on the matter to any person engaged in manufacturing, preparing, compounding, or processing such drug entity who shows reasonable ground for such a hearing.

"(3) Any person engaged in the manufacture, preparation, compounding, or processing of any drug entity (or dosage forms or strengths thereof) not included in the Formulary which such person believes to possess the requisite qualities to entitle such drug to be included in the Formulatory pursuant to subsection (b) may petition for inclusion of such drug entity and, if such petition is denied by the Formulary Committee, shall, upon request therefor, showing reasonable grounds for a hearing, be afforded a formal or informal hearing on the matter in accordance with rules and procedures established by such Committee.

"LIMITATION ON MEDICARE PAYMENT FOR CHARGES OF PROVIDERS OF SERVICES

"SEC. 1821. (a) Any provider of services as defined in section 1861(u), whose services are otherwise reimbursable, under any program under this Act in which there is Federal financial participation on the basis of 'reasonable cost', shall not be entitled to a professional fee or dispensing charge or reasonable billing allowance as determined pursuant to this part.

"(b) A fee, charge, or billing allowance shall not be payable under this section with respect to any drug entity that (as determined in accordance with regulations) is furnished as an incident to a physician's professional service, and is of a kind commonly furnished in physicians' offices and commonly either rendered without charge or included in the physicians' bills.

"REASONABLE ALLOWANCE FOR ELIGIBLE DRUGS

"SEC. 1822. (a) For purposes of this part, the term 'reasonable allowance' when used in reference to an eligible drug (as defined in subsection (h) of this section) means the following:

"(1) When used with respect to a prescription legend drug entity, in a given dosage form and strength, such term means the lesser of—

"(A) an amount equal to the customary charge at which the participating pharmacy sells or offers such drug entity, in a given dosage form and strength, to the general public, or

"(B) the price determined by the Secretary, in accordance with subsection (b) of this section, plus the professional fee or dispensing charges determined in accordance with subsection (c) of this section.

"(2) When used with respect to insulin such term means the charge not in excess of the reasonable customary price at which the participating pharmacy offers or sells the product to the general public, plus a reasonable billing allowance.

"(b)(1) For purposes of establishing the reasonable allowance in accordance with subsection (a) the price shall be (A) in the case of a drug entity (in any given dosage form and strength) available from and sold by only one supplier, the price at which such drug entity is generally sold (to establishment dispensing drugs), and (B) in any case in which a drug entity (in given dosage form and strength) is available and sold by more than one supplier, only each of the lower prices at which the products of such drug entity are generally sold (and such lower prices shall consist of only those prices of different suppliers sufficient to assure actual and adequate availability of the drug entity, in a given dosage form and strength, at such prices in a region).

"(2) If a particular drug entity (in a given dosage form and strength) in the Formulary is available from more than one supplier, and the product of such drug entity as available from one supplier possesses demonstrated distinct therapeutic advantages over other products of such drug entity as determined by the Committee on the basis of its scientific and professional appraisal of information available to it, including information and other evidence furnished to it by the supplier of such drug entity, then the reasonable allowance for such supplier's drug product shall be based upon the price at which it is generally sold to establishments dispensing drugs.

"(3) If the prescriber, in his handwritten order, has specifically designated a particular product of a drug entity (and dosage form and strength) included in the Formulary by its established name together with the name of the supplier of the final dosage form thereof, the reasonable allowance for such drug product shall be based upon the price at which it is generally sold to establishments dispensing drugs.

"(c)(1) For the purpose of establishing the reasonable allowance (in accordance with subsection (a)), a participating pharmacy, shall, in the form and manner prescribed by the Secretary, file with the Secretary, at such times as he shall specify, a statement of its professional fee or other dispensing charges.

"(2) A participating pharmacy, which has agreed with the Secretary to serve as a provider of services under this part, shall, except for subsection (a)(1)(A), be reimbursed, in addition to any price provided for in subsection (b), the amount of the fee or charges filed in paragraph (1), except that no fee or charges shall exceed the highest fee or charges filed by 75 per centum of participating pharmacies (with such pharmacies classified on the basis of (A) lesser dollar volume of prescriptions and (B) all others) in a census region which were customarily charged to the general public as of June 1, 1975. Such prevailing professional fees or dispensing charges may be modified by the Secretary in accordance with criteria and types of data comparable to those applicable to recognition of increases in reasonable charges for services under section 1842.

"(3) A participating pharmacy shall agree to certify that, whenever such pharmacy is required to submit its usual professional fee or dispensing charge for a prescription, such charge does not exceed its customary charge."

(h) Section 1861(t) of the Social Security Act is amended—

(1) by inserting ", or as are approved by the Formulary Committee" after "for use in such hospital"; and

(2) by adding at the end thereof the following new sentence: "The term 'eligible drug' means a drug or biological which (A) can be self-administered, (B) requires a physician's prescription (except for insulin), (C) is prescribed when the individual requiring such drug is not an inpatient in a hospital or extended care facility, during a period of covered care, (D) is included by strength and dosage forms among the drugs and biologicals approved by the Formulary Committee, (E) is dispensed (except as provided by section 1814(j)), by a pharmacist from a participating pharmacy, and (F) is dispensed in quantities consistent with proper medical practice and reasonable professional discretion."

(i) Section 1861(u) of the Social Security Act is amended by striking out the "home health agency," and inserting in lieu thereof "home health agency, pharmacy,".

(j) Section 1861 of the Social Security Act is further amended by adding at the end thereof the following new subsection:

"Participating Pharmacy

"(dd) The term 'participating pharmacy' means a pharmacy, or other establishment (including the outpatient department of a hospital) providing pharmaceutical services (1) which is licensed as such under the laws of the State (where such State requires such licensure) or which is otherwise lawfully providing pharmaceutical services in which such drug is provided or otherwise dispensed in accordance with this title, (2) which has agreed with the Secretary to act as a provider of services in accordance with the requirements of this section, and which complies with such other requirements as may be established by the Secretary in regulations to assure the proper, economical, and efficient administration of this title, (3) which has agreed to submit, at such frequency and in such form as may be prescribed in regulations, bills for amounts payable under this title for eligible drugs furnished under part A of this title, and (4) which has agreed not to charge beneficiaries under this title any amounts in excess of those allowable under this title with respect to eligible drugs except as is provided under section 1813(a)(4), and except for so much of the charge for a prescription (in the case of a drug product prescribed by a physician, of a drug entity in a strength and dosage form included in the Formulary where the price at which such product is sold by the supplier thereof exceeds the reasonable allowance) as is in excess of the reasonable allowance established for such drug entity in accordance with section 1822."

(k)(1) The first sentence of section 1866(a)(2)(A) of the Social Security Act is

amended by striking out "and (ii)" and inserting in lieu thereof the following: "(ii) the amount of any copayment obligation and excess above the reasonable allowance consistent with section 1861(dd) (4) reasonable allowance consistent with section 1861(dd) (4) and (iii)".

(2) The second sentence of section 1866 (a) (2) (A) of such Act is amended by striking out "clause (ii)" and inserting in lieu thereof "clause (iii)".

(1) The amendments made by this section shall apply with respect to eligible drugs furnished on and after the first day of January 1976.

By Mr. MAGNUSON:

S. 1480. A bill for the relief of Iris Gozart; to the Committee on Finance.

Mr. MAGNUSON. Mr. President, today I introduce a bill that will provide needed disability insurance benefits for Mrs. Iris Gozart. Mrs. Gozart, of Aberdeen, Wash., was tragically stricken with multiple sclerosis 13½ years ago. The financial burden that this has created for her husband is no longer bearable. It is just one more example of the urgent need for a national health insurance plan so that such enormous human suffering that this type of long-term illness causes is not compounded by financial bankruptcy from endless medical bills.

I urge the Congress prompt consideration of this bill.

By Mr. BROOKE:

S. 1481. A bill to reorganize the executive branch of the Government to establish a Department of Environment and Natural Resources, and for other purposes; to the Committee on Government Affairs.

Mr. BROOKE. Mr. President, the full Senate is about to begin consideration of the President's proposal to reorganize his Cabinet by creating a new Department of Energy. I certainly feel such a reorganization of the many energy agencies in our Government to be overdue. Our scattered governmental programs respecting energy use need to be consolidated and managed in a coherent manner. But I have become increasingly concerned that the interests related to resource development may become so powerful when they are consolidated in one place that countervailing considerations about how we should regulate and conserve our natural resources will be overwhelmed. Thus, I believe it is essential that we institutionalize the programs, functions, and concerns which relate to resource conservation. The Energy Department cannot possibly do this. Its chief function will be to oversee the management and development of the resources which our economy will need to consume in the years ahead.

Certainly, we have not had an efficient system for managing our common heritage of natural resources in the past few years. I think it is entirely appropriate that large parts of the Department of the Interior are being taken out of that Department and being put in the Energy Department. The Department of the Interior has been an umbrella for the past decade or so for concerns that compete with one another and which deserved to be heard individually rather than lumped together. Very legitimate debate and conflict over resource management issues has been muted and kept from the public because it was lost in bureaucratic competition between various departments representing different perspectives.

However, the consolidation of the energy functions leaves other natural resource programs scattered around the Government and weakened. For example, ocean-related activities are scattered among six departments. Not only is a wide range and large number of agencies involved in protecting our environment, but they are mainly managed by officials whose status will not be so high and whose powers will not be so broad as those of the new Secretary of Energy. What will remain at the Department of the Interior will essentially be a hodge-podge of resource management functions which in no way will be comprehensive or all inclusive. EPA and the Departments of Commerce, Agriculture and the Army have important resource management functions. Ocean resource management has no single, powerful advocate. Furthermore, even the committees of the Congress are not organized in such a way as to provide balanced and well-organized debate on natural resource management issues. The new Energy Committee in the Senate has no exact counterpart concerned with conservation and environmental protection. After all, the Environment Committee is really the Public Works and Environment Committee and has a great many development issues as primary concerns. Ever since we have considered congressional reorganization in the Senate, I have been discussing these issues with my colleagues on the floor of the Senate and my concern has rather deepened than lessened.

Therefore, Mr. President, I am today filing a bill to create a new Department of Environment and Natural Resources. This legislation assumes that the Department of Energy will have been organized by the time this Department of Environment is considered. Therefore, it mandates the consolidation of those functions which will remain under the Secretary of the Interior once the Department of Energy has been formed, the EPA and the National Oceans and Atmosphere Administration. Other conservation related functions such as the management of wetlands under powers which now are lodged either with the Secretary of Agriculture or the Secretary of the Army, are also transferred to this department.

Mr. President, I believe the creation of the job of Secretary of Environment and Natural Resources will put in the Cabinet of the United States, and therefore, at the side of the President of the United States, an advocate for conservation and thoughtful management of our many nonenergy natural resources such as our land, air, water and oceans. I further believe that putting such an advocate on an equal footing with the Secretary of Energy, who is charged with development responsibilities, as well as with the Secretary of Agriculture, who also is responsible for husbanding and developing other important natural resources, will permit a continuing counterbalance of power and opinion which can only strengthen and invigorate our resource management policies. The principle of charging coequal officials with the responsibility to criticize one another constructively and to work cooperatively, to achieve a balance of interests and powers has been a fundamental principle of the way we organize our Government. In spite of the many difficulties of managing a complicated democracy in which so many private and public interests compete freely, this kind of structure has often been the strongest protection for the wide variety of concerns and the best hope for effective management.

We are fortunate that in the years since the passage of the National Environmental Protection Act many parts of this Government have become engaged in regulating and managing the conservation of our natural resources. Many of these programs were experimental, all of them were new. And numerous existing programs began to realize that there were conservation issues related to their traditional activities. And public pressure was largely responsible for creating a general environmental awareness throughout the Government.

However, the flowering of these concerns at every level and in every sector of our public life has meant that these activities have been scattered and in some ways uncoordinated. It is time that we looked at the broad spectrum of conservation activities in the context of our new national understanding that we have an ecosystem in which our lands, our air, our water and oceans and all our natural resources are so closely interconnected both biologically and politically that programs dealing with one can never be handled in isolation from programs dealing with the others. It is both my basic principal concern that the conservationists viewpoint find clear expression in Government and my management-related concern regarding the efficiency with which our resource management and environmental protection programs are run that leads me to advocate the creation of the Department.

It is the purpose of this legislation that the Secretary of the Environment and Natural Resources become the individual in the Government who is responsible for implementing the purposes of the National Environment Protection Act. He or she is to report annually to the Congress the Nation's progress towards wiser use of our environment. In order to do so the Secretary will have to be responsible for a wide range of now-scattered functions.

I should add, Mr. President, that I myself have been debating for several months about which programs indeed clearly need to be transferred to the new agency. The legislation I am filing today omits two agencies which, after further deliberation the Congress may, in fact, wish to include in the new department. One is the Coast Guard, which lately has assumed a wide variety of regulatory functions aimed at protecting the marine

environment which constitute a significant change from its prior role of a police and life-saving force along our coasts. Another is the Forest Service of the U.S. Department of Agriculture whose functions currently involve both protection of our forests and timber resources and their cultivation for commercial use. Clearly, the functions of both these agencies are also crucial to the wise oversight of public lands and waters. However, the legislation I have written puts the major role for protection of wilderness, forests, and ocean resources under a new Secretary and mandates continuing coordination with the two agencies I have just mentioned. These issues and many others which will doubtless be raised, are ones that I am hopeful both the Congress and the public will debate fully. I must say my mind is open with respect to the exact form of the new agency. I am however, deeply convinced that it must be based on the three principal agencies, Department of the Interior, EPA, and NOAA, which form the central core of the new department.

Mr. President, I believe that the Nation is entering a new era in our awareness of the planet on which we live and the natural system of which the United States as a whole and our people as individuals are part. I see a new ethic of conservation of the precious common property resources God has given us. I see a new awareness that many actions have long lasting, far reaching consequences in our biosphere which impinge on others in a way that the initiator can often never imagine. In a few short years I believe we have gone through a period of social learning and human development which could not have been imagined. I think we have learned as a people, that we are inter-connected, that there is nowhere on the planet or in the solar system to throw anything "away".

We have not incorporated these understandings into our social and political arrangements but we do have time and we do have the ability to do so. I believe the time has come to formalize these concerns at the highest levels of government. The Government itself is steward for a large part of this continent's resources and it has related responsibilities to private holders and users of natural resources as well as to the world. This Government must develop a clearer understanding for itself, for the American people and for the world's people of how competing needs and demands on the world's ecology are going to be accommodated. And, once such policies and perceptions have been fully laid forth, this Government must have an institution which can implement them.

My legislation creating the Department of Environment and Natural Resources institutionalizes the conservation ethic and gives it the clout it deserves. I hope that the attention of the Congress and the Nation can soon be devoted to this vital undertaking.

Mr. President, I ask unanimous consent that a fact sheet on the bill be printed in the RECORD.

There being no objection, the factsheet was ordered to be printed in the RECORD, as follows:

FACTSHEET

Purpose: The Congress recognizes there is a national need to eliminate duplication and improve coordination in the management and regulation of the common environment, property resources and ocean resource heritage of the American people. Also, the Congress declares it essential that the Cabinet of the United States include a Secretary charged with creating and maintaining conditions under which man and nature can exist in productive harmony on land and sea, promoting efforts to prevent and eliminate damage to the environment and biosphere, and enriching the understanding of ecological systems and natural resources important to the Nation. The creation of a Cabinet level Department of Energy makes it especially urgent that a comparable unit of government charged with wise management of commonly-held resources other than energy be created forthwith.

Creation of the new Department: The Department of Environment and Natural Resources shall exercise:

Those powers now in the Department of the Interior which would otherwise remain in the Interior after the creation of a new Department of Energy.

Those powers now in the Environmental Protection Agency.

Those powers now in the National Oceans and Atmosphere Administration.

Those powers in the Department of Commerce related to Coastal Zone Management and Marine Mammal Protection.

Those powers in the Department of the Army and the Department of Agriculture related to wetlands areas, estuaries and offshore structures.

The Department of the Interior, the Environmental Protection Agency and the National Oceans and Atmosphere Administration are abolished.

The Secretary of the Department of Environment and Natural Resources is made primarily responsible for implementation of the National Environmental Policy Act of 1969.

Structures and Functions in the Department of Environment and Natural Resources: In addition to the Secretary, the Congress establishes the offices of:

Deputy Secretary and General Counsel.

Assistant Secretaries for Policy and Administration.

Assistant Secretary for Environmental Science and Research who will plan and coordinate environmental research and development and administer a new office of Energy Development Impact Assessment.

Assistant Secretary for Fish, Wildlife and Recreation who performs functions previously carried out by the counterpart in the Department of the Interior and administers Marine Mammal Protection Act (except parts related to cetaceans).

Assistant Secretary for Land and Water Resources who performs functions previously carried out by the counterpart in the Department of the Interior and administers a new Bureau of Coastal Zone Management.

Assistant Secretary for Oceans who will be responsible for all functions related to conservation and management of ocean resources including regulation of offshore dumping and offshore structures. He/She will also oversee a new Office of Ocean Vessel and Facilities Safety.

Assistant Secretary for Air Quality who shall administer all air quality functions previously performed by EPA.

Assistant Secretary for Water Quality who shall administer all water quality functions previously performed by EPA.

Assistant Secretary for Waste and Hazardous Materials who shall administer all solid waste, toxic substances, pesticides, radiation and noise pollution functions previously performed by EPA.

By Mr. DOMENICI:

S. 1482. A bill to provide for the recycling of used oil, and for other purposes; to the Committee on Environment and Public Works.

NATIONAL OIL RECYCLING ACT

Mr. DOMENICI. Mr. President, today I am reintroducing legislation to promote resource recovery and conservation to preserve and enhance the quality of air, water, and land resources by establishing an effective program to promote the recycling of used oil.

This measure would provide incentives for increasing the use of used oil.

Every year, over 1 billion gallons of used lubricating oil is available for recycling. Yet, according to recent studies, almost half of this amount is indiscriminately disposed of, most of it finding its way into our water systems.

In 1965 there were approximately 150 used oil rerefiners in the United States. Today, there are about 30 remaining. The production of rerefining has also drastically changed, from 300 million gallons in the 1960's to less than 100 million gallons today.

There are several major reasons contributing to the above-mentioned declines, relating primarily to Federal disincentives for the rerefining industry. Probably the action which has had the most effect on the decline in the rerefining industry took place in 1965, when the Excise Tax Reduction Act was enacted. Before this time, there had been a 6-cent-per-gallon tax levied on the manufacturers of lubricating oil which was paid by the first user of that oil. Since rerefiners were not required to pay this tax, they subsequently had a 6-cent-per-gallon competitive edge over oil refiners.

In 1965, however, the Internal Revenue Service ruled that since these funds were to go into the highway trust fund, off-highway users would be refunded the full 6-cent-per-gallon payment on virgin lubricating oils. In addition, IRS refused to allow tax rebates on any virgin oils that were to be blended with rerefined oil to meet user viscosity requirements. As a result, the rerefiner not only lost a 6-cent-per-gallon differential, but was penalized an additional 3 cents per gallon if he used a 50–50 blend of recycled oil with virgin oil.

Also, in 1965, the Federal Trade Commission ruled that all rerefined motor oils produced for sale to the public had to be labeled "previously used," implying an inferior product and having a definite effect on consumer sales.

The rerefining industry has been trying to run comparison tests and set standards in order to evaluate the overall performance records of virgin oils and rerefined oils. Meanwhile, Federal Government policies require that all Government purchases of oil must be new, regardless of the quality of the recycled oil.

Mr. President, the thrust of this bill is to help reestablish a more favorable economic climate for the recovery and rerefining of waste oil. Several approaches are taken which should provide incentive for competent operators to expand existing capacity or to enter the industry

in areas where no rerefining capacity exists now.

As an example, of incentives, the Federal and State governments would be encouraged to use recycled oil for Government contracts and military and nonmilitary users.

Mr. President, I believe that this bill fills an important gap in the current legislative effort to deal with our energy and environmental problems. The "National Oil Recycling Act" will strengthen the rerefining industry and increase the amount of waste oil rerefined. I ask unanimous consent that the bill be printed in its entirety in the RECORD at the conclusion of my remarks.

Mr. President, I also ask unanimous consent that an article which appeared in the Atlanta Journal and Constitution Sunday, April 17, 1977, entitled, "Huge Waste: Oil Down Drain" be printed in the RECORD.

There being no objection, the bill and article were ordered to be printed in the RECORD, as follows:

S. 1482

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Oil Recycling Act".

PURPOSES

SEC. 2. In view of the purposes of the Resource Conservation and Recovery Act of 1976 to promote resource recovery and conservation to preserve and enhance the quality of air, water, and land resources it is the purpose of this Act to establish an effective program to promote the recycling of used oil.

DEFINITIONS

SEC. 3. For the purposes of this Act—

(1) the term "used oil" means all oil which has through use been contaminated by physical or chemical impurities which have not been removed by subsequent re-refining or other processing;

(2) the term "recycled oil" means used oil which has been re-refined or otherwise processed to remove the physical and chemical contaminants acquired through use, which by itself or when blended with new oil or additives is substantially identical or superior to new oil intended for the same purposes;

(3) the term "new oil" means all oil which has been refined from virgin oil and may or may not contain additives, but has never been used, and does not include used oil or recycled oil;

(4) the term "lubricating oil" means all oil regardless of origin, which—

(A) is suitable for use as a lubricant, or

(B) is sold for use as a lubricant;

(5) the term "hydraulic oil" means all oil which is used primarily to transmit power or pressure, but which may also serve lubricating and other functions;

(6) the term "cutting oil" means all oil which is used primarily in cutting, milling, and machining operations (including forging, drawing, rolling, shearing, punching, and stamping), but which may also serve lubricating and other functions;

(7) the term "fuel oil" means all oil which has been refined, re-refined, or otherwise processed for the purpose of being burned to produce heat;

(8) the term "automotive oil" means all oil, including lubricating oil and hydraulic oil, which is used in automobiles, trucks, buses, motorcycles, and all other motor vehicles which travel on roads and highways;

(9) the term "industrial oil" means all oil exclusive of virgin oil, fuel oil, oils used for cooking and medicinal purposes, and automobile oil, and includes, but is not limited to, lubricating oil, hydraulic oil, and cutting oil when such oils are not automotive oils;

(10) the term "used oil collector" means any person who controls a system which functions to retrieve or collect used oil for sale or transfer to oil recycling facilities, or for other methods or treatment or disposal;

(11) the term "used oil recycler" means any person who re-refines or otherwise processes used oil to remove its physical and chemical contaminants;

(12) the term "treatment" includes any activity or processing that blends used oil with virgin oil, removes contaminants from used oil or in any way changes the physical form or chemical composition of used oil; and

(13) the term "disposal" means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any used oil into the air or on any land or water so that such used oil or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters.

FEDERAL ENCOURAGEMENT OF THE USE OF RECYCLED OIL

SEC. 4. The Administrator of the Environmental Protection Agency, Federal Energy Administration, and the Secretary of Commerce, acting through the National Bureau of Standards, and all procuring agencies of the government, shall act within their authority to encourage the use of recycled oil. Such action shall include, but is not limited to—

(1) procuring recycled automotive and industrial oils for all military and nonmilitary Federal uses, within one year of passage of this act, while, to the maximum extent possible, maintaining satisfactory performance levels;

(2) requiring all persons contracting with the Federal Government to use recycled oil in performing such contracts where available at reasonable price;

(3) educating the Government and private sectors of the economy as to the merits of recycled oil, and the need for its use in order to reduce the drain on the Nation's oil reserves, conserve limited resources, and minimize the treatment or disposal of used oil in ways harmful to the environment;

(4) within one year of the enactment of this section, the General Services Administration, the Department of Defense, and all other Federal agencies shall revise their procurement regulations and specifications to comply with the intent of this section.

STATE REGULATION AND ENCOURAGEMENT

SEC. 5. (a) This Act shall in no way preempt State regulation of recycled oil or used oil disposal whenever such regulation provides for stricter control of recycled oil or used oil than provided for by Federal law.

(b) The States should encourage the use of recycled oil in order to accomplish the purpose of this Act. In order to qualify for Federal grants under section 11 of this Act, a State shall adopt laws, regulations, and administrative machinery which shall provide for, but not be limited to—

(1) requiring that used oil collectors obtain a State permit prior to engaging in used oil collecting activities, and such permits shall require, as a minimum, information pertaining to methods for collecting, storing, transferring treating and disposing of used oil, as well as the identity of used oil sources, purchases, transferees, and disposal sites;

(2) requiring that used oil recyclers obtain a State permit prior to engaging in recycling operations and such permits shall require, as a minimum, information identifying—

(A) the source and quantities of used oil to be acquired for recycling;

(B) the recycling facility's plant size and operating capacity;

(C) the specific recycling technologies to be utilized;

(D) the quantities and grades of recycled oil to be produced; and

(E) the methods of disposing of the waste byproducts;

(3) requiring the State to use recycled oil for all automotive and industrial uses of the State government, and require all parties contracting with the State to use recycled oil in the performance of such contracts;

(4) encouraging the use of recycled oil in retail sales of automobile oil;

(5) prohibiting the use of used oil as fuel oil or for the oiling of State roads, unless such oil has been processed to meet the minimum standards for such uses established by Federal and State pollution control laws; and

(6) educating the public and private sectors of the State as to the merits of recycled oil, and the need for its use in order to reduce the drain on the nation's oil reserves and minimize the treatment and disposal of used oil in ways harmful to the environment.

LABELING OF RECYCLED OIL

SEC. 6. (a) The Administrator of the Environmental Protection Agency shall by rule prescribe labeling standards applicable to containers of new oil, used oil, and recycled oil in order to carry out the purpose of this Act within one year of passage of this Act and consistent with the Resource Conservation and Recovery Act of 1976 and the Energy Policy and Conservation Act. Such labeling standards shall be designed to reduce to the maximum extent practicable environmental hazards and wasteful practices associated with the disposal of such oils after use.

RESTRICTIVE CONTRACTS PROHIBITED

SEC. 7. (a) It shall be unlawful for any person to enter into any contract or agreement where the intent of such contract or agreement is to discourage the recycling of used oil consistent with the label on the container of the used oil.

(b) Violations of subsection (a) are subject to a fine of $50,000 for each violation thereof, or imprisonment for a term not to exceed one year, or both.

RECORDS

SEC. 8. (a) Users of more than one hundred gallons of automotive and industrial lubricating and hydraulic oil per year shall maintain complete records of—

(1) the quantities and types of all lubricating and hydraulic oils purchased;

(2) the quantities and types of all lubricating and hydraulic oils consumed during use; and

(3) the quantities and types of all lubricating and hydraulic oils disposed of after use—

(A) by in-house recycling;

(B) by delivery to or pickup by used oil collectors or used oil recyclers; or

(C) by any other method of treatment or disposal.

(b) Used oil recyclers shall maintain complete records of—

(1) the quantities and types of all used oil acquired;

(2) the quantities and types of all new oil acquired for use in blending recycled oil;

(3) the quantities, types, and sources of sale or other disposal of all recycled oil produced; and

(4) the quantities, types, and places of disposal of all waste byproduct generated in the recycling process.

(c) Used oil collectors shall maintain complete records of—

(1) the quantities and types of used oil collected; and

(2) the quantities and types of used oil—

(A) delivered to recyclers; and

(B) otherwise treated or disposed (including the place of disposal).

(d) Records required to be kept by this section or any other provision of this Act shall be kept in accordance with regulations promulgated by the Secretary of the Treasury, and the Administrator of the Environmental Protection Agency acting jointly.

REPORTS

SEC. 8. The Administrator of the Environmental Protection Agency shall make reports to Congress not later than March 31 of each year, containing, but not limited to, the following information:

(1) the amount of automotive and lubricating and hydraulic oil sold throughout the United States each year;

(2) the amount of used oil recycled each year;

(3) the significance of used oil as a contributor to water pollution and other environmental problems; and

(4) the problems of the oil recycling industry (including new technological requirements and the necessity for tax incentives).

MANDATORY LICENSING

SEC. 9. Whenever the Administrator of the Environmental Protection Agency determines that—

(1) in implementing the provisions of this Act, a United States patent right not otherwise available is necessary to enable any person to comply with this Act;

(2) there are no reasonable alternative methods to accomplish this Act's purposes; and

(3) the unavailability of such patent right may result in a substantial lessening of competition or a tendency to create a monopoly in any line of the Nation's commerce;

the Administrator, through the Attorney General, may so certify to a district court of the United States, which may order the person owning the patent to license it on such reasonable terms as the court, after hearing, may determine.

PENALTIES AND ENFORCEMENT

SEC. 10. (a) Any person violating any provision of this Act which does not provide for specific penalties or punishment thereunder shall upon conviction thereof be guilty of a misdemeanor which shall be punishable by a term of six months in prison for each violation, or a fine of not to exceed $25,000, or both.

(b) It shall be the duty of the Attorney General to prosecute violations of this Act.

GRANTS AND APPROPRIATIONS

SEC. 11. (a) There is hereby authorized to be appropriated for the fiscal year ending June 30, 1975, and for each succeeding fiscal year, $25,000,000 for Grants to the States to assist them in fulfilling the purposes and provisions of this Act. The Administrator of the Environmental Protection Agency shall make allotments to the States, not to exceed 10 cents per capita for any State based on the latest national census, when he has determined that they are in compliance with this Act. The Administrator shall prescribe regulations, pursuant to this Act, governing the expenditure of the allotments within one year of passage of this Act.

(b) There is hereby authorized to be appropriated for the fiscal year ending October 31, 1977 and for each succeeding fiscal year through the fiscal year ending October 31, 1980, $10,000,000 for the demonstration of new processes and technology to be used in the economical and ecological recycling of used oil. The Administrator of the Environmental Protection Agency may make grants of this money, pursuant to regulations and requirements he shall adopt, to private parties, or states, or use this money within the Environmental Protection Agency for the above purposes.

(c) There is hereby authorized to be appropriated for the fiscal year ending October 31, 1977, and for each succeeding year, through the fiscal year ending October 31, 1979, $10,000,000 for the development of reports, standards, and testing methods to implement the provisions of this Act.

AMENDMENTS TO INTERNAL REVENUE CODE

SEC. 12. (a) Subpart B of part III of subchapter A of chapter 32 of the Internal Revenue Code of 1954 (relating to lubricating oil) is amended to read as follows:

"Subpart B—Lubricating, Hydraulic, and Cutting Oils

"Sec. 4091. IMPOSITION OF TAX
"Sec. 4092. Definitions.
"Sec. 4093. Exemption of sales to producers.
"SEC. 4092. IMPOSITION OF TAX

"There is imposed on lubricating, hydraulic, and cutting oils (other than recycled oils) which are sold in the United States by the manufacturer or producer a tax of 6 cents per gallon, to be paid by the manufacturer or producer.

"SEC. 4092. DEFINITIONS.

"(a) CERTAIN VENDEES CONSIDERED MANUFACTURERS OR PRODUCERS.—For the purposes of this subpart, a vendee who purchases lubricating, hydraulic, or cutting oils exempt from tax under section 4093 is considered to be the manufacturer or producer of such oils.

"(b) LUBRICATING OIL.—The term 'lubricating oil' means all oil regardless of origin, which—

"(1) is suitable for use as a lubricant, or

"(2) is sold for use as a lubricant.

"(c) HYDRAULIC OIL.—The term 'hydraulic oil' means all oil which is used primarily to transmit power or pressure, but which may also serve lubricating and other functions.

"(d) CUTTING OIL.—The term 'cutting oil' means all oil which is used primarily in cutting, milling, and machining operations (including forging, drawing, rolling, shearing, punching, and stamping), but which may also serve lubricating and other functions.

"(e) RECYCLED OIL.—The term 'recycled oil' means used oil which has been re-refined, or otherwise processed to remove the physical and chemical contaminants acquired through use, which by itself or when blended with new oil or additives is substantially identical or superior to new oil intended for the same purposes.

"SEC. 4093. EXEMPTION OF SALES TO PRODUCERS

"Under regulations prescribed by the Secretary or his delegate, no tax shall be imposed under this subpart upon lubricating, hydraulic, or cutting oils sold to a manufacturer or producer of such oils for resale by him.".

(b) (1) Section 6424 of such Code (relating to lubricating oil not used in highway motor vehicles) is repealed.

(2) The item relating to section 6424 in the table of sections for subchapter B of chapter 65 of such Code is repealed.

(3) (A) Section 6675(a) is amended by striking out "6424 (relating to highway oil not used in highway motor vehicles),"; and

(B) Sections 7603, 7604, and 7605 are amended by striking out "6424(d)(2)," each place it appears therein.

(c) Section 39 of such Code (relating to certain uses of gasoline, special fuels, and lubricating oil) is amended—

(1) by inserting at the end of subsection (a)(2) the word "and";

(2) by striking out subsection (a)(3);

(3) by redesignating subsection (a)(4) as (a)(3); and

(4) by striking out "6424," and inserting "6424(g)," in subsection (c).

(d) The amendments made by this section apply to lubricating, hydraulic, and cutting oils sold on and after the first day of the first calendar quarter beginning more than thirty days after the date of enactment of this Act.

SEC. 13. Part IV subchapter I of the Internal Revenue Code of 1954 as amendment to add the following:

"Sec. 34(a) General Rule.

"There shall be allowed as a credit against the tax imposed by this chapter the sum of 3 cents for each gallon used of lubricating oil re-refined by a person.

"(b) Regulations. The Secretary or his delegate shall have power to adopt regulations implementing this section.

"(c) Definitions.

"(1) the term 're-refined' means any process which removes all or substantially all of the physical or chemical impurities present in used lubricating oil, and which restores used lubricating oil to its original quality.

"(2) the term 'used lubricating oil' means lubricating oil which has through use been contaminated by physical or chemical impurities which have not been removed by subsequent re-refining or other processing."

EFFECTIVE DATE

SEC. 14. The provisions of this Act, except as otherwise provided, shall be effective after ninety days following the date of enactment of this Act.

CAN BE RECYCLED—HUGE WASTE: OIL DOWN DRAIN

(By Andrew Mollison)

WASHINGTON.—Americans in the average week pour in storm sewers enough used motor oil, fully suitable for recycling, to change the oil in a quarter of a million cars.

A single large chemical plant near Pittsburgh pours 75,000 gallons of used process oil and 50,000 gallons of used lubricating oil annually into a treatment ditch, where half of it becomes hazardous sludge and the rest flows directly into a river.

That same plant incinerates another 10,000 gallons of used oil a year rather than separate it from other waste and sell it for 12 to 15 cents a gallon to recycling collectors.

Similar disposal methods waste over half of the more than one billion gallons of used automotive and industrial oils produced in the U.S. each year.

They form one part of the national mosaic of energy waste that President Carter hopes to shatter in nationwide television appeals this week in unveiling his energy program.

Used oil causes 44 per cent of the oil pollution in American rivers and harbors, according to the American Petroleum Institute.

The additive-packed lubricants dirty the air, contaminate farms and backyards and underground drinking water, clog sewage treatment plants and kill fish and the microorganisms that fish eat.

"It's really dumb," says Michael Willingham, the former Atlantan working on the used oil program at the Federal Energy Administration (FEA). "It is profitable to recycle waste oil, using present technology."

Oil recycling companies—known as re-refiners—could profitably buy waste oil, bathe it in acid and clay to remove the contaminants, add chemicals to restore it to high-quality lubrication standards, and sell it at a profit to factories or utilities or to jobbers serving discount stores.

This would cut the nation's need for expensive foreign crude oil by 35,000 to 50,000 gallons a day.

Instead, the re-refining business is "at its historical low point," admits Duane Ekedahl, Washington representative for the Association of Petroleum Re-refiners. From approximately 160 companies in 1961 and 48 com-

panies in 1971, the re-refining industry has dwindled to only 30 companies.

Instead of processing more than 300 million gallons a year of waste oil, as they did in the early 1960s, the re-refiners process less than 90 million gallons annually.

Changing buying patterns for motor oil played a part in the industry's decline.

Discouraged by poor results from some tests of re-refined motor oil, the Department of Defense in the late 1950s stopped buying such products.

The rest of the federal government—and the vast majority of city and state governments which also use Department of Defense bidding specifications—also stopped buying recycled oil.

Do-it-yourself oil changers, who buy almost half the automotive motor oil in the country (up from 7 per cent in 1961), show little interest in what the Federal Trade Commission insists must be labeled "used oil," although the same product—labeled "re-refined oil"—sells for premium prices in other countries.

Those purchasing switches also hurt the re-refining industry's supply.

Government agencies found it cheaper to dump their used oil, or use it for road or insect spray, rather than to save it for recycling, once they were freed from the usual "closed-loop" contracts under which they sold their used oil to the same company that sold them re-refined oil.

Part of the blame for the supply and demand bind falls on the waste oil industry itself, acknowledged Ekedahl, who says the shrinkage of the industry has since eliminated the shady operators who merely strained and repackaged used oil, rather than treat it properly for recycling.

"There were products that weren't properly re-refined," Ekedahl said. "But today that's a bum rap."

The low quality controls and a suspicion of all outsiders by re-refining entrepreneurs turned off a lot of potential customers and political allies.

This weakened the industry during its attempts, before the Arab oil embargo of 1973–74, to fight federal regulatory, taxing and purchasing decisions that inadvertently lowered the industry's profitability.

The embargo renewed interest in recycling of the waste oil.

But efforts to free the industry from those government-made restrictions have been hampered by a duplication of efforts among several agencies responsible for energy policy, and by budget-trimming decisions to limit funding.

When Willingham was assigned last November to the waste-oil project in the FEA, he found that a how-to-do-it kit for states and localities who want to encourage recycling "had been promised over and over again," but that "the kit that had been prepared . . . didn't answer any of their questions."

He said the FEA kit should be ready by the end of April.

A 1975 law ordered the National Bureau of Standards (NBS) to devise new, cheaper test procedures "for the determination of substantial equivalency of re-refined or otherwise processed used oil."

Donald A. Becker, head of the NBS study, had to scramble for funds redirected from other projects because Congress appropriated no money for it.

Fuel oil is a more acceptable competitive product than are lubricants for the major oil company officials who sit on the NBS oil standards advisory board.

"That could be very important for us," said Ekedahl, who said re-refiners hope that new NBS test standards will open up the possibility of sales to government agencies and environment-conscious industries by the end of the year.

Under another law, passed last year, the Department of Defense must drop its ban next year on recycled products, if they are safe and reliable, even if they cost slightly more than competing products.

"We know that if you do a good job of re-refining and use the proper additives, you will get a product that can be used," said Army chemist Thomas Bowen, who is involved in the tests on 16 selected recycled oils. "Our worry is how do you control quality."

The Commerce Department, the Energy Research and Development Administration and the General Services Administration all have programs to conserve used oil.

And one source in the Treasury Department said it will reconsider a pre-embargo taxing decision that took away a three-cent-per-gallon tax advantage for blended re-refined oil, and impose an excise tax on it that is three cents higher than that for most virgin oil.

ADDITIONAL COSPONSORS

S. 7

At the request of Mr. ROBERT C. BYRD, the Senator from Ohio (Mr. METZENBAUM) was added as a cosponsor of S. 7, the Surface Mining Control and Reclamation Act.

S. 126

At the request of Mr. ROBERT C. BYRD, the Senator from Illinois (Mr. STEVENSON), the Senator from New Mexico (Mr. SCHMITT), the Senator from Michigan (Mr. RIEGLE), the Senator from Montana (Mr. MELCHER), and the Senator from Arizona (Mr. GOLDWATER) were added as cosponsors of S. 126, to reduce the hazards of earthquakes, and for other purposes.

S. 657

At the request of Mr. FORD, the Senator from Florida (Mr. CHILES) was added as a cosponsor of S. 657, the Earth Resources and Environmental Information Systems Act of 1977.

S. 694

At the request of Mr. KENNEDY, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 694, to adjust the status of Indochinese refugees.

S. 972

At the request of Mr. NELSON, the Senator from Kentucky (Mr. HUDDLESTON) and the Senator from New Jersey (Mr. WILLIAMS) were added as cosponsors of S. 972, to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic international market development.

S. 1034

At the request of Mr. HAYAKAWA, the Senator from Wyoming (Mr. HANSEN) was added as a cosponsor of S. 1034, to provide for a study of the effects of saccharin and for other purposes.

S. 1072

At the request of Mr. ROBERT C. BYRD, the Senator from Florida (Mr. CHILES) was added as a cosponsor of S. 1072, the universal voter registration bill.

S. 1273

At the request of Mr. ALLEN, the Senator from Wyoming (Mr. HANSEN) was added as a cosponsor of S. 1273, to authorize the Administrator of General Services to renegotiate certain contracts.

S. 1303

At the request of Mr. NELSON, the Senator from Maine (Mr. HATHAWAY) was added as a cosponsor of S. 1303, the Legal Services Corporation Act Amendments of 1977.

S. 1307

At the request of Mr. THURMOND, the Senator from Arizona (Mr. GOLDWATER), the Senator from North Carolina (Mr. HELMS), and the Senator from Utah (Mr. GARN) were added as cosponsors of S. 1307, to amend title 38 of the United States Code.

S. 1385

At the request of Mr. HELMS, the Senator from Oklahoma (Mr. BARTLETT) was added as a cosponsor of S. 1385, to amend title XVIII of the Social Security Act.

S. 1392

At the request of Mr. RIBICOFF, the Senator from Rhode Island (Mr. PELL) and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 1392, to strengthen and improve the early screening, diagnosis, and treatment program.

S. 1436

At the request of Mr. CASE, the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of S. 1436, to authorize the Secretary of Agriculture to prohibit the availability of so-called junk food in food service areas during the time meals are served to children under the Child Nutrition Act of 1966 and the National School Lunch Act.

SENATE RESOLUTION 76

At the request of Mr. HAYAKAWA, the Senator from North Carolina (Mr. HELMS), the Senator from Texas (Mr. TOWER), and the Senator from Nebraska (Mr. CURTIS) were added as cosponsors of Senate Resolution 76, relating to unilateral regulations by the European Economic Community.

SENATE RESOLUTION 117

At the request of Mr. NELSON, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of Senate Resolution 117, to designate National Small Business Week.

AMENDMENT NO. 183

At the request of Mr. CULVER, the Senator from Minnesota (Mr. HUMPHREY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from South Dakota (Mr. ABOUREZK), and the Senator from Idaho (Mr. CHURCH) were added as cosponsors of amendment No. 183, intended to be proposed to S. 275, the Food and Ariculture Act of 1977.

SENATE RESOLUTION 166—SUBMISSION OF A RESOLUTION TO PROVIDE FOR THE REORGANIZATION OF ADMINISTRATIVE SERVICES OF THE SENATE

(Referred to the Committee on Rules and Administration.)

Mr. CULVER. Mr. President, I am submitting today with the Senator from Texas (Mr. BENTSEN) and the Senator

from Oregon (Mr. HATFIELD) a resolution creating a coordinated administrative management system for the Senate. This resolution would vest in a single Senate Administrator responsibility for providing support services and facilities, for preparing new budgeting, accounting and auditing systems for the Senate, and for determining priorities for space allocation and utilization. These functions are now scattered among a number of different offices. Consolidation should insure their provision with the greatest efficiency and at the lowest cost. In order to assure that services are provided in a manner both fair and responsive to the needs of Senators, the Administrator would act under the direction of a nine-person Administrative Council, representative of the Senate membership.

The establishment of such a coordinated administrative management system was the principal recommendation of the final report of the Commission on the Operation of the Senate. I had the honor in July of 1975 of proposing that this Commission be established because I believed that the Senate could benefit from an objective, independent analysis by informed, public-spirited citizens. This proposal received the active, bipartisan support of the Senate leadership and in September 1975, a panel of nine outstanding Americans with distinguished backgrounds in business, education, and government service was appointed by Senators Mansfield and Scott.

The Commission's membership included:

Harold E. Hughes, Chairman; former Governor of Iowa and former U.S. Senator;

Archie R. Dykes, Vice Chairman; chancellor, University of Kansas;

Willard L. Boyd, president, University of Iowa;

Robert P. Huefner, director, Institute of Government, University of Utah;

Juanita M. Kreps, then vice president, Duke University, and the current Secretary of Commerce;

Carl E. Sanders, former Governor of Georgia;

William H. Scott, partner, Peat, Marwick & Mitchell, Anchorage, Alaska;

J. Mark Trice, former Secretary of the Senate;

Wilson W. Wyatt, former mayor of Louisville, Ky.

And as ex officio members:

Francis R. Valeo, Secretary of the Senate;

Gerald W. Frank, administrative assistant to Senator MARK HATFIELD.

Vincent Rock was named staff director.

I know that my colleagues would want to join me in expressing appreciation to the Commission members and staff for the energy and careful attention which they brought to their task. I am confident that their efforts will help create a more efficient and productive Senate.

Creation of the Commission represented the first time in its history that the Senate had invited an outside group to examine its internal operations. This review was a logical counterpart to the committee established to reform the Senate committee structure. As an Iowan, I was especially pleased that former Governor and Senator Harold Hughes of our State was chosen as Commission Chairman and that Willard Boyd, president of the University of Iowa, was among its members.

For more than a year, the Commission made a thorough, impartial review of the entire range of Senate operations, from scheduling procedures to techniques of oversight to the use of support agencies such as the Congressional Budget Office. In its final report, the Commission made recommendations for improvements in the utilization of space and time, in the performance of the Senate's responsibilities for oversight and legislation, and in the quality of its communications with the public. I believe that these recommendations offer thoughtful and imaginative suggestions for increasing the ability of this institution to fulfill its constitutional obligations.

One of the key findings of the Commission was that the Senate's administrative management structure was inadequate. At its outset in the 18th century, the Senate could operate in an informal, collegial fashion. As the Nation grew and the pace of history accelerated, its responsibilities and needs similarly expanded and support services to aid Senators were added by a process of accretion. The result is that while the Senate today is of necessity a modern, complex institution, the provision of its administrative services—personnel, accounting, budgeting, office management—is inefficient and disorganized. Responsibility for routine services is often fragmented among different offices. New Senators and their staffs are startled to discover, for example, that office furniture and office equipment are handled by different agencies, and that the bells on clocks and the works on clocks are not repaired by the same shop. Administration of the stationery store rests with an officer of the Senate while a Senate committee must approve each item in its inventory. In some cases, so diffuse is the dispersion of authority that fundamental management requirements are overlooked. An officer of the Senate, an official appointed by the President, and a Senate committee each has control over some aspect of the assignment of space, yet none of these offices or any other can report what space exists for Senators or how it is currently being used. An institutional historian could probably find precedents, perhaps even an arcane logic, to explain how the current division of responsibility came to be, but this would neither justify nor remedy the situation. The essence of that situation was well stated by the Commission in its final report:

> An inadequate administrative structure is one of the Senates most severe problems. . . . Improved administration would greatly facilitate the substantive activities of the Senate.

Mr. President, the resolution which Senators BENTSEN and HATFIELD and I are submitting today is intended to rationalize the administrative management of the Senate. To that end, it is premised upon the two major features of the Commission's recommendation in this area. The first of these is that administrative services should be consolidated under a single Administrator with clear lines of authority and responsibility for initiating modern management systems for personnel, budgeting, accounting, auditing, and similar functions. In addition, the Administrator would reorganize and maintain existing technical and administrative services, monitor services provided jointly to the House and Senate, and establish priorities for the use of space in the Senate office buildings and the Senate wing of the Capitol.

The second principal feature of the Commission's recommendation is that the Administrator should be accountable to the Senate, through a council of Senators, for the performance of his duties. Recognizing that management is an important part of leadership responsibility and that the Committee on Rules and Administration has and should maintain jurisdiction for policy decisions upon which administrative services are based, the Commission urged membership for representatives of these groups. Accordingly, the resolution we introduce today would place on an administrative council the majority and minority leaders, the assistant majority leader, and the chairman and ranking minority member of the Rules Committee. In addition, our resolution acknowledges the importance of administrative management to all Senators and the preponderance in this institution of Senators with relatively little seniority. It does this by assigning four places on the Administrative Council to Senators in their first 12 years of service. Specifically a Democrat and Republican each from Senators in their first term and those in their second term shall be nominated by their peers and elected by the full Senate party membership. I believe that the nine-member council which results will be truly representative of the Senate as a whole.

One additional point which ought to be made very clear is that urging the need for improvements in the system of administrative management in the Senate implies no criticism of any of the Senate officers or other administrators who currently help to manage the Senate's business. My own experience has been one of courteous and capable assistance from the Sergeant-at-Arms, the Secretary of the Senate, and other officials who provide our support services. I am sure that my colleagues feel the same way. In fact, it is a tribute to their abilities and efforts that the Senate has operated as smoothly as it has.

It is evident, too, that the experience and expertise of the current Sergeant-at-Arms, Mr. Hoffman, and Secretary of the Senate, Mr. Kimmitt, will play a vital role in moving to a new management system. The present system has excellent administrative officials operating within a very inadequate management structure. The limitations of a system place very real constraints on what can be accomplished by even the most capable individuals. However, the obverse of this case is equally valid. No system, no matter how carefully designed, will ex-

ceed the quality of the individuals responsible for it.

The changes which the resolution calls for will not be made easily or quickly. There will inevitably be a period of transition and the guidance of the Sergeant-at-Arms and the Secretary of the Senate will be needed to make this transition work. This, of course, is in full keeping with the intent of the Commission on the Operation of the Senate. It suggested, for example, in its final report, that the Secretary of the Senate serve as executive secretary to the Administrative Council. I know from conversations with members of the Commission that they felt strongly that the background and judgment of the Sergeant-at-Arms would be critical in directing any incoming Senate Administrator as he begins his difficult task. I am confident that a working system can be devised which utilizes the abilities of these officers.

We all recognize, Mr. President, that internal management reform lacks the intrinsic public interest and immediacy of other issues which this body considers. It is, however, essential if the Senate is to address those urgent issues in the most capable fashion. I am hopeful that the Senate will be able to act promptly and affirmatively on this resolution.

I ask unanimous consent that the text of the resolution be printed in the RECORD at the conclusion of its sponsors' remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, the Senate of the United States faces a staggering workload which generates ever-increasing pressures on the time of Senators and their staff. In the Senate, to be effective is to be efficient. There is not a Member of this body who can afford the luxury of wasted time or effort.

Each of us, in his own office, devotes a substantial amount of time and energy to the development of efficient administrative procedures. Indeed, the Senate does not confine its zeal for efficiency and economy of operation to its own house. We are constantly exhorting the administration and the bureaucracy to look for ways to eliminate wasteful practice and better serve the public interest.

In focusing our attention on the microcosm of our own offices and the larger world of the Federal bureaucracy, I would submit that we have overlooked certain inefficiencies in the administration of the Senate as a whole. Despite the best efforts of talented and dedicated Senate officers, simple housekeeping tasks—the installation of telephones, hanging pictures, arranging for more modern, space-efficient furniture—tend to become difficult and time consuming. As a result, our attention is diverted from the more pressing business of the Senate.

In many respects, the Senate is administered under a system rooted in the 19th century. True, the system has evolved; we no longer subscribe to the green eye shade and ledger theory of management. But the efficient performance of our work is still handicapped by a series of overlapping, inconsistent, illogical jurisdictions. We lack an ability to plan ahead for future needs, an ability that would be a clear requirement for any successful commercial establishment.

It is no secret that space is at a premium in the Senate. Many of our staff members work under crowded, difficult conditions. We are spending $83 million to expand the Dirksen Office Building, yet no clear priorities for space have been established and publicly reviewed.

The report of the Commission on the operation of the Senate released last year makes a compelling case for administrative reform. It highlights inefficient administrative practices and points out that improved administration would greatly facilitate the substantive activities of the Senate. It is critical of our inability to plan for the future, and it suggests that we pay for services we do not receive.

I want to emphasize that my remarks are not intended to detract in any way from the ability, the initiative, or the dedication of the Secretary of the Senate and the Sergeant at Arms. They are doing the best they can to make a creaky, patched-up apparatus serve the public interest. The Senate has impressive human assets, but is shackled by an antiquated system of administration.

The legislation I am cosponsoring today is not directed at anyone. It will not impinge on the operation of Senators' personal offices. Its sole purpose is to give the Senate the tools to do its job more efficiently by enabling it to utilize the advantages of 20th century administrative practices.

Ours is a simple plan. The resolution would establish a nine-member administrative council, composed of five members of the leadership and four first- and second-term Senators. It would also set up the post of Senate Administrator, thereby identifying a single official charged with ultimately managing all administrative and support services.

The Senate Administrator would be appointed and removed by the Administrative Council. The Administrator would develop plans for reorganizing current administrative functions, developing new budgeting and accounting procedures and auditing systems. The Administrator would provide technical and administrative support services to Senators and committees, determine space use priorities—with the approval of the Administrative Council—and monitor the administration of certain joint services.

It is clear to me that this type of reorganization cannot be accomplished overnight. The success of this reorganization will come through careful preparation and planning. In this regard, I foresee the merit in having a substantial period of transition from our current administrative system to this streamlined system. During this crucial transition period, the newly selected Administrator would benefit from the direction and consultation of the Senate Sergeant at Arms who has taken such a concerned leadership role in improving the services provided by his office. The Sergeant at Arms is in a unique position to provide a sensitivity to the political reality of the Senate as well as a commitment to modern management. Clearly, the Senate should capitalize on the talents of the current Sergeant at Arms in this transition process by placing the new Administrator under his direction.

It is also clear to me that the report of the Commission on the Operation of the Senate was correct in noting the important role to be played by the Secretary of the Senate in this new administrative system. As suggested by the Commission report, the Secretary could also serve as Executive Secretary to the Administrative Council. In this position, the Secretary of the Senate would be able to contribute his valuable experience and expertise to the members of the Administrative Council in assisting them with their work.

In short, Mr. President, I feel that this effort, if taken slowly, with the full and able participation of our current officers of the Senate, will meet the administrative deficiencies identified by the report of the Commission on the Operation of the Senate.

I think the need for reform is apparent. The Senate should be prepared to assess its own operation with the same criteria it applies to other agencies of the Government. The people of the United States have every right to demand the most efficient and effective Senate possible.

I intend to make the resolution a priority item of legislation in this session of Congress, and I believe many of the cosponsors feel the same way. I hope this legislation will receive the prompt and sympathetic consideration of the Senate.

The text of the resolution follows:

S. RES. 166

Resolved, That this Resolution may be cited as the "Senate Administrative Reorganization Resolution of 1977".

DEFINITIONS

SEC. 2. For purposes of this Resolution—

(1) The term "Administrator" means the Administrator of the Senate.

(2) The term "Administrative Office" means the Administrative Office of the Senate established by section 3.

(3) The term "Administrative Council" means the Administrative Council of the Senate established by section 4.

ADMINISTRATIVE OFFICE; ADMINISTRATOR

SEC. 3. (a) There is established an office of the Senate to be known as the "Administrative Office of the Senate". The Administrative Office shall be headed by an Administrator of the Senate who shall be appointed by, and may be removed by, the Administrative Council. The Administrator shall be appointed without regard to political affiliation and solely on the basis of fitness to perform the duties of the Administrator. The Administrator shall receive compensation at an annual rate fixed by the Administrative Council.

(b) With the approval of the Administrative Council, the Administrator shall appoint and fix the compensation of such personnel as may be necessary to carry out the duties and functions of the Administrative Office. All personnel of the Administrative Office

shall be appointed without regard to political affiliation and solely on the basis of fitness to perform their duties. The Administrator shall prescribe the duties and responsibilities of the personnel of the Administrative office, and may delegate to them authority to perform any of the duties, powers, and functions imposed on the Administrative Office or on the Administrator.

(c) In carrying out the duties and functions of the Administrative Office, the Administrator may procure the temporary (not to exceed one year) or intermittent services of experts or consultants or organizations thereof by contract as independent contractors, or, in the case of individual experts or consultants, by employment at rates of pay not in excess of the daily equivalent of the highest rate of pay of a member of the staff of a committee of the Senate.

(d) For a period of not exceeding 12 months following the date of the enactment of this Act, the expenses of the Administrative Office shall be paid from the contingent fund of the Senate in accordance with the paragraph relating to the contingent fund of the Senate under the heading "UNDER LEGISLATIVE" in the Act of October 1, 1888 (28 Stat. 546; 2 U.S.C. 68), and upon vouchers approved by the Administrator, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

ADMINISTRATIVE COUNCIL

SEC. 4. (a) There is established an Administrative Council of the Senate which shall consist of—

(1) the Majority Leader, Assistant Majority Leader, and Minority Leader of the Senate;

(2) the chairman and ranking minority member of the Committee on Rules and Administration of the Senate;

(3) two Senators who are members of the majority party and two Senators who are members of the minority party, selected as provided in subsection (b).

The Majority Leader shall serve as the chairman of the Administrative Council.

(b)(1) One member of the Administrative Council who is a member of the majority party and one member who is a member of the minority party shall be a Senator, who at the time of his selection, has served in the Senate for less than six years. He shall be nominated by Senators of his party who have served in the Senate for less than six years and shall be elected by all Senators of that party.

(2) One member of the Administrative Council who is a member of the majority party and one member who is a member of the minority party shall be a Senator who, at the time of his election, has served in the Senate for more than six but less than twelve years. He shall be nominated by Senators of his party who have served in the Senate for more than six but less than twelve years and shall be elected by all Senators of that party.

(3) A Senator elected under paragraph (1) may not serve as a member of the Administrative Council elected under such paragraph after he has served in the Senate for six years, and, if he has served as such a member for more than two years, shall not be eligible for election under paragraph (2). A Senator elected under paragraph (2) may not serve as a member of the Administrative Council elected under such paragraph, after he has served in the Senate for twelve years.

(c) A quorum of the Administrative Council shall consist of five members and the concurrence of at least five members shall be necessary for the appointment and removal of the Administrator.

(d) The Administrative Council shall supervise the Administrator, shall review the quarterly reports made by the Administrator pursuant to section 5(e), and may direct the Administrator to identify such problems and carry out such studies as it finds necessary or desirable.

(e) The Administrative Council shall review the plans submitted by the Administrator under sections 5(b)(1) and (2) and the review and recodification submitted by the Administrator under section 5(c) and, after approving such plans and such review and recodification with such modifications as it considers desirable, submit them to the appropriate committees of the Senate.

DUTIES AND FUNCTIONS OF ADMINISTRATOR

SEC. 5. (a) It shall be the duty and function of the Administrator—

(1) to furnish and maintain all administrative and support services and facilities which may hereafter be transferred to, conferred upon, or delegated to him;

(2) upon request, to provide technical services to Senators and Senate committees;

(3) with the approval of the Administrative Council, to determine the priorities of use of space in the Senate office buildings and the Senate wing of the Capitol and assign such space (including office space) for the use of Senators and committees and other offices of the Senate; and

(4) to monitor the administration of those services provided for the Senate which are provided jointly for the Senate and the House of Representatives.

(b) In addition to the duties and functions prescribed by subsection (a), the Administrator shall—

(1) prepare plans for reorganizing the administrative and support services and facilities provided for the Senate and submit such plans to the Administrative Council;

(2) prepare plans for new budgeting, accounting, and auditing systems for the Senate and submit such plans to the Administrative Council; and

(3) engage in such studies and prepare such plans as may be directed by the Administrative Council.

(c) The Administrator shall prepare a general review and a recodification of the laws and rules and standing orders of the Senate relating to the provision of administrative services and facilities for the Senate, and submit such review and recodification to the Administrative Council.

(d) The Administrator shall, at the request of Senators, furnish information with respect to the basis of plans relating to the provision of administrative goods and services.

(e) The Administrator shall develop a system for personnel records, and guidelines for pay, benefits, and conditions of employment, for employees of the Administrative Office and its subdivisions.

(f) The Administrator shall report to the Administrative Council within 15 days after the close of each calendar quarter on the operations of the Administrative Office during such calendar quarter. Such reports shall include information on administrative goals, work underway, and problems encountered.

AMENDMENTS SUBMITTED FOR PRINTING

AMENDMENT OF THE STANDING RULES OF THE SENATE—SENATE RESOLUTION 5

AMENDMENTS NOS. 256, 257, AND 258

(Ordered to be printed and to lie on the table.)

Mr. ROBERT C. BYRD (for himself, Mr. ALLEN, and Mr. HELMS) submitted three amendments intended to be proposed by them jointly to the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

AMENDMENTS NOS. 260 THROUGH 266

(Ordered to be printed and to lie on the table.)

Mr. GRIFFIN (for himself and Mr. BAKER) submitted seven amendments intended to be proposed by them jointly to the resolution (S. Res. 5), supra.

REGULATION OF SURFACE MINING OPERATIONS—S. 7

AMENDMENT NO. 259

(Ordered to be printed and to lie on the table.)

Mr. FORD. Mr. President, the full energy and Natural Resources Committee has approved an amendment to S. 7 that exempts small coal operators from certain provisions of the bill for 30 months following enactment. The committee amendment requires that this extension of time pertains only to operations conducted under a permit issued before the date of enactment of the bill.

A question has been raised as to whether this provision would allow coal operations to split up into smaller subsidiaries, each of which would fall under the small operator definition. The amendment that I now propose would prohibit any such evasion of the intent of the committee amendment. My amendment specifies that the operation must be under a permit granted before May 2, 1977, the date that the full Energy and Natural Resources Committee ordered S. 7 reported.

ENERGY REORGANIZATION ACT—S. 826

AMENDMENT NO. 267

(Ordered to be printed and referred to the Committee on Governmental Affairs.)

Mr. DOMENICI. Mr. President, on behalf of Mr. SCHMITT and myself I am today submitting an amendment to the energy reorganization bill, S. 826. Our amendment is intended to assure that in the formulation of national energy policy due consideration is given to energy programs and plans previously adopted by the individual States.

It is abundantly clear that actions taken at the Federal level in the energy field in particular have a profound effect on the lives of all of our citizens, as well as on the future conduct of the business of State and local government. This is especially true for policy formulation, where national decisions about energy pricing and resource development will have a dramatic impact on individual and regional lifestyles. We are all aware of the impact on individuals of the many energy proposals presently pending before the Congress. Perhaps not so visible are the problems created for the various geographic regions of the country. The "boomtown" phenomenon in energy resource-rich portions

of the country is but one example of this regional impact.

In an effort to foresee and prepare for the twin impacts of growth and energy developments, States have, within the bounds of their own jurisdictional authority, utilized electric utility commissions, natural gas regulatory agencies, and State energy boards to provide a measure of planning and control to this process. These efforts are to be commended, and should not be lightly swept aside, or even worse, ignored, in the formulation and implementation of national policy.

Our amendment is designed to call this concern to the attention of the Secretary of Energy by: First, providing assurance that presently existing areas of State jurisdiction in the energy field are not altered by this legislation; and second, directing that, where practicable, due consideration is given to the needs of those States whose existing programs and plans are in conflict with national policy.

Mr. President, I hope my Senate colleagues will join with Senator SCHMITT and myself in assuring that this amendment becomes a part of the energy reorganization bill.

NOTICE OF HEARINGS

ENERGY AND ECONOMIC IMPACTS OF H.R. 13950

Mr. METCALF. Mr. President, there will be a hearing regarding the ICF, Inc., report entitled "Energy and Economic Impacts of H.R. 13950." This study was completed under contract for the Environmental Protection Agency and the Council on Environmental Quality. The hearing will be held on Wednesday, May 11, at 8:30 a.m. in room 3110, Dirksen Senate Office Building by the Subcommittee on Public Lands and Resources. Inquiries may be directed to Norman Williams, staff member of the Energy and Natural Resources Committee, at 224–5249.

ADVISORY COMMITTEE ON TIMBER SALES PROCEDURES

Mr. METCALF. Mr. President, I wish to announce, for the information of the Senate and the public, the scheduling of a hearing before the Subcommittee on Public Lands and Resources of the Committee on Energy and Natural Resources on S. 1360, a bill to establish an advisory committee on timber sales procedures.

The hearing is scheduled for May 18, 1977, beginning at 9:30 a.m. in room 3110 of the Dirksen Senate Office Building. Anyone who wishes to testify or who desires additional information concerning the hearing should phone Mr. Steven P. Quarles, counsel to the subcommittee, at 224–9894.

TITLE I OF S. 807, SMALL BUSINESS ENERGY RESEARCH INCENTIVES ACT

Mr. NELSON. Mr. President, I wish to announce that the Small Business Committee will hold hearings on title I, Small Business Act amendments, of S. 807, a bill to provide certain assistance to individuals and small business concerns in the areas of solar energy equipment and energy-related inventions. The hearings will be held on May 25 in room 235, Russell Office Building and on May 26, 424 Russell Office Building, beginning each day at 10 a.m. The Senator from New Hampshire (Mr. McINTYRE) will chair. Witnesses will be announced at a later date.

Further information can be obtained from the committee offices, room 424, Russell Office Building, telephone 224–5175.

VETERANS' LEGISLATION

Mr CRANSTON. Mr. President, the Committee on Veterans' Affairs plans to hold public hearings on Wednesday, May 25, to consider S. 247, S. 1414, and S. 129. S. 247 would extend veterans' benefits to members of the Women's Air Forces Service Pilots; S. 1414 would do the same for Signal Corps telephone operators of World War I; and S. 129 would restore recognition of wartime service to certain Filipino veterans of World War II.

The hearings will begin at 9:30 a.m. in room 318 of the Russell Senate Office Building. Persons wishing to testify should notify Mary Sears, associate counsel of the committee at 224–9126, by Tuesday, May 17.

SPECIAL COMMITTEE ON AGING

Mr. CHURCH. Mr. President, the Special Committee on Aging will conduct hearings on May 16, 17, 18 on the subject: "Health Care for Older Americans: the 'Alternatives' Issue."

Senator CHILES will conduct the hearings. Each hearing will begin at 10 a.m., in room 6226.

The hearings are intended to provide material needed to conduct an examination of progress being made in developing so-called alternatives to institutional care and the effectiveness of Federal policy in this area.

Witnesses on May 16 will discuss difficulties in providing noninstitutional care to older persons.

On May 17, testimony will focus on subjects for developing community-based networks of care.

The Department of Health, Education, and Welfare will discuss current policy on alternatives at the May 18 hearing.

SUBCOMMITTEE ON CRIMINAL LAWS AND PROCEDURES

Mr. McCLELLAN. Mr. President, I wish to announce for the information of the Members and the public that the Subcommittee on Criminal Laws and Procedures of the Committee on the Judiciary will hold open hearings on May 18–19, 1977, on S. 1382, a bill to establish criteria for the imposition of the sentence of death. The sole issue on which testimony will be taken during this hearing will be whether the provisions of the bill meet the constitutional requirements of recent Supreme Court decisions.

On May 18, the hearings will be held in room 2228, Dirksen Senate Office Building, and on May 19, in room 1318, Dirksen Senate Office Building. The hearings will commence each day at 10 a.m.

Additional information on the hearings is available from the staff in room 2204, DSOB, telephone AC 202–224–3281.

FOREIGN CURRENCY REPORTS

In accordance with the Mutual Security Act of 1954, as amended, the Secretary of the Senate herewith submits the following additional reports of the several committees of the Senate, concerning the foreign currencies and U.S. dollars utilized during the calendar year 1976 in connection with foreign travel:

CONSOLIDATED REPORT OF EXPENDITURE OF FOREIGN CURRENCIES AND APPROPRIATED FUNDS FOR FOREIGN TRAVEL, COMMITTEE ON APPROPRIATIONS (AMENDED REPORT) EXPENDED BETWEEN JAN. 1 AND DEC. 31, 1976

Name and country	Name of currency	Per diem		Transportation		Miscellaneous		Total	
		Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency
Amount brought forward			$22,342.35		$31,584.39		$571.91		$56,497.26

JOHN SPARKMAN,
Chairman, Committee on Foreign Relations.

Apr. 22, 1977.

ADDITIONAL STATEMENTS

THE FRUSTRATIONS OF THE SMALL BUSINESSMAN

Mr. TALMADGE. Mr. President, there appeared in the May issue of Nation's Business magazine an excellent article on Billy Carter and the "frustrations of the small businessman."

Billy Carter, in a way that has now become familiar to virtually all Americans, speaks out candidly and forcefully against big Government and its overzealous regulatory intrusions into the private sector. As usual, Mr. Carter does not pull any punches. I believe Mr. Carter reflects the frustration and the anger that is felt by millions of Americans today, especially businessmen who are trying to struggle to make a living and to provide badly-needed employment in the face of what increasingly seems to be overwhelming bureaucratic odds.

I bring this article to the attention of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLY CARTER: FRUSTRATIONS OF THE SMALL BUSINESSMAN

William Alton Carter III, businessman, points to a stack of paper on his desk and says, "A lot of what they ask for in those government forms they send out is nobody's damned business."

Billy Carter, outspoken folk hero, points to his Amoco station down the street and wisecracks, "It's a beer joint—we sell gas as a sideline."

The public image of Billy Carter, brother of the President of the United States, is that of a hell-raising, hard-drinking, irreverent yokel. It is an image that he likes to project, but it is not necessarily the real Billy Carter.

SOUND AND SUCCESSFUL

When he assumes the role of William Alton Carter III, businessman, a role seldom captured in television or newspaper accounts, he is a no-nonsense, hard-driving executive.

He has helped propel a small, family-owned farm products enterprise into a thriving multimillion-dollar business. Much of this growth occurred while his older brother, Jimmy, was governor of Georgia or running for President.

"No matter what you read about Billy in the papers, he is a very sound and successful businessman," one of his business associates in Plains, Ga., says.

Billy Carter, who has just turned 40, is a self-made success. He learned the peanut business from the ground up. Unlike his famous brother, he had only a smattering of college. He has had plenty of practical experience, however. He can look at four tons of peanuts on a truck and tell you within 200 pounds what they weigh, and that is something you don't learn from schoolbooks.

PROBLEMS WITH BUREAUCRACY

In many ways, like other businessmen, small and big, Billy Carter is fed up with the Washington bureaucracy as it affects his business. The infectious Carter grin fades when he talks about worker safety and health laws, air pollution edicts, government paperwork, taxes, and unemployment compensation. The expression turns almost grim when welfare is mentioned.

Some of the problems which bother Billy Carter the businessman could be eased by Jimmy the President if the latter carries out some of the promises he made before and after his election.

Speaking of the Occupational Safety and Health Administration, a thorn in the side of most small businessmen, the President said recently: "If I can clean up the mess in OSHA, I can be reelected." The President also has launched an attack on government paperwork.

Billy Carter, who twice ran unsuccessfully for mayor of Plains, population 683, says he rarely discusses affairs of state with his brother.

"The only thing I'll raise hell with him about is agriculture," he says. Hesitating, he tones down his comment. "I won't say raise hell, but I have called Secretary Bergland [Secretary of Agriculture Bob Bergland] a couple of times."

PROBLEMS WITH OSHA

Operating the Carter warehouse, which buys, processes, stores, and markets peanuts and sells fertilizer, lime, and other farm products, has brought Billy Carter into conflict more than once with OSHA and with the federal Environmental Protection Agency. EPA inspectors from time to time have claimed the peanut shelling process has polluted Plains.

The President is well acquainted with Billy Carter's feelings in some of these areas.

"Jimmy knows what trouble I've had with pollution because I raised so much hell at the state level when he was governor," the younger brother asserts. "He knows how much I've had to spend on pollution."

CARTER FARM LEASED

The Carter family interests include the warehouse, in which the President has controlling interest, and Carter Farms, Inc., a 3,061-acre farm outside Plains which is owned jointly by seven members of the Carter family.

Under an agreement signed by President Carter shortly before his inauguration, the farm has been leased and the warehouse will be sold. The President's holdings in both properties have been turned over in trusteeship to Charles Kirbo, an Atlanta lawyer who is a close friend and adviser to the President. Billy Carter's livelihood depends on the family business, and President Carter has asked Mr. Kirbo to keep that in mind in whatever disposition is made of the properties.

Billy Carter told NATION'S BUSINESS he has been given first option to buy the warehouse, which already has attracted several potential buyers.

"I know what the warehouse is worth, so I'm not going to pay a premium for the Carter name," he says. "I've already got the name. In effect, the warehouse will be placed on the open market for sale, and it will be a straight business transaction."

The Carters spent about $1.2 million on warehouse improvements during the past two years, largely involving a new peanut shelling plant with facilities for additional storage.

"We simply could not meet OSHA requirements in the old plant," Billy Carter says.

Jimmy Carter, Annapolis graduate, designed the plant, and Billy Carter, onetime paint salesman and construction worker, supervised construction.

"That's where I got an education," Billy Carter explains. "I worked with the builders from the first day to the last so I could learn every inch of the operation. When it was finished, I trained the workers."

IRKSOME COMPLAINTS

He estimates that 22 percent of the spending on shelling equipment in the new plant—the total came to $800,000—was dictated by OSHA and EPA requirements. Despite that expense, he says, federal inspectors still are on his back with niggling complaints.

Pointing to the top of a grain elevator where the shelling operation starts, he says, "We had to spend $400 for some guardrails up there, but one man might go up there once a year."

At the peak of the processing season, in the fall, the Carter warehouse employs up to 75 men and women. The number of employees has been falling off as more and more labor-saving devices have been installed, and the trend can be expected to continue.

Unfortunately, the victims of the labor-

saving devices are some of the hard-core unemployed in the area.

PROBLEMS WITH MINIMUM WAGE

"Every time the minimum wage goes up, we have to lay off a few more people," Mr. Carter says. "I'd rather give these people jobs, but I have to look at costs."

At one time he had 24 women sorting peanuts by hand. Virtually all have been replaced by a series of electric eyes which sort the peanuts mechanically.

In the peanut shelling plant that was shut down because it could not meet OSHA requirements, there were jobs for about 35 men and women.

"We are doing five times more production in the new plant, and we can get by with 15 people," Mr. Carter says.

Billy Carter hired a student at a nearby school for problem learners to sweep the plant and do other odd jobs.

"I could have given jobs to five or six boys in that school if it weren't for the minimum wage," he comments.

He says he would favor a two-tiered minimum wage system in which teenagers could be hired at a lower rate.

"Actually, I would much prefer some kind of system where we could hire people at a lower figure and gradually raise them to the minimum wage," he says. "That way, we would have a chance to see if they can do the work, or even show up for work, before giving them a regular job.

"I'm really on the spot. Every time the minimum wage goes up, I have to raise my other employees. It's not fair to have your better employees making the same as those who don't put as much into their work."

He pauses a moment and laughs. "You know, I shouldn't be talking like this. Every time I say anything about the minimum wage, I get more hell. Especially from the unions. But I'm going to say it again. A lot of people simply aren't worth the minimum wage."

PROBLEMS WITH WELFARE

Billy Carter is convinced that Washington is to blame for some of the unemployment in this country, not only because of the minimum wage, but because of unrealistic, unsound, and sometimes ridiculous regulations on unemployment compensation and welfare.

"We have a lot of trouble in this area with welfare," he says. "In Sumter County we have as many people administering welfare and related programs as there are in the rest of the county government. Five years ago we had eight people handling welfare; now there are close to 60. They raise hell if people getting welfare go to work.

"Here's a good example of what I mean. I had a man working for me—a big, strapping fellow—who had some kind of chronic leg ulcer. He went to a new doctor who told him he had to stay off the leg for a couple of weeks. They put him on welfare. At that time the work was seasonal, and he was making as much on welfare as by working. That was 15 years ago.

"I see him every once in a while walking down the street. On Saturday afternoon he's drunk and raising hell. I finally complained to the welfare people, and you know what they told me? 'Well, we check him every Thursday afternoon, and he's always there sitting in a chair with his foot propped up.' I got mad. I said, 'Damn it, if I was drawing what you're paying him, I know damned well that one afternoon a week I'd sit there and watch television with my foot propped up when you come in.'

"The trouble with the welfare program is that the more people they have on the payroll the more they hire, and the more they hire the more the director gets."

Billy Carter is no less disenchanted with the way the jobless pay system is operated.

UNEMPLOYMENT PAY ABUSE

"Our unemployment compensation system is so much abused," he complains. "I guess we brought 50 people here from the state employment office this year when the rush season was on. I know of only one man who took a job and stayed on for a few weeks. The only thing most of them want to do is come out here and get us to sign the slip showing they applied for a job. Then they go back home and continue drawing benefits. We operate 60 and 70 hours a week in the rush season, so we had the jobs if people really wanted to work.

"When unemployment was at the highest, I needed a man to run a peanut drying machine. It would have paid $250 to $300 a week. I couldn't hire a single person. They would rather draw $90 in unemployment benefits every week and pick up food stamps at the same time."

FIRING CHALLENGED

Because of the jobless pay system, Billy Carter finds that firing can be as difficult as hiring.

Several times he caught one of his workers sleeping in the warehouse. On one occasion he had to send the man to the hospital, where an examination showed a heavy concentration of alcohol in his bloodstream. After repeated warnings, Mr. Carter let the worker go because, among other reasons, he worked around dangerous machinery.

State unemployment compensation officials objected to the firing, and Mr. Carter's contribution to the jobless pay system was increased as a result.

"I appealed, but the government ruled in the man's favor," Mr. Carter recalls. "They said that I had no proof the man was drunk on the job, that he was probably only sleeping. I even had the hospital report which showed the man's drunken condition."

TAX INSPECTORS CALL

Being the President's brother doesn't discourage visits by federal tax inspectors. Billy Carter interrupted his interview with a NATION'S BUSINESS editor when two Internal Revenue Service officials called at his warehouse office. Later he explains:

"They came to talk about an audit. Said we were selected at random for a complete check—my records, Mother's, the warehouse's, the service station's, Jimmy's, and the farm's. All six of us at one time—and at random.

"When I heard they were coming over, I put the word out in Atlanta that they'd have to get a court order if they wanted to see all these records. That shook 'em up. I won't do it, of course."

NO. 1 PROBLEM: GOVERNMENT

Ask Billy Carter what is the greatest problem the small businessman has to contend with and he answers with one word—government.

"No question about it, government at all levels, but especially at the federal level," he elaborates.

"I'm not going to deny that some of those OSHA and EPA regulations are good. They are. But I'm talking about all the ridiculous regulations we have to put up with.

"The major complaint I have is that 90 percent of the folks they send here to inspect us don't know anything. We have some kids right out of college who don't know a damned thing. I could tell them this [pointing to his bookcase] is a peanut sheller, and they wouldn't know the difference. The trouble is that they don't educate these inspectors before they send them out."

What, he is asked, would make OSHA and EPA more workable? His answer is simple: "A little common sense."

The Carter warehouse at one time ginned cotton for farmers in the area, but gave it up. Cotton ginning, like mechanical peanut shelling, is noisy, a circumstance which brought Billy Carter and OSHA into one of their confrontations.

WORKS MACHINERY HIMSELF

"All of the employees working around the gin had to wear earplugs," he explains. "So I had to do the ginning. You see, as the owner, there was no way I could be made to wear earplugs. There are about 80 electric motors on a cotton gin, and the only way you can tell when there is a problem is to hear it. You can't convince OSHA about things like that.

"I had to put in an expensive wall across the whole new shelling plant to cut down the noise. That wall is completely worthless for anything else."

After the plant was completed, OSHA ordered Billy Carter to install additional toilets as well as hot water in the washrooms.

"Now they're after me to put a couch in the women's washroom in case someone gets sick," he says. "Hell, I don't have room to put in any couches. So I told 'em to go to hell, and I haven't done it yet."

Does Billy Carter believe his brother will succeed in cutting back federal paperwork?

"I sure hope so."

TIME FILLING OUT FORMS

Until the federal government let up somewhat on some forms that had to be filled out and returned to Washington, according to Mr. Carter, his office staff was spending about 15 percent of their time filling them out.

"Some of these quarterly, semi-annual, and annual reports are a three and four-day job," he explains. "Some are almost impossible to fill out. I had some forms that had to be filled out by the 15th of the month, so for five days before the 15th we didn't do a thing but government paperwork."

Billy Carter says that much of the information sought by government agencies should be seen by only one agency, the Internal Revenue Service, if any.

"Take these crop reports and the agricultural census," he says. "A lot of them have to do with my finances. I don't like that information going through 40 government hands. Me, I'm kind of peculiar. I have six or seven bank accounts because I don't like everybody to know how much money I have in the bank.

"When they do these agricultural censuses, you can almost say the hell with everything else for almost a month because it's going to tie you up that long. I have to help the farmers who deal with us. The only place they can get the information to fill out their own census forms is right here. So we have to go through all our back records to satisfy the government. And you can't get out of it because it's required by law."

TAX REBATES—TOO COSTLY

Mr. Carter used to get a rebate from the State of Georgia for taxes he paid on diesel fuel for his tractors that bring in peanuts from the farms. The voluminous paperwork forced him to forgo the rebate.

"The cost of keeping the records and filling out the forms just wasn't worth it," he says. "Every time a tractor filled up with diesel, I had to send a man out to get a record of the transaction. At the end of the month we had to add everything up and fill out a five-page form. If that wasn't enough, the state had somebody down here asking us for proof. I lost about $50 a month, but it wasn't worth fooling with."

Like all businessmen, Billy Carter is hit by paperwork from all sides. In one EPA check of his new plant, inspectors came across a piece of peanut cleaning machinery which fell short of certain pollution control requirements.

"The permit I had to get to put in the controls was so complicated it cost me $200 just

to get the damned thing filled out," he recalls sourly.

Billy Carter has invested much effort in learning about business. That he has learned well is shown by the fact that the warehouse, during the six years he has been responsible for its daily operations, has seen gross sales shoot up from $1 million annually to $5 million.

BUSINESS STARTED IN 1930'S

Billy learned a lot about the business hanging around the warehouse as a child. He was extremely close to his father, Earl, who launched the business in the 1930's, selling fertilizer, lime, and general agricultural supplies, as well as storing peanuts and ginning cotton. When the elder Mr. Carter died, Billy was only 14, and Jimmy was forced to abandon a career in the Navy to return to Plains and take over the farm and warehouse.

Billy Carter, meanwhile, joined the Marines after graduation from Plains High School and spent four years in uniform, serving for a while in the Far East. He was 18 and on leave from Marine boot camp when he married his childhood sweetheart, Sybil, who was 16.

In 1959, when he was discharged, he tried a succession of jobs—construction work, selling paint in Macon—and enrolled for a brief period at Emory University in Atlanta. In 1962 he went to work with Jimmy at the warehouse.

BUSINESS IN GOOD HANDS

"Miss Lillian," as Jimmy's and Billy's mother is affectionately known around Plains, says the family business is in good hands.

"Billy is more popular with the farmers than Jimmy was," she says. "He's more down to earth. Despite what some people think, Billy is just as well read as Jimmy, and he is really smart. He's well loved, especially by the farmers and the newsmen. His only trouble is he cusses too much and drinks too much beer—but not on duty."

David Reeves, assistant manager of the Carter warehouse, says that "Billy knows everything about peanuts He can pick a peanut out of a truck and tell you the moisture content within five percent. Or he can pull a young peanut out of the ground and predict the maturity date within a week."

Ernest Turner, owner of Turner's Hardware and Department Store and chairman of the board of deacons at the Plains Baptist Church, was a partner in the fertilizer portion of the Carter warehouse business for almost 15 years.

Mr. Turner says

"Billy is a smart businessman He is very capable of running the family business. He gets along very well with the farmers and talks their language"

NOT A DEMOCRAT

While it may surprise some readers, Billy Carter does not consider himself a Democrat.

"Basically, I'm not political," he told Nation's Business "Basically, I'm not a Democrat I voted straight Democratic in the last election for the first time in my life. I vote for individuals, not party"

If Billy Carter is impressed by the political achievements of his older brother, he doesn't let on

"Yes, we chat every once in a while," he says. "But I let him call me, I don't call him"

What does he consider his brother's single greatest attribute?

"His determination to be a good President. I said in the beginning that if determination and hard work would get the presidency, he would be President. I was proved right.

"I'm not saying he'll be an extremely popular President, but he'll get things done They said he owes so much to the blacks and the unions that his hands will be tied. I guess you see who's raising the most hell since he got in: the blacks and the unions."

Billy Carter gives Jimmy Carter high marks for his performance so far.

"I think he's doing a good job, although I'm like everybody else—I'm not extremely happy with all his appointments. There's a couple of them I'd like to see fired."

He won't say who.

Although he ran twice for mayor of Plains—losing by six votes in 1972 and 19 last year—Billy Carter concedes he had little chance of winning "because I'd just as soon drink a beer out in the street."

TRANSFORMATION IN PLAINS

Actually, Billy Carter wanted to be mayor because he loves the town dearly.

He is saddened, frustrated, and angry over the sudden emergence of Plains as a tourist mecca.

"Plains has gone from a quiet little town to the biggest junk shop in the United States," he complains.

Virtually every store along block-long Main Street has been converted into a souvenir shop selling cheap mementos, some demeaning to America's first family. Three bus firms hustle tourists past landmark attractions—the homes of Miss Lillian, the President, Billy, and cousin Hugh Carter; Billy Carter's Amoco station; and, of course, the warehouse.

Tourists are pouring into Plains by the hundreds daily, their numbers to swell by the thousands this summer. There are no hotels or motels. Portable toilets have been installed in a small park. Real estate prices are skyrocketing.

BUSINESS HARDER TO RUN

Billy Carter is finding it harder and harder to run his businesses. He has lost his privacy. Tourists cluster around the Amoco station and the warehouse, waiting for a glimpse or an autograph. Visitors sometimes force their way into his office. He rarely goes to the station, once his favorite hangout.

"Sometimes, to conduct business, I have to go to my lawyer's office, or a beer joint down the road, or just jump in my truck and do business with people while we're driving around," Mr. Carter says.

Tourists tramp over his lawn at home. One demanded admittance at 7 a.m. one Sunday to take pictures inside. As a result of threatening letters, the younger of the six Carter children no longer are allowed to move about freely The Carters recently announced they would have to move out of Plains because of fear for the safety of their children. They have bought a house out in the countryside, 19 miles north of the town, and plan to begin living there this summer.

In a quiet way, Billy Carter is trying to diminish the onslaught on the character of Plains. He recently accepted appointment as one of three county assessors.

SELFISH AND UNSELFISH

"I did this for selfish and unselfish reasons," he explains. "Plains is basically a town of widows. Most of the people here are old and on fixed incomes. With land values shooting up the way they are, the taxes on these people's properties will go out of sight."

Mr Carter will, however, have to give up the assessor's job when he moves from Plains.

As an example of the rising value of property in Plains, he says he can get $1,500-a-month rent on a Main Street building he owns that brought only $40 a month three years ago.

Hiring lawyers out of his own pocket, Billy Carter has successfully fought five rezoning cases in which residential properties would have been made available for commercial development

He says he is convinced that, if the junkshop sprawl continues, "it will be impossible for the people who want to live here to stay, and the town will become a major rip-off spot for the tourists."

CIVIC PROJECTS

If he can't halt the proliferation of souvenir stands, he has at least found a way to convert some souvenir sales into civic betterment. For some years he has held a lease on the old Plains railroad depot, where his brother launched his presidential drive, and has used it to store lime and fertilizer. After the election he helped form a group called Plains Civic Projects—he is president and his wife is treasurer—which opened a souvenir shop in the station.

"Billy has insisted that all the profits be used for worthwhile civic projects," says Ralph Cornwell, a retired Sears, Roebuck merchandise manager who now runs the depot shop. "He'd like to take over one of the old buildings, for example, and show historic movies of this area to the tourists."

Mr. Cornwell says he met Billy Carter about 11 years ago, when he moved to Plains.

LIKES TO MAKE MONEY

"I am and still am very impressed with him. When it comes to money, he is a very serious man. And he is quick to accept ideas on how to make money. I remember he was looking for a cotton gin a few years ago, and I told him about one I had heard was for sale in Tampico, Mexico. He was way ahead of me. He had already contacted the Mexican government and was making plans to buy it."

Billy Carter has hired an agent to handle speaking requests and public appearances as well as to ward off scores of promoters who want him to join in ventures exploiting the Carter name.

AT WORK BY SIX

Except for the pressures imposed on him and his family by the hordes of tourists—"we used to get three a year, and two of them had just lost their way"—Billy Carter has resisted the presidential aura that touches all of the Carter clan, and he clings to his old life-style.

He is usually at his office no later than six in the morning He wears blue jeans or other work clothes. When he is not conducting warehouse business, there is always a coterie of good-old-boy friends who drop in for small talk. But he misses his old hangout, the Amoco station.

Washington leaves Billy Carter cold. The White House has no appeal for him. He would not find it difficult to choose between attending one of his brother's state dinners or drinking beer with his buddies.

"When Jimmy was governor I went to only one function," he recalls. "That was when he had a reception for the Vietnam prisoners of war. These things are too stiff. They don't turn me on at all."

Billy Carter sums up his feelings in a few words:

"I don't like to go anywhere if I can't get back the same night."

SHENANDOAH APPLE BLOSSOM FESTIVAL—50TH ANNIVERSARY

Mr. HARRY F. BRYD, JR. Mr. President, the Shenandoah Apple Blossom Festival commemorated on April 30 and May 1 of this year its 50th anniversary.

During the April 30 ceremony, the Reverend Robert W. Koons, pastor of the Grace Lutheran Church, Winchester, delivered a beautiful prayer, which impressed me so much that I want to share it with my colleagues:

Almighty God, we offer thanksgiving for the wonders of your creation—the blossoming, fruitful apple trees; all orchards and

fields, lakes and streams, mountains and seas: the beauty and bounty of it all.

We penitently confess our irreverence for the earth—the pollution of its air and water, the littering of its land, the ravaging of its resources: the wanton destruction of life.

We pray for the humble awareness that we are Your guests on this planet, that we are to care gently and responsibly for all that belongs to You, and especially that we are to safeguard and enhance the life of every human being on the face of the Earth: in the loving Spirit of Your Son Jesus, in whose name we pray. Amen.

HUBERT H. HUMPHREY

Mr. ANDERSON. Mr. President, my Minnesota colleague and good friend, Senator HUBERT HUMPHREY, was honored recently by the American Political Science Association.

The association added one more title to Mr. HUMPHREY's long list of recognitions—honorary fellow of the APSA's congressional fellowship program. Only two other Americans have been so honored in the history of the program.

Mr. President, it is very fitting that Minnesota's senior Senator was recognized in this way. Not only does his record in this great body include one significant legislative accomplishment after another during all his years of Senate service, but Senator HUMPHREY is also a magnificent embodiment of the great spirit of the Senate intended by the framers of the Constitution when they created this house of Congress.

He is vigorous in his approach to the great issues of the day, effective at the legislative interaction that produces progressive and humane law, sophisticated and knowledgeable in the substance and strategy of the Senate's purposes and processes, cognizant and respectful of the division between legislative and executive powers, and determined to make both work well in the interest of the American society. Above all, he is devoted to the people of this country in the letter and spirit of the Constitution's commitment.

Mr. President, the Nation has rarely seen a public official and Member of Congress with the supreme ability and sensitivity of HUBERT H. HUMPHREY. He is both a people's legislator and a legislator's legislator of the first order. The Congress could not better be honored than by the choice of HUBERT HUMPHREY as an honorary fellow by the American Political Science Association.

I respectfully ask unanimous consent to have printed in the RECORD an editorial from the Washington Star of Monday, May 9, 1977, entitled "Tribute to Hubert Humphrey."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRIBUTE TO HUBERT HUMPHREY

Hubert Humphrey didn't make it to the White House and he didn't make it to be majority leader of the Senate. But he keeps demonstrating how unquestionably he has made it to the top in everybody's esteem as a master of the arts of government and as a man to admire.

The latest evidence came the other night when a couple of hundred men and women who have served on the staffs of senators, House members and Congressional committees via the American Political Science Association's Congressional Fellowship program got together to make Sen. Humphrey an honorary Fellow. They've done that for only two other people—former Secretary of State Dean Acheson and D. B. Hardeman, an aide to former House Speaker Sam Rayburn. It was clear that they meant it to say a lot.

When the senator came to the podium, jaunty as ever in spite of the white hair and what his face tells of the illness he has survived, it was easy to see why. All the excitement and sheer fun of American politics were in the jokes about the Fellows who had worked for him—quite a few through the years. All the American zest and optimism that have given our approach to government its creativity were in the talk about political work done and political work still to be done.

It was a very Humphrey speech. No, not that it was too long—what an irony, anyway, that a politician should get in trouble for being too articulate! It was Humphrey in the way the ebullience encompassed a thoughtful man's ideas and a practical man's experience. That American sense of possibility, so different from kill-or-cure utopianism, was as dynamic when he was talking about our country as one that "exposes its limitations" as when he was harking back to his own origins in a poor Dakota farm town and marveling at what he had been able to do.

It would have been an appealing occasion if it had been merely a bit of recognition for a man who's been sick and stood up to important defeats. But it was something more as well. It was a warming of younger hands and hearts at a primordial flame.

CREEPING MARXISM

Mr. HELMS. Mr. President, many of President Carter's political initiatives during his first 100 days in office, we now learn, were suggested in a previously unpublicized 51-page memorandum that was recently made available to the Washington Post.

The memorandum, known as the "Initial Working Paper on Political Strategy," was written in December by Patrick H. Caddell, Mr. Carter's political pollster. It contains a number of policy recommendations to the President, among which is the suggestion that America abandon free enterprise and embark upon a bold new system.

Caddell wrote:

What we require is not stew, composed of bits and pieces of old politics, but a fundamentally new ideology . . . We desperately need an ideological "paradigm" to replace the "free market capitalist" model that we don't really want . . . American society needs some kind of direction.

A stew, yes. That is indeed an apt description of our mixed economy: heavy doses of Government, sprinklings of free enterprise for decoration, marinated in gobbledygook. But one wonders what Chef Caddell has in mind that is more palatable. Some form of socialism? Perhaps fascism? These will give us direction, whether we like it or not. Or maybe a return to the guide system of the preindustrial period.

Whatever Caddell is cooking up for the President, we can be sure it is a recipe for economic disaster; for there is no such thing as an economic system which will allow for more freedom and produce more abundance than the free enterprise system—at least not in this world.

Contrary to Caddell's spurious claims, what is required is not a new ideology but a deeper understanding of our economic system and a greater appreciation of the benefits derived from free enterprise. In my view, an acre in North Carolina is better than a principality in Utopia. Until the Caddells of this world learn this profound but simple truth, we shall continue to suffer the consequences of their delusions.

Marxism, the greatest delusion of our times, continues to attract followers, in spite of its inherent contradictions, its unhistorical view of man and society, and its false promises. And yet, as Prof. William H. Peterson of Campbell College in my State points out in a recent essay on "Thoughts for May Day, 1977," much of the Marxist ideology has already become a basic ingredient of our own economy—or "stew" as Caddell describes it.

Mr. President, I would like to share Dr. Peterson's timely essay with my colleagues, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THOUGHTS FOR MAY DAY, 1977

(By William H. Peterson, Lundy Professor of Philosophy of Business, Campbell College, Buies Creek, N.C.)

Today is May Day, banner holiday for Communists and Socialists the world over, replete with huge parades, displays of military might, giant pictures of Marx, speeches denouncing capitalism and the decadent West—a propaganda extravaganza trumpeting the triumph of Marxism.

And it is a triumph, if for the West a rather dark one. Consider that Communist nations, from East Germany to the new Socialist Republic of Vietnam, constitute a human Red Sea of some 1.3 billion people, or about one-third of the world's population.

Consider, in addition, another large part of the Marxist world: the noncommunist, nonaligned yet socialist natons where democracy and "human rights" at least substantially still hold—countries like India, Britain, Scandinavia and large parts of South America, Africa and the rest of the world—perhaps around a billion people more.

Clearly the red tide, which only began in the 20th century, is really rolling. True, the tide is not homogeneous; Marxism is not monolithic. Still, over half of the world's population now look, more or less, to Karl Marx, the father of "scientific socialism," as their savior and guiding light, far more people than those who look to Jesus, Mohammed or Buddha. Marxism is overwhelmingly the predominant economic philosophy if not religion of our age. In historical perspective, capitalism is dying.

How did Marx and key Marxists like Lenin and Mao do it—i.e., conquer the world, or at least the lion's share of it? Why are they winning the battle for men's minds?

Insights to the answer can be found in a remarkable if slender 12,000-word tract, *The Communist Manifesto*. This is a sacred text, not unlike the Bible or the Koran, for hundreds of millions of people, and is translated into more than 30 languages. It is also a blueprint for action, a strategy for the Communist millenium. Yet the *Manifesto*, written by Karl Marx and Friedrich Engels, was published 129 years ago in 1848, just weeks before the revolutions that swept central Europe.

Consider its opening line which is just

as true today as it was then: "A spectre is haunting Europe—the spectre of Communism." For today Eastern Europe is enveloped. Tomorrow, Western Europe?

Or consider its view of history as but "the history of class struggles," or how it contends modern capitalism split society "into two great hostile camps, into two great classes directly facing each other: Bourgeoisie (the capitalists) and Proletariat (the workers).

Yet the *Manifesto* concedes: "The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together."

What's wrong then? Mainly, the reason is the workers don't begin to get their fair share of productive income, which in *Das Kapital* (1867) Marx said is 100% (under his doctrine that labor creates *all* value). Instead, workers are subjected to "callous," "minimum" wages, to "naked, shameless, direct, brutal exploitation." Exploitation is equated with profits; profits are at the expense of wages.

The solution? Simple. It can "be summed up in a single sentence: Abolition of private property." The means are also simple: Revolution, "the forcible overthrow of all existing social conditions."

But—and what a but this is—the workers should first, if they can and where they can, i.e., country by country, "win the battle of democracy." They should use their "political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralize all instruments of production in the hands of the State, i.e."—and what an i.e this is—"of the proletariat organized as the ruling class." So the workers are advised to seek "despotic inroads on the rights of property."

Little wonder, then, at the triumph of Marxism. In one way or another, in one degree or another, all the ideas set forth in the *Manifesto* (such as "a heavy progressive or graduated income tax") have been variously adopted by governments throughout the world, with confusion if not chaos the frequent result.

In addition, world wars and world inflation have also made despotic inroads on the rights of property."

Marxists also seem to have triumphed by falsifying the relative shares that workers and owners receive in the division of national and corporate income Marxists have long contended that workers get as little as 20% of the income. But what are the facts? In 1976, according to U.S Commerce Department figures, American employees in both the private and public sectors got 76.2% of the national income. The division is even more striking in the case of corporate income. Here workers received 90.1% and owners 9.9% in the two-way, wages-profits split of divisible corporate income in 1976. In other words, the workers get close to the 100% demanded by Marx—but without Marxism and all that it portends

WELFARE REFORM—MYTHS AND FACTS

Mr. RIBICOFF. Mr. President, the more things change the more they stay the same. Five years ago I wrote an article for the Washington Post, Outlook section, on welfare reform. We were in the midst of the battle on the family assistance plan. In that article I attempted to dispel the myths about welfare because I and many others were concerned that welfare reform should be based on facts, not misconceptions.

Five years later the myths still abound. And these myths must be dispelled before a welfare reform plan is enacted.

I am pleased to see that Secretary of HEW, Joe Califano, is attempting to do just that. In his April 27, 1977, remarks before the Washington Press Club, he outlines the myths and tries to set the record straight.

I ask unanimous consent that Mr. Califano's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY JOSEPH A. CALIFANO, JR.

In a few days from now, President Carter will make his first major statement on welfare since his campaign.

In helping the President prepare for this statement, we have combed the country for suggestions and advice about welfare reform. Meetings and hearings were held throughout the Nation. I personally conducted a ten-hour public hearing. I have asked dozens and dozens of people about alternative reform proposals, sat through innumerable briefings, and received hundreds of letters.

I have been surprised and appalled by what I have heard and learned.

I have been surprised at some of the facts about poverty. The gap between the realities of poverty in America and the public perception of the poor population represents one of the major barriers to enactment of effective welfare reform. I have come to appreciate that any welfare reform proposal must rest on excruciatingly difficult choices on which opposing views are often intensely held.

I have also been appalled at the extent to which our present welfare system is anti-work and anti-family I have come to believe that President Carter understated the matter during the campaign when he characterized the present welfare system as a disgraceful mess.

What the welfare debate in this nation needs is blunt talk about real facts.

Past debates about welfare have too often focused on pernicious myths about the poor in America. These myths have been perpetrated and perpetuated by ignorance, by incoherent and demagogic discussion by public officials, and inadequate reporting by the media. It is imperative that the forthcoming national debate on welfare not focus on phony issues, false choices, or unrealistic expectations that have so clouded past discussions.

At the outset, we must work to dispel the myths and misconceptions concerning the poor and needy that have been, in large measure, responsible for the defeat of past reform measures. The real welfare problem may well be, in fact, the widespread lack of public understanding of what the welfare picture really is—a picture that is complex and inconveniently divergent from our conventional wisdom about it.

Five myths have come to distort public understanding of the poor and welfare.

Myth No. 1—The most pernicious and most widespread—is that people are poor because they don't work and don't want to work, that the welfare rolls are replete with lazy loafers.

The facts are quite different.

Nearly 71 percent of the 26 million poor individuals in the nation represent people that we do not normally ask to work: Children and young people under 16, the aged, the severely disabled, students, or mothers with children under six.

Nineteen percent of the poor population work either full-time or part-time. Thus, 90 percent of poor Americans either work full- or part-time, or are people no civilized society would force to work.

Some 8 per cent are women, most of whom have family responsibilities—mothers with children between 6 and 17, or wives.

Only two per cent of the 26 million poor people even resemble the mythical welfare stereotype—non-aged, non-disabled males who do not work. And Census figures indicate that most of this group is between 62 and 64, ill, or looking for work.

The facts are that the vast majority of household heads in poverty are working; that nearly a third work full-time, all year around, and still remain poor. The poor are poor, not because they won't and don't work; but because when they do work, they do not earn enough money to lift them out of poverty.

Myth No. 2 is that most of the poor are poor for life—that they represent a permanent stagnant group. The fact is that the poverty population is extremely fluid—with sizable numbers of people moving in and out of poverty with remarkable frequency. Each year about 7.5 to 10 million people move above the poverty line, and a like number become poor.

Over a six-year period (1967–1972), only 3% of the American population was poor in every one of those six years. More than one-fifth—21 per cent—of the American population were poor in at least one of those six years. So while the poverty percentage of the American population hovered around 11% during that period, in reality about twice that number of Americans—21 per cent—were in poverty for at least one year of that period. Moreover 30% to 40% of those who were poor in any given year are not poor the next year.

Most of the poor are poor, not because of some inherent character flaw or personal failing, but because of events they cannot control. And many of them do, in fact, regain higher incomes and climb back out of poverty.

Myth No. 3 is that the poor are mostly black and non-white. The fact is that 69 per cent of the American poor are white.

Myth No. 4 is that the poor don't know how to spend their money. The evidence we have shows that low-income people spend a somewhat greater proportion—about 88 per cent—of their income on food, clothing, housing, medical care and transportation than do people with higher incomes.

Myth No. 5 is that many welfare families receive payments that are far too high. The fact is that, in 24 states, the combined benefits of AFDC and food stamps total less than three-fourths of the official poverty income level. That level ($5,500 for a family of four in 1975) has increased along with the price level but has not been increased to reflect the changes in consumption patterns which have occurred since 1955.

These five myths distort the welfare debate and obscure the real problems of the current system. There is certainly no need to resort to myths to criticize our present welfare government assistance programs. These programs—presently costing some $40 billion in Federal funds—sorely need overhaul. There is a good deal of truth in the charge that present programs are anti-work, anti-father, and anti-family.

Many Americans are familiar with the man-in-the-house rule which has been so destructive of family life for decades. But to get a sense of how viciously anti-family and anti-work our present welfare system has become, try these two examples:

In Michigan, a two-parent family with two children, with the father working at the minimum wage, has a total income of $5,678 (including earnings, the earned income tax credit, food stamps and less FICA taxes) and has to pay his own medical bills. By contrast, a single parent family of 4, with a non-working mother on welfare, has a total income of $7,161 (including AFDC, food stamps, and the insurance value of Medicaid).

Should that Michigan mother decide to go to work at the minimum wage, her income rises to $9,530 (including earnings, the

earned income tax credit, AFDC food stamps and the insurance value of Medicaid, less FICA taxes).

The quickest way for that working father to increase his family's income under the Michigan welfare system is to leave his family.

Or take a family in Wisconsin where the father can make more money working halftime than full-time. Wisconsin's welfare system covers two-parent families. Thus, a family of four, with the father working halftime at the minimum wage, has a total income of $8,628 (including earnings, the earned income tax credit, AFDC-UF, food stamps, and the insurance value of Medicaid less FICA taxes).

But that father had better not go to work full-time or his income will drop by some $3,000. If he works full-time in Wisconsin at the minimum wage, his income is reduced to $5,691 (including earnings, earned income tax credit, food stamps, and less FICA taxes). He loses his AFDC–UF payments and his medicaid coverage.

As outrageous as these examples are, there are no simple solutions for dealing with welfare. The tradeoffs involved in designing welfare reform are tough, the choices are hard.

How do we set benefits at adequate assistance levels and introduce an overriding incentive to work?

What is the trade-off between fiscal relief and adequate benefits?

How rapidly should benefits be reduced as earnings rise? As the incentive to work increases, the program's cost and coverage rises rapidly.

Who should be eligible?

Which recipients should be required to work? To what degree, if any, should the government compel mothers with small children to work?

Should public jobs be guaranteed? If so, to whom: single, or two-parent, families with children over 6? 12? 16 or 18?

I believe welfare reform is politically possible. But political consensus requires an end to the widespread acceptance of myths about the poor. I hope the vigorous debate in the months ahead will be based on a realistic understanding of poverty in America and on realistic expectations of what government can do to ameliorate poverty's brutal impacts.

As the discussion continues between Congress, the States localities, and the Administration, I believe we can develop a welfare system that is efficient, fair, and compassionate—a system of jobs and assistance in the tradition of President Carter's campaign promises to reform welfare to reflect the good sense and common deceny of the American people.

LABOR, BUSINESS, AND MONEY—A POST-ELECTION ANALYSIS

Mr. LAXALT. Mr. President, organized labor is a political powerhouse. Its track record in recent elections has been most impressive. What is more, in view of recent proposals for public financing of congressional elections, it seems likely that the political pendulum could swing even further in organized labor's direction.

The campaign finance laws of 1974 and 1976 were intended to end the strong influence of special interests over our elections. Yet they have merely succeeded in helping some such interests at the expense of others.

Michael Malbin's "Labor, Business, and Money—A Post-Election Analysis," which appeared recently in the National Journal, is a superb study of this development, telling us both how it happened and providing some suggestions as to what might be done about it. I ask unanimous consent that the text of this article be printed in the RECORD for the information of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR, BUSINESS, AND MONEY—A POST-ELECTION ANALYSIS

(By Michael J. Malbin)

When Congress amended the campaign finance law in 1974 and 1976, the bills' supporters said they would bring an end to the days when special interests could have undue influence over elections.

It hasn't worked out that way.

The new law has eliminated some of the ways that money can influence politics. But the net result of limiting some contributors has been to increase the power of other big spenders who were permitted to operate as they always did.

The biggest winner was organized labor. The magnitude and sophistication of labor's efforts last year are even more impressive when stacked up against what others could do, particularly on the presidential level. Public financing for the general election campaign shut off private contributions to the two major presidential candidates. Contributions to the national party committees were permitted, but even this was limited. In contrast, labor was able to spend as much as it wanted to in communicating with union members and their families, registering them to vote and getting them to the polls.

While the total spending on these efforts cannot be determined with any precision, a conservative estimate of what they were worth to the ticket of Jimmy Carter and Walter F. Mondale is at least $8.5 million. Uncounted and unreported additional spending almost certainly pushed the total up to or over the $11 million mark, compared with the $21.8 million that the ticket legally was permitted to spend.

By comparison, the top 154 contributors in 1972 to the Committee for the Reelection of the President accounted for only a third of the money that Richard Nixon raised that year.

Some of the provisions of the 1974 and 1976 amendments to the campaign finance law also seemed to be favorable to business, and corporations, in fact, have been forming new political action committees at a remarkable pace in the past two years. But so far, most corporate committees have been cautious and have limited themselves to $500 or $1,000 gifts to incumbent Members of Congress from their own districts or to members of congressional committees that handle legislation important to them. But even if corporations were to give candidates the maximum legal gift of $5,000 per election, they never would match labor's unreported, in-kind contributions. Stockholders almost certainly would sue to prevent massive corporate activities on a par with labor's, even though such activities would not violate the campaign laws.

More important, electoral activities of business suffer from the same liabilities that business faces when it lobbies the government. Businesses often are successful when they concentrate on items that affect them directly, but they tend to dissipate their power when they deal with broader public issues that lack a single "business" point of view around which lobbyists or political action groups can coalesce. Even if there were, a company's specific interests are too important to permit it the luxury of not backing an incumbent because of the broader issues. In this respect, the activities of labor and business simply are not parallel.

Labor and business groups were not the only ones affected by the law, of course. Incumbents, professional fund raisers, ideological purists and wealthy candidates all had their positions enhanced by one or more of its provisions. But these people, even less than those in the business world, have few interests in common.

The net result has been that a law that appeared to be even-handed in theory has proven to be uneven in practice. With the virtual extinction of the individual big giver, a number of different groups appear to be the gainers in terms of political influence. But when the relative positions of these groups are assessed, labor comes out well ahead of the rest.

Labor, not surprisingly, supported the 1974 and 1976 amendments to the campaign finance law. For the future, it supports an extension of public financing to congressional elections and favors universal voter registration. Public financing could leave labor in as dominant a position on congressional elections as it was in 1976 on the presidential. Universal registration would permit labor to divert the resources it now applies to registration to such purposes as beefing up its communications and voter particapation programs. *(For high lights of the campaign finance law, see exhibit 1.)*

LABOR'S EFFORTS

Labor groups contributed $8.2 million to congressional candidates in 1976—an average of $17,500 per district—but that is only a small part of the whole picture.

Members of the labor movement are proud to say that their direct contributions are dwarfed by the rest of their effort, both in terms of the money and the volunteer work involved. "We don't think it's the money that's decisive. It's the services they imply," said Ben Albert, director of public relations for the AFL–CIO's Committee on Political Education (COPE).

But the money is at least a starting point—the necessary condition for labor's massive volunteer network. Victor Riesel, a syndicated labor columnist and frequent critic of labor's power in the electoral process, has asserted that unions spend eight or 10 times as much on political activity as they contribute directly to candidates.

Albert called Riesel "amateurish," but did not dispute his conclusion. He objected specifically to Riesel's failure to break labor's community and "political education" activities into their political and non-political components and to distinguish between the people working on COPE projects who are pure volunteers and those who receive strike benefits or other compensation. When asked for his own estimates, however, Albert refused to give any, saying that bookkeeping complexities made it impossible to do so.

Despite Albert's reticence in coming up with totals, one can identify a few of the bigger parts of the picture. At least four key items have to be included: communications with union members and their families advocating the election or defeat of specific candidates and reported to the Federal Election Commission (FEC), more general communications that escaped the election laws' reporting requirements, registration and voter participation campaigns, and overhead costs.

The 1976 amendments to the campaign finance law provide that a union's communications with its members or a corporation's communications with executive employees and stockholders are not contributions limited by the law. Labor used this exemption to great advantage during the presidential election, where private contributions were prohibited.

Labor legally could have spent its money on communications with the general public. Some labor leaders wanted to do this, but it was rejected. The political advantage of labor's internal communications is that they were but one part of a concerted campaign to convince union members that their vote for Jimmy Carter would make a difference.

Had the message been presented to the public at large without the other parts of the voter participation package, it would have been lost among the rest of the campaign verbiage, opponents said.

More important from a legal standpoint, communications with the general public are permissible under the law only if they are independent of and uncoordinated with the candidate's own activities and only if they are paid by voluntary contributions kept in a separate fund instead of by union dues. To have qualified for these "independent expenditures," labor would have had to sever the intimate ties it had built up with the Carter campaign. This would have damaged the efficacy of the voter participation program and lessened labor's future access to the White House.

By the time the campaign was over, it became difficult to distinguish labor's efforts from those of the Democratic National Committee (DNC) or Carter. COPE research director Mary Zon, for example, was paid by the Carter campaign to serve three days a week as its liaison with labor groups. The DNC's 42-member campaign steering committee included COPE national director Alexander E. Barkan, International Association of Machinists and Aerospace Workers president Floyd E. Smith and United Auto Workers (UAW) president Leonard Woodcock.

This network enabled the DNC and organized labor to target their efforts in a manner that best fit the Carter campaign strategy. It meant that registration efforts could be concentrated in large states that Carter's polls showed to be up for grabs. It also meant that the DNC and labor did not duplicate their efforts. In some key states, labor's registration efforts were almost the only ones in operation.

The only reported expenses in this carefully coordinated effort were the ones associated with direct communications with union members, which were reported only when they were focused on specific candidates. Admonitions to "vote Democratic" did not have to be reported, nor did direct advocacy of a specific candidate if the basic purpose of the communication was not political.

Virtually every newsletter mailed to members in September and October included material praising Carter or criticizing Ford, usually with a picture of Carter on the cover. Almost none of this was reported to the FEC, presumably because the material appeared in regular publications that normally report on union business.

The AFL–CIO did report that six issues of its *Memo from COPE* cost $16,186.59. Since the publication is only one of many that supported Carter during the pre-election period, it can safely be assumed that this figure is only a small fraction of the total cost of labor publications.

The AFL–CIO reported spending $400,558 on all internal communications, $315,982 of which was spent to help Carter. Most of the $289,139 spent by the UAW on internal communications and most of the $120,424 spent by the Communications Workers of America, AFL–CIO, also was spent on behalf of Carter. (See table 1.)

The help that Carter received from labor in this form alone exceeded the sum that Nixon received in 1972 from any single source, with the sole exception of the $2.1 million he got from Chicago insurance millionaire W. Clement Stone. But, since Nixon outspent Carter almost three to one, labors internal communications spending was more important proportionately than Stones gifts to Nixon.

Registration and get-out-the-vote drives were financially and politically more important than internal communications. No hard figures are available of the total costs involved, but COPE and UAW sources say their unions spent about $3 million each on these efforts. By comparison, the DNC's $2 million drive was the biggest one it ever had conducted. Similarly, the Republican National Committee's $3 million vote identification and participation program was its biggest effort to date. (The RNC did not conduct a registration drive.) This means that the nation's two most active union groups spent more to register voters and get them to the polls than the two major political parties combined. And this does not even begin to take into account the similar activities of other unions.

These expenditures are permissible under the law because they supposedly are "nonpartisan." But no one even pretends that they are in effect. By concentrating on its own members in states where the Democratic ticket needed the most help, labor played what probably was a decisive role in Carter's victory.

There have been several estimates that the concerted registration drives conducted by labor, the DNC and some black organization added some eight to 10 million new voters to the polls last year. Of the three, labor's registration efforts are considered to have been the most effective.

COMMUNICATING ON POLITICAL MATTERS

Labor unions and corporations must report how much they spend to communicate with their own members or stockholders and administrative employees if the communications, as their principal purpose, directly advocated the election or defeat of specific candidates.

Following are lists of all unions whose reported communications costs exceeded $10,000 in 1976 and of all organizations that spent on internal communications on behalf of President Ford.

Most of the union spending was on behalf of the Carter-Mondale ticket, and such spending is listed separately. In most instances where unions sent materials to their members advocating the election of more than one candidate, their reports allocated the expenses among the candidates. In a few cases, *National Journal* allocated the spending, based on what appeared to be the common practice.

According to these figures, labor reported spending $26 on behalf of Carter for every dollar anybody spent on behalf of Ford for internal communications, counting only those communications required to be reported.

All reports were filed 30 days after the election except for a few (indicated by asterisks) that were filed 10 days before the election. The Federal Election Commission did not notify groups affected by the reporting requirement until last September. As a result, some spending that falls within the legal requirements may have gone unreported.—Compiled by Sarah Jacobs

TABLE 1

	Total	Carter
Labor for Carter		
AFL–CIO	$400,557.90	$315,981.67
United Auto Workers	289,139.12	240,688.48
Building Construction Trades Department AFL–CIO	177,508.85	41,974.58
Communications Workers of America	120,423.69	106,813.64
Pennsylvania AFL–CIO	101,056.24	9,430.93
Active Ballot Club-Retail Clerks International Association	97,097.98	69,889.97
Ohio AFL–CIO	69,448.00	38,326.00
Michigan AFL–CIO*	45,720.79	------
Indiana AFL–CIO	42,034.16	4,045.98
American Federation of State, County and Municipal Employees	41,014.64	24,170.47
Maryland and D.C. AFL–CIO	34,972.33	3,281.39
New Jersey AFL–CIO*	29,943.00	26,858.00
Texas AFL–CIO	25,196.20	12,946.16
Tennessee State Labor Council*	23,622.42	9,462.61

Council 13, AFSCME, AFL–CIO	12,567.00	6,283.00
Los Angeles County Federation of Labor, AFL–CIO	12,187.50	3,046.87
Rhode Island AFL–CIO	10,307.37	7,124.00
Cleveland AFL–CIO	10,265.66	7,699.25
Others	187,877.66	63,446.18
Total	1,901,703.40	1,051,897.23

	Total	Ford
Organizations for Ford		
National Rifle Association Institute for Legislative Action	$101,528.57	$13,204.92
Libbey-Owens-Ford Co	13,096.38	13,096.38
Dresser Industries Inc	5,245.00	5,245.00
Cooper Industries Inc	5,079.40	5,079.40
PepsiCo. Inc.*	4,485.15	4,485.15
Total	129,434.50	41,110.85

It generally is accepted among experts analyzing 1976 voter registration patterns that registration efforts by labor and black organizations in Ohio and Texas were instrumental in Carter's victory in those states—and thus, ultimately, in the Electoral College. About 43 per cent of all new registrants in the country were registered in Texas.

Even this is not the whole story of what labor's efforts were worth to Carter in terms of dollars. A substantial part of COPE's $2 million overhead must be attributed to the registration drive and other activities related to the national campaign. It would be safe to attribute $1 million of the overhead to these activities.

To these figures should be added a variety of miscellaneous activities. The National Education Association (NEA), for example, spent more than $250,000 to produce a film that contrasted separate interviews with Carter and President Ford. (NEA expenditures on behalf of Carter exceeded $400,000, according to Robert E. Harman, associate director of government relations.)

If reported spending is combined with figures that the AFL–CIO, UAW and NEA revealed to *National Journal*, the total comes to $8.5 million spent on behalf of the Carter-Mondale ticket. And on top of that is still more unreported communications and registration spending. Since Carter was permitted to spend no more than $21.88 million on his own behalf under the campaign law, by a conservative estimate, labor spent for Carter at least half of what he could spend for himself.

BUSINESS ACTIVITIES

Business groups were not much help to President Ford in the general election. Five organizations spent a total of $41,000 on internal communications to help him and that was about it.

But Ford had the power of incumbency in his favor and was able to take advantage of reduced rates for campaign travel by his White House staff and Cabient officers.

Without a hold on the White House now, Republicans will have to look elsewhere for help. Business's poor track record leaves enough Republicans sufficiently depressed to make them talk about pushing harder for labor support themselves.

The source of the dissatisfaction is not hard to find. Although the campaign law amendments have spurred the growth of corporate poltical action committees, few corporations have done more than act as conduits for contributions that in the past would have been made by individual businessmen to the candidates.

Unlike labor, business had done almost nothing new under the campaign finance law amendments. A *Wall Street Journal* survery of top corporations published on Oct. 27, 1976 revealed only a few examples of corporations that actively encouraged political participation. Joseph Fanelli, president of the Business-Industry Political Action Committee (BIPAC), told the *Journal* that the new laws could place business "on the verge of a political renaissance," but added that the problem "is whether the will is there." But business's problem may go deeper than that. It may be impossible, structurally, for business ever to muster the unity of purpose that other groups have.

Up to this point, business groups have been involved in rather unimaginative direct campaign contributions. Despite pleas from the Republican National Committee for support for Republican challengers in marginal congressional districts held by Democrats, most business money went to incumbents of both parties. In fact, Democrats received about half of the more than $7 million disbursed by the 675 business political action committees operating in 1976.

The activities of the largest business political committees were typical. The Northwestern Officers Trust Account, affiliated with the Chicago and North Western Transportation Co. (C & NW), spent $122,611.76 in 1976. It gave $1,000 each to former Sen. Frank E. Moss, D-Utah, and to Sen. Howard W. Cannon, D-Nev., who both served the committee with jurisdiction over railroad legislation. Most of the account's other pre-election gifts were for $500 to $1,000 each to incumbent Senators and Representatives of both parties from states served by the C&NW railroad.

The Nonpartisan Committee for Good Government, affiliated with the Coca-Cola Co., was even more cautious in the way it spent $85,000 in 1976. Its nonpartisanship extended to writing matching checks to the Republican and Democratic National Committees on three different occasions for a total of $6,000 to each. The Atlanta-based firm also gave $1,000 to the Georgia Republican Party and then balanced it by giving $500 each to two Georgia Democrats, Reps. Andrew Young and John J. Flynt, Jr. Other Democratic recipients in the month before the election were former Sen. John V. Tunney of California ($500), Sen. Daniel Patrick Moynihan of New York ($500), Rep. Nick Joe Rahall II of West Virginia ($250) and Rep. Bruce F. Vento of Minnesota ($250).

In January 1977, the committee gave $500 to $1,000 to each of six incumbents to help them reduce their 1976 campaign deficits. The recipients, all Democrats, were Young, Flynt, Elliott H. Levitas and Doug Barnard of Georgia, Max Baucus of Montana and Jim Mattox of Texas.

Trade association committees typically have more money to give away than corporate committees. But except for the Realtors' PAC, which concentrated on Republicans, most of them sprinkled their money among incumbents from both parties who were in a position to help. Some, such as the dairy and trial lawyers groups, tried to support candidates who had supported their positions in Congress. Others, such as the American Banking Association's BANKPAC, tended to concentrate on incumbents with relevant committee assignments, without regard to political party.

Thus, Sen. Harrison A. Williams Jr., D-N.J., and former Sen. Vance Hartke, D-Ind., were near the top of Common Cause's separate lists of recipients of both labor and business contributions. Williams chairs the full Human Resources Committee and the Banking, Housing and Urban Affairs Subcommittee on Securities. Hartke chaired what was then the Commerce Subcommittee on Surface Transportation.

Some political action committees, such as those affiliated with the American Medical Association and with related state associations, follow no clear pattern in their gifts to incumbents. At a Nov. 15 panel sponsored by the American Enterprise Institute for Public Policy Research, Common Cause executive vice president Fred Wertheimer noted the California Medical Political Action Committee's 1974 contributions to candidates in its state ranging from Reps. John L. Burton and Ronald V. Dellums, on the left of the Democratic Party to Reps. Barry M. Goldwater Jr. and John H. Rousselot, on the Republican Party's right.

"The ideology involved there is an ideology of incumbency," Wertheimer said. "Most people in this country assume that business groups are going to give most of their money to Republicans and labor groups to Democrats. When you look at the figures, it appears as if in 1976, business groups will give about half of their money to Democratic Members of the House of Representatives and the Senate. I think the reason is pretty clear. The money is an investment."

Wertheimer said the only answer is public financing of congressional election. But he did not say how public financing could also limit the importance of the indirect spending used so effectively by labor in the publicly financed presidential election campaign.

PACS AND CONGRESSIONAL CANDIDATES

The table lists the number of political committees that were active in 1976 and the amount of money that they gave to congressional candidates in the 1974 and 1976 elections. It does not reflect contributions made by individuals in the listed areas.

	Currently active committees	New committees since Jan. 1, 1975	Contributions to congressional candidates 1976	Contributions to congressional candidates 1974
Business, professional, agriculture	836	537	$11, 562, 012	$4, 804, 473
Business	675	485	7, 091, 374	2, 506, 946
Health	108	26	2, 694, 910	1, 936, 487
Lawyers	8	7	241, 280	
Agriculture	45	19	1, 534, 447	361, 040
Labor	253	92	$8, 206, 578	$6, 315, 488
Miscellaneous	58	26	1, 299, 928	682, 215
Ideological	19	3	1, 503, 394	723, 410
Total	1, 166	658,	22, 571, 912	12, 525, 586

Note: 1976 figures reflect contributions in 1975 and 1976 through Nov. 22. The 1974 figures reflect contributions from Sept. 1, 1973 through Dec. 31, 1974. Common Cause says the period from January through August 1973 was one of limited group activity.

RICH MAN, POOR MAN

Business's cautious backing of incumbents in both parties raises problems for challengers who want to mount serious campaigns without depending on labor. With large individual contribtuors ruled out, the three basic sources of large amounts of money are personal wealth ideological groups and direct mail fund-raising.

This year's most expensive House election campaign—the $1 million-plus blockbuster between Republican Robert K. Dornan and Democrat Gary Familian for the California seat vacated by Republican Alphonzo Bell—is a good example of how all of these sources come into play.

The Supreme Court held in *Buckley v. Valeo* that Congress could not constitutionally place a mandatory ceiling on the amount that candidates could spend on their own behalf, although Congress could set such a limit as part of a public financing plan that a candidate is free to accept or reject.

Familian, a Los Angeles plumbing heir, took advantage of the decision to put more than $370,000 of his own money into his $639,000 losing effort. Familian raised more than $30,000 from labor and another $8,000 from various Democratic Party channels, but his own money was the backbone of his campaign.

Familian was not the only person to take advantage of this part of the *Buckley* decision. The record-breaking campaign waged by Sen. H. John Heinz III, R-Pa., was financed almost entirely from more than $2.5

million of the ketchup heir's own money In West Virginia, Rahall spent $236,000 of his own to capture the seat held by former Rep. Ken Hechler, D, and Democrat Cecil (Cec) Heftel used $483,000 of his money in winning Democratic Sen. Spark M. Matsunaga's House seat in Hawaii.

But spending a vast amount of one's own money does not assure election. Cadillac dealer Richard P. Lorber spent more than $680,000 to win a difficult Democrat Senate primary and then lose the general election to John H. Chafee in Rhode Island by a 58-42 per cent vote. Agribusinessman Merlin Karlock, D, put up more than $410,000 to win only 43 per cent of the vote against the incumbent, Rep. George M. O'Brien, in Illinois. And Morgan Maxfield, a conservative Democrat from Missouri, kicked in $275,000 in losing his race for the seat of the late Rep. Jerry Litton. (Litton had spent more than $200,000 of his money on his successful Senate primary campaign before he died in a plane cash.)

Dornan, a former radio broadcaster, could not counter Familian's wealth with money of his own. But his hardline conservation made him a favorite of some people who knew how to overcome this handicap.

On May 5, the Committee for the Survival of a Free Congress loaned $5,000 to Dornan, which it mailed directly to the Richard A. Viguerie Co. in Falls Church, Va. Dornan also received a $5,000 check from the National Conservative Political Action Committee. Both of these multi-candidate committees raise most of their funds through direct mail solicitations by Viguerie, who probably is the nation's most successful conservative direct mail fund raiser.

By the end of Dornan's campaign, he had received $9,375 from the Committee for the Survival of a Free Congress, $9,500 from the National Conservative Political Action Committee and $1,095 from the Committee for Responsible Youth Politics, a smaller committee for whom Viguerie raises funds.

Much of this money was plowed directly back to Viguerie to raise more. Over the course of his primary and general election campaign, Dornan paid $35,710.15 to the Viguerie Co., $46,074.39 to Diversified Mail Marketing and $4,365.35 to the Diversified Printing Co. The $86,149.89 spent with these three Viguerie companies represented approximately one-fifth of Dornan's $400,346.56 in total campaign expenditures.

The expenditures paid off for Dornan as well as for Viguerie. Dornan was able to raise $241,185.25 in contributions from individuals who did not give more than $100 each to his campaign. That is an incredibly high 60 per cent of his total $404,118.58 in receipts.

Individual large contributions gave Dornan $56,303.50—large in absolute terms but a small percentage of his total. Business and professional groups gave him only $13,825 and various Republican committees gave $28,505. The only groups that helped Dornan before his primary were the ideological groups, and they were most responsible for his other fund-raising successes.

The importance of professional fund raisers goes up as the limits on individual contributions go down. Thomas F. McCoy, a Washington-based fund raiser for liberal Democratic candidates, wrote in an unpublished essay: "We are functioning under a system wherein the supporter with financial outreach has supplanted the supporter with personal funds to contribute.

"A banker supporter solicits other bankers and business interests on behalf of a candidate and raises $100,000. Is the candidate less beholden to him than he would be to a donor of the same amount? Take the case of Phil Walden, the president of Capricorn Records, who reportedly raised $100,000 for the Carter campaign from persons in the rock music industry and promoted a series of rock concerts featuring Capricorn record artists that raised over $750,000 Does President Carter owe less to Phil Walden for the money he raised than he would owe to Max Palevsky, Martin Peretz or Clement Stone (who gave large sums to candidates in the past)?"

McCoy said that the only major difference between the fund-raising entrepreneur and the large contributor is that the general public can find out who the large contributor is through a tough disclosure law, but he cannot identify the fund raisers.

McCoy's point is important, but needs to be kept in perspective. His example makes it clear that campaign finance "reform" does not automatically mean more open or more accountable politics. But it also points out the wide variety of people who can act as fund-raising entrepreneurs. As a result, the entrepreneurs are likely to contribute a series of individual favors to candidates without having a systematic impact on politics as a whole. In this respect, therefore, they are not unlike corporate political action committees.

Labor also can be divided internally, especially when it chooses to enter politics before the party nominees are chosen. Unions rarely get involved in congressional primaries, but one or more were active on behalf of virtually every Democratic presidential candidate in 1976. The matching fund form of public financing did not increase the relative power of any of the unions active at that stage, but the spending limits do put a premium on any organization that can provide volunteer assistance, as labor can. However, no single organization or kind of organization was dominant or is likely to be dominant in a multicandidate primary.

Labor also can split over endorsing presidential candidates during a general election, as it did in 1972. But the flat grant public financing system creates a possibility that never existed before. When labor unites behind one candidate, as it did in 1976, a flat-grant system in which private contributions are prohibited leaves it in a position no other groups can match. Little wonder that labor calls the campaign finance experiment a success.

EXHIBIT 1

REGULATING THE CONTRIBUTORS

Campaign contributions by individuals, corporations, labor unions and special-interest groups are regulated by provisions of the Federal Election Campaign Act Amendments of 1974 (88 Stat. 1263) and 1976 (90 Stat. 475). Here is a summary of key provisions:

Individuals may give up to $1,000 per election to a candidate for federal office. Primary, runoff and general elections are considered separate elections, but all presidential primaries are counted as one election. Individuals may give no more than $5,000 in any one year to all candidates for federal office, but independent expenditures on behalf of candidates have no limits.

Multi-candidate committees may give no more than $5,000 per election to a candidate. These committees must have more than 50 members and must support five or more candidates.

Individuals may contribute up to $20,000 per year to a political party; multi-candidate committees may give up to $15,000.

National party committees may contribute $10,000 to each House candidate and $17,500 to each Senate candidate. They also were permitted in 1976 to spend $3.8 million on behalf of the presidential tickets.

Corporations and labor unions may not contribute corporate or union funds to candidates. Under the 1976 amendments, however, they may use these funds to pay for the administrative and fund-raising costs of a separate, voluntary political contributions fund.

Labor unions may spend an unlimited amount of money communicating with their own members. Expenditures for this purpose must be reported to the Federal Election Commission (FEC) only if the main purpose of the communication is to advocate directly the election or defeat of a specific candidate.

Corporations are granted a similar exemption for communications with their administrative personnel and stockholders.

Unions and corporations may spend an unlimited amount for "nonpartisan" registration and voter participation drives directed at a union's members or a corporation's stockholders and administrative personnel. These expenditures need not be reported to the FEC.

AMERICAN SAYS OF WIFE IN RUSSIA: "I'LL WAIT FOREVER"

Mr. HARRY F. BYRD, JR. Mr. President, on May 4, 3 years ago, Prof. Woodford McClellan of the University of Virginia in Charlottesville, married a Soviet citizen in Moscow. Several months later, Professor McClellan had to leave Russia and return to the United States, leaving behind his bride, Irina, in Moscow because the Soviet authorities refused to issue Mrs. McClellan an exit visa.

To this day, despite repeated efforts by our Government to obtain an exit visa for Mrs. McClellan, the Soviets refuse to allow Woodford and Irina McClellan to be reunited.

The Russians typically give no reason for their cruel refusal to keep this man and wife separated. This is ample justification for the United States to continue to vigorously pursue a long overdue resolution of this matter with the Soviet authorities.

I commend to my colleagues an informative article in a recent issue of the National Observer which details at length the McClellans' frustrating experiences.

I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN SAYS OF WIFE IN RUSSIA: "I'LL WAIT FOREVER"

(By Richard Egan)

Woodford and Irina McClellan marked their third wedding anniversary last week. There was no celebrating, no anniversary kiss, no exchange of gifts. The McClellans haven't seen each other since Aug. 28, 1974, about 16 weeks after their marriage. And they don't know whether they will ever see each other again.

McClellan, 43, is an American who teaches Russian history at the University of Virginia here. His wife, 38, is a Russian. She barely manages to support herself and her 17-year-old daughter, Elena, by giving private English-language lessons in Moscow, where the McClellans were married on May 4, 1974. Since McClellan left Russia in August 1974, the Russians repeatedly have rejected Mrs. McClellan's efforts to obtain an exit visa to emigrate to the United States. And McClellan, who visited Russia a dozen times between 1960 and 1974 without difficulty, has been turned down several times by the Russians in his attempts to obtain a visa to visit his wife.

OBSCENE LETTERS AND CALLS

The McClellans have no idea why the Russians won't allow Irina McClellan and her

daughter to emigrate or allow her husband to visit her. "It's utterly bizarre," says McClellan. "There's no rational explanation on the surface. State Department officials tell me this is the most baffling case ever. No one can figure it out." He is convinced the KGB, the Soviet secret police, is responsible for the refusal to allow Mrs. McClellan to leave.

And McClellan says the KGB has gone beyond merely rejecting visa applications. His wife has received "threatening and obscene letters and phone calls." He, too, has received "obscene, pornographic material" postmarked in Moscow. And recently, he says, similar material has been sent to Elena, his wife's daughter by a previous marriage.

"SHE'S VERY STRONG"

"It's designed to break my wife's spirit or mine," McClellan says as he sits in his small office here on the University of Virginia "grounds," as the university calls its campus. Books, magazines, and assorted papers clutter the room. On his desk are two photographs—one of his wife, the other of Sigmund Freud. (McClellan says he hopes eventually to write a book about the Soviet attitude toward Freud.)

"The Russians would love nothing better than a propaganda victory: American Professor Denounces Soviet Wife, or something like that. Well, they're not going to get it. They may make us wait a long time. They already have. But I'll never give up and I hope she doesn't. I don't think she will. She's very strong, but she's under an enormous strain."

State Department officials acknowledge that the McClellan case is an unusual one, through the Russians frequently raise difficulties over allowing emigration of Soviet citizens married to foreigners. The average delay is about one year, State Department officials say.

McClellan says he is puzzled about why the Russians would allow him to marry Irina if they had decided not to allow her to leave her homeland. Moreover, after the McClellans were married in a civil ceremony in Moscow, the Russian government, which provides all the housing, assigned them "a spacious apartment on the top floor of a brand-new 14-story building in a rather elegant section of Moscow," he says. "They gave me access to archives, paid all my expenses on a study tour to Leningrad and the Baltic states. Everything was normal. They were acting like any civilized country in the world. As I look back on it, I suppose we could berate ourselves that we were living in a fool's paradise, but who could expect after this normal, decent treatment that we would suddenly be classified as criminals?"

MOTHER WORKED FOR KGB

The McClellans met in August 1972 at a resort in the Caucasus Mountains. McClellan left Russia later that month, returning to see her later in 1972 and in March and July 1973. In December 1973 he went back to Russia for an eight-month stay in an exchange program for college professors.

The Russians made an effort to block the marriage Irina's mother, who formerly had held a low-level job with the KGB, at first refused permission for her daughter to marry, but then relented. Russian authorities can require parental permission for marriage regardless of the age of the person marrying, though they seldom do so, says McClellan. "The obvious, logical, inescapable conclusion is that the KGB decided to apply [the regulation] in our case perhaps because my wife's mother had worked for the KGB."

In December 1972 Irina, then a secretary and translator-interpreter at Moscow's Institute of World Economy and International Relations, was told by her employers that she would be transferred to a lower-status job if she did not break off her relationship with McClellan. She refused to do so, resigned from the institute, and got a job teaching English at a Moscow high school.

"YOU KNOW STATE SECRETS"

Irina applied for an exit visa soon after the marriage. She received no reply until a few days before McClellan left Russia. "The KGB denied the visa," says McClellan. "They told her, 'No, you know state secrets, and we're going to give you a year to clear your mind.'"

The Soviet explanation for denying the visa made no sense to the McClellans. "Irina never had a security clearance and never did secret work," says McClellan. "One of the best proofs of that is that they let us get married. If she had known any significant secrets, they would not have let me go over and see her all those times. It's a Catch-22."

Since that first rejection of Mrs. McClellan's application for a visa, the Soviets no longer cite "state secrets" for turning her down. "They just tell her her case is 'complicated,'" says McClellan.

SHE QUIT HER JOB

Only once did the McClellans have hope that Irina might be allowed to leave—and that hope was cruelly dashed. In March 1975 a woman at OVIR, the Soviet passport office, phoned Mrs. McClellan and told her she could emigrate in three weeks. Mrs. McClellan sold some of her furniture, bought suitcases, and gave the required two weeks' notice of resignation from her job at the Moscow high school.

When she heard no further word from OVIR after three weeks, she went to the OVIR office. A man at OVIR told her the OVIR woman was not authorized to tell Mrs. McClellan she could leave. It was a KGB trick to get Mrs. McClellan to quit her job, McClellan says. "Instead of just firing her from her job, they got her to resign so that they could blame it on her," says McClellan. "She couldn't get her job back, and she's been unable to find regular work since."

McClellan has not sent his wife money because, he says, the Soviet government through taxes and a low exchange rate confiscates 90 per cent of the money remitted. Mrs. McClellan's former husband has been providing support payments for Elena, but can end the payments when she turns 18 on May 26. Elena has been barred from continuing her education beyond high school. "Her mother is considered a criminal under Soviet law—she married a foreigner," say McClellan.

SENATORS SIGN PETITION

The McClellans have sent appeals to Soviet leader Leonid Brezhnev and other top Russian officials. They have received no replies. At least a dozen congressmen have interceded with the Russians on behalf of the McClellans. All to no avail. Last February an interfaith group in Indiana opened a public campaign on behalf of Mrs. McClellan and Dr. Naum Salansky, a scientist from Soviet Lithuania. The group got 7,000 signatures on a petition that was forwarded to the Soviet government. In April Salansky was allowed to leave Russia.

Last week, on the McClellans' third wedding anniversary, the interfaith group, several congressman, and McClellan placed a conference call to Mrs. McClellan. The Russian operator told them there was no answer, though Mrs. McClellan had been expecting a call from her husband. On the same day, a petition signed by 34 senators and asking that Mrs. McClellan be allowed to leave Russia was delivered to the Soviet embassy in Washington, D.C.

McClellan believes his best chance of getting his wife out of Rusisa is through a special appeal by President Carter. But, he says, "I couldn't press the right levers in the Ford Administration that would get a Presidential appeal and I don't seem to be able to press the right levers to get a Presidential appeal now.

"The reason I'm asking for special treatment is that my wife has been singled out for special torment by the Soviets. I frankly think that the highest levels of the American Government have not appreciated the seriousness of this case. If they don't take it more seriously, my wife and I are condemned to be apart forever. There is no guarantee that even an appeal from Mr. Carter to Mr. Brezhnev will free my wife. But if it doesn't at least we'll know that the case is hopeless. My wife could try to rebuild her life. It's been shattered almost beyond repair. As for myself I'll wait for her forever."

THE USE OF THE POLYGRAPH AND OTHER TESTING DEVICES FOR EMPLOYMENT PURPOSES

Mr. BAYH. Mr. President, I would like to submit for the RECORD an excellent article which appeared on May 4, 1977, in the Wall Street Journal. This article concerns the administering of a polygraph test and the adverse effects of that examination upon the life of one individual. For some time now, I have been troubled by the use of polygraphs and polygraph-type equipment by employers in both the Federal and private sector. Polygraphs along with psychological stress evaluators and similar devices are used by employers to screen job applicants and to test for misconduct among employees on the job.

To my mind, the use of these devices for such purposes raises serious questions concerning invasions of privacy. A polygraph examination usually requires an individual to disclose all manner of personal information and frequently forces him to reveal past actions which are completely irrelevant for employment purposes. Many jobs are conditioned upon the individual's willingness to take these tests, entirely eliminating any element of choice. However, even in those instances in which the tests are "voluntary," a burden is placed upon the individual who refuses to comply.

In addition to my concern over the threat to individual privacy posed by these examinations, I am also concerned about the legitimacy or validity of the tests themselves. The evidence to date is far too sketchy and inclusive to be persuasive as to the reliability of any of these testing devices.

For these reasons, as chairman of the newly organized Senate Subcommittee on the Constitution, I plan to conduct a thorough investigation into the use of polygraphs and polygraph-type equipment in the area of employment. In furtherance of this study, I have asked the subcommittee staff to contact various individuals and organizations which might have an interest in this issue with a view toward eventually holding hearings and introducing appropriate legislation.

Mr. President, I feel that this is an area of our national life which would benefit greatly by an airing of current practices and by a gathering of necessary additional information concerning polygraph-type examinations. Any one of us could be affected by the use of poly-

graphs. Therefore, I would like to give notice that the subcommittee staff will be undertaking a study of this issue.

Mr. President, I ask unanimous consent that the Wall Street Journal article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

X PLUS Y EQUALS "Z"

(By Jonathan Kwitny)

I have always suspected lie detectors were unreliable. Now I've had a first-hand experience that seems to confirm that suspicion, and on the basis of it, I don't think I'd want to take a lie detector test, and I sympathize with anyone who's pressured into taking one.

The detectors are probably right most of the time, which is better than guessing. But they are not nearly good enough to depend on in serious matters. Even the polygraph establishment concedes that guilty persons might on occasion fool the detector with well-performed denials. But the establishment insists the detector will never point its accusing needles at a subject who is telling the complete truth.

I have less faith.

About a year ago, I started a clipping file on polygraphs, figuring that when I had enough examples of lie detectors telling lies about innocent people, I would combine them into an article. Until a few weeks ago, all I had was the clipping I started out with.

Peter Reilly, the Connecticut youth who has now been exonerated of the murder of his mother, was subjected to a polygraph test by the Connecticut State Police after his arrest. He flunked it. He was convicted and sent to prison. In preliminary tests, he was judged to be "a textbook reactor"—a perfect subject for the test. Then the lie detector effectively labeled Mr. Reilly a murderer, and he isn't one. After his conviction was overturned by a judge who called it "a grave injustice," the state's attorney, in preparing for a new trial, announced he had come across new evidence that placed Mr. Reilly miles away from the murder scene. All charges were dropped.

Now I have learned that a lie detector apparently has been telling lies in a case involving me and a news source.

Early in 1974, I got a call from a Mr. X, whom I didn't know, but who had read and liked my articles. He said he had a friend, Y, who held a responsible position at Combustion Engineering Inc., a major maker of power plants. Combustion had recently reversed a downtrend in nuclear sales by announcing a flurry of new contracts won in bidding against previously front-running competitors. Consequently, its stock had soared.

TAKING UNUSUAL RISKS

Y had told X—and I subsequently confirmed that directly with Y—that the turnaround followed decisions by Combustion to take unusual contractual risks that hadn't been disclosed to the public. The risks involved, first, allowing power utilities considerable freedom to back out of deals they had made with Combustion with little or no cost to the utility long after contracts were signed, and, second, extending broad warranties that even covered equipment changes required by future changes in government regulations. There was evidence of considerable controversy within Combustion over whether to take these risks.

Experts I interviewed in the industry agreed the contracts were both unusual and risky. And although Combustion maintained that the contracts could be met profitably, I found that Combustion's officers and directors had been heavy sellers of the company's stock in the months after the favorable news of the contracts

When the story was published, trading in Combustion stock was halted. When trading reopened, the price of both the common and the preferred fell to about half what it had been, a quick equity wipeout of about $450 million. The victims included numerous Combustion employes who held stock through an employe investment plan.

Combustion reacted predictably: It set out to find Y.

A lie detector was set up. Some 40 or 50 employes were scheduled to take it. Only half a dozen did. For one thing, I found out about it and did a story for the Journal, which Combustion now agrees was "probably a factor" in the decision to call the tests off. But for another thing, the lie detector already had fingered a possible culprit.

A source at the company told me that management thought it knew who gave me the documents. Afraid of hurting Y, I neither questioned Combustion about this nor tried to reach Y again. Evidently, since lie detectors can't be used in court except by consent, Combustion couldn't fire its traitor in a public show and sue him.

Then, a year ago, I began playing tennis regularly with a prominent figure in the power supply industry who had been fascinated by the Combustion episode. He said that Elno Powell, who recently retired as a senior executive at Combustion, had told him shortly after the lie detector tests that Combustion had identified the culprit and "neutralized" him.

My friend, taken aback by the Godfather-like language, replied, "What did you do, castrate him?" He says Mr. Powell just laughed, and replied, "Something like that." Mr. Powell, interviewed recently, says he doesn't recall the details, or what he meant by "neutralized," but confirms that others at Combustion told him they thought they had found the news source.

Subsequently I got a call from one Charles Puzas, who said he used to work in Combustion's contract department. He was given the lie detector test back in 1974 and was told afterwards that he alone had failed it. Another source at the company says he was told the same thing about Mr. Puzas.

Says Mr. Puzas: "I was singled out as the person who visited you. They brought in special attorneys. They interrogated me. Rumors started circulating throughout the company. My bosses became suspect. My associates, my peers, believed that I was the person. They would not confide in me any longer. I just felt I could not work in that type environment, under those conditions." he says. He began drinking heavily and calls himself an alcoholic. He says his family left him because of it. He says he found another job in the industry, but lost it in a lay-off.

When he first called me he was out of work and sounding desperate. A few days ago he reported he has a new job. But he is getting divorced. He blames all those troubles on the Combustion episode. His estranged wife, to the extent she'll talk at all, tends to confirm what he says.

FLUNKED THE TEST

In several weeks of questions and answers relayed through a public relations staff, Combustion conceded that Mr. Puzas left when he said he did, but the company wouldn't disclose the results of the lie detector test. As for R. J. Hallinan—the Combustion general counsel who Mr. Puzas says told him he flunked the test—the Combustion PR people said Mr. Hallinan "doesn't recall whether he said such a thing or not." And the company said it didn't know whether other persons involved also told Mr. Puzas he flunked, as he says they did.

After numerous requests from Mr. Puzas and me to see the polygraph operator's report, Combustion finally allowed Mr. Puzas to see it in the company's office.

But he says the company would not let him copy it or even take notes. He says that the report clearly indicates he failed the test, though it doesn't quite say so specifically. He says it showed he had "an adverse reaction" to 11 key questions, including whether he knew me, whether he had talked with me and whether he had given me documents. He says it concluded with words to the effect that he "could not be excused from guilt," or some such euphemism.

Faced with Mr. Puzas' account yesterday, Combustion conceded that Mr. Puzas had shown "an adverse reaction" to "several questions"—whether it was 11 or not the PR man wasn't sure—and the company declared that the test was, in the PR man's word, "inconclusive." Combustion still wouldn't elaborate on the test.

Said the PR man, "The specific questions are really immaterial. The test overall was inconclusive. In our mind it was not a matter of excusing someone from guilt, it was a matter of establishing facts and events and the test did not enable us to do that. We do not associate Mr. Puzas departure from the company with that test."

But others, including Mr. Puzas, do.

Lie detector experts will no doubt write in complaining that the polygraph doesn't lie, that a poor operator just messes things up. But there's always going to be an operator interpreting the responses, and there's no sure way to identify a "good" operator—any more than there's a way to tell whether a person is lying about something that only he knows.

In this case, there are three persons who know, with a rare kind of absolute certainty, that any lie detector that accuses Mr. Puzas is framing him. Mr. Puzas knows. The real Y knows. And I know.

When Mr. Puzas first called, he told me he wasn't interested in suing Combustion. He said he merely wanted a letter from me that would clear him. I have made contact with Y and have received his permission to disclose the truth about Mr. Puzas.

So this is the letter. I never heard the name Charles Puzas before he called me up a few weeks ago. I had never talked to him before. He had never supplied me any documents or information before, directly or indirectly. And any detector that says different is lying.

THE NATIONAL DAY OF ROMANIANS

Mr. HAYAKAWA. Mr. President, not many Americans are aware of this day's significance in the history of the Romanian people. May 10 is the traditional National Day of Romanians who acquired nationhood in 1866 when Charles, Prince of Hohenzollern-Sigmaringen was proclaimed Prince of Romania. Eleven years later, that is precisely 100 years ago, the Principality of Romania—until then a vassal of the Sultan—proclaimed her independence by severing the outdated bonds that linked her with the Ottoman Empire.

During all those years and up to the present time, Romanians have cherished and revered the 10th of May as their national holiday, the anniversary of happy and glorious events in their history. It remains the symbol of their permanency and perseverence through woes and hardships to reach the ultimate end of freedom and well being.

The foreign rule which now oppresses the Romanian nation has not been able to uproot the people's attachment to the traditional celebration of the 10th of May. In order to try and alter at least its

significance, official celebrations were shifted from the 10th to the 9th of May, anniversary of the Soviet victory. But, though flags are now hoisted on May 9, Romanians in their captive homeland celebrate in their hearts the following day, awaiting with faith and courage the dawn of new times, when freedom shall be restored to them.

As a Senator from California, whose population includes many persons of Romanian descent, I would like to use this opportunity to extend my congratulations and best wishes to the oppressed people of Romania.

I hope they will always find encouragement in the thought that they are not forgotten in this country and that the United States is and will remain their faithful friend.

NATIONAL SECURITY 1977–2001

Mr. CULVER. Mr. President, Wednesday afternoon of this week and through the day on Thursday, a number of Senators and Congressmen are initiating a bipartisan congressional conference on "U.S. National Security—1977–2001," in room 1202 of the Dirksen Senate Office Building. A "dear colleague" letter has gone out inviting all Members of both Houses to cosponsor this informational discussion and to participate in the sessions to such extent as their schedules will permit.

This conference has been set up in response to a growing demand for an updated, high-level dialog on national defense matters, encompassing all viewpoints.

Because of the extraordinary timeliness of such a discussion—considering the resumption of the SALT talks, the budget resolution, and the defense authorization debate—it was decided that it should be held at the earliest possible date.

The format will bring together 20 of the Nation's leading authorities on national security policy and defense spending for spontaneous, roundtable discussion with Members of Congress.

Moderator of the conference will be our distinguished former colleague, the Honorable Stuart Symington who, because of the unique versatility and length of his Government service, has probably the best overview of national security issues of anyone in recent history.

Among the initiating sponsors of the conference are Senators CRANSTON, NUNN, HUMPHREY, ROTH, BELLMON, HASKELL, BUMPERS, PEARSON, SCHMITT, HART, HOLLINGS, and Congressmen WHALEN, CONYERS, SIMON, FASCELL, and FRASER.

The outside participants include such well-known names as Gerard Smith, Ray Cline, Paul Nitze, Herbert York, Gen. George Keegan, Adm. Gene LaRocque, Bruce Russett, Earl Ravenal, Gen. Daniel Graham, Philip Karber, John Steinbruner, and Fred Warner Neal.

The purpose of the sessions is to make available up-dated information to Congress, the administration, and the public on alternative choices in the defense field.

The invited participants were chosen to represent the best exposition of widely differing opinions in national defense philosophy.

The "1977–2001" theme was chosen because it reflects the fact that we cannot make sound national security judgments on the basis of today and tomorrow. Accelerating technological developments and political changes dictate the imperative of long-range foresight and planning in national security matters.

The forum will run from 2 to 5 p.m. on Wednesday, May 11 and from 9 to 4:30 p.m. on Thursday, May 12. It is open to the press and the public. It is being held with the cooperation of the Council on National Policy Planning which assisted in conducting the Conference on Full Employment in December of 1975, sponsored by the Joint Economic Committee. The purpose of the conference is entirely informational—there will be no resolutions or other group action taken—and full transcripts of the proceedings will be made available to the cosponsoring Congressmen and Senators.

REVERSE DISCRIMINATION: A BRIEF AGAINST IT

Mr. LAXALT. Mr. President, in a recent Gallop poll 83 percent of the Ameriman people expressed their opposition to so-called reverse discrimination. Rejecting the argument that to make up for past discrimination certain groups in our society should now be given preferential treatment, this vast majority of Americans feels that ability, as best that can be determined, should remain the main factor considered.

On September 24, 1975, President Johnson signed Executive Order 11246 requiring affirmative action programs for institutions with 50 or more employees holding Federal contracts of $50,000 or more. The stated intention of this action was to overcome the results of past discrimination and to insure future equity in hiring, salaries, and promotion. In the years since the affirmative action program has been in effect it has become apparent that equity has not been insured but rather that discrimination in new forms has arisen which is equally inconsistent with congressional intent.

So-called affirmative action programs have been defended as a way of remedying past injustices committed against certain social groups. Doubtless, injustices have occurred. However, in my judgment, justice requires the current generation to cease discriminatory activities but not to reverse them. Reversal merely continues rather than repairs injustice.

Mr. President, I am a firm believer in nondiscrimination. So, apparently, are a vast majority of Americans. Yet somehow we have emerged from one type of discrimination only to have another type foisted upon us by the Federal bureaucracy.

Ernest van den Haag in the National Review has thoroughly analyzed this bizarre development. I ask unanimous consent that his article entitled "Reverse Discrimination: A Brief Against It," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVERSE DISCRIMINATION: A BRIEF AGAINST IT

(By Ernest van den Haag)

"How am I, as Secretary of HEW, ever going to find first-class black doctors, first-class black lawyers, first-class black scientists, first-class women scientists, if these people don't have the chance to get into the best [schools] in the country?"—Joseph A. Califano Jr., *New York Times*, March 18, 1977.

I

On April Fool's Day Mr. Califano wisely fudged these words he had spoken two weeks earlier. However, he still does not understand that reversing discrimination is inconsistent with enforcing equality of opportunity. Preferential admissions to colleges and professional schools are now widely practiced. So is "affirmative action," which is basically analogous to preferential admissions: it applies to hiring, promotion, and employment in general. Persons belonging to selected minorities or under-represented groups (such as women, or blacks) are admitted or hired if they meet scholastic standards which are specially lowered for them. Or, they are given preference over others who have performed as well or better in meeting requirements. This practice, which Secretary Califano endorses, discriminates, in effect, against those who are being displaced in favor of those who displace them. Its legality has been attacked with respect to state institutions. But the Supreme Court, although it heard the DeFunis case (*DeFunis* v. *Odegaard*, 1974), avoided deciding it because DeFunis, who had sued the university, had by that time been admitted and graduated.

Both preferential admissions and affirmative action are meant to discriminate against discrimination, to reduce discrimination by favoring those discriminated against in the past, or elsewhere. Is this reversal morally justifiable? Can it be effective in achieving its purpose?

In the past Oxford and Cambridge gave preference to the sons of great English families even when their qualifications did not justify it. They were preferred because they would exercise power and influence whether admitted or not. It was thought that society would benefit more by educating these students than by educating others who, even if more meritorious, would be likely to exercise less influence on the course of social affairs. The advantage to the universities was expected to be greater as well—a matter that probably did not escape the attention of the admitting authorities. For similar reasons, American universities in the past gave preference to students likely to inherit great wealth. Is a reversal of this pattern required by justice, or is it socially useful, as the old pattern was thought to be? Let me consider the social usefulness before turning to the justice of reversal.

Could society benefit from the preferential admission of the disadvantaged as it might have benefited from the preferential admission of the privileged? Scarcely. There is no reason to believe that members of groups previously discriminated against will exercise disproportionate social power or influence, regardless of higher education denied or received. Hence their preferential admission cannot be justified by reasoning that their education deserves preference because it would be socially more useful than that of the more meritorious.

Preferential admissions might be useful in other respects. If one assumes that society consists of separate communities, each wanting indigenous leaders, preferential admissions (even quotas) might help provide higher education for the requisite number of members of each group. (This was the justification English universities advanced for giv-

ing some preference to potential Indian and African leaders.) But women, or even blacks, do not form segregated political or cultural communities. Where they do, our present policy is to integrate or at least to desegregate them. Although the "melting pot" image of America simplifies and exaggerates, the Swiss paradigm of full geographical and cultural separation is neither feasible nor desirable in the United States. (Anyway, those who desire it can avail themselves of the private colleges exclusively attended by the groups of their choice.) Preferential admission of the previously disadvantaged cannot rest, then, on the social benefit to be gained by educating the independently powerful, or on the need for indigenous leadership.

Another argument for preferential admission conceives of institutions of higher learning and of other non-political institutions as representative bodies, in which all classes, races, sexes, and religions—however well integrated—ought to be represented in proportion to their share of the population, even if admission standards have to differ for each group to secure its proportional representation. Yet educational or business, unlike political, institutions are not meant to be representative. In politics, representativeness, rightly or wrongly, plays a major role, although it is often hard to see who, and what, is represented: the occupational, class, age, and sex ratios of our representative bodies scarcely reflect those of the population. Still, it would be hard for a white man to be elected in Harlem; and political tickets wisely tend to represent important ethnic, religious, or geographical groupings of voters.

However, institutions of higher learning are not political bodies and cannot represent the voters without defeating their function, which is to teach and do research, not to make political decisions. So too with business enterprises: to require representativeness in faculties, or student bodies, is no more justified than to require representativeness in Chinese restaurants, prisons, hospitals, or opera houses. These institutions have non-representative functions which require admission (or confinement) criteria relevant to those functions, regardless of representativeness. So too with graduate or professional schools. We want the most able and gifted to be prepared for the tasks at hand by the most able and gifted, regardless of sex or race. To demand representativeness would be contrary to the social interest which requires the best surgeon, or the best singer, to be educated for his task, not the racially or sexually most representative.

I can find no utilitarian justification, then, for preferential admission of previously under-represented national, racial, or sexual groups. On the contrary, it would be dysfunctional, favoring persons less able to learn and teach than those rejected, and thus causing society to be served by the less able in the professions education prepares for. *Mutatis mutandis*, this applies to non-educational institutions as well. Let me turn now to non-educational institutions as well. Let me turn now to non-utilitarian justifications.

II

Should the preference given the powerful in the past be reversed for the sake of justice? Surely, to do so would shift rather than repair injustice. Injustice would not be reduced, but merely inflicted on a different group. If the preference given the powerful was wrong because it violated equality of individual opportunity and the rule of admission by relevant qualification only, then violation of that rule in favor of a different group, the powerless, would be no less wrong, however generous the reparative intent.

Individual reparations can be justified if the victim of discrimination and the victimizer are individually identifiable. Thus, qualified persons who were not hired because they were discriminated against may be compensated for their loss. There is a case even for collective compensation, if losses are tangible (e.g., racial firings, confiscations, or de-licensings as in Nazi Germany), and if victimizers and victims, though not individually identifiable, are roughly contemporary as groups. Matters become murky, however, if one considers granting compensation to persons not allowed to acquire the qualifications they might have acquired had they been admitted and which might have led to higher incomes than they actually did earn. Unjust losses certainly were suffered, but we cannot know their incidence and size.

Matters become even more murky if the discriminatory rules were imposed over a long period in the distant past. The incidence of the unjustly achieved advantages and of the unjustly imposed disadvantages becomes diffuse and uncertain, as does the liability for both. Moreover, current generations can bear no responsibility for discrimination imposed by generations past, other than to discontinue it. Can today's Italians be held liable for Caesar's invasion of Gaul, or today's Frenchmen for Napoleon's invasion of Germany? Can Polish or Italian workers be held liable for the fate inflicted on American Indians by the colonists or Jewish teachers and students for disabilities imposed on blacks in the past? or contemporary males for past discrimination against women? We are told (Deuteronomy 24:16): "The fathers shall not be put to death for the children, neither shall the children be put to death for the fathers: every man shall be put to death for his own sin." It is a good rule. Those not responsible for it cannot be asked to compensate for the damage. They can only be restrained from causing further losses.

Justice, then, requires the cessation of discriminatory activities, including discrimination in admissions or hiring, but no reversal. Preferental admissions to repair past injustice might "discriminate for" persons who themselves suffered no "discrimination against," at the expense of persons not responsible for past "discrimination against."

The problem of compensation for the present consquences of past injustice cannot be met, then, by preferential admissions. Still, efforts to solve it are demanded by generosity, if not by justice. Some members of the formerly "discriminated against" groups have native abilities which would justify admission to the schools or hiring by the enterprises to which they have applied, had these abilities not remained undeveloped because of unfavorable circumstances co-produced by past discrimination. Colleges and universities may play a role in helping such applicants to overcome hardships, in order to prepare them for (non-preferential) admission. Pre-admission tutoring may be a reasonable effort to offset the present effects of past injustices in which colleges participated, and thus to make amends.

III

Occasionally it is argued that preferential admissions are needed to offset unfairness inherent in the tests which universities and professional schools use to decide on admissions. These tests are thought to discriminate against qualified persons who belong to disadavntaged groups. Actually, they are quite reliable in predicting the likely degree of success in the professional and graduate schools which use them. They measure relevant abilities, regardless of sex or race. Their value is limited: the tests do not measure nonacademic abilities or human characteristics, nor predict the degree of success in activities for which they are not designed. However, though less than perfect, the tests serve well the limited purpose for which they are used. Preferential admissions, far from offsetting unfairness, instead would introduce it by setting aside the objective measurement the tests permit, in favor of racial or sexual privileges.

IV

Sexes and races are not proportionally represented among students admitted to professional and graduate schools, nor among faculties, nor in the ranks of corporations. This has been regarded as evidence of discrimination against the under-represented. Radicals insist that disproportionate representation is unfair even when it does reflect actual differences in abilities, qualifications, or motivations. Others, philosophically more moderate, believe that equal treatment necessarily would lead to proportional representation of all groups. Thus, disproportionate representation eo ipso demonstrates "discrimination against" the under-represented, even if it cannot be verified independently, and preferential admission may become an appropriate remedy.

If one assumes that all relevant aptitudes, talents, and motivations are equally distributed among classes, sexes, nationalities, and races, then over- or under-representation of any one group in desirable activities necessarily indicates unequal treatment. Such an assumption has never been shown to be true. Widespread abilities, e.g., the ability to be a farmer, a janitor, or a clerk, seem to be distributed fairly equally among groups. But the ability to study mathematics or teach it, or to run a major enterprise, is not that widespread. Universities and corporations cannot draw on a number of talented people in each group proportional to the size of the group. And if the members of different groups are not necessarily equally qualified ab initio, objective tests need not lead to proportional representation. Over- or under-representation does not indicate bias any more than proportional representation of groups among admitted candidates indicates unbiased admissions standards. Racist theories notwithstanding, the over-representation of Jews in important professions in Germany, and the consequent under-representation of non-Jewish Germans, did not indicate a discriminatory policy to place the latter at a disadvantage in favor of the former.

V

Is preferential admission of students, or affirmative action in hiring faculty or executives, a suitable remedy for actual or suspected discrimination? Both policies set numerical goals which, when achieved, would make faculties and student bodies, or executive units, reflect the proportions in which women or various racial groups occur, either in the general population, or among candidates with appropriate prior degrees and specializations.

Outside academic institutions, the advantages of using affirmative action to establish equality of opportunity may at times outweigh the disadvantages, when a licensing or admissions board, or an employer, currently discriminates against a group. There is a *prima facie* indication of discrimination if all those admitted, employed, or licensed are white, or male, even though others wish to be, and if 1) no distinctive qualifications are needed for the job or license; or 2) the distinctive qualifications needed can be shown to be possessed by the rejected candidates in substantially the same degree as by the accepted ones; or 3) the relevant qualifications can be tested, yet no suitable tests are used (or the tests used discriminate irrelevantly). In such cases numerical goals help to attain equality of opportunity. Yet they should be abandoned as soon as improper discriminatory practices cease, for numerical goals necessarily reduce the appropriate discriminations in hiring, promotion, firing, or licensing in terms of actual skill, reliability, diligence, etc.

Numerical goals *ipso facto* disregard the distinctive individual qualifications of can-

didates, or reduce the decisive weight they should have in most cases. They certainly cannot be appropriate for educational institutions, where these distinctive qualifications must be paramount. Further, academic institutions can (and do) properly test individual qualifications for admission. Therefore, numerical goals, far from reducing irrelevant discrimination, perpetuate or introduce it into academic institutions by placing more qualified persons at a disadvantage relative to less qualified or equally qualified ones who belong to an under-represented race or sex. (Where individual qualifications, although of decisive importance, are not always objectively testable—e.g., in hiring or promotions—universities and professional schools usually are willing to submit disputes to arbitrators.)

VI

Consider now the effects on persons, rather than institutions. The effect of academic affirmative action, or of preferential admissions, on those discriminated for is likely to be unhelpful. There are three possibilities. First, there is the unqualified law student who was preferentially admitted. He will drop out because of low grades which were predictable from his entrance test. He may be worse off than before.

Second, some preferentially admitted students graduate by dint of preferential grading or undemanding curricula specially fashioned for them. They profit from the credentials obtained. But the group which was to be favored pays a high price: the black college graduate, PhD, or lawyer who graduated because lower standards were applied to him than to his white counterparts is not as competent as they are and will reinforce the prejudice which maintains that blacks are necessarily less competent than whites.

Third, there is the preferentially admitted black student who, despite low entrance scores, actually catches up and does well without preferential grading. Yet he may never know whether he graduated because he was black or because he deserved to. If he does know, others will not; he will suffer from the image perpetuated by his fellow student whose preferential admission was complemented by preferential grading. Similarly, female or black professors hired or promoted because of affirmative action will not know whether they were hired because they were qualified or because they were female or black; nor will others. Those hired because they belong to an under-represented group though they are not the most qualified persons also will perpetuate the image of low competence of the under-represented group—the image that contributed to discrimination against it in the first place.

The persons excluded because of preferential admissions or affirmative action naturally are no less bitter than those who in the past were excluded by discrimination. Since "discrimination for" merely reverses "discrimination against," it cannot but perpetuate the group hostilities of the past. This applies as well to all enterprises which practice reverse discrimination.

There is also an unattractive arbitrariness about the whole procedure. Unless inclusion into the groups discriminated for is determined by sex, it often must be capricious. Puerto Ricans, Spaniards, Argentinans, and Mexicans are all "Spanish surnamed." It is hard to see what else they have in common, or why they should receive different treatment than Portuguese, Brazilians, or Arabs. And it is not obvious that various white "ethnics" suffered less from discrimination than females did. Yet they are not preferentially admitted, or hired, by affirmative action. These remedies, then, are not only counterproductive and unjust most of the time, but also arbitrarily selective. Perhaps this is a minor defect compared to those already mentioned: if an idea is bad, arbitrary application does not make it much worse. Nonetheless the inherent capriciousness of the scheme and the unavoidable arbitrariness in execution are psychologically repulsive.

VII

Affirmative action and preferential admissions were aided and abetted by persons who felt guilty enough about past discrimination to make amends, even at the expense of innocent third persons. Groups which, rightly or wrongly, felt discriminated against in the past also have supported affirmative action and preferential admissions. But in the main these are creatures of the federal bureaucracy and judiciary. The bureaucracy actually gave birth to the illegitimate child; the judiciary adopted and legalized it.

Fears that a bureaucratic monstrosity would be foisted on the country were voiced in Congress during the debate on the Civil Rights Act of 1964. Such fears were laid to rest when the managers of the bill, Senators Joseph Clark and Clifford Case, submitted a memorandum stating:

"There is no requirement in Title VII that an employer maintain a racial balance in his work force. On the contrary, any deliberate attempt to maintain a racial balance, whatever such balance may be, would involve a violation of Title VII because maintaining such a balance would require an employer to hire or refuse to hire on the basis of race. It must be emphasized that discrimination is prohibited as to any individual . . . the question in each case would be whether that individual was discriminated against." [110 *Congressional Record* 7213, April 8, 1964.]

Further, at the behest of the bill's sponsors, the Department of Justice submitted a memorandum stating:

"Finally, it has been asserted that Title VII would impose a requirement for "racial balance." This is incorrect. There is no provision, either in Title VII or in any other part of this bill, that requires or authorizes any federal agency or federal court to require preferential treatment for any individual group for the purpose of achieving racial balance.

"No employer is required to hire an individual because that individual is a Negro. No employer is required to maintain any ratio of Negroes to whites, Jews to gentiles, Italians to English, or women to men." [110 *Congressional Record* 7207, April 8, 1964.]

Despite the clear language of these memoranda, the bureaucracy has perverted the intent of the legislation. Racial balance and the group preferences needed to attain it are prescribed and enforced. The courts have found constitutional arguments to help administrative agencies override the intent of Congress. Bureaucracy has replaced both democracy and common sense. They can be reinstated only when the citizens push Congress and the courts into disciplining and limiting the bureaucracy.

SENATE JOINT RESOLUTION 50—RESOLUTION TO REQUIRE THE FEDERAL GOVERNMENT TO BALANCE THE FEDERAL BUDGET

Mr. THURMOND. Mr. President, I am pleased to join Senator WALLOP, the distinguished junior Senator from Wyoming, as a cosponsor of his resolution (S.J. Res. 50) that would require the Federal Government to balance the Federal budget and eliminate Federal indebtedness.

I would like to commend Senator WALLOP for his efforts to keep this issue before the Senate of the United States. I share the concern of the distinguished Senator from Wyoming over the danger that continued deficit spending poses to the economic stability of the United States. We, as a nation, just cannot continue to spend more than we take in. I believe that it is in the long-run best interest of the United States for us to have a balanced Federal budget.

As we all know, professional economists are continuously debating the pros and cons of deficit financing and its effect on unemployment, interest rates, inflation, capital formation, and State and local government expenditures. From these debates, there are no clear answers. However, I believe that it is clear, even to the laymen, that there is no "free lunch." There will always come a day of reckoning, a day when we must pay up.

In cases when we choose to "deficit finance" a program, we are either paying by inflation or deferring payment to the future. For instance, it is evident that we are today paying for the social programs initiated in the mid-1960's.

Mr. President, this is what bothers me. Inflation redistributes the cost, but it is still paid for just as it would have been with increased taxes. Unfortunately, in most instances, the American citizens do not realize the connection between deficit spending and inflation. Nor do they realize the heavy and unfair burden which borrowing places on future generations.

In my opinion, the Federal Government should operate on a pay-as-you-go basis where we can more closely associate the costs with the benefits. Let us put the choices out in the open and not hide or disguise them with deficit financing. We should not fool ourselves, and more importantly, we have no right to fool our fellow citizens.

Mr. President, I believe that restoring fiscal responsibility to the Federal Government is extremely important to the future of our country, and I am pleased to join the distinguished Senator from Wyoming in sponsoring this resolution.

JOHN ROBSON—A DEDICATED PUBLIC OFFICIAL

Mr. KENNEDY. Mr. President, last week John E. Robson relinquished his post as Chairman of the Civil Aeronautics Board. At a time when Government regulation and those who do the regulating are under furious attack, John Robson gave the regulatory process a new respect.

First, he diligently worked to make airline regulation work at the CAB. His guiding principles were the public interest and a faithful adherence to the statute by which the CAB derives its authority. Under Chairman Robson's tenure, the final nails were hammered into the casket of the route moratorium—a Board policy predating John Robson by which no competitive route applications were set for public hearing despite a statute which required speedy hearings. John Robson's CAB leadership also coincides with a period where low-fare competitive experiments by the airlines were allowed to take root. Both the consumers and the airlines

benefited during this process—the first group through lower-cost air transportation and the second through higher profits. Chairman Robson also paid attention to the nuts and bolts of administering a regulatory agency that was characterized by delay and inaction prior to his arrival in 1975. With little fanfare, Chairman Robson helped initiate a system to monitor and thus speed up the regulatory process—a system that just recently began operating and which promises to bear its sweetest fruit at some future time.

But, John Robson's contributions were more fundamental to the regulatory process than anything I have mentioned so far. Not content to simply administer honestly and creatively the statute Congress has told all CAB Chairmen to administer over the last 39 years, John Robson took the time and interest to reexamine the statute itself—its rationale, its relevance for the last quarter of the 20th century. And, he concluded that Congress should reduce the power of the very agency he was in charge of, he asked us to reduce regulation and rely, instead, on competitive market forces to protect the public and the industry in the foreseeable future. He was not afraid to take the long view and did not shrink from efforts to have the Board, the Congress, and the executive face the larger questions of public air transportation and the proper role of government in a private airline industry.

The consumer, the Congress, and the airline industry owe John Robson a debt of gratitude for his distinguished public service. If all future appointees to regulatory bodies were of similar caliber, intelligence, and dedication, the task of regulatory reform might be substantially complete.

QUESTIONS AND ANSWERS ON DIRECT ELECTION OF THE PRESIDENT

Mr. BAYH. Mr. President, there continues to be overwhelming popular support for the proposed constitutional amendment to abolish the electoral college and provide for direct popular election of the President and Vice President. On March 7, 1977, I inserted in the CONGRESSIONAL RECORD the report of the most recent Gallup poll. Eighty-four percent of the American people responding with an opinion in that poll supported a constitutional amendment for direct popular election of the President.

The support for this long-needed reform is bipartisan. It has been embraced by liberals and conservatives alike and by an overwhelming majority of the people in every region of the country. Among the organizations which have taken a strong position in support of the direct election amendment are the American Bar Association, Chamber of Commerce of the United States, AFL-CIO, UAW, League of Women Voters of the United States, and Common Cause. A number of other national organizations also have endorsed direct election, including the American Federation of Teachers, the National Small Business Association and the National Federation of Independent Business. Recently I was advised that the American Society for Public Administration adopted a resolution in support of Senate Joint Resolution 1, the direct election amendment.

The direct election amendment has been studied thoroughly by members of the Senate Judiciary Committee during the past several months and it has been the subject of widespread public discussion. Indeed that public discussion has been continuing for many years. A number of years ago I prepared a list of the 10 most frequently asked questions about direct election of the President and the answers to those questions. Recently the League of Women Voters of the United States worked with the staff of the Senate Judiciary Subcommittee on the Constitution in updating those questions and answers.

Mr. President, we in the Senate owe a debt of gratitude to the League of Women Voters. Their study of direct election has been characteristically thorough and thoughtful. I would like to share with the Senate and insert in the CONGRESSIONAL RECORD the questions and answers on direct election of the President on which I have been pleased to cooperate with the League of Women Voters.

I ask unanimous consent that the questions and answers be printed in the RECORD.

There being no objection, the questions and answers were ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS ON DIRECT ELECTION OF THE PRESIDENT

Question 1. Would direct popular election weaken the two-party system?

Answer. Whatever the historical reasons for the initial appearance of two parties on the American political scene, most political scientists are agreed that its continued existence is due mostly to the fact that in the United States political contests are decided in single-member districts. In other words, in an election there is but one prize to be won. The electoral mechanics of the single member district, in terms of its effect on the party system, are such that they tend to force factions to combine in order to be certain of capturing a popular vote plurality and victory. Since direct popular election would not affect the nature of the Presidency, and it would remain a single member office, there is little likelihood of direct election splintering the parties.

Conversely, the simplest way to splinter the parties would be to offer a share of power to factions in proportion to their relative strengths. Direct popular election, unlike other proposed changes in how we elect our Presidents, would avoid the prospect of multiple parties by offering only one prize, thus maintaining the incentive to coalesce around the two major parties.

In addition, S.J. Res. 1 proposes a 40 percent plurality requirement as a further safeguard against a proliferation of the parties. The 40 percent requirement would encourage potential splinter groups to continue to operate within the framework of the two party system, since no minor party could reasonably hope to win 40 percent of the total popular vote. At present, it should be pointed out, third parties are encouraged to enter close Presidential contests in the hope of playing a balance of power role—as in 1948 and again in 1968. In S.J. Res. 1, in the unlikely event of a runoff, only the two top vote-getters would participate, which would discourage minor parties from entering the contest, since it is highly improbable that they would be among the top two.

If splinter parties were to survive under direct popular election, it would become necessary for them to expand their political base and become, in effect, national parties. Traditionally, political organizations are based on state and local foundations. For a party to have true viability, it must be able to compete for county sheriff, commissioner, mayor, congressman and governor, as well as for the Presidency.

Direct popular vote can actually strengthen meaningful grass roots political organization. Under the present system, there is little incentive to increase the margin of victory or decrease the margin of defeat in any given state, because a candidate receives the state's entire electoral vote whether the popular vote margin is one vote or one million. In an election by direct popular vote, every precinct committee-man in each party would know that every extra vote registered and cast would actually count in the national total. This system would in reality increase the incentive to vote and strengthen meaningful political activity.

Question 2. What effect, if any, would direct popular election have on our federal system of government?

Answer. Direct popular election is perfectly consistent with the constitutional principle of federalism, which recognizes the dual existence of the states and the national government as separate entities. The Presidency, within this constitutional framework, is a national office, and the President, in fact as well as in theory, is the Chief Executive of all the people. Therefore, the choice of a President should rest with all of the people.

As former Senator Mike Mansfield pointed out in a statement urging the abolition of the electoral college:

The Federal System is not strengthened through an antiquated device which has not worked as it was intended to work when it was included in the Constitution and which, if anything, has become a divisive force in the Federal System by pitting groups of states against groups of states. As I see the Federal System in contemporary practice, the House of Representatives is the key to the protection of district interests just as the Senate is the key to the protection of State interests.

These instrumentalities, and particularly the Senate, and the principal constitutional safeguards of the Federal System, but the Presidency has evolved, out of necessity, into the principal political office . . . for safeguarding the interests of all the people in the states. And since such is the case . . . the Presidency should be subject to the direct and equal control of all the people.

Question 3. How would direct popular election affect the distribution of political power between large states and small states and between urban voters and rural voters?

Answer. Some spokesmen for urban America have claimed that we should retain the present electoral system because it represents "the only effective hold on power that the urban population centers have in the federal government today." On the other hand, some spokesmen for rural America have stated that the present electoral vote formula, which entitles each state to as many electoral votes as it has Senators and Representatives, inflates the voting power of the citizens of the smaller states. Such is the dichotomy of the large state-small state argument. In all fairness, both sides of this argument are theoretically correct.

The ratio of electoral votes to population indicates that the smaller states have a mathematical voting advantage under the present vote formula embodied in Article II

of the Constitution This theoretical advantage, however, is offset by the effects of the unit rule. Under the unit rule, all of the state's electoral votes are awarded to the candidate who wins a popular vote plurality—regardless of whether the plurality is one vote or a million votes The consequence of this "winner-take-all" system is that Presidential campaigns and political power are concentrated in the large, closely contested urban states, where entire state blocs of electoral votes can be won by the narrowest of margins. The campaign strategists are keenly aware that the candidate who carries the eleven most populous states and the District of Columbia is elected President even if he is soundly defeated in the remaining thirty-nine states. In those elections where the large electoral vote states divide evenly, the mathematical advantage of the small states can become an effective advantage In those elections where the large electoral vote states gravitate towards the same candidate, the practical advantage of the unit rule for the large states becomes self-evident

Direct popular election's greatest merit is the fact that it eliminates all of the weighted factors in the election process. Regardless of the statistics of any given election, the direct popular vote removes any political advantage that urban groups or rural groups may find in the present system Under direct election, the unit of voting is the individual vote. Each vote would count the same regardless of where it is cast Therefore, it is the individual who would benefit from direct popular election

There can be no denying that a community or a state with large numbers of residents would have greater political impact under a popular vote plan than a less populous neighbor. But under direct popular vote each community the same size would have the same influence on the electoral process This is not the case under the present electoral college system Today's political campaigners stop in Oakland, California and ignore Omaha, Nebraska, of similar size The reason is California's large electoral vote.

Under direct popular election each vote counts the same; communities of one thousand, ten thousand or five hundred thousand people will have the same effect on the outcome of the election as any other community the same size—whether in a large state or a small one.

Question 4. Would popular election produce delayed results, and lead to uncertainty because of recounts?

Answer. The vote counting mechanics of direct popular election would be exactly the same as those now used in statewide elections for Governors and United States Senators The separate states would have the primary responsibility. The essential requirements of an accurate and speedy vote count have been met in thousands of direct elections throughout the United States In New York and California millions of popular votes are cast and tabulated without difficulty There is no reason why similar requirements cannot be met in the election of the President In fact with the ever-increasing use of mechanical vote counting devices, the whole election process is likely to become more streamlined

In any close election, regardless of the system used, a recount is a possibility The pertinent question here is, would the chances of a recount be greater, or increase the uncertainty of final outcome to a greater degree under direct election than is the case today under the electoral college system

Those concerned with a popular vote recount envision a recount of 70 million votes starting at vote one and proceeding to vote 70 million. A more realistic procedure would give each state the responsibility of conducting its own recount. Of course Congress would have to establish the regulations governing this procedure, including the criteria which would have to be met to qualify a state for a recount. Then all of the states granted a recount would proceed to recount their votes during the same time interval. Thus, from a practical standpoint, the time required for a popular vote recount under direct election would be the time required to recount the votes in one state.

How does this compare with the recount problem under the electoral college system? Clearly, the possibility of a recount exists under the present system whenever the electoral vote tally is likely to be close—particularly where the change of a few popular votes in one of the major states can change a large bloc of electoral votes from one candidate to another

In 1960, a recount was conducted in Hawaii, and whereas Nixon had been adjudged the winner in the initial return, Kennedy was determined the final victor by the recount The final outcome in Hawaii was not forthcoming until the last part of December

Question 5 What about the incentive for fraud under direct popular vote?

Answer Opponents argue that direct popular election will increase the temptation for widespread voting fraud. In truth, however, it is the present system that encourages voting irregularities because a handful of fraudulently procured popular votes can determine the outcome of a large bloc of electoral votes Who can forget Illinois in 1960, where charges and counter-charges of a stolen election were freely exchanged? Under direct election, fraud—if it did occur would affect only the actual number of popular votes involved. It would not, as under the present system, produce a distorted statewide result.

Question 6 Will direct popular election mean federal control and regulation in each precinct?

Answer Under the provisions of S.J. Res. 1, the places and manner of holding elections and regulations governing inclusion on the ballot would be prescribed, in the first instance, by state legislatures subject to a reserve power in Congress. The primary responsibility would be with the states. The reserve power would be used only in cases where there had been arbitrary state action excluding major party candidates or abuses such as the constant changing of polling places in an attempt to deny the ballot. This procedure parallels the provisions of Article I, Section 4 of the Constitution, governing the election of Representatives and Senators.

S J Res 1 specifies that qualifications for voting in Presidential elections should be the same as those for voting in Congressional elections The qualifications for voting for members of Congress, as spelled out in Article I, Section 2 of the Constitution, are actually set by state law, since they are tied to the qualifications necessary to vote for members of the "most numerous branch of the state legislature" In the event that at some later date the disparity in age and residency requirements among states would present a significant problem, the power is reserved for Congress to seek uniformity in these two areas But the major thrust of S J Res 1 is to permit the states to set the qualifications for voting in Presidential elections and also to run the election process, as is now the case in Federal elections which choose Senators and Representatives to serve in the Congress of the United States.

Answer A 1977 Gallup poll revealed that 84 percent of the people who responded with an opinion favored a constitutional amendment for direct election Regional statistics are

Midwest 87 percent
South 79 percent
East 80 percent
West 85 perecnt

An impressive number of national organizations have carefully reviewed the electoral question and declared their support for the direct election plan. Among these are the American Bar Association, the U.S. Chamber of Commerce, the AFL-CIO, the United Auto Workers, the National Federation of Independent Business, the National Small Business Association.

The direct election amendment passed the House overwhelmingly in 1969 but became enmeshed in a Senate filibuster and was never voted on in the Senate.

Question 8. Under the direct popular election, won't the ten largest states be able to dictate the outcome?

Answer. Only if we make the unrealistic assumption that every voter in the ten largest states will vote for the same candidate. This has never happened. In fact, the large states are precisely those where election results are the most evenly divided.

Question 9. Would either the district plan or the proportional plan correct the flaws in the present system?

Answer. In terms of more accurately reflecting the popular will, the district plan represents no improvement over the present system. In effect, it merely shifts the "winner-take-all" formula and its attendant inequities from fifty statewide elections to electoral districts. In 1952, for example, the district system would have so distorted the popular will that President Eisenhower's 55.1 percent of the popular vote would have produced 70.6 percent of the electoral vote. Or, to use another example, President Johnson's 61.8 percent of the popular vote in 1964 would have given him 86.6 percent of the electoral vote under the district plan. It is important to remember that these distortions are built into the district plan and could easily produce a President who was not the first choice of the American people.

The glaring inequities that can result from the district plan are clearly illustrated by comparing the returns from the First and Fifteenth Congressional Districts in Illinois in 1964. President Johnson carried the First District by a 167,458 popular vote margin. Senator Goldwater, in contrast, won the Fifteenth District by only 71 votes. Under the district plan, both candidates would have received one electoral vote. The main defect of the district system, then, is that it completely discounts the size of the vote and the margin of victory. The winner is not necessarily the candidate with the most votes.

The proportional plan, it is true, would provide us with a more accurate reflection of the popular vote than either the present system or the district plan, but it still could not guarantee the election of the popular choice. A computer study revealed, for example, that a Presidential election decided by 500,000 votes (in 1968 the margin was 499,704) had a 25 percent chance of backfiring under the proportional plan and producing a minority President.

Under very easily imagined circumstances, the proportional plan could produce exactly the kind of result we find so unsatisfactory in the present system. If one candidate won most of his or her electoral votes in the small, safe states, and the large states were fairly evenly divided, the popular vote winner likely would be the electoral vote loser. In fact, this is exactly what would have happened in 1896 had the proportional system been in effect for the McKinley-Bryan race. McKinley captured 51.1 percent of the popular vote, and Bryan 46.7 percent of the nationwide total. By dividing each state's electoral vote proportionally, however, Bryan would have emerged as President.

The proportional plan, in addition, would have the very undesirable effect of stressing the values of one party states and rewarding states with low voter turnouts. In the 1968 Presidential election, for example, President Nixon captured 43 percent of the popular

vote in Virginia. Under the proportional plan he would have received 5.2 electoral votes. Vice President Humphrey won 43 percent of the popular vote in Missouri, a state with the same number of electoral votes as Virginia. Humphrey's 43 percent of the Missouri vote, therefore, would have likewise provided 5.2 electoral votes. However, it only required 590,315 popular votes to produce Nixon's electoral votes in Virginia, while Humphrey's 5.2 electoral votes were based on 791,444 popular votes—a difference of 201,129 popular votes.

The only system which guarantees that the President will be the candidate who receives the most votes is the direct popular election proposal.

Question 10. What is the purpose of the 40% run-off provision of S.J. Res. 1? Doesn't this increase the chance of a Presidential run-off?

Answer. Quite the contrary. The purpose of the 40 percent provision is to minimize the chances of a run-off and strengthen the traditional two party system of our political structure. To have true viability, a minority party must seek to affect the outcome of the election by preventing either major party from winning in the first election. To accomplish this goal under a 40 percent provision, a minority party would have to capture at least 20 percent of the popular vote. However, if a majority of the popular vote was required to win, even a relatively insignificant splinter party could prevent a final decision in the event of a closely divided popular vote between the two major parties.

We are searching for a system that has the maximum amount of credibility and certainty. Americans have become accustomed to accepting the credibility of a President who received less than a majority of the popular vote (i.e. Nixon, Kennedy, Truman, Wilson). But reason would dictate that there is a floor of nationwide support below which a President's credentials would be seriously questioned. Forty percent of the popular vote seems, historically, to represent a reasonable line of demarcation. In fact, only one President in history received less than 40 percent of the popular vote. In 1860 Abraham Lincoln received only 39.76 percent of the popular vote, but his name was omitted from the ballot in 10 states.

Thus, it would seem that the 40 percent popular vote level meets the necessary minimum of national support required for presidential credibility. In addition, the chance of an election producing results in which one of the candidates received less than this figure, thus necessitating a run-off, is relatively remote.

ROMANIAN INDEPENDENCE DAY

Mr. CASE. Mr. President, I congratulate all Americans of Romanian descent on the occasion of the 100th anniversary of the achievement of Romanian independence and the founding of the independent kingdom of Romania. On May 10, 1877, Romania—along with her ally, Russia—fought for the independence it had already proclaimed from the Ottoman Empire and defeated the Turks on the battlefield. The Congress of Berlin in 1878, confirmed Romanian independence and on May 10, 1881, Charles I was crowned the first King of Romania. After World War II, however, Romania fell under the dominance of the Soviet Union, and so the country has once again lost her freedom.

Romania is one of the 35 participating countries in the Helsinki agreement of 1975 and, as a member of the Commission on Security and Cooperation in Europe—otherwise known as the Helsinki Commission—I am particularly concerned with the problem of Romanian implementation of their promises, especially in the area of human rights. In connection with this, I am heartened to hear that the Manchester Guardian reports the Romanian Government has already released the writer, Paul Goma, and is going to grant amnesty to 28,000 people, including dissidents, to mark the 100th anniversary of Romanian independence. I hope that this information is correct.

Last month, the Senate, in showing its concern and friendship for the people of Romania, approved legislation authorizing $20 million to assist victims of the recent earthquake in Romania.

Once again, let me extend my best wishes today to all Romanian-Americans and let us all work together so that Romanians, wherever they are, will be free to practice their religious, cultural, and political rights as they see fit.

THE LETHAL DILEMMA

Mr. SPARKMAN. Mr. President, on May 2, Senator CHURCH made a provocative speech at the Massachusetts Institute of Technology, entitled "Arms, Energy, and the Atom." In view of the importance of having a full and thorough public dialog on nuclear energy policy, I ask unanimous consent to have Senator CHURCH's speech printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ARMS, ENERGY, AND THE ATOM: THE LETHAL DILEMMA

(By Senator FRANK CHURCH)

The terms of reference given to me for this lecture were that I should speak on any aspect of change and security, subject only to the request that I do so within the time frame of possible development over the next two decades. In his letter of invitation, your President, Jerry Wiesner, put it thusly: "A central and new factor in the present world situation is that the exploitation of science and technology has so accelerated the rate of change of man's condition that our traditional means for dealing with political, economic, social and military change are no longer adequate to the task."

This statement well describes the nuclear weapons proliferation dilemma. For here we have a classic case study of human technology outpacing our political capacity to tame the very atom which may either bestow energy salvation or lead us to destruction. That is the issue I wish to discuss with you today.

I do so with trepidation. For me to discuss the complexities of nuclear technology at M.I.T. is rather like my going to Mayo's to give a lecture on open heart surgery. Still, public policy, even in the most technical of fields, must ultimately be decided by elected officials. Every member of Congress must, therefore, do the best he can to grope with such subjects and communicate his conclusions to the public, at large.

The Administration's nuclear energy strategy has four major elements: (1) defer indefinitely nuclear fuel reprocessing; (2) restructure our nuclear breeder program by deactivating the ongoing effort to bring about its commercialization; (3) fund research and development in alternative fuel cycles "which do not involve direct access to materials usable in nuclear weapons"; and (4) increase substantially the number of conventional nuclear power plants (the light water reactors), together with our uranium enrichment capacity to fuel them both at home and abroad. In effect, by deferring nuclear fuel reprocessing and the introduction of the breeder, the Administration is attempting to avoid entering the plutonium stage of nuclear energy development. Plutonium, it is felt, increases the danger of nuclear weapons proliferation to an unacceptable level of risk. By our unilateral renunciation of plutonium-based breeder reactors and our offer to other nations of a guaranteed supply of enriched uranium to fuel their conventional reactors, the Administration hopes to set an example which others will follow.

However well-intentioned, I am convinced that the Administration's nuclear energy policy is a formula for nuclear isolationism. It will reduce—not enhance—U.S. influence in shaping worldwide nuclear policy. Thus, instead of advancing the control of nuclear weapons proliferation, our self-imposed restraint runs the grave risk of leaving an international vacuum, which is an invitation to nuclear anarchy.

I believe the Administration proposal is flawed for at least two reasons:

First, it does not take sufficient account of the energy vulnerability of countries lacking our resource base. The United States still produces nearly 60% of its oil needs, although imports have grown to alarming proportions. Moreover, we have massive coal reserves, oil shale potential and large domestic uranium deposits. But other industrialized nations like France, West Germany and Japan, and most developing countries, are not so fortunate.

These energy-deficit countries have also been traumatized by the 600% rise in the price of oil mandated by the OPEC cartel since October of 1973. During the past three years, the 13 oil exporting nations of OPEC have accumulated payments surpluses of $150 billion. The interest alone on the consumer debt brought about by these huge surpluses amounts to as much as the oil importers were paying for the oil itself before 1970. And the debt keeps mounting. Presently, the OPEC governments are taking in about $45 billion more each year than they can buy back in imports. Britain and Italy, borrowing to pay for the oil ran out of private credit last year. Portugal, Spain, Greece and Turkey are heading into trouble now, with Belgium, Denmark, and Finland not far behind. France, practicing austerity, is still able to borrow privately. But efforts to stimulate the French economy before next year's critical election will undoubtedly lift its import bill.

The breeder program is the only technology now on the horizon which holds out the promise of relieving Europe and Japan of an unremitting dependence upon foreign-held fuel supplies. The singular advantage of the breeder is that future models, on the basis of known technology, should produce more fuel than they consume. A breeder program makes possible the use of the otherwise worthless uranium 238 (which comprises 99.3 percent of natural uranium), and this becomes a potential fuel resource of incalculable value. Indeed, the United States already has in storage tons of tailings containing purified uranium 238 which, if used in a breeder program, could produce an electrical equivalent five times larger than all the oil in the Middle East!

Neither the governments in Western Europe nor Japan are going to remain bound in an energy straitjacket if they have a chance to achieve, through the breeder program, eventual energy independence. John Anderson, the energy specialist for the Washington Post, after a trip to major European capitals, concluded:

"The major European powers have already gone a very long way in their commitment to the development of plutonium breeder reactors France and Britain have both had experimental breeders running since the 1960's. Germany has one in operation now, and there's another under construction in Italy. As for the much bigger commercial breeders, France has now decided to go ahead with the world's first- the 1200 megawatt Superphoenix. A 1300 megawatt breeder is under design in Britain.

"But they won't be competitive, in economic terms, unless they are widely used There is going to be fierce pressure on European governments to export these machines, to help pay for the enormous development costs. The German sale of the plutonium reprocessing plant to Brazil isn't the last of these cases It's more likely to be only the first."

The second flaw in the Administration's program is that it fails to offer a satisfactory substitute for the world's diminishing supply of oil. According to a CIA study made public recently, global oil supplies will begin to fall short of world demand by 1985, a few short years away! In the face of this dire forecast, the Administration hopes to persuade other nations to stick with conventional reactors and agree to "one-use-only" of the enriched uranium with which they are run. Such a "throw-away" policy involves burying the used fuel rods with the unspent uranium and newly-created plutonium still inside, after they are removed from a nuclear power plant.

Inasmuch as the spent fuel rods can be reprocessed and recycled through the reactors again (adding 30% to the energy originally produced), and since the plutonium manufactured by the fission process could fuel the breeder (thus assuring the world an ample energy source for generations to come), the Administration's plan is viable only if the supply of natural uranium were virtually, unlimited.

This, of course, is anything but the case The Administration relies upon a Ford Foundation study which assumes that there will be far more recoverable uranium found in this country than intensive exploration has indicated. The Ford study estimates a 3 7 million ton reserve figure But a series of studies by federal agencies, including one conducted by the National Academy of Sciences, have concluded that the known and probable reserves of uranium in this country total about 1.8 million tons. Such a quantity would provide only one-half of the nuclear energy production required by the United States alone between now and the end of the century. Even if the Ford Foundation prediction proved true, it is still apparent that the United States would be unable to produce, from its own natural uranium deposits, a sufficient supply of enriched uranium to meet our own needs and those of our foreign customers, besides We ask, in effect, that by abandoning the breeder, they exchange one depleting source of fuel, oil, for another, natural uranium. How can we expect them to do it?

Moreover, recent disclosures have shown that the foreign uranium production market may be susceptible to cartelization by a few producers Prices have jumped to OPEC-type levels, so much so that the Westinghouse Corporation is now enmeshed in litigation which endangers its solvency as it was forced to renege on uranium supply contracts which had assumed relatively stable prices. In short, it is unrealistic to believe that other fuel-deficient governments are going to confine themselves to multi-billion dollar conventional reactor programs, while relying upon a future supply of natural uranium which is unsure in quantity and susceptible to drastic price manipulation

So we should not be surprised that oil-deficit nations are even now turning in the opposite direction, toward protectionist energy policies

A Brazilian Government white paper on nuclear energy summed up this sentiment:

'Recent historical developments have demonstrated the dangers of relying heavily on external sources for the satisfaction of the basic input needs of the economy . . . To avoid what happened in the case of oil—it was imperative that the solution in the case of nuclear energy be one that enabled the country to reach the indispensable autarky in the medium term.

'In other words, it was not acceptable to replace one form of dependence for another—the economic growth of the country, or its mere subsistence, cannot be dependent upon 'third countries' decisions as to prices and supplies of essential fuels."

Like it or not, in the post-OPEC world the breeder reactor has become the symbol of the nationalistic drive for energy independence. If there was any doubt on this score, surely it must have been dispelled by the April 23 West German Government announcement approving a four-year, $2.7 billion program of energy research, focusing on nuclear-power and plutonium-based reactors.

As against the energy potential of the breeder program and the reprocessing stage which is a necessary preliminary to the breeder, the Administration has cited the danger of nuclear weapons proliferation. It is important, therefore, to try to understand precisely what that danger is. Halting nuclear energy short of the plutonium stage will not eliminate the risk of proliferation. As the Ford Foundation study observes, the requirements for making nuclear weapons can be reduced to three:

1 Uranium,
2 Trained Personnel; and
3 Facilities to produce enriched uranium or plutonium from the natural uranium.

While uranium is unevenly distributed and most countries are dependent on imports, relatively little is needed to manufacture a bomb Indeed, India obtained the requisite amounts from the imported fuel for its research reactor Most of the technology necessary for a weapons program is readily available to scientists and engineers. The Ford study acknowledged that a weapons program is certainly within the capabilities of developed countries, and of many developing countries And, although a very large investment has so far been required for uranium enrichment, new methods on a much smaller scale are in various stages of development. Today, it is easily within the means of any of a dozen advanced non-nuclear states to build a centrifuge plant adequate for a modest weapons program.

As Representative Mike McCormack noted in a recent article in the Washington Post:

"The reason that weapons have not been made from commercial nuclear power plant fuel is that it is much cheaper and simpler to make nuclear weapons from natural uranium using facilities designed and built exclusively for that purpose Trying to divert nuclear power plant fuel into weapons production is the most expensive, clumsy, dangerous and inefficient way for any nation to make a weapon."

For these reasons, I believe that our energy policy must feature the reprocessing of spent fuel in the near future, accompanied by the research and development necessary to enable us, by the early 1990's, to place on the market some form of breeder technology. At the same time, I believe that this country must take the lead in strengthening and extending existing institutions like the International Atomic Energy Agency. We must do what we fell short of doing in the 1950's and '60's, namely, devise an international framework which will enable all non-weapons states to meet their genuine energy needs with nuclear power, while minimizing the risk of nuclear weapons proliferation.

The problem now, as I see it, is to devise an effective system of international controls. If we begin by laying down an American commandment: "Thou shalt not have access to nuclear reprocessing or possess breeder reactors," not only will we fail, but we will exacerbate nationalistic passions and lose the opportunity to build upon the embryonic international institutions which now exist.

Almost 25 years ago, the United States admitted that we could not prevent other countries from acquiring and developing nuclear technology. In his "Atoms-for-Peace" address to the United Nations on December 8, 1953, President Eisenhower outlined a new American policy based upon the recognition of this truth. He proposed the creation of a new organization under the UN to assist countries in developing nuclear energy for peaceful purposes. Recipients of this assistance were to agree to international inspection, in order to prevent diversion of materials for weapons use. As the world leader in nuclear technology, the United States sought to influence the peaceful development of this vast new energy source while, at the same time, restricting its use in building weapons arsenals.

So we took the lead in the creation of the International Atomic Energy Agency (IAEA). Ever since, the IAEA, with our strong support, has furnished technical assistance and materials to participating countries and has developed and administered a system of safeguards. Meanwhile, the United States, carrying out its commitments under the IAEA Statute and the Treaty on the Non-proliferation of Nuclear Weapons, has helped other countries acquire, research and power reactors. We have been the world's major supplier of nuclear materials, equipment, technology and training. But the infant system of international inspection and control that we fathered has not kept pace with the growing need.

I would, therefore, suggest that we abandon any new and demonstrably futile attempt to contain the flow of nuclear technology and try instead to channel it in directions that will provide adequate supplies of energy while minimizing the potential for making nuclear weapons. We should aim toward eventual international ownership and control of the fuel cycle necessary to sustain commercial reactors in all non-weapons states. Regional uranium-enrichment and reprocessing plants should be established under the auspices of the IAEA. This agency should own all the nuclear fuel in its global system, be responsible for the fuel's security, and accountable for its use. Fuel elements could be leased to the participating nations on the condition that the spent rods would be returned, and that each reactor in which they are inserted would be subject to IAEA inspection.

No plutonium or other weapons material would ever be produced in a form which could be used for weapons fabrication; the fuel would be blended with other materials to make it unworkable for bomb construction. For example, the reprocessing would produce only blended uranium and plutonium, usable for fuel elements, but unworkable in a weapon.

Fuel fabricating facilities would be built immediately adjacent to the chemical separation plant, as would a facility for classification of all their waste for deep burial. New fuel elements could be slightly irradiated as a last step before being shipped from the facility. Thus, they would require the same heavy shielding that is necessary to return irradiated fuel elements from a nuclear plant.

Such a system of international supply and control would not only provide maximum protection against diverting fuel to weapons but would meet the legitimate demands of the non-weapons states for an assured supply of nuclear fuel at a fair price. Just as the American Government now sells enriched uranium to commercial reactors in this country, the IAEA could make its fuel available to participating states at cost.

The system I have described would also furnish the best insurance against terrorists. By dealing only in irradiated fuel, it would be necessary to steal at least one, and perhaps several, 50-ton shipping casks, in order to obtain enough material to make a single weapon. Furthermore, it would be necessary to extract the weapons material from the hot fuel rods, a feat requiring elaborate facilities. This should reduce the potential for elicit diversion for weapons material virtually to zero.

I do not underestimate the formidable task of establishing such a global system. But while we work in that direction, our national policies should constitute the example of how such a system might work. In this regard, I agree with Congressman Mike McCormack, the Chairman of the House Science and Technology Subcommittee, who recently observed:

"Of course no system is perfect or foolproof. It should be obvious, however, that this nation and the world can have the energy required for economic stability and a high degree of nuclear security as well.

"If some nation decides that, in spite of all the attendant problems, it is determined to obtain nuclear weapons, then it will obviously be much easier to make the weapons outside the fuel cycle, as was done by India. This could be done secretly today, regardless of any restraints the United States places on its own energy programs. It is more likely to happen if the United States does not provide leadership for a workable program to assure adequate controls and supplies of energy.

"Above all else, this nation must lead, and from a credible position. The other nations of the world do not believe that we can provide them with nuclear fuel unless we have a breeder program and unless we recycle and process our fuel."

BEAM WEAPON THREAT

Mr. GOLDWATER. Mr. President, an editorial appearing in the May 2 issue of Aviation Week and Space Technology has caused a great deal of concern and interest from not just the scientific and military communities, but from the general public at large. The editorial, written by Robert Hotz, is entitled "Beam Weapon Threat," and describes in as much detail as can be gathered the development of the laser beam as a weapon by the Soviets. Naturally, the United States has been working on this concept for a long time, but it has only recently come to our attention that the Soviets have also been in this field and have made advances that should be of concern to all Americans. I ask unanimous consent that this editorial and an article be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BEAM WEAPON THREAT

(By Robert Hotz)

The Soviet Union has achieved a technical breakthrough in high-energy physics application that may soon provide it with a directed-energy beam weapon capable of neutralizing the entire United States ballistic missile force and checkmating this country's strategic doctrine.

These developments are described in detail in this issue by Aviation Week & Space Technology Military Editor Clarence A. Robinson, Jr., in the story beginning on page 16. There are those in the official intelligence bureaucracy who will challenge our judgment in printing these facts on those Watergate-worn grounds of "national interest." We have been following this story for more than a year and have in fact refrained from printing it earlier because of what were then legitimate matters of intelligence security. But those considerations no longer exist.

The hard proof of eight successful Soviet tests of directed-energy beam weapon technology gives new and overriding urgency to bring these developments into the public domain and rip the veil of intelligence secrecy so that this whole matter of vital national urgency and survival will finally be brought to the attention of the President of these United States, the Congress and the citizens of this republic whose future is at risk. In all of the previous four years that these Soviet developments have been known to the official intelligence community, they have been stifled by a conspiracy of skepticism and silence and never once penetrated to the highest decision-making councils of this country.

TECHNOLOGY LEAP VERIFIED

The incredible story of how the Soviets leap-frogged a generation of high-energy physics technology and developed a workable experimental model of a directed-energy beam weapon now has been largely verified by the successive Soviet tests at Semipalatinsk and Azgir and the brilliant work of a small group of extremely young physcists in this country. The fact that this country still has a chance of avoiding a crippling technological surprise that could render its entire strategic missile force ineffective is due to the courageous, dogged and perceptive work of a handful of U.S. Air Force intelligence specialists who polarized around the leadership of Maj. Gen. George Keegan, Jr., recently retired chief of Air Force intelligence (AW&ST Mar. 28, p. 38).

We do not suggest any formal conspiracy to suppress the mounting evidence of a massive Soviet research, development and industrial push aimed at the goal of an anti-ICBM directed-energy beam weapon. Rather it was a combination of smug American assurance that the Soviets were simply not capable of out-reaching us in any technological race and the intellectual arrogance of elderly scientists who through the ages have spent their twilight years proving that the next generation of breakthroughs is "impossible."

In modern times, we have the continuing examples of Dr. Vannevar Bush, who thundered that the ICBM was a technical impossibility, and the assortment of scientists in the Eisenhower era who firmly believed that manned spaceflight should be abandoned because the human system could not survive its rigors. It was a similar group of high-energy physicists, some heavy with Nobel laurels, who encouraged the natural technical illiteracy of the Central Intelligence Agency to discount the steadily growing stream of Soviet developments and to lead the bitter intramural battles that suppressed the evidence from higher government councils for crucial years.

There is still considerable debate over the real significance of the Soviet tests at Semipalatinsk and Azgir and how long it will take the Soviets to translate their experimental developments into a usable weapon. But there is no longer much doubt among top-level U.S. high-energy physicists that it is feasible to develop a directed-energy beam device.

INITIAL SKEPTICISM OVERCOME

There also is an element in the Pentagon that can visualize the eventual Soviet deployment of the directed-energy beam weapon as the end game of an intricate chess exercise that began with the 1972 negotiation of the anti-ballistic missile treaty, which effectively stopped not only U.S. deployment of an anti-ICBM system but also most of its significant on-going research and development. The hypothesis for this chess game, which ends in the early 1980s with the triumphant Soviet shout of "check and mate," involves the U.S. finding its strategic deterrent ballistic missile force stripped of any defensive system, with the Soviets using their anti-ICBM directed-energy beam weapon to negate any U.S. retaliation and strong civil defense shield to minimize damage from the few warheads that might penetrate.

The race to perfect directed-energy weapons is a reality. Despite initial skepticism, the U.S. scientific community now is pressuring for accelerated efforts in this area.

It is absolutely essential that the remaining chapters of this debate be conducted in public where every American citizen, from President Jimmy Carter on down, is aware of the elements that will determine this nation's future. It is far too important an issue to be cloaked in the obscure bureaucratic infighting of the intelligence community.

It could be a fatal error for this country to continue to put its major strategic reliance on a single type weapon for which an effective counter is already looming on the technical horizon.

SOVIETS PUSH FOR BEAM WEAPON

(By Clarence A. Robinson, Jr.)

WASHINGTON.—Soviet Union is developing a charged-particle beam device designed to destroy U.S. intercontinental and submarine-launched ballistic missile nuclear warheads. Development tests are being conducted at a facility in Soviet Central Asia.

The Soviets also are exploring another facet of beam weapons technology and preparing to test a spaceborne hydrogen fluoride high-energy laser designed for a satellite killer role. U.S. officials have coined the term directed-energy weapons in referring to both beam weapons and high-energy lasers.

A charged-particle beam weapon forcuses and projects atomic particles at the speed of light which could be directed from ground-based sites into space to intercept and neutralize reentry vehicles, according to U.S. officials. Both the USSR and the U.S. also are investigating the concept of placing charged-particle beam devices on spacecraft to intercept missile warheads in space. This method would avoid problems with propagating the beam through the earth's atmosphere.

Because of a controversy with in the U.S. intelligence community, the details of Soviet directed-energy weapons have not been made available to the President or to the National Security Council.

Recent events have persuaded a number of U.S. analysts that directed-energy weapons are nearing prototype testing in the Soviet Union. They include:

Detection of large amounts of gaseous hydrogen with traces of tritium in the upper atmosphere. The USAF/TRW Block 647 defense support system early warning satellite with scanning radiation detectors and infrared sensors has been used to determine that on seven occasions since November, 1975, tests that may be related to development of a charged-particle beam device have been carried out in a facility at Semipalatinsk.

Ground testing of a small hydrogen fluoride high-energy laser and detection of preparations to launch the device on board a spacecraft. Some U.S. officials believe the test

of the antisatellite-laser may be related to recent Soviet activities on a manned Salyut space station.

Test of a new, far more powerful fusion-pulsed magnetohydrodynamic generator to provide power for a charged-particle beam system at Azgir in Kazakhstan near the Caspian Sea. The experiment took place late last year in an underground chamber in an area of natural salt dome formations in the desert near Azgir and was monitored by the TRW early warning satellite stationed over the Indian Ocean.

New test site at Azgir under the direct control of the Soviet national air defense force (PVO Strany), commanded by Marshal of the Soviet Army General P. F. Batitskiy. Since the PVO Strany would be responsible for deploying a beam weapon to counter U.S. ICBM warheads, Marshal Batitskiy's role indicates a near-term weapons application for these experiments, U.S. officials believe.

Point-by-point verification by a team of U.S.-physicists and engineers working under USAF sponsorship that the Soviets had achieved a level of success in each of seven areas of high-energy physics necessary to develop a beam weapon.

Shifts in position by a number of experienced high-energy physicists, who earlier discounted the Soviet capability to develop the technology for a charged-particle beam device. There is now grudging admisson that the USSR is involved in a program that could produce such a weapon.

Recent revelations by Soviet physicist Leonid I. Rudakov during a tour last summer of U.S. fusion laboratories that the USSR can convert electron beam energy to compress fusionable material to release maximum fusion energy. Much of the data outlined by Rudakov during his visit to the Lawrence Livermore Laboratory has since been labeled top secret by the Defense Dept. and the Energy Research and Development Administration, but it gave a clue to U.S. scientists that the USSR is far ahead of the U.S. in controlled fusion by inertial confinement (compression of small pellets of thermal nuclear fuel) and weapons based on that technology.

Pattern of activity in the USSR, including deployment of large over-the-horizon radars in northern Russia to detect and track U.S. ICBM reentry vehicles, development and deployment of precision mechanical/phased-array antiballistic missile radars and massive efforts aimed at civil defense.

There is little doubt within the U.S. scientific or intelligence communities that the Soviets are involved in developing high-energy technology components that could be used to produce a charged-particle beam weapon, but there is a great difference of opinion among officials over whether such a device is now being constructed or tested in the USSR.

In increasing numbers, U.S. officials are coming to a conclusion that a decisive turn in the balance of strategic power is in the making, which could tip that balance heavily in the Soviets' favor through charged-particle beam development, and the development of energetic strategic laser weapons.

Most of the controversy centers on what tests are being conducted in an unusual research facility about 35 mi. south of the city of Semipalatinsk.

In the face of mounting evidence of Soviet efforts aimed at developing a charged-particle beam weapon for anti-ballistic missile defense, the Air Force's Scientific Technical Intelligence Committee (STIC) has scheduled a fall meeting to review new data.

The Semipalatinsk facility where beam weapons tests are taking place has been under observation by the U.S. for about 10 years. The central building at the facility is believed by some officials to contain a collective accelerator, electron injectors and power stores.

The building is 200 ft. wide and 700 ft. long, with walls of reinforced concrete 10 ft. thick. The entire facility, with its associated support equipment, is estimated to have cost $500 million.

The test site is at the southern edge of the Semipalatinsk nuclear test area, and it is separated from other test facilities. It is surrounded by a series of security fences.

The total amount invested by the USSR in the test project for the 10 years' work there is estimated at $3 billion by U.S. analysts.

The U.S. used high-resolution photographic reconnaissance satellites to watch as the Soviet technicians had four holes dug through solid granite formations not far from the main large building at the facility. Mine heads were constructed over each opening, and frames were built over the holes. As tons of rock were removed, a large underground chamber was built deep inside the rock formation.

In a nearby building, huge extremely thick steel gores were manufactured. The building has since been removed. These steel segments were parts of a large sphere estimated to be about 18 meters (57.8 ft.) in diameter. Enough gores for two complete spheres were constructed. U.S. officials believe the spheres are needed to capture and store energy from nuclear-driven explosives or pulse-power generators. The steel gores are believed by some officials to be among the earliest clues as to what might be taking place at the facility.

The components were moved to the nearby mine heads and lowered into the chamber.

Some other U.S. physicists believe the steel gores are designed for underground storage of unused nuclear fuel for a magnetohydrodynamic or closed cycle gas core fission process needed to power beam weapons or for storing waste products from the fission process.

One of the major problems in gaining acceptance of the concept within the U.S. scientific community was to convince high-energy physics experts that the Russians might be using nuclear explosive generators as a power source to drive accelerators capable of producing high intensity proton beams of killing potential.

Initially, some U.S. physicists believed there was no method the Soviets could use to weld together the steel gores of the spheres to provide a vessel strong enough to withstand pressures likely to occur in the nuclear explosive fission process, particularly when the steel to be welded was extremely thick. U.S. officials later discovered that the Russians invented a process called flux welding and had been using it for years in producing pressure spheres. The flux welding process, according to some U.S. officials, makes the bonded material weld as strong as, or stronger than, the steel walls.

U.S. officials, scientists and engineers queried said that the technologies that can be applied to produce a beam weapon include:

Explosive or pulsed power generation through either fission or fusion to achieve peak pulses of power.

Giant capacitors capable of storing extremely high levels of power for fractions of a second.

Electron injectors capable of generating high-energy pulse streams of electrons at high velocities. This is critical to producing some types of beam weapons.

Collective accelerator to generate electron pulse streams or hot gas plasma necessary to accelerate other subatomic particles at high velocities.

Flux compression to convert energy from explosive generators to energy to produce the electron beam.

Switching necessary to store the energy from the generators in large capacitors.

Development of pressurized line needed to transfer the pulses from the generators to power stores. The lines must be cryogenically cooled because of the extreme power levels involved.

For several years, Air Force Maj. Gen. George J. Keegan, who until his recent retirement headed USAF's intelligence activities, has been trying to convince the Central Intelligence Agency and a number of top U.S. high-energy physicists that the Soviets are developing a charged-particle beam weapon for use in an antiballistic missile role.

Evidence was gathered by Air Force intelligence from a variety of sources, including early warning and high resolution reconnaissance satellites, published USSR papers on high-energy physics and visits between Soviet and Free World physicists. In contacts with scientists deeply involved in developing components necessary for beam weapon application in both the USSR and the U.S., data was gleaned that clearly showed the Russians to be years ahead of the U.S. in most areas of technology, one U.S. physicist said. He added that it became increasingly clear that the Soviets were making a concerted effort to develop the technology in each area so that, if it was pulled together, a beam weapon and possibly related laser weapons could result.

All of the evidence that Gen. Keegan and his small team gathered about Soviet designs on charged-particle beams was presented to the CIA and its Nuclear Intelligence Board, which has so far rejected their conclusion that beam weapons development is evident.

Most of the evidence had been gathered over a four-year period and involved the entire spectrum of facilities for test and experimentation, research laboratories, power generation, electron injection, collective acceleration and beam propagation—all areas where the Soviet Union has outpaced the U.S., according to a U.S. official.

Some scientists and engineers refused to accept information that the installation at Semipalatinsk had anything to do with beam-generation tests or that levels of energy required for these experiments could be attained. And even if somehow the energy could be generated, it could not be harnessed for beam application, they said.

ENERGY LEVELS REQUIRED

Typical levels of energy required for use with a beam weapon are 10^{12} joules per pulse, with the energy of a particle of the beam from 1 to 100 giga electron volts. It is these levels of energy required that still cause some skepticism among high-energy physicists.

"Keegan refused to accept CIA's evaluation of the USAF intelligence data," one U.S. official said. "So, he systematically set about acquiring talented young physicists to analyze the information and to probe the basic physics of the problem—an area in which U.S. scientists were notably deficient."

One scientist in particular, a USAF civilian employe at Wright-Patterson AFB, Ohio, was influential in providing Gen. Keegan with an assessment of the information, which said that it appeared the facility at Semipalatinsk was being developed for use for nuclear power generation related to beam weapon work. His assessment was made very early in the observation of the facility, long before atmospheric data of possible beam weapons testing was obtained.

"These young physicists gathered to his cause by George (Gen. Keegan) were a very sharp group of young turks, and some have

since gone on to gain stature within the high-energy physics crowd," one official said.

It was anticipated by Gen. Keegan and his advisers that the USSR would be forced to vent gaseous hydrogen from the experiments at Semipalatinsk and that early warning satellites could detect it.

UNDERGROUND TESTING

Liquid hydrogen in large amounts is believed by some officials to be utilized to cushion the nuclear explosive generator sphere and for cryogenic pumping of large drift tubes nearly a kilometer in length through which the beams are propagated for underground testing. In both cases, large amounts of gaseous hydrogen are formed and released into the atmosphere, probably carrying large amounts of nuclear debris or radioactive tritium that can be exploded at altitude and dispersed to avoid harming the people below, according to some U.S. scientists.

"Explosions of such gaseous hydrogen discharges are now being detected with regularity from Soviet experiment," a U.S. official said, "and scientific studies of the gas releases and explosions have confirmed their source as being near the Semipalatinsk facility."

USAF intelligence developed an acronym—PNUT—to refer to the test area at Semipalatinsk. The letter P is for possible, and the other letters stand for nuclear underground test. The CIA still refers to the site as URDF-3—unidentified research and development facility three.

In recent public pronouncements, Gen. Keegan has taken the CIA to task for having rejected Air Force intelligence information about Soviet beam weapon development. He also has spoken bitterly about a number of top U.S. physicists who refuse to accept even the possibility that the Soviets are involved in beam weapon development. Most of the physicists who would not accept the data were older members of the scientific community who had been involved in research and development from the early day of a project called Seesaw.

PROJECT ABANDONED

The U.S. attempted unsuccessfully to develop a charged-particle beam device under the project code named Seesaw. It was funded by the Defense Dept.'s Advanced Research Projects Agency but abandoned after several years.

A number of influential U.S. physicists sought to discredit Gen. Keegan's evidence about Soviet beam development. The general attitude within the scientific community was that, if the U.S. could not successfully produce the technology to have a beam weapon, the Russians certainly could not. "It was the original not-invented-here attitude," one U.S. physicist said

There were about 20 hypotheses advanced by these physicists and the CIA's Nuclear Intelligence Board as to what the facility at Semipalatinsk was being used for by the USSR. One theory was that it was a supersonic ramjet test site and another was that it was a nuclear reactor test site for commercial aplications. That was based on the layout, which resembled some reactors in the USSR.

"There is now no doubt that there is dumping of energy taking place at the site with burning of large hydrogen flames," one official said. "What bothered the Nuclear Intelligence Board at first was that it was hard to imagine that some seven technologies critical to the weapons concept could be perfected there within the time frame presented and not be detected by us.

"In each case, the Air Force was able to disprove the theories advanced, at least to USAF satisfaction," one U.S. official said. "But along the way Keegan became an outcast within CIA and the Defense Intelligence Agency. This was despite the fact that many times in the past it turned out that his intelligence information proved correct when it was not accepted at first. He [Keegan] made some great intelligence breakthroughs," another official said.

As evidence of Soviet intent mounted, the Air Force convened a munitions panel of its Scientific Advisory Board to examine the problem. The panel met at Livermore Laboratory for three days to study the data of Gen. Keegan and his technologists. Some members of that panel also were involved in the Seesaw project before it was halted.

"The panel of experts rejected virtually all of the Air Force's hypotheses. In an emotional meeting, they denigrated all suggestions of nuclear explosion generation, power storage, power transmission and collective acceleration," an official explained. "The bottom line was that the panel said there is no way to control or stabilize such a beam if a weapon is produced. The net result is that evidence about possible beam weapons development was rejected."

Later, some of the same physicists who rejected the charged-particle beam data realized the Soviets had made progress in many separate areas of required technology for beam weapon application. Some physicists involved sought funding from the National Science Foundation and Energy Research and Development Administration for nuclear power and beam generation studies, one official said.

In an effort to prove that USAF intelligence estimates were correct, Gen. Keegan and his young physicists set about trying to prove Soviet technology exists in areas necessary for beam weapons.

THEORETICAL BLOCKS ISOLATED

After isolating the theoretical roadblocks identified by the Scientific Advisory Board's munitions panel, the physicists, along with several new groups recruited by Gen. Keegan, went to work exploring possible USSR technologies.

Within a few months the team, under the direction of a young Air Force physicist, found that all the munitions panel's objections could be overcome "and had already been solved in the Soviet Union. Several breakthroughs in high-energy physics were involved," an official said.

Explosive generation was solved in the USSR by Soviet academicians Andrei Terletsky, who was once a KGB agent in Sweden, and Andrei Sakharov, who was instrumental in developing the Soviet hydrogen bomb and is now a dissident.

Soviet physicist Rudakov visited the U.S. in July, 1976, and outlined his major advances in electron beam fusion. ERDA immediately tried to cover up the ideas he presented at Livermore in response to a taunt by a Western scientist. It was all considered highly secret in the U.S. and "those seated there had to sit with their mouths open and not respond to Rudakov's outline," one U.S. physicist said.

"His idea startled the U.S. physics community by its magnitude—transforming laser and electron beams to soft X-rays to compress fusion fuel at low energy levels. This is a real scientific breakthrough,' 'the physicist said, "and could allow them to produce large amounts of fusion power to be used in producing energy for a beam weapon." Rudakov had such good results in using relativistic electron beams to achieve fusion that he now is developing a $55-million machine funded for this purpose in Russia called Angara 5, a physicist added.

Gen. Keegan and his physics team quickly determined that the next problem to be resolved was flux compression needed to convert energy from explosive generation to electrical energy to power an accelerator.

"Through open sources they learned that the Soviets had long since solved that problem," one expert said.

U.S. scientists meeting at Livermore objected and said that power pulses generated could not be conducted over known cabling without burning it up until Gen. Keegan's reserachers discovered that pressurized gas lines invented in the U.S. years earlier by ITT and General Electric were available and in use by the U.S.S.R.

RECONNAISSANCE DATA

Pipes at the Semipalatinsk site leading from the underground chamber were spotted by reconnaissance satellite, but they were discounted by the CIA and munitions panel as being there for another application, possibly to exhaust supersonic ramjets. Photographs from satellites also revealed a number of tank cars near the test site loaded with liquid hydrogen. USAF intelligence officials believed it was being used by the Soviets for cryogenic pumping of beam drift tubes. This was considered impossible by U.S. scientists because they believe liquid hydrogen is too volatile and dangerous for cryogenic use. Again, however papers have been published in the U.S.S.R. on the subject, and liquid hydrogen has been used for years for that purpose, one official said.

Officials believe that cabling leading from the underground granite chamber at Semipalatinsk carries power from a fission explosive generator to nearby transformers where it is stepped up. The power is cabled into giant capacitors inside one end of the large thick-walled building, they believe. Along the 700-ft. side are located the electron injector gun and the collective accelerator, according to their theory. The power is fed into them to produce a proton beam. The beam is bent at an angle by magnetic mirrors and propelled near the speed of light along the drift tubes running underground about a kilometer, they believe, and the drift tubes are evacuated to simulate operating the beam in space and are used for beam propagation testing.

At one time, there were five concentric rings constructed around the building about 5 km. (3.1 mi) apart. At each 5 deg. of arc, a vertical sensor was placed. At first, U.S. analysts believed this arrangement was to monitor movement of gaseous hydrogen clouds. The geometry was so precise, however, that some believed the sensors were located to measure beam impact or for beam tracking.

Storing energy to manage its flow was the next area of technology that Gen. Keegan and his scientists investigated. They discovered that the Soviets had solved the problem earlier by using large water capacitors to store energy. Dense fields of energy/electricity can be stored using pressurized water as a dielectric with pressure to 100 atmospheres. This is considered another breakthrough by U.S. physicists, because the U.S.S.R. can store 40 times the density of energy that can be stored in the Free World, one official explained. "This technology is now being developed in the U.S.," he added, after it was completely verified under a contract with the Defense Nuclear Agency.

For the past 15 years there has been an open and free exchange between the U.S. and the USSR in the high-energy physics area, one U.S. physicist explained. That exchange is related mostly to projects for nuclear power generation for commercial application, but by its very nature, the development of energy or offshoots of the technology has application to the beam weapons field, the official said.

"This is a field where to our knowledge there are few secrets. We go freely to their [USSR] laboratories and have few doors barred to us," a U.S. high-energy physicist said, "and the same thing is true for them in this country." This does not apply to lab-

oratories where weapons development is being carried out.

Gen. Keegan's scientific team set out to prove the feasibility in another area of Soviet technology required for beam weapons use—switching. Switching the energy from its storage capacitors to the electron injector is a major element required for the weapon to function, according to U.S. experts.

A small U.S. company has devised a breakthrough in switching technology, a U.S. scientist explained, and has patented it. Theoretical feasibility has now been fully established, the scientist added.

The electron injector was the next area of investigation on which the team focused its attention. For this to be successful, several engineers have explained, a generator is needed to provide a steady stream of rapidly pulsed plasma of 100 million electron volts per pulse at levels of 10 megajoules/sec.

"This is pure Buck Rogers to the physicists at Livermore Laboratory, who refused to accept that the Soviets could accomplish it," one U.S. official said. U.S. scientists since have been able to confirm that Soviet high-energy institutes long ago solved problems of electron injection that place them years ahead of U.S. technology. "At the Institute of High-Energy Physics in Novosibirsk, U.S. scientists have found generator technology that, when scaled up, can be used as an electron injector." Such equipment is now being exported to the U.S. for commercial use. The Soviet technology involved is at least 10 years ahead of anything under development in the U.S.

CIA CHIEF INFORMED

In 1975, Gen. Keegan disclosed his findings on Soviet technology related to beam weapons development to William Colby, then head of the CIA, and to a number of its nuclear scientific advisers.

"On the strength of Keegan's information that the Soviets were on the verge of developing a weapon to neutralize our ICBMs and SLMBs, Colby directed the formal convening of the CIA's Nuclear Intelligence Panel to consider the disclosures," according to a U.S. official.

In a final meeting last year with the panel, Gen. Keegan and his associates presented evidence over a three-day period to the panel. The panel went into executive session to study the data and then wrote its report. No copy of the report was ever presented to USAF intelligence.

PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification from the Department of Defense the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the Record the four notifications I have just received.

There being no objection, the notifications were ordered to be printed in the RECORD, as follows:

[Transmittal No. 77-29]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: United Kingdom.

(ii) Total Estimated Value: Major defense equipment* $83.3 million; other, 35.7 million; total, $119.0 million.

(iii) Description of Articles or Services Offered: One-thousand seven-hundred and nine (1,709) AIM-9L SIDEWINDER missiles and spare parts.

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: May 6, 1977.

[Transmittal No. 77-32]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Saudi Arabia.

(ii) Total Estimated Value: Major Defense Equipment,* $53.7 million; other, none; total, $53.7 million.

(iii) Description of Articles or Services Offered: Thirty-four (34) line items of small arms, mortar and howitzer ammunition.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: May 6, 1977.

[Transmittal No. 77-33]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Saudi Arabia.

(ii) Total Estimated Value: Major Defense Equipment,* none; other, $34.5 million; total, $34.5 million.

(iii) Description of Articles or Services Offered: Procurement of the second increment of the Coordinated Shore Base Material Allowance List (COSMAL) to support shore communications stations, and ships sold to Saudi Arabia under Foreign Military Sales cases.

(iv) Military Department: Navy.

(v) Sales Commisison, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: May 6, 1977.

[Transmittal No. 77-34]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Greece.

(ii) Total Estimated Value: Major Defense Equipment,* $9.9 million; other, 3.8 million; total, $13.7 million.

(iii) Description of Articles or Services Offered: Eighty-two (82) TOW launchers, one-thousand four-hundred ninety-four (1,494) missiles, four-hundred (400) practice missiles, eleven (11) training sets, eight-two (82) mounting kits, auxiliary equipment and spare parts.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: May 6, 1977.

* As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

REACTION TO THE PRESIDENT'S ENERGY MESSAGE

Mr. NELSON. Mr. President, the most important thing to note about the President's energy message is that we finally have a President who recognizes that we are confronted with a major energy crisis. For years, resource experts have warned us of the coming resource crunch and for all of those years nobody read their literature and nobody heard their voices.

Finally we have a President who hears them, understands what they are saying, and knows they are right. His two major speeches in 1 week show that he means to provide the necessary leadership and that he understands that the success or failure of his program will turn on the extent of public education, public understanding, and public consent.

The President of the United States is our most important educator, and President Carter understands that role. His two speeches have dramatically escalated the public dialog on the energy issue. This is the vital first step toward meaningful action by the Congress and the country. Yet, we still have a long, long way to go to achieve the necessary public understanding. Opinion polls show that a significant number of people still doubt that an extremely serious problem exists. Nevertheless, the hard evidence overwhelmingly shows that we had better start coming to grips with the energy issue quickly or the situation is going to go from bad to worse to disastrous. We still have time to make rational decisions. We can still manage successfully our energy situation if we move with deliberation, but it will become unmanageable if we do not.

This is what the President is telling us. If we mean to do what serves the long-term interests of the country, there will be sacrifices and it will not be painless. If we do anything meaningful, there will be some disruption in the lives and works of everything and everybody. If we do nothing, the disruption will be major, all pervasive, unpredictable, and probably uncontrollable.

The real question is not whether the President is asking too much of the American people, but rather, is he asking enough?

For the first time, we have leadership from the White House on energy. The President's package is a substantial step in the right direction.

First, President Carter has set the correct goals:

The reduction of our 5 percent annual energy growth rate over the next decade to about 2 percent per year.

The reduction of 1985 petroleum demand for imports by 10 million barrels per day to 6 million barrels per day. Today, for example, our petroleum consumption equals pre-embargo levels. Petroleum demand for 1976 was 4.9 percent higher than 1975, 2.4 percent higher than 1974, and only 0.3 percent less than the record high 1973 level. During January, because of the cold weather, consumption exceeded for the first time 20 million barrels per day, 10.3 percent above January 1976, and 14.1 percent above January 1975. For 1 week during last winter, we imported more than 50 percent of the oil we consumed. Our normal consumption runs between 16 and 18 million barrels per day with more than 40 percent coming from imports and over

25 percent of the imports coming directly from OPEC.

The reduction of gasoline consumption by 10 percent below projected 1985 demand. Under the mandatory fuel economy performance program adopted by the Congress in 1975 and endorsed by the President, by 1985 we will use less gasoline than we are now. The New York Times estimates that by 1985 when the new car fleet must average 27.5 miles per gallon, gasoline consumption will be reduced 29.4 million gallons per day over projected demand. Current consumption averages 273.7 million gallons per day, or rughly 47 percent of all petroleum consumed.

The President's final goal, the insulation of 90 percent of our residential and commercial buildings over the next ten years, is also right on target.

Second, President Carter is absolutely correct in making conservation the keystone of this Nation's energy program. Conservation will allow us to reduce demand, increase efficiency, and buy time, allowing us to develop additional sources of energy, such as solar, as well as to expand domestic coal production. Changes in lifestyle will have to be made, sacrifices are inevitable, but we really have no other choice. We must either modify the way we live or our continued waste of energy will create an economic disaster at some point in the not too distant future.

Third, prudent stewardship of the environment and a sensible resource development plan is an integral part of President Carter's approach. It is a policy calling for the rational development of new domestic sources of energy, balanced with ecological protection.

We must use greater amounts of coal. We must work to meet the President's objective of boosting production from the current level of 400 million tons per year to over 1 billion tons per year. Coal is our most plentiful finite energy resource. We must mine more of it in strict compliance with a new and tough Federal strip mine control bill. We must burn the coal, replacing oil and natural gas as boiler fuels for industry and large commercial and business firms. However, it should be used pursuant to the Clean Air Act standards that protect public health and the environment.

Fouth, the President has called for massive research and development efforts into renewable sources of energy. He has called for a rather substantial expansion of Federal funding for the development of clean energy from coal, while at the same time he has cut the atomic energy research budget. Moveover, in evaluting the long-term energy problems that face us, in deciding what mix of conservation, coal, solar, and nuclear power will provide energy for the next century, President Carter has decided to slow the pace and reduce the emphasis placed on atomic power by the last two administrations. As an important first step toward implementing this decision, the President has decided that the breeder reactor will be scrapped. The President also indefinitely deferred programs for nuclear fuel reprocessing and the use of plutonium as a reactor fuel. Atomic energy plant safety and operating procedures will be tightened. The Energy Research and Development Administration's atomic waste disposal program will undergo an intensive review.

The President's goals: conservation, sensible development of coal, prudent management of our environment, and new energy research and development are all essential. The President has presented a strong, farsighted, progressive program to the country. On the whole, it deserves our active and strong support.

I do, however, have several reservations about four components of the program presented to the Congress on April 20.

First, the President has proposed a tax on gas guzzlers and a tax rebate to purchasers of cars that exceed minimum Federal fuel economy performance standards. The tax in model year 1978 for cars achieving less than 12.5 miles per gallon would be $449. This tax would increase to $2,488 by 1985 for the most wasteful models. Rebates for 1978 would be $47 and theoretically rise to $493 in 1985 on cars averaging better than 39 miles per gallon. The money for the rebates will be furnished from revenues collected from the Federal excise tax on fuel inefficient models. If, as expected, there is a large shift to fuel efficient cars it is likely that the rebates under the White House proposal will be insignificant.

It seems to me that if the purpose of the gas guzzler tax is to discourage the purchase of fuel inefficient cars, then the tax is too low. Furthermore, the tax rebates for those purchasing fuel efficient cars should be eliminated. We will all be making personal sacrifices as part of a national campaign to solve the energy crisis. People who purchase cars that obtain mileage that exceeds Federal minimum standards will not only be acting in the national interest, but they will be acting in their own vested economic interest as well. They should not be rewarded for "doing the right thing," especially if the right thing will be of some direct economic benefit to them. Consequently, there are two alternatives to this aspect of the President's proposal that should be explored: Increasing the tax to such a level to discourage purchases and shift people to fuel efficient cars, or accelerating the compliance timetable and increasing fuel economy performance standards contained in the 1976 legislation.

Second, the standby gasoline tax slated for introduction in 1979, if consumption goals for 1978 are exceeded, will probably not work as currently drafted. A 5 cent tax per gallon, per year, over a 10-year period, a total increase in the Federal excise tax of 50 cents per gallon in a decade, is unlikely to significantly reduce consumer demand, but it may be a necessary tool if gas consumption is rapidly escalating in 1979. If, in fact, the gas tax must be used, a workable rebate plan must be designed to protect the poor and those who must drive substantial distances to work. If, nonetheless, the tax is implemented, it should only be returned to low-income people, the working poor, the elderly, people living on fixed incomes, citizens who will be adversely affected by any increase, not returned to everyone as the President has suggested. This whole idea should be reevaluated, a more workable rebate formula should be developed. Additionally, the merits and problems of a rationing system utilizing a white market should be explored. Under this latter proposal, everyone would be issued a basic allocation of gasoline coupons. Extra coupons could then be purchased at a substantially higher price.

Third, the proposed tax credit for people to insulate and weatherize their homes is at least questionable and should be carefully evaluated. The President is proposing to encourage, with direct help from the Treasury, a program that is likely to be implemented by homeowners simply after reviewing the merits of the question. People ought to realize that insulation is the single most important factor effecting home heating and cooling costs; that it is efficient and pays for itself in a relatively short period of time. If the public understands the benefits, a subsidy probably is not necessary.

There is no question that insulation is one of the most cost-effective energy conservation measures. It also has the quickest payback in terms of savings on projected utility bills. According to the Wisconsin Office of State Planning and Energy, the average cost of insulating a typical ceiling in the State is $300 to $450. At current prices, this action alone will save between 15 to 30 percent on a resident's fuel bill. At current prices, the payback is 4 to 5 years. As energy prices continue to rise, and they certainly will rise, the payback will be more quick.

Fourth, oil and gas pricing. The President has proposed allowing the price of oil to rise to the world market level, the OPEC controlled level, in three annual stages by imposing additional Federal excise taxes. New natural gas and gas from expired contracts would be linked to the OPEC oil price on a Btu basis by use of additional excise tax. I am opposed to any measure that would allow a foreign cartel, OPEC in this case, to set our oil and gas prices. While such a mechanism, using excise taxation to raise energy prices, will prevent the public from being gouged by the oil industry, the tax rebate scheme to refund the excise tax to low income and needy citizens is not well thought out and deserves more work.

On balance, there is much more "good" than "bad" in the President's program. In addition to the basic goals detailed by the President, there is a great deal in his program that deserves the support of the American people and the Congress.

President Carter has endorsed and recommended expanding a program I sponsored three years ago as chairman of the Poverty Subcommittee, a program to winterize the homes of low income people. Under the President's proposal, funding for the Community Services Administration's—CSA—winterization program will be increased to $130 million in fiscal year 1978 and $200 million in fiscal year 1979 and fiscal year 1980. The program's current budget is $55 million.

According to the Federal Energy Administration, nationally there are over 6 million low-income homes that require

improvement in weatherization. The National Bureau of Standards—NBS—estimates that the cost of weatherization materials—insulation, weather stripping, storm windows—ranges from $900 in Pennsylvania to $100 in southern California. Here in Wisconsin, the State Office of Planning and Energy projects the average cost of weatherization, primarily insulation, at $125 to $250 per home, excluding labor. The National Bureau of Standards estimates the national average cost of making an average size home totally energy efficient, including labor, at $1,300.

The CSA program has been very successful here in Wisconsin. By the close of fiscal year 1976, a total of 4,344 households had received weatherization aid.

If the level of funding recommended by the President is continued over the next 6 or 7 years, the vast majority of low income homes in this country can be greatly improved.

Although it is difficult to exactly calculate what increased insulation means in terms of actual consumer savings, the National Bureau of Standards estimates that for a 1,000 square foot, two-story home, consuming fuel at 40 cents a gallon, where weatherization improvements have been made, the first year savings would be $110 or 275 gallons of fuel oil. NBS estimates that proper insulation and weatherization would cut fuel consumption by more than 50 percent.

The administration has also endorsed a recommendation I made several years ago concerning the need for independent verification of oil and gas industry estimates of reserves. The American Gas Association and the American Petroleum Institute should no longer be the sole repository of energy information that will help shape future nationwide decisions. President Carter has proposed a program very similar to the program outlined in my Energy Information Act legislation.

To aid rural citizens, the President has also proposed that the Secretary of Agriculture implement a rural home winterization program in cooperation with the rural electrical cooperatives across this Nation. Long-term low interest loans would be made available from FHA.

Important reforms in the area of utility rates are contained in the administration's package. The White House has proposed inverting the rate structure, in other words, making people who use more energy to pay more for it. Now, bulk users oftentimes receive cheaper rates while homeowners who conserve and use less energy are charged more per unit of energy consumed. Moreover, peak-load pricing will be allowed. Under this plan, people who use energy during peak demand periods when energy is expensive to produce would pay more. Energy used when demand was low would be less expensive. Finally, in the pricing area, the President recommends that in terms of higher natural gas prices, the more expensive new gas should be allocated to industrial and commercial users while the lower priced older gas be reserved for homeowners, small businesses, and essential government services.

In the area of future research and development, the President has made some very wise decisions. First and foremost, he proposes a rather substantial increase in funding for the development of clean uses of coal. Federal money, in terms of loan guarantees and grants, will be used to encourage new technological development. In terms of nuclear energy, the President has recommended that the breeder reactor program be scrapped, the contracts for equipment canceled, and construction immediately halted.

In evaluating the President's proposal, we in the Congres must look beyond our districts and States; we must look beyond party lines and partisan philosophy; we must look to the health and welfare of the Nation.

The attack by the vested interests on the President's proposal has already started. The automobile industry is against the tax on gas guzzlers. The oil and gas industry complain that the program will not provide enough incentives to stimulate new production. Consumer organizations complain about the pricing policy. Just about everyone has questions about the gasoline tax. In fact, almost every major economic group has attacked a part of the President's recommendation. And, last but not least, the Republican leadership in the Congress has attacked the President's proposal, but they admit they have no alternative.

The answer to the crisis will involve sacrifice. The Congress must insure that the required sacrifices are shared equitably. And, to the extent necessary to meet the goals established by the President, we should all be willing to modify our lifestyles. We will either deal with this problem or the crisis will deal decisively and disastrously with us. There is no painless solution. We face an important challenge. Only by working together can we, as a nation, come out of this crisis strong.

IMPROVING THE FIGHT AGAINST WHITE COLLAR CRIME

Mr. HEINZ. Mr. President, one of the fundamental principles of our democratic system of government is equal justice under law. No concept speaks more directly to our basic notions of fairness than that which demands that all citizens—regardless of race, sex, national origin, or economic status—share identical protections and be subject to the same liabilities before the bar of justice.

The principle of equal justice under law is undermined when we fail to fight white collar crime with the same vigor we apply to other forms of lawlessness. When a law breaker is not prosecuted or "gets off easy" simply because he enjoys a position of power in our society, public confidence in our system of justice is inevitably and properly diminished. When certain crimes are not subject to the full weight of law enforcement only because they tend to be committed through high-level deviousness rather than other and more blatantly violent means, the public is victimized and our principles are compromised.

Clearly, the need for a strong and effective fight against white collar crime goes beyond principle. We cannot afford to watch idly while price-fixers steal millions of dollars from American consumers, and for that reason I support the use of full criminal sanctions against those who violate our antitrust laws. When public officials abuse their public trust, or when unscrupulous operators conspire to defraud the Government, the people suffer and the perpetrators must be punished.

Mr. President, Richard L. Thornburgh recently wrote a perspective critique of our current efforts to fight white collar crime. Mr. Thornburgh, who recently served as Assistant Attorney General in charge of the Criminal Division at the Justice Department, points out some shortcomings in our law enforcement efforts and provides some prescriptions for change.

I ask unanimous consent that Mr. Thornburgh's article, which originally appeared in the Philadelphia Inquirer, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer, Apr. 5, 1977]

START TO FIGHT WHITE COLLAR CRIME

(By Richard L. Thornburgh)

During his campaign last year, President Carter stated with some passion that he saw "no reason why big shot crooks should go free while the poor ones go to jail." Law enforcement officials echo such sentiments but know that, without more than rhetoric, the multibillion-dollar costs of white collar crime will continue to escalate.

There can be no substitute in this area of law enforcement, as in any other, for the "nuts and bolts" of adequate manpower, tools and sanctions to carry out an effective crime fighting program. All are lacking today.

"Crime in the suites" as Ralph Nader has labeled this type of criminal conduct, is characterized by sophisticated and complex schemes concealing fraud and corruption behind facades of respectability. Thus, successful white collar investigations and prosecutions are not the product of break-down-the-door-and-seize-the-evidence tactics. Most often they result from a lengthy and painstaking "paper chase," involving a careful review of tax, business and banking records by skilled and experienced personnel seeking touchstones to illegal payments, usually in cash.

Past deficiencies in the "nuts and bolts" of these law enforcement efforts must be addressed on a priority basis if the public expectation of containment of white collar crime is to be realized.

Unlike street crime, crime in the suites" cannot be combatted by simply hiring more police and more prosecutors. Of far greater importance than the quantity of the manpower utilized is its quality, particularly those with sharpened pencils and an accountants' eye for detail.

At the federal level, the FBI has recognized and begun to cope with its inadequate inventory of agents equipped with necessary accounting and auditing expertise to handle these cases.

Other areas require attention. For example, more skilled and aggressive internal inspection and enforcement efforts must be mounted by executive branch and independent agencies if program fraud in housing, medicare, medicaid, and welfare benefits are to be dug out effectively

Finally, a "merit" approach to the retention and appointment of experienced United States attorneys and their assistants will augur well for skilled prospective efforts in the white collar area where affluent defend-

ants can usually hire the best defense lawyers the private bar can offer.

Because most white collar cases do involve a "paper chase," it is vitally important that certain legislative proposals now before the Congress be examined closely for their effect on crime-fighting efforts.

Already on the books are provisions of the 1976 Tax Reform Act which severely limit the participation of the IRS in white collar investigations and prosecutions. Up for consideration in the 95th Congress are similar bills to restrict grand jury access to bank statements, credit records, and other financial data.

Each of these restrictions purports to provide so-called "privacy" safeguards, but all far exceed protections found by the Supreme Court to be constitutionally required.

Make no mistake. These extra-constitutional guarantees of "privacy" can be accomplished only at the expense of a drastic reduction in the effectiveness of white collar enforcement efforts. One hopes that Congress will weight the trade-offs carefully in this area before enacting legislation which tie the hands of investigators, prosecutors and grand juries.

One of the most controversial issues in the white collar crime area is that of sentencing. Jail sentences have a strong deterrent potential in white collar offenses.

More often than not, however, the white collar offender has escaped lightly, often on grounds that his social and economic disgrace is "punishment enough." Such a view should be resisted.

Guidelines for seeking jail sentences in price-fixing offenses have already been enunciated by antitrust prosecutors and pending legislative proposals would mandate even-handed and stiff sentencing practices for all white collar offenses.

The end result should be, in the words of one federal district court judge, to seek to insure that "courts are collar blind as well as color blind" when it comes to dispensing justice.

Only by a realization of the above can concern over white collar crime and its depredations be translated into effective action. This opportunity should surely not be missed by the Carter administration.

THE IMPENDING MINERAL CRISES

Mr. STEVENS. Mr. President, the United States is a great producer of minerals and mineral materials for use in its economy. However, over the years much of the public lands in the United States have been slowly closed to mineral entry. In my home State of Alaska, a vast majority of public lands are closed to the operation of the general mining laws under specific Federal withdrawals. By doing this, the Nation is deprived of vast quantities of minerals which we are then forced to import from foreign sources.

The exposition of the problem that this closure has caused was recently published in the Alaska Miner, the journal of the Alaska Miners Association. I commend this article to all Members of the Senate and ask that they consider the impact described by the withdrawals throughout the Nation. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE IMPENDING MINERAL CRISES: WHAT IS IT AND WHAT DOES IT MEAN?

By Wallace McGreggor, President of NW Miners Association

In a society grown to enjoy and expect abundance, the thought of shortages is intolerable. Our concept of living and our way of life depend upon the ready availability of a broad range of raw materials, for which our society has an enormous appetite and without which it could not be sustained.

Were it not for the fact that there are widely held misconceptions about the source and well-spring of our abundance, we could be justified in a confidence that the vast outpouring of the American cornucopia would not soon be diminished.

Such misconceptions, however, have bred mistrust and we find it fashionable for politicians at all levels of government to cast a jaundiced eye at anything mining or mining development-related. In recent years the mining industry has been overwhelmed by legislation which has disregarded the finite and unique qualities of mineral deposits in prioritizing domestic land usage, and which has denied the realities of economics in conservation and the maximizing of our resource utilization.

The U.S. has never been a nation totally self sufficient in its natural resources. We have had major deposits of a great many of the more important commodities, but we have always had to rely to some degree on foreign sources for some raw materials. For the major part of two centuries, however, our dependence on foreign supplies was minimal and with the exception of war years there was little concern for the certainty of supply at prices dictated by the balance of world supply and demand.

Times have changed, however, and for many of the traditional basic raw materials absolutely essential to our way of life, the U.S. is, or is rapidly becoming a have-not nation . . . a have-not nation under circumstances where the supply of a growing number of commodities are becoming increasingly uncertain not for reasons of world resource shortages, but for reasons of political instability and potential international cartel action.

Net imports of non-fuel raw materials in 1975 rose to 21% of domestic consumption—up drastically from 10% of domestic consumption as recently as 1973. If such figures don't seem disconcerting, consider the fact that the rise is a radical departure from our historical pattern of important dependence and stems from a quadrupling of imports over the most recent three-year period.

The aluminum industry, at one time totally self-sufficient, now imports almost all of the raw materials required to produce aluminum.

The U.S., once self-sufficient in potash, will, in the current year, import an estimated 60% of its needs from Saskatchewan, Canada. The U.S. used to be self-sufficient in iron ore. Today we import 30% of our iron ore and steel needs. The U.S. has had no domestic production of chromite ore since 1961. In addition to chromium, the U.S. imported in 1975 better than 90% of its needs for Columbium, Mica, Strontium, Manganese, Cobalt and Tantalum.

This year the U.S. will depend upon imports for more than one-half of the requirements for seven of the thirteen basic raw materials needed in any industrialized society—Aluminum, Chromium, Manganese, Nickel, Potash, Tin and Zinc. By 1985, the Department of the Interior predicts that the U.S. will also depend upon imports for more than half of its iron, lead and tungsten. In the foreseeable future, imports may have to augment the U.S. needs for copper and even sulphur. Only the 13th mineral, Phospate, is in abundant domestic supply.

A growing dependence on foreign supplies of natural resources under present government policies is an obvious fact of U.S. life. Whether we can continue to control our destiny as we move to even greater dependence is a moot question.

A look at chromium, a commodity without which there would be no stainless steel industry, reveals some of the more disconcerting facets of the problem we face and illustrates how confused political thinking and the mixing of ideological objectives and raw material policy are working to our detriment.

Significantly, most of the world chromium is produced in three countries: Rhodesia, South Africa and Russia. With the U.N. embargo on Rhodesian chromium a few years ago, the U.S. was forced to buy chromium from Russia. X-Ray and spectrographic analysis, however, revealed that the chromite that the U.S. was buying from Russia originated in Rhodesia. When the U.S. complained, the Russians simply turned to selling chromite of Russian origin to the U.S. while keeping the Rhodesian chromite for their own internal use. The Russians bought the Rhodesian chromite at a fraction of its former world price because Rhodesia had no other buyer and then tripled the selling price to the U.S. because the U.S. had lost its source of supply.

Now, of course, with the political stability of Rhodesia and South Africa threatened, the possibility of a disruption of African chromite production looms large.

Think for a moment about the contribution that the U.S. makes to the world's food supply. Our agricultural success is sustained by a heavy reliance on fertilizer, three of the four essentials of which—nitrogen, sulphur and potash—we are dependent directly or indirectly on imports for supply. Only phosphorus, in the form of phosphates, is in abundant domestic supply. Nitrogen from ammonia is produced primarily from natural gas which is in dwindling domestic supply. We can and almost certainly will have to turn to coal as an alternative source, but the cost of ammonia will escalate substantially.

Although some sulphur is still exported, on balance the U.S. is becoming an importer from Canada, Mexico and the Caribbean.

As an example, we are heavily dependent upon Canada for our potash requirements, but no longer is there comfort in a dependence upon our good friends to the north in light of the trend toward nationalization in some of the provinces, notably in Saskatchewan, where the socialist government there has asserted its rights to take over the potash industry on its own terms, terms that are totally unfair and will result in the takeover of properties at a fraction of their true value.

Who would have thought even a few years ago, that the mining industry would be faced with expropriation in Canada. Nationalization is a trend of the times that is no longer limited to the developing countries. Increasingly the mining industry in finding it necessary to deal with foreign governments, rather than with private companies, governments that, in many instances, are unfriendly in their stance toward the U.S. and the free enterprise system.

Over the past ten years there has been a quickening pace in world-wide expropriations of private mining operations, Zaire, the former Belgian Congo, expropriated its copper industry in 1967. Peru and Zambia took over the copper metal mines of their countries in 1970. Chile seized the Anaconda, Kennecott and other properties in 1971. Guyana expropriated its bauxite mines in 1971. Early in 1974 Jamaica arbitrarily raised taxes on bauxite production from $1.60 a ton to $11.00 per ton. Such exorbitant taxation

is little different than outright expropriation without compensation for property rights. In 1974, Venezuela nationalized not only its oil industry but also the iron mining Steel. Peru took similar action against Marcona in 1975. The trend is alarming because no longer is there any moral compunction about acts of expropriation. No longer does that U.S. industry have the backing of the U.S. Government in protecting the property rights of U.S. citizens in foreign countries.

The effect of such circumstances has been to severely undermine the security of the U. S. with regard "to assured foreign sources of mineral supplies. Mineral resources upon which we have become dependent are no longer under the control of organizations with an allegiance to the U.S. The presence of U.S. mining concerns as a major force in world-wide exploration is being contracted out of necessity to the relative safety of a dwindling area of the globe. The benefit of expanding world-wide exploration effort drawing upon the expertise and capital of U.S. industry is being lost.

Each of these factors, moreover, contributes to the likelihood of the creation of successful commodity cartels which could restrict supplies and raise prices on some imported commodities at any time. Seeing the success of the OPEC operation, third-world nations are now seeking opportunities to use their mineral wealth not necessarily for the logical purpose of enhancing their economic position, but for achieving political ends. The major copper-producing countries of Chile, Peru, Zambia and Zaire have formed the Intergovernmental Council of Copper-Exporting Countries in the hope that they might emulate OPEC nations by controlling the world copper market.

The situation in aluminum is quite tenuous for the U.S. with regard to cartel action. Jamaica and Surinam are the source of about two-thirds of the aluminum used in the U.S. An alliance between these two countries and Guyana in the formation of an aluminum cartel could conceivably exercise considerable control over the U.S. aluminum industry. To the degree that Jamaica was able to unilaterally increase its taxes on bauxite exports by almost 700% just two years ago, control is already being exercised.

But the aluminum industry is a case in point of the alternatives open to the U.S. in developing substitute sources of raw material. Bauxite, the ore of aluminum, is the product of weathering which results in a natural concentration of the Alumina content. At its highest degree of concentration, the Alumina content exceeds 70% of the mineral bauxite and is the obvious reason as to why bauxite is the most economic to process. However, there are other sources of Alumina of which the U.S. has enormous resources measured in hundreds of billions of tons. Not only are there high Alumina clay deposits, but there are crystalline rocks such as Anorthosite and Cyanite for which the technology for conversion to aluminum we understand has been developed though at a higher cost than conventional bauxite reduction.

The most baffling of the problems we face in dealing with foreseeable mineral shortages are those of government policies which accentuate and even create the probability of shortages. Many years ago the government established stockpiles of strategic minerals. The high point of the stockpiling for most metals was in 1965, since which time the government has been selling most commodities for reasons that are not understood. A political purpose must exist, though obviously at variance with national security objectives for which they were intended. Even though we have been totally dependent upon foreign sources for chromite for the past fifteen years, the government is selling off our chromium stockpile and now has it down to less than four times our estimated consumption for the present year. In nickel, the government drew its stockpile down to zero in 1972; the strategic stockpile of aluminum has been drawn down to eight months of domestic consumption. For each of these commodities, we are presently almost totally dependent upon foreign sources for supply. Years of lead time would be required to develop substitute domestic resources.

While there is no doubt that American mining and metallurgical industries possess the requisite technology to reduce our growing national dependence, the lack of a coherent national minerals policy makes the job impossible to accomplish. Not only is industry uncertain as to what it can do, but there is an underlying anti-business sentiment in much of the congressional efforts to shift more power to the Federal government.

The examples of how restrictive measures imposed by the government are slowing down the historical growth rate of the U.S. mining industry are legend. The government's land use policies have closed over two-thirds of the federal domain to mineral entry. Various existing laws governing air and water purity all have direct detrimental impacts on our present mining and smelting operations not to mention our ability to develop new resources. Pending changes in the Clean Air Act of 1970 would designate extensive regions where existing air quality conditions could not be down-graded, many areas where the discovery and development of new mineral resources are most likely to occur. In separate legislation congress recently passed a bill to ban mining in Death Valley, an area of major known deposits of Borax and Talc. Were it not for the exceptional efforts of the Alaska delegation, the same bill would have closed to mining the one nickel deposit of presently known potential economic development in the United States, a deposit located at Glacier Bay, Alaska.

The U.S. national tendency to give preference to social priorities which restrain the use of American mineral resources necessitates the reliance on world markets for supplies of ores that might, under other circumstances, be produced from domestic sources at comparable or even lower costs. Thus, principally for political reasons our minerals supply picture is tenuous. I am afraid that only when we have experienced mineral shortages will Congress come to grips with the problems that it is creating.

We can be sure that any crisis in mineral availability will directly affect each of us. Depending upon the severity of such a crisis, our standard of living will suffer, and to some degree, your and my way of life will have been altered.

HOW MUCH OF ALASKA SHOULD BE LOCKED UP?

Mr. STEVENS. Mr. President, between now and the end of this Congress, you will hear many comments from me regarding the future of Alaska's public lands. This Congress more than any other will have a great impact on the future of these lands and on the future of the State in general. It is not surprising in a State the size of Alaska that the role the land plays is great. Alaskans traditionally use the lands in their States more than citizens use public lands in the other States and are very concerned that the Congress make the best decision regarding the future of these lands.

However, this is not merely an Alaskan issue. The future of the entire Nation is involved and slowly there is developing an awareness throughout the country that we must act carefully and judiciously to insure the proper use of Alaska's lands. Indicative of this developing awareness is a recent editorial concerning the future of Alaska's d–2 lands in the Seattle Times. These lands, as you know, are approximately 80 million acres of public lands withdrawn for study as potential additions to the national parks, forest, and wild and scenic river systems. This Congress will make a decision concerning the future of these lands and the Seattle Times asked the basic question related to this important issue; "How Much of Alaska Should be Locked Up?"

I commend this article to Members of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Seattle Times, Apr. 17, 1977]

HOW MUCH OF ALASKA SHOULD BE LOCKED UP?

Congressional hearings in Washington, D.C. open this week on an issue that overshadows even the Alaska oil pipeline in terms of long-range importance to the 49th state.

Environmentalist groups all across the country are calling it their "issue of the decade." Others call it the "greatest subdivision in history."

At issue are the so-called "D2 lands," in reference to Section D2 of the Alaska Native Claims Settlement Act of 1971. The act, which granted 40 million acres of Alaska land to natives in return for access to pipeline-corridor properties, established a commitment to reserve millions of other acres for public use.

The key question: How many millions?

Several bills are before Congress to answer this question in varying ways. But the immediate focus of attention is on the so-called "Alaska Coalition Bill," whose chief sponsor is the powerful chairman of the House Interior Committee, Representative Morris K. Udall, Arizona Democrat.

The popular designation of Udall's measure is a misnomer. It has very little to do with any coalition within Alaska, but represents an attempt by environmental extremists who live far from the 49th state to prescribe Alaska's future.

The bill—combined with existing parks, wildlife refuges, and scenic rivers—would lock up 146.6 million acres in Alaska's wilderness-preservation system.

That is larger than the combined area of New Jersey, Connecticut, Massachusetts, Hawaii, Delaware, Maryland, Vermont, West Virginia, New Hampshire, Maine, Indiana, South Carolina and Kentucky!

In that vast area extending into every major geographical segment of the state, all economic development other than tourism (largely of the backpack variety) would be banned.

Most of Alaska's rich mineral resources, including an estimated 130 billion tons of coal and many strategic minerals in short supply, would go untapped.

The unlimited potential of Alaska food and fiber resources would go largely unrealized. And the state's road and rail system would be limited for the most part to the existing skeleton network.

In other words, Alaska's economic development would be permanently stunted.

No one seriously concerned with this issue suggests that additional millions of acres, beyond the 32 million so classified, should not be set aside for single-purpose (scenery and wildlife) use.

But the Udall bill represents an altogether unreasonable over-reach that is contrary not

only to Alaska's interest, but to that of a nation increasingly and dangerously dependent on the import of strategic raw materials from abroad.

The hearings opening this week are before an Alaska-lands subcommittee under the chairmanship of Representative John F. Seiberling, Ohio Democrat. The hearings will be continued later in other cities, including Seattle June 20.

Our hope is that out of the hearings will emerge common-sense legislation that endorses multiple use, as opposed to the single-use concept, for a reasonable part of America's northern storehouse of resources.

THE MIDDLE EAST

Mr. JAVITS. Mr. President, last week marked the 29th anniversary of the independence of the State of Israel. Through the years, Israel has survived five wars with its Arab neighbors. Despite this, Israel has developed and prospered into a modern and advanced nation.

In marking Israel's anniversary, the American Israel Public Affairs Committee—AIPAC—held a dinner during its 18th Annual Policy Conference here in Washington. Attended by many Members of Congress and hundreds of community leaders from all over the country, one of the guest speakers at this dinner was our colleague from Kansas, Senator ROBERT DOLE.

In a wide-ranging speech, Senator DOLE painted a hopeful but realistic picture of the situation in the Middle East and of Israel's special relationship with our own country. Mr. President, I ask unanimous consent that the full text of Senator DOLE's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR BOB DOLE

It is a pleasure to participate in this Annual Policy Conference of the American Israel Public Affairs Committee coinciding with Israel's 29th year of independence. I respect the fine work which AIPAC does in Washington.

I speak for many of my colleagues when I say that the information provided by AIPAC has been most helpful in our efforts to understand the current situation in the Middle East.

SIX YEARS AGO

Six years ago, in April of 1971, I appeared at your dinner commemorating Israel's 23rd anniversary. On that occasion, I stated:

"We seek more than the continuation of an uneasy truce—of an armed truce subject to erupt into open warfare without a moment's notice.

"For the millions of Arab and Israeli children growing up in the tensions and hostilities of today, we hope for a future free of strife. Such a future must be built on more than guns and planes—though we must never forget the importance of military security.

"Such a future must be built on a genuine, lasting settlement of the basic differences that divide the contending parties in the Mideast. Obviously, this kind of settlement should not and will not be imposed from the outside. The idea of a rigid 'agreement' engineered by the great powers and inflicted on Israel and the Arab states is neither ethical nor practical. It would not be a just peace, and it would not be a lasting peace, by its very nature."

I cannot stand here this evening and assure you that Israel need no longer fear for its existence, and that a settlement between Arabs and Jews has been reached. I can say, however, that I believe we have made progress towards an Arab-Israeli settlement and that peace in the Middle East is possible if it is based on provisions which include:

The opportunity for Israel to preserve itself in the midst of hostile Arab states;

The maintenance of a balance of power between Israel and the Arab states;

And the satisfaction of the just aspirations for peace shared by all the people of the Middle East.

NO ALTERNATIVE TO SURVIVAL

The first step towards a durable peace in the Middle East is the acceptance of the sovereignty of the State of Israel by the Arab world, the PLO included. This has been, is now, and must always be the cornerstone of U.S. policy in the Middle East. There can be no substitute, no alternative, to Israel's survival.

Israel lives today because it has been able to maintain itself against those who have tried to destroy it. The Israeli's have made great personal and economic sacrifices to create a viable state in an area that has never before known such prosperity. In a very real way, Israel today is a democratic oasis, a model other nations would do well to emulate. The incredible sacrifices of the Israeli people combined with the record of the Israeli nation have given Israel the right to something far greater than mere survival.

Israel lives today despite United Nations resolutions and the preferences of some of the great powers. The United Nations, in fact, has proven to be a hindrance to peace in the Middle East with its condemnation of Zionism as racist—a position rightfully criticized by Ambassador Scranton—and by its publication of reports which seem to question Israel's legal right to exist. In condemming the report of the United Nations Committee on the Exercise of the Inalienable Rights of the Palestinian People—which questioned, retroactively, the legality of the 1947 partition—Ambassador Scranton called the report "unfair", "senseless" and "totally devoid of balance". By catering to the PLO, the United Nations has only strengthened its intransigence. The PLO has never rescinded the major points of the National Covenant of 1968 which called for an "armed struggle against the Zionist presence". Given earlier United Nations positions, it is no coincidence that as late as last March, the PLO reaffirmed its commitment to that armed struggle.

DEFENSIBLE BORDERS

A second step toward a durable peace is the recognition of Israel's need for defensible borders. Israel and its neighbors are entitled to negotiated borders which are secure and defensible. The primary issue is not how far Israel must withdraw but how to guarantee the Israeli people that they are in a position to defend themselves should their enemies choose to attack.

A third step towards peace in the Middle East is the lifting of the Arab boycott. The boycott interferes with international trade. It threatens guarantees of equal rights and equal protection. Fighting the boycott is an American concern. The boycott draws its strength from avarice and its energy from fear. It must be met decisively, for it has been demonstrated repeatedly that where resistance is highest, boycott enforcement is weakest.

Senator Church and I agree that any nation has the right to initiate a primary boycott or an embargo against any other nation. We further agree that no nation has the right to demand compliance with a secondary or a tertiary boycott from American firms. For that reason, I support legislation which would make it illegal for an American company to participate in a boycott of Israel or of other firms doing business with Israel as a condition of doing business with Arab countries. Such legislation, however, must be far stronger than the Administration is presently willing to support. I am disappointed in Mr. Carter's willingness to quickly back down from a stronger position held during the recent campaign.

A fourth condition for peace is an equitable agreement on the future of Jerusalem. It was to Jerusalem that the ancient prophets strode and toward Jerusalem that 2,000 years of Jewish prayers were sent. Never again should Jews be barred from their holy places as they were from 1949 until 1967.

MUST BE MORE THAN A TRUCE

I believe all of these conditions can be met if the United States realizes that Israel cannot be expected to accept a "peace" which is little more than a temporary truce.

A meaningful settlement must be a resolution of grievances which leads to normal relations. The United States must consider the achievement of normal relations to be the first requirement. Peace cannot be merely a military armistice. It must be political, cultural and economic as well, if it is to endure.

Normalized relations, phased in gradually, tied to limited withdrawals, provide the best means of building a peace. Each step will be a test of Arab intentions. Each movement towards reconciliation will strengthen the drive for peace, encouraging pragmatism and good faith. Each achievement along the way will show that nations at peace live as partners, not as adversaries.

Another area of concern which I share with Jewish Americans is the future of Soviet Jews. As a member of the Commission on Security and Cooperation in Europe, which is monitoring Soviet compliance with the Helsinki Final Act, I am very much aware of the conditions which exist in the Soviet Union for all minority groups. The Jews, however, are subject to an especially brutal environment. They are denied the right to practice their religion. They are discriminated against on the job, in educational institutions and in their daily lives. They are not permitted to leave. Those who wish to emigrate abroad are subject to all manner of harassment including demotion, job loss, military conscription, and denunciations at public meetings. Those who speak out against such oppression as did Anatole Sharansky—are arrested.

It has been very frustrating for me—as I know it has been for you—to watch these events unfold and to feel powerless to influence them. But as frustrated and as powerless as we may feel, we must continue to speak out against these injustices. We must continue to act on behalf of the oppressed whenever we can.

In January of 1971, when the Soviets sentenced two Jews to death for allegedly hijacking an airplane, I introduced a resolution in the Senate asking the Soviets to commute those sentences. The following day the sentences were commuted.

Who can say the Senate Resolution had any impact?

Who can say it did not?

The following December, when Silva Zalmeson was dying of tuberculosis in Siberia, I introduced another Senate Resolution—requesting that she be brought out of Siberia and given medical attention. What the immediate results were, I do not know. Happily, she is out of Siberia, out of Russia, and at home in Israel.

ANATOLE SHARANSKY

More recently, I signed a letter to Comrade Brezhnev protesting the arrest of Anatole

Sharansky and requesting his release. I met with Mrs. Sharansky when she was in Washington, and I assured her of my continued support of her husband's efforts to leave the Soviet Union.

At the request of Jewish Americans in Kansas, I have now sent two letters to Ambassador Dobrynin requesting that the Yakir family be allowed to emigrate to Israel.

Finally, in an effort to obtain first hand information on human rights violations in Eastern Europe, I have formed an advisory council of leading ethnic Americans who are intimately familiar with conditions in that part of the world. I am proud to say that an outstanding member of that Council is the Washington representative of the National Conference of Soviet Jewry.

NEVER GIVE UP

I cannot be certain that any of my efforts will have an impact. But I do know that my efforts, your efforts, the efforts of countless other Americans who are concerned about human rights will, sooner or later, have an impact. We will continue to be frustrated, but we must never give up.

American-Israeli friendship is no accident. It is a product of our shared values. We are both democracies. We are both pioneer states. We have both opened our doors to the oppressed. We have both shown a passion for freedom and we have both gone to war to protect it.

There are few true democracies left in the world today, but Israel is one of them. There are few allies upon whom the United States can count, but Israel is one of them. There are few nations who share our ideals, but Israel is one of them.

By aiding Israel, we remain true to our founding principles. By strengthening Israel, we strengthen the cause of human freedom and dignity. Six years ago, at your organization's earlier dinner, I concluded my remarks with those words which are just as relevant and vital today:

"Israel must and shall survive as a free nation. But beyond bare survival, let us work for the day when a generation of Arab and Israeli children can be born into a world at peace—a world in which old enmities and injustices no longer poison the chances for peaceful development and cooperation."

I am proud to have had the opportunity to address your organization tonight because I feel your aim—that of continued American-Israeli friendship and cooperation—is a noble one. In conclusion, I would like to quote Theodore Herzl who said: "If you will it, it is no fable."

THE URANIUM CARTEL

Mr. METZENBAUM. Mr. President, as a member of the Senate Antitrust and Monopolies Subcommittee, I have just attended 3 days of hearings on the status of our antitrust laws. Quite frankly, the prognosis is dim. It seems our antitrust laws have been ineffective in combating anticompetitive practices which continue to cost consumers billions of dollars and result in the inefficient use of our limited resources. Time and time again, we have seen grave abuses of the marketplace by those who produce our energy resources.

Sunday's Washington Post highlighted a new area where energy producers, allegedly through their foreign subsidiaries, have subverted our antitrust laws—the uranium, or "yellowcake," cartel. The effect of this cartel has been devastating—the world price for yellowcake rose from $6 a pound to $41, causing at least one middleman—Westinghouse Electric Corp.—to cancel its contracts with many public utilities. In the article, William Greider raises some critical questions concerning our antitrust laws:

What is the reach of U.S. antitrust laws? Both Canada and Australia enacted new laws last year, prohibiting their uranium companies from supplying documents in response to the shower of U.S. subpenas, a matter of national sovereignty, they argued.

On the other hand, in an age where multinational firms are astride all national borders, how much impact do U.S. antitrust laws really have, if a company can accomplish through its foreign subsidiary whatever it is prevented from doing inside America's borders.

Because of the importance of the questions that Mr. Greider raises in his article, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

URANIUM CARTEL STIRS QUESTIONS OF ENERGY POLICY

(By William Greider)

The yellowcake cartel began with modest ambitions for multi-national profit.

An international "producers' club," as they called themselves, would bring stability and higher prices to the world trade in yellowcake, the raw uranium which fuels nuclear power plants.

The club—encouraged by the governments of Canada, Australia and South Africa, inspired by major producers based in France and Great Britain—set out in 1972 to rig bids and drive prices upward, according to its own secret records. It divided the market outside the United States, assigning percentages to its members. It put the squeeze on "middlemen" competitors who do not own their own uranium mines.

But this foreign-based cartel succeeded so spectacularly in achieving its goal that the matter is now a billion-dollar legal hassle in U.S. courts—and a potential time bomb which could alter the American political debate over future energy supplies.

While the public was worrying over OPEC's rising oil prices, the world price for yellowcake rose even more drastically—from $6 a pound to $41. The U.S. market price became fixed to the world price. And one middleman—the Westinghouse Electric Corporation—was staggered by the consequences.

Westinghouse, unable to fill its uranium-supply contracts to the public utilities which buy its nuclear reactors, canceled them. Now some 17 utilities are suing for damages which, theoretically, could exceed a billion dollars.

In turn, Westinghouse is suing the 29 multi-national companies which it claims were part of the yellowcake cartel. The Justice Department has a grand jury exploring the matter in search of criminal violations of the U.S. antitrust laws. A House oversight subcommittee is pouring over hundreds of secret corporate documents which it had subpoenaed for its own investigation.

Each issue involves complex economic arguments over who hurt whom. Some analysts contend, for instance, that the cartel had little impact on uranium prices, that yellowcake was driven up by supply shortages and the zoom in OPEC oil prices. Others believe that oil showed yellowcake how it could be done.

But what turned this foreign-based cartel into an American controversy is this: some of the alleged participants are American companies, operating through their foreign subsidiaries. One was Gulf Oil, which is still cleaning up its corporate image from the scandal of its illegal $5 million political slush fund.

Now, if Westinghouse's allegations are substantiated, Gulf has another black eye coming—the spectacle of the nation's eighth-largest corporation using, through its Canadian subsidiary, the leverage of an international cartel to cripple the nation's 20th largest corporation.

To make the drama richer, both Gulf and Westinghouse are based in Pittsburgh. Their top executives drink together at Duquesne Club, and Jerry McAfee, the new board chairman brought in to clean up Gulf's image, was president of Gulf Canada when the cartel manipulations were arranged. Westinghouse, for that matter, is in a peculiar role as "victim," since it has had its own share of price-fixing scandals in the past.

Gulf does not deny that it participated in the cartel, but insists it did nothing to violate U.S. laws. "Participation in the cartel," a company spokesman in Pittsburgh said, "was through our Canadian subsidiary at the stipulation of the Canadian government. It was the Canadian government which said, if you're going to be a producer, you are going to have to participate."

In the various layers of litigation, however, Westinghouse has introduced corporate documents from Gulf files to argue that Gulf, among others, was a willing partner and that it helped block Westinghouse from the uranium purchases it needed. Other U.S. defendants include Kerr-McGee, the nation's largest uranium producer, and Getty Oil and Utah International.

Gulf attempted last week in U.S. District Court in Washington to block the subpena of its records by Rep. John E. Moss, (D-Calif.) Commerce subcommittee. The House panel won. The still-secret records are said to include detailed inquiries from nervous managers in Gulf's Canadian subsidiary asking the home office to assure them that they were not getting themselves in trouble.

The broader questions raised by the case go in several directions, any one of which could jeopardize the Carter administration's energy blueprint. For instance:

Is the world price of uranium still subject to manipulation by a global cartel? If so, that could add another argument against rapid development of nuclear power in the United States, a development implicit in President Carter's energy plans.

Westinghouse insists the cartel is still in place, but went underground after prices soared, no longer needed to arrange rigged bidding. The government of Canada announced last fall that it withdrew from the "informal marketing arrangements" in 1975.

One market analyst dubbed the cartel "UPEC," and suggested that future increases in uranium prices are possible. Others argue that the cartel was formed mainly in retaliation against the U.S. embargo which closed the American market to foreign producers. Now that the U.S. embargo is being phased out, a foreign cartel has no further purpose. At the moment, in fact, some Europeans are fuming about the possibility of an American-led cartel in the future.

What is the reach of U.S. antitrust laws? Both Canada and Australia enacted new laws last year, prohibiting their uranium companies from supplying documents in response to the shower of U.S. subpoenas. A matter of national sovereignty, they argued.

On the other hand, in an age when multinational firms are astride all national borders, how much impact do U.S. antitrust laws really have, if a company can accomplish through its foreign subsidiary whatever it is prevented from doing inside America's borders?

Finally, in terms of current political sentiment, the yellowcake cartel may provoke more congressional interest in questions of

who controls energy resources—the issue of the oil industry's major acquisitions in uranium and coal and other fuel sources.

The cartel, by no stretch of the facts, could be blamed on Big Oil, but some in the industry fear that Gulf's prominent role will become a cautionary tale of how oil domination of other resources threatens the future.

"It's a perfect case," said one oil industry source, "to prove that you can't trust the oil companies."

In the courtroom, where scores of lawyers are arguing over reams of confidential documents from Gulf and other corporations, things are getting a bit nasty.

Gulf has filed a motion in the antitrust suit in Chicago asking that Westinghouse's law firm—Kirkland & Ellis—be disqualified because it did a private study for the American Petroleum Institute in Washington which gave it access to the private commercial secrets of oil companies, including Gulf. The study was on "horizontal divestiture"—the antitrust question of whether the oil industry has too large a share of competiting fuels like uranium.

On the merits of its allegations, Westinghouse won something of a moral victory in a Pittsburgh case which it settled with a local utilities company. The state judge, I. Martin Wekselman, listened to much of the antitrust evidence against Gulf and the other cartel participants and observed in his settlement order:

"There was persuasive evidence that both the price and supply of uranium were drastically affected by a number of interrelated contingencies, including a conspiracy among United States and foreign uranium producers to fix prices, to allocate markets and to eliminate competition from intermediaries in the uranium market such as Westinghouse . . ."

The "club" arrangements, strangely enough, were first publicized in detail last year by environmentalists—who are as opposed to nuclear-power manufacturers like Westinghouse as they are to uranium miners like Gulf. Documents leaked or stolen from the Mary Kathleen mines in Australia were turned over to Friends of the Earth, which made them public.

Those secret papers, plus others subpoenaed by Westinghouse in the lawsuits, depict a rather formal organization with by-laws and marketing rules and fines for members who broke them. The "club" jumped around the Western World with regular meetings in Paris and Johannesburg and London and other commercial centers.

"A leader and a runner-up will be selected by the secretary in consultation with the committee," the operating rules stated. ". . . The leader would have the right to go to the appropriate minimum price then applicable . . . The runner-up would have the right to go to the minimum price plus 8c/lb . . . All 'other producers' would have the right to go to the minimum price plus 15c/lb . . ."

The details floating around the world were then assigned to different "leaders" as, for example, a 1972 letter from a British executive outlined to his Australian affiliate:

"It has also been agreed that the Australians and Nufcor [a South African company] will work out a scheme whereby they will be leading in regard to a quotation for Taiwan; the French and Nufcor will make similar arrangements for a quotation in Yugoslavia. I would like to mention that this does not mean we will not be quoting and it will still mean that we have to pursue it actively, but there is very little chance of our getting any of this business. . ."

The question of what induced yellowcake prices to multiply in 1974 and 1975 is a jungle of cause-and-effect arguments. What is much clearer from the documents that have surfaced so far is that the cartel members, including Gulf, saw Westinghouse as a rival—and acted to head it off in the world uranium market.

At a "club" meeting in Cannes in the summer of 1972, the representatives were warned that three Swedish utilities were dickering with Westinghouse for their future uranium supply and perhaps gambling that the club arrangements would break down.

"The club," according to minutes of the meeting, "could well be in for a 'war of nerves.' "

At the meeting, the "club" agreed upon rules for how to handle uranium bids from reactor manufacturers like Westinghouse, setting the price higher and reserving the right to make a competing quotation to the eventual buyer. A Gulf Canada man was not present at Cannes, but a copy of the minutes turned up in the home-office files and Gulf was already being assessed dues to support the "club" headquarters in Paris.

Late in 1972 Westinghouse did conclude a deal to supply uranium to the Swedish companies, depending on an Australian mine for its supply. Don Hunter, an official of Gulf's General Atomic in San Diego, wrote the following internal report in March, 1973:

"We have learned that Westinghouse has submitted a joint venture with Queensland Mines for approval of the Australian government. If this arrangement is approved, Westinghouse will be provided with up to 2 million pounds per year from 1975 to 1980 and 600,000 pounds per year post-1980 . . . The proposed venture is approximately three months away from fruition and if it develops would provide Westinghouse with a potential source for U.S. reactor sales. It would also provide a source for their substantial foreign shortage.

"We will work with GMCL [Gulf Minerals Canada Ltd.] to try to put pressure on the Australians to block the proposed arrangement."

The Australian government did cancel Westinghouse's venture a few months later. Westinghouse contends it was part of the cartel activities. Others point out that the newly elected labor government in Australia was waging its own campaign against mineral exploitation by foreign corporations and did not need any prompting from Gulf Oil.

In any case, the private records of the cartel continued to mention Westinghouse as an adversary. Minutes of the eighth session of the "operating committee" held in London in October, 1973, reviewed dealings with "middlemen," and reported:

"Westinghouse: Nufcor received from Westinghouse a proposal to buy at 25 per cent below club prices and declined it."

A new pricing schedule was discussed and the minutes noted:

"This new line of price will be proposed to the next policy committee, but will be applied immediately unless there is formal opposition by anyone of the groups. In particular it will be applied to . . . Westinghouse" and two European suppliers.

A month later in Las Palmas, the operating committee met again and the draft minutes included this item:

"Negotiations with middlemen. It was agreed that nobody would enter into serious discussions with Westinghouse before coming back to the club."

Albert L. Bethel, the Westinghouse vice president in charge of uranium resources, testified before the Moss subcommittee on how Westinghouse came up short:

". . . During the latter part of 1973 and during 1974 we were making attempts to consummate large purchases of uranium, multimillion-pound lots. Late in 1973, we went out for proposals for supply and we got no bids. We went out again in June of 1974, July of 1974, and again we got no firm quotations. During 1975 we made several bids for parcels that were on the market and were unsuccessful. We bid what we thought was a reasonable price and got no takers."

Westinghouse's version is that all of its experts had predicted an ample market in uranium and stable prices, far into the future. Others claim that Westinghouse took risks—selling uranium without secure sources of supply—and it got burned when the 1974 oil crisis, among other things, sent the prices soaring.

Whatever caused the yellowcake inflation, "club" members did reach their original goal. As one British member put it: "improving uranium prices although selling lesser quantities."

HAPPY NEW YEAR, AMERICA

Mr. DOMENICI. Mr. President, I rise today to urge my colleagues to join me in wishing the American taxpayer a Happy New Year. Some of them may wonder why I am doing this on May 9th, which, as everyone knows, is well into the year.

The reason, Mr. President, is that according to the calculations of the Tax Foundation, May 5th was the first day of 1977 that the average taxpayer actually begins to earn some money for his or her own use. For the 4 months and 4 days before then, the average American taxpayer has been working to earn the money required to pay his or her taxes, Federal, State, and local.

For those who would prefer not to think of this situation in terms of days, months, and year, let us talk about it in terms of minutes and hours per day. Again, according to the Tax Foundation, the average American taxpayer with an 8 hour work day works the first 2 hours and 42 minutes just to pay his taxes. Payment of Federal taxes requires 1 hour and 44 minutes with 58 minutes required for payment of State and local taxes. It is startling to realize that the Federal tax rates we have imposed on the American people take more of their productive efforts than required to pay for food—1 hour and 8 minutes—or pay for housing—1 hour and 30 minutes. That is incredible.

We had an opportunity here in the Senate recently to give the American people a little New Year's gift. We could have made their New Year come a little earlier, perhaps as early as April 15 when they must have their tax returns filed. We could have accomplished that significant reduction in the period they work for Government simply by permanently reducing the tax rate for individual taxpayers. Unfortunately, Mr. President, we ducked out of that opportunity by muttering something about the sanctity of future tax reform and because the President evidently wants Americans to keep working for Government for 4 months and 4 days a year until he gets around to checking into whether that may be too long.

So, I hope my colleagues, particularly those who voted to kill the permanent tax reduction initiative, will join me in wishing the average American taxpayer a Happy and Prosperous New Year. I just hope that after the smoke clears from the tax reform hassle we will go through, the average American taxpayer will not be having to wait till July of every year to quit working for Government.

Mr. President, I ask unanimous consent to have an article entitled "It Takes

4 Months Of Work On Taxes" printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT TAKES 4 MONTHS OF WORK ON TAXES

NEW YORK, May 4.—If you're an average taxpayer working eight hours a day, you have been laboring since Jan. 1 just to pay your federal, state and local taxes.

Thursday you start working for yourself.

According to the Tax Foundation, Inc., the average taxpayer has to work 2 hours and 42 minutes a day just to pay his taxes—or 4 months and 4 days for 1977.

The foundation said that, according to revised figures, an 8-hour-a-day worker labors 1 hour and 44 minutes to pay his federal taxes, and 58 minutes to pay his state and local taxes.

In comparison, a worker labors 1 hour and 8 minutes a day to pay for food and tobacco, 1 hour and 30 minutes for housing and home operation, and 25 minutes for clothing.

THE PUBLIC USE OF PRIVATE INTEREST

Mr. DOMENICI. Mr. President, the complex interrelationship between Government, citizens, and private industry form one of the most critical aspects of public policy decisionmaking. During the past 30 years we have seen public policy made, to all intents and purposes, by relying on a "carrot-and-stick" approach where the Federal Government acts as rewarder, punisher, and regulator of behavior. We have seen an extraordinary proliferation of regulators, bureaus, regulations, and lawsuits as Government goes about the business of trying to be all things to all people and, to do all things, it seemed, to all people.

I wrote many months ago, in the Wall Street Journal, of the need to restructure and reorder Federal Government activity. I wrote then that a top priority for decisionmakers was to determine just what the Federal Government ought to do and what the Federal Government ought not to do. It was my contention then, and still is, that we have sadly neglected using the marketplace, and its forces, as tools for changing society and reaching new goals for our Nation. I also argued for wholesale "swapping" of programs between the States and the Federal Government.

I believe that we have made steps, tentative though they may be, in that direction. Senator HENRY BELLMON and myself have tried to introduce legislation in the fields of education and nutritional aid that at least stay the trend toward centralization of all answers in Government. But, I would be the first to admit that the wholesale move toward using market forces to determine policy and direction looms far, far away, and has not been addressed in any forward way.

One thing impresses me more than at any other time, however—the answers we seek will require a fundamental reordering of legislative and executive branch "conventional wisdom." Intervention by Government on a massive scale can no longer be considered the "sine qua non" of good public policy. Indeed, it can be argued that the kneejerk response that demands a Government answer for every problem, an answer imposed from without, may be the first sign that the response is inadequate or, worse, irrelevant, to the dilemma confronted.

Keeping in mind the complexity of the problems involved, and realizing the forces once in motion yield reluctantly, if at all, I still would suggest that the vital marketplace system of this Nation, with all of its dynamics and advantages, has been grossly underused by national policymakers. In this regard, I read with great interest an article in the May 1977 issue of Harper's, entitled "The Public Use of Private Interest." The author of this article is Charles L. Schultze, President Carter's chairman of the Council of Economic Advisers.

I am not at all sure that Mr. Schultze, for all his brilliance and experience, has confronted sufficiently one essential sociological feature of the American landscape—the rise of expectations created by Government action in a wide number of fields and by promises of Government action, and some immediate "benefit" to the citizen, by Government leaders. This rising tide of expectations, as one of Mr. Schultze's colleagues wrote last year, has created many of the political problems that we now face when we attempt to restructure programs.

However, as an outline of alternatives to present almost autonomic Government intervention Mr. Schultze's article is informative and stimulating. Since this Nation must confront the apparent failure of Government intervention, by itself, as sufficient response to societal problems, I believe that articles such as this one are critical. Mr. Schultze's article is not the first in what promises to be a lengthy debate on the extent and appropriateness of Government intervention in the private sector, but it is certainly a welcome sign that a member of this administration questions publicly what has been for decades the conventional wisdom of many of his colleagues.

I ask unanimous consent, Mr. President, that Charles Schultze's article, "The Public Use of Private Interest," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PUBLIC USE OF PRIVATE INTEREST

(By Charles L. Schultze)

(During the 1960s the belief took hold that some kind of federal budgetary program or federal regulatory agency could be designed to deal with almost any social or economic problem. Now it is widely recognized that most federal programs do not work well, and consist principally of "throwing money at problems." The rash of new regulatory mechanisms established in recent years—for pollution control, industrial health and safety, and consumer product quality and safety—have begun to generate resentment against excessive red tape. Yet a large majority of the public still believes that the federal government has responsibility for ensuring a decent income for the poor, seeing that jobs are available for those wanting work, and controlling inflation.

(Conservatives argue that recently adopted social interventions have been a mistake. Not only is there a general sense of malaise that government is performing its new tasks ineffectively, but a growing body of objective evidence suggests that this perception is correct. The liberal argument holds that there is nothing inherently wrong in the recent trend of interventionism, and that most of these problems could be straightened out by reforming election laws, undertaking more thorough policy analyses, and devoting more money to underfunded programs.

(In what follows, Charles L. Schultze, now chairman of the Council of Economic Advisers, argues that this polarity of viewpoints offers little help in dealing with reality. Mr. Schultze sets forth a number of conditions to determine when and how, or if at all, government should intervene. Specifically, he takes issue with the established methods of our society in dealing with what we perceive as a market failure, and hence a reason for government intervention or collective action, and offers various suggestions for alternative approaches.)

THE GROWTH OF REGULATION

In 1930, some 8 percent of the gross national income was spent by federal, state, and local governments for purposes other than national defense and foreign affairs. Except for the spread of publicly provided elementary and secondary education, this fraction had not grown substantially since the Civil War. In the next thirty years, however, the proportion of national income spent for the domestic programs of government rose to 13.5 percent. Today, only sixteen years later, such expenditures amount to 24 percent of gross national income. Interest on the debt and cash transfers for direct income support to individuals now make up one-third of those expenditures. The remainder, however, represents some form of government delivery of goods and services or provision of subsidies. The fraction of national income taken for these purposes by the federal government itself was less than 1 percent of national income in 1930, but grew to 4 percent by 1960 and then to 8 percent by 1976.

The growth of federal regulatory activities has been even more striking. Even as late as the middle 1950s there were only four areas in which the federal government had a major regulatory responsibility: antitrust, financial institutions, transportation, and communications. In 1976, there were seventy-seven federal agencies engaged in regulating some aspect of private activity.

Until perhaps fifteen or twenty years ago, most federal activities in the domestic sphere were confined to a few broad areas: providing cash income under Social Security programs for which eligibility was fairly easily determined; undertaking basic investments in a few sectors of the economy, principally highways, water resources, and high-rise public housing; regulating a selected list of industries for the alleged purpose of controlling monopoly or preventing certain abuses; and a series of housekeeping activities, such as running the Post Office, the national parks, the merchant seamen's hospitals, and the air navigation system. But in a short space of twenty years the very nature of federal activity has changed radically toward much more complex and difficult objectives. The newer programs are different, and the older ones have taken on more ambitious goals. In the field of energy and environmental policy the generally accepted objectives of national policy imply a staggeringly complex and interlocking set of actions directly affecting the production and consumption decision of every citizen and every business firm.

In a society which relies on private enterprise and market incentives to carry out most productive activity, there is a critical choice to be made beyond the question of whether or not to intervene. Should intervention be carried out principally by grafting a specific command-and-control module onto the private enterprise incentive-oriented system, usually in the form of a regulatory apparatus, or should it be undertaken by modifying the

informational flow, institutional structure, or incentive pattern of that private system? Neither approach is universally appropriate to every situation. But our political system almost always chooses the command-and-control response and seldom tries the other alternatives. What follows is an analysis of the reasons for this bias, an estimate of its costs and consequences, and suggested areas in which the alternative of institution-building, incentive, and information would be superior.

THE STANDARD PATTERN OF SOCIAL INTERVENTION

The term *social* (or *collective*) *intervention* assumes a good deal. It implies the rebuttable presumption that the desirable mode of carrying out economic and social activities is through a network of private and voluntary arrangements—called, for short, "the private market." A theory of social intervention is thus concerned with defining the conditions under which that presumption is indeed rebuttable.

We think of the public sector as intervening in the private and not vice versa; though in most societies throughout history (and in many today) the presumption ran the other way. With only a little facetiousness Lenin's New Economic Policy of the early 1920s and the current attempts to introduce profitlike calculations into Eastern European economies might be labeled "private intervention into the collective system." But in the United States, reform movements and interventionist policies seldom have questioned the "rebuttable presumption" approach. The strong populist streak which runs through U.S. reformist history, and is still reflected in political rhetoric, always had small businessmen and family farmers high on its list of heroes. Populism sought to help its heroes with cheap money and by breaking up or regulating monopolies, not by nationalizing them. Even the Tennessee Valley Authority was sold as a "yardstick" for privately owned utilities, not as the first step toward public ownership.

The rebuttable presumption approach is also an implicit philosophical underpinning of modern welfare economics. The theory of social intervention for purposes of microefficiency (as distinct from income redistribution) is built upon three pillars; an analysis of the formal characteristics of an efficient economic system (Pareto optimality); a specification of the conditions under which a decentralized market system with private ownership of property will duplicate those characteristics (the duality conditions); and an identification of the particular situations in which existing private markets do not or cannot meet those conditions (market failure).

The rebuttable presumption hypothesis, however, has provided little guidance for the social intervention that has actually occurred, except to rule out nationalization of industry as an acceptable solution. There is little connection between the rebuttable presumption approach as worked out by modern welfare theory and its application to social legislation. Once a political battle to intervene has been won in some broad area—environmental control, reduction of industrial accidents, or standards for nursing homes and day-care centers—the extent and scope of the resulting social controls are seldom grounded in a specific analysis of where and to what extent the private market fails to meet acceptable standards. Similarly, there is seldom any attempt to design techniques of intervention which preserve some of the virtues of the free market. The usual instruments of social control do not involve the use of incentives, the creation of market analogues, or the promotion of competitive institutions. Apart from income-maintenance programs, the techniques of intervention are pretty well confined to centralized regulatory bodies, governmental delivery of free services, and categorical grants to subordinate units of government.

To some extent political action and economic theory treat the actual instruments of social intervention as a series of black boxes. One first identifies a market failure—environmental pollution or industrial accidents or a mismatch between jobs and people in the labor market. If the political system can generate a consensus that some form of social intervention is called for, the job is turned over to the black box. Within the box a group of presumably omniscient and disinterested bureaucrats determine what is to be done and issue the necessary directives. It is ironic, indeed, that a society whose citizens absorb the praises of the market's libertarian and economic virtues almost with their mother's milk, and an economics profession which cut its teeth on demonstrating how a decentralized incentive system can produce socially desirable outcomes, should give such short shrift to the same concepts when it comes to forging tools for collective action.

The power of economic incentives to generate steadily improving efficiency we acknowledge and employ to bring us whitewall tires, cosmetics, and television sets. But when it comes to something really important like education, we eschew incentives completely. We would find it amusing if someone suggested that the best way to reduce labor input per unit of production would be to set up an agency specifying labor input in detail for each industry. But that is precisely how we are going about trying to reduce environmental damages and industrial accidents.

VIRTUES OF THE MARKET

Quite apart from their maximizing characteristics, as elaborated in formal economic theory, the buyer-seller relationships of the marketplace have substantial advantages as a form of social organization. In the first place, social relationships in the market are a form of unanimous consent arrangement. When dealing with each other in a buy-sell transaction, individuals can act voluntarily on the basis of mutual advantage to both parties. Organizing large-scale social activity through the other alternative open to a free society—democratic majoritarian politics—necessarily implies that in each particular decision there will be some minority that disapproves. Everything else being equal, unanimous consent arrangements are much more attractive politically than any other alternative. Obviously everything else is not always equal. If the income distribution is grossly unfair, the concept of voluntary decisions and unanimous consent is a charade—the coercion of economic necessity is not less real for being economic instead of political. But I am not trying to make the point that the unfettered market is always superior, rather that its buy-sell arrangements have a major social advantage. In designing techniques for collective intervention, the gains from preserving some or all of these arrangements should be given significant weight. Occasions to do so come up all the time: If government is to give assistance to higher education, should it do so through aid to individual students who can then "buy" education where they choose, or should it be through direct subsidies to colleges and universities? Should federal manpower training subsidies principally take the form, as they do now, of grants to training institutions or to manpower training vouchers to individuals, in the manner of the GI Bill of Rights? Should the federal government stipulate in detail safety regulations for each industrial workplace or should it put a stiff price on industrial accidents (e.g., by a tax on injury rates) and let individual firms decide how to respond in order to reduce their tax bill? To say that the principle of voluntary decisions should be given weight does not mean it should be the sole criterion. But precisely because the legitimate occasions for social intervention will surely increase as time goes on, the desirability of preserving and expanding the role of choice takes on added importance. Marketlike arrangements not only minimize the need for coercion as a means of social organization, they also reduce the need for compassion, patriotism, brotherly love, and cultural solidarity as motivating forces behind social improvement.

Learning how to harness the "base" motive of material self-interest to promote the common good was perhaps the most important social invention mankind has yet made. Turning silk into a silk purse is no great shakes, but converting a sow's ear into a silk purse does indeed partake of the miraculous. In the abstract we accept that view, but sometimes in discussing the specifics of social intervention we are loath to apply it. If I want industry to cut down on pollution, indignant tirades about social responsibility can't hold a candle to schemes which reduce the profits of firms who pollute. If I want drivers to economize on gasoline usage, advertising appeals to patriotism, reminders of the energy crisis, and "Dont be fuelish" slogans cannot match the effect of higher prices at the gas pumps. In most cases the prerequisite for social gains is the identification not of villains and heroes but of the defects in the incentive system which drive ordinary decent citizens into doing things contrary to the common good. There is indeed a role for "preaching" as a means of creating a political and cultural situation in which consensus can be reached on social intervention. Cleaning up the environment will only be achieved as environmental quality takes a higher place in the value system of most citizens. But when it comes to the specifics of getting the job done, preaching, indignation, and villain identification get in the way of results.

A second advantage of the market as an organizing principle for social activity is that it reduces the need for hard-to-get information. We think it a major problem that educational research has failed to come up with any evidence which convincingly tells us what will make Johnny read better. We have been unable to determine the production function for education—the relationship among teacher-pupil ratios, curricula, and facilities on the one hand and educational results on the other. There are a number of reasons for this failure, but chief among them is our inability to define and measure either inputs or results satisfactorily.

The more complicated and extensive the nature of social intervention, and the more it seeks to change individual behavior, the more difficult it becomes to acquire the necessary information at a central level. It is relatively easy to set up a system of payroll records from which to determine Social Security benefits. Doing something about the delivery structure of medical care or controlling industrial accidents require a much more complex system of information-gathering. Obviously, on the basis of informational economies, one does not rush out and recommend that education be turned over to the private market and sold like toothpaste, or that simple effluent charges displace all pollution-control regulations. But, where feasible, building some freedom of choice into social programs does provide substantial advantages, either in generating explicit information for policy-makers about the desirability of alternative outcomes or in bypassing the need for certain types of information altogether.

A third advantage of the market as a means of social organization is its "devil-take-the-hindmost" approach to questions of individual equity. At first blush this is an outrageous statement, worthy of the coldest heart among the nineteenth-century Benthamites. And obviously I have stated the

point in a way more designed to catch the eye than to be precise.

In any except a completely stagnant society, an efficient use of resources requires constant change. Consumer states, production technologies, locational advantages, and resource availabilities are always in flux. From the standpoint of static efficiency, the more completely and rapidly the economy shifts production to meet changes in tastes, resource availability, or locational advantages the greater the efficiency. From a dynamic standpoint, the greater the advances in technology and the faster they are adopted, the greater the efficiency. While these changes on balance generate gains for society in the form of higher living standards, almost every one of them causes a loss of income to some firms and individuals, often temporary and for only a few, but sometimes long-lasting and for large numbers. The introduction of a new technology in a particular firm may displace a handful of skilled workers who, after a period of unemployment, find equivalent jobs elsewhere. Or a shoe factory in a one-plant community may close, permanently lowering the income of middle-aged skilled workers, local merchants, and property owners. Both of these types of income losses may occur in an economy running at full employment; both types of losses are even greater in a recession. Under the social arrangements of the private market, those who may suffer losses are not usually able to stand in the way of change. As a consequence, efficiency-creating changes are not seriously impeded.

There are three ways in which society can deal with these income losses: (1) Prevent the particular changes from taking place, thereby making the question moot; (2) Make it up to the losers either with monetary payments (compensation) or with offsetting changes that improve the losers' welfare (log-rolling); (3) Don't compensate for each change, but through the tax and transfer system try to make sure that the cumulative result of all the changes is an income distribution that meets society's standards of fairness and equity.

Our society employs substantially different standards and values when dealing with losses associated with market efficiency and when faced with the possibility of losses through government actions. We are rather chary in dealing with losses by preventing efficiency-creating moves in the marketplace but very prone to use this technique when it comes to collective actions. Over the years the American political system has developed a set of formal and informal rules about losses associated with political decisions. First, we tend to subject political decisions to the rule "Do not direct harm." We can let harm occur as the second- and third-order consequences of political action, or through sheer inaction, but we cannot be seen to cause harm to anyone as the direct consequence of collective actions. The rule is far from absolute, and exceptions abound. But it does strongly influence policy. The specific application of the rule is handled, in a limited sphere of cases, by monetary compensations, as, for example, in the taking of private property for a highway. Unemployment compensation is another example. But most usually the prevention of loss is sought by trying to design collective action to avoid it in the first place.

Dealing with the problem of losses which an emphasis on efficiency necessarily raises is, of course, one of the stickiest social issues. There is absolutely nothing in either economic or political theory which argues that efficiency considerations should always take precedence. And sometimes there is no way to avoid unconscionably large losses to some particular group except by avoiding or at least moderating changes otherwise called for by efficiency considerations. Nevertheless, when it comes to the design of instruments for collective intervention, we place far too much stress on avoiding efficient solutions, and far too little stress on compensation and general income-distribution measures as loss-avoidance techniques.

The final virtue of marketlike arrangements is their potential ability to direct innovation into socially desirable directions. While the formal economic theory of the market stresses its static efficiency characteristics—its ability to get the most out of existing resources and technology—what is far more important is its apparent capacity to stimulate and take advantage of advancing technology. Living standards in modern Western countries are, by order of magnitude, superior to those of the early seventeenth century. Had the triumph of the market meant only a more efficient use of the technologies and resources then available, the gains in living standards would have been minuscule by comparison. What made the difference was the stimulation and harnessing of new technologies and resources.

It is not simply that market incentives and the price system stimulate new technologies in general, but that they tend to direct invention toward conserving those resources which are scarce. Agricultural technology for grain production in the United States developed in the direction of using much land (which was abundant) and little labor (which was scarce). It developed differently in Europe and Japan where land is far less plentiful relative to labor. More generally, most economic analysis of the nature of inventions suggests that they tend to occur in very rough conformity with economic needs and scarcities as signaled by prices and profitability. The corollary to these propositions is that where prices give the wrong signal—that is, do not reflect true economic scarcity—technology responds accordingly. Pollution is a classic case. For hundreds of years, environmental quality was treated as a free resource. The market, responding with marvelous efficiency to that signal, proceeded to develop technology which made maximum use of the air and water as "free" sinks for waste products, and paid no attention to the development of technologies which reduced pollution per unit of output. Automobile engines were designed for speed, acceleration, and low production costs, to the accompaniment of smog-creating emissions. Steel mills, coking plants, and paper mills were built to economize on labor and other costs, while using, and fouling, incredible volumes of air and water. This was in sharp contrast to the case of another resource—labor: labor is expensive; business firms must pay for it, at ever-increasing real wages. As a consequence, over the past century, the amount of labor per unit of output has been halved every fifteen years.

From a long-range standpoint, the effectiveness of social intervention in a number of important areas critically depends on paying attention to this lesson. Much of the economic literature on pollution control, for example, stresses the role of economic incentives to achieve static efficiency in control measures—that is, using existing technology in a way which reaches environmental goals at least cost. In the long run, however, the future of society is going to hinge in an important way on the discovery and adoption of ever-improving technology to reduce the environmental consequences of increasing production. If, for example, we assume that per capita living standards in the United States improve from now on at only one-half the rate of the past century, the GNP 100 years from now will still increase more than threefold. Median family income, now about $14,000, will equal about $55,000. Only if the amount of pollution per unit of output is cut by two-thirds can we maintain current environmental performance, much less improve it—even with the assumption that the rate of economic growth is halved. There is simply no way such reductions can be achieved unless the direction of technological change is shifted to minimize pollution.

The problem of environmental quality permeates most of the production and consumption aspects of the economy. Hence the discovery and adoption of pollution-reducing technology will have to be equally pervasive. Unlike the space program or the Manhattan Project, it is not a task that central direction can accomplish well. Rather the institutions and incentives of society have to be modified for a steady long-run effort. Reducing pollution has to become a paying proposition rather than a set of regulations to be fought and delayed.

Congestion in central cities, chemical threats to health, sharply rising medical costs, and the pressure of economic growth on scarce natural resources are other problem areas in which some form of social intervention already exists and in which the avoidance of long-term problems depends especially on the response of technological development to social needs. The point is not that the unfettered market can deal with these problems. Indeed, the problems arise because the market as it is now structured does not work well. But in designing the techniques of social intervention, the historically demonstrated power of marketlike incentives to influence the pace and direction of technological change warrants every effort to install such incentives in our social programs.

THE CAUSES OF MARKET FAILURE

Within the sphere of activities not excluded from the market by considerations of liberty and dignity, there remains a large number of situations in which the free-enterprise private market as we now know it does not produce efficient results. Where the deviations are serious, a prima facie case arises for collective intervention on grounds of efficiency alone. Paradoxically, most of these situations occur where the existing private-enterprise system itself does not make a proper market for some important output or input.

Where the market process fails, too much or too little of some particular output will be produced. We get too little environmental quality, or too many industrial accidents, or too much traffic congestion. Society can go about dealing with market failure in two quite different ways. It can try to isolate the causes of the failure and restore, as nearly as possible, an efficient market process. Or it can take matters completely into its own hands, supplant the market process, and directly determine the outputs it wants. In other words, social intervention can be *process-oriented*, seeking to correct the faulty process, or *output-oriented*, seeking to bypass the process and determine outputs directly by regulation or other device.

Regardless of the circumstances, however, social intervention has almost always been output-oriented, giving short shrift to the process-oriented alternative. And this has been a costly bias. It has taxed, well beyond its limit, the ability of government to make complex output decisions. And it has stretched thin the delicate fabric of political consensus by unnecessarily widening the scope of activities it must cover.

The structure of the private-enterprise system and the efficiency with which it operates depend in an important way on the contents of our system of property and contract laws. The free-enterprise system in this respect carries the label "made by government." How efficiently that system works at any point in time is strongly conditioned by how well the structure of property laws matches the underlying technological and economic realities. If those realities change, and property laws do not, there is bound to be trouble.

There is a second basic proposition which underlies an identification and analysis of

market failure. To be an efficient instrument for society, a private market must be so organized that buyers and sellers realize *all* the benefits and pay *all* the costs of each transaction. Another way to state the same requirement is that the price paid by the buyer and the costs incurred by the seller in each private transaction reflect the full value and the full cost of that transaction not only to them, but to society as a whole. My decision to drive to work will reflect my own balancing of the benefits I receive from auto transportation against the money and time costs I thereby incur. But if streets are already congested, the addition of my car to the traffic will lengthen the time it takes everyone else to commute and will impose real costs on society that I did not take into account in my own decision. There will be more auto commuting than is truly efficient.

As a very rough-and-ready generalization, the body of laws governing property rights and liabilities is likely to yield inefficient results principally when dealing with the side effects of private market transactions. The problem is not that side effects exist, but that the benefits they confer or the costs they impose are often not reflected in the prices and costs which guide private decisions. In some cases the side effects are confined to the parties making the transaction, as in the case of many consumer product defects or job-related injuries. But often the side effects impose costs (or confer benefits) on large numbers of people who were not parties to the transaction. Air and water pollution from industrial production cause damage over wide areas to people who had no part in the production or purchase of the goods being produced. Auto commuters on congested streets create traffic delays for each other with no transactions involved. To the extent that an educated population makes for a better citizenry, my decision to send my children to college generates side effects by way of social benefits to the whole population.

Where side effects are confined to the particular parties in a transaction, proper specification of the laws governing private property can sometimes insure that a side effect is properly reflected in the private accounting of costs and benefits. Where this is possible, establishing some continuing mechanism of social intervention is unnecessary. Individual buy-and-sell arrangements can efficiently reflect social values. The introduction of workmen's compensation laws, for example, shifted the prima facie liability for work-related injuries to employers—that is, the injured worker did not have to prove negligence in court in order to collect damages. The intent of the shift was to make it more probable that employers would face the true social costs of their choices about how to organize production, and thus, for the sake of increasing their own profits, act to reduce such costs.

In many cases, however, the very nature of the situation is such that merely redefining property rights will not deal with the problem; markets cannot be organized by purely private efforts, or, if so, only at great cost. This is sometimes true even when the side effects are confined to the parties making a transaction. It is almost universally true where large numbers of other parties are involved.

There are essentially four sets of factors, the existence of which leads to market failure and also limits the range of corrective action available to society: high transaction costs; high information costs; large uncertainty; and, finally, what economists call the "free rider" problem. They are often present in combination.

Transaction costs: Markets are not costless. There are expenses of money, time, and effort in setting and collecting prices. Sometimes transaction costs are virtually infinite—there is no conceivable way that a market can be formed to deal with side effects. Sometimes transaction costs, while not infinite, exceed the benefits which a market could otherwise confer, and so it doesn't pay to set one up. Very often the existence of transaction cost forces us to organize markets in less than an ideal way; the scope and nature of the transaction costs strongly limit the range of effective social intervention.

Traffic congestion provides a good example of all of these situations. The decisions of individual drivers to commute through crowded downtown streets creates costly side effects—each decision to drive imposes delay costs on other drivers. Could the law be changed to create property rights in the side effects: I would have to buy "rights" to drive from other drivers on whom my decisions would impose delay? Obviously not. There is no conceivable way in which the tens of thousands of drivers could mutually calculate bids and offers, transfer net balances of payments, and monitor and enforce agreements. Could local governments establish a quasimarket—set up a schedule of congestion tolls and charge each driver according to the time of day and the degree of congestion along the particular streets he travels? While ingenious schemes have been suggested, involving radar and computerized billing, the costs of setting up such quasi-markets would seem to rule them out. What about stiff parking fees downtown, or the sale by government of monthly downtown auto permits? Those who value their daily auto trip highly would be willing to pay; others would use mass transit. Congestion could be reduced for both groups. The transaction costs of such a scheme would be much lower, but the prices charged would lose some of their relationship to the particular circumstances causing congestion. My contribution to congestion varies according to when I drive and along what streets—the parking fee or commuting permit charges me a price which is only the roughest sort of approximation to that contribution. Hence, the resulting scheme will not be ideally efficient. Nevertheless, it may (or may not) lead to a more efficient result than the two polar opposites—do nothing, or forbid the use of certain areas to private automobiles.

Uncertainty and information costs: It is easier to treat the problems of uncertainty and information costs together since it is through information that we can, at least sometimes, reduce uncertainty. Market transactions cannot be an efficient method of organizing human actvity unless both the buyer and the seller know and understand the full costs and benefits to them of the transactions they undertake, including any side effects which impinge on their own welfare. If, for example, the legal principle of *caveat emptor* prevails, consumers are responsible for judging the reliability and safety of the products they buy. If, at reasonable costs in time, money, and mental effort, they can acquire and interpret information about the quality of products, then more reliable and safer brands will command a premium over less reliable and dangerous products. The premium will reflect consumer judgments about the value to them of reliability and safety. Producers in turn will find it profitable to push reliability and safety up to the point where the costs of doing so begin to exceed the premium—in short, an efficient outcome will be assured.

There is sometimes a dilemma in the public provision of consumer information. In the case of hazards which are highly complicated, the provision of technically complete but neutral information may not be very helpful. Evaluating the significance of the hazard on the basis of new information may itself require more technical ability and judgment and a larger amount of time than it is reasonable to expect from most consumers. Government could then regulate the safety characteristics of such products, almost always causing the price to be higher. And in some cases a ban on certain types of products may be imposed, which is equivalent to charging an infinitely high price. In such situations the single risk-evaluation of a governmental body is substituted for the diverse judgments of millions of consumers.

The temptation to overregulate is great, and should be resisted. Quite apart from safety features, there are a host of product characteristics—performance, reliability, durability—which often depend upon highly technical factors. Consumer information about such characteristics, as it is usually acquired, is most often casual and imperfect, and in the case of durable goods cannot be acquired by repetitive trial and error. Market demand and product price differentials therefore do not reflect evaluations based on perfect information. If the mere existence of market imperfection is allowed to become the occasion for regulation, then we would have to regulate every characteristic of every durable product. But the benefits of potentially superior information which a regular can bring to bear have to be balanced against the inability of monolithic regulatory judgments to match the diverse preferences of individuals and by the inevitable sluggishness with which regulators adapt to changing circumstances. Where the potential harms from a product feature are great and where the technical difficulty of evaluating information is very high, then regulation may be the best alternative, despite its inefficiencies. But in all cases we should compare an imperfect market with an imperfect regulatory scheme, not with some ideal and omniscient abstraction.

The "free rider" problem: Where the side effects of private transactions have a common impact on many people—for example, the discharge of sulfur into the atmosphere from coal-burning utilities—the possibility of purely private action is severely limited. In theory, if the rights to the use of the clean air were assigned by law to the polluter, those affected might band together and pay the polluter to reduce the emissions. But any one individual would enjoy the benefits of reduced pollution whether he paid his share of the cost or not. He could be a "free rider" on the efforts of everyone else. How could cost shares be decided and enforced? Without the coercive power of government, purely voluntary arrangements could not be successful. Conversely, if the rights were assigned to those affected by pollution so that the polluter had to buy rights to emit sulfur, how would agreement be reached on the appropriate size of the payments and the sharing out of the proceeds? Purely voluntary action implies unanimous consent.

We do undertake some actions of this nature by unanimous consent arrangements. The implicit neighborhood agreement that no one mows the lawn on Sunday morning is one such arrangement. But as a means of dealing with important and widespread side effects of private transactions, voluntary arrangements would quickly break down.

THE INADEQUATE RESPONSE TO MARKET FAILURE

Usually, when a specific problem has been singled out for public action, there has been little attempt to isolate the particular causes of market failure and deal with them in a way which preserves as many as possible of the elements of voluntary choice and private incentives in the affected area. Rather, intervention typically takes the form of substituting a centralized command-and-control approach to decisionmaking over a far broader area than is necessary to deal with the specific market failure in question. It is impossible to provide an overall measurement of the mismatch between the occasions for in-

tervention and the forms which intervention has actually taken. But several broad traits have characterized public policy: the effort to affect private activity by regulation and state and local governments by detailed grant programs.

One very broad class of market failure stems from the inability of the unaided private market to put a price on important side effects of economic transactions and so to subject them to the efficiency calculus which balances costs against gains. As we saw, changes in property laws cannot usually create an ideal pricing structure for side effects, given the complicated situations in which many of them occur. Hence, in each specific case we have to balance the less than perfect efficiency of an artificially created pricing structure against the less than perfect efficiency of a regulatory or other nonpricing approach. The virtually universal characteristic of public policy in these circumstances is to *start* from the conclusion that regulation is the obvious answer; the pricing alternative is literally never considered.

Precisely because environmental problems are so pervasive, they illustrate the entire gamut of situations, ranging from those in which environmental side effects can reasonably be priced to those in which information or transaction costs make pricing ineffective or excessively expensive. Effective policy must take account of the fact that in almost every industry and every situation there are alternative ways to reduce pollution that vary widely in effectiveness and cost. Nationally, the difference between efficient and inefficient control programs can, over a ten-year period, mount into the hundreds of billions of dollars. Policy must also operate in a world of imperfect knowledge in which the relative cost and effectiveness of various abatement techniques and the effect of pollutants on the environment are subject to great uncertainty. Policy must deal both with situations where targets and deadlines can and ought to be adjusted depending on costs and other circumstances, and with cases of potentially fatal toxic chemicals where little flexibility is possible. And, finally, policy should avoid prematurely locking the nation into uniform technological choices that discourage a continuing search for better control methods.

THE EXAMPLE OF WATER POLLUTION

Let us examine, by way of example, the nation's program to control water pollution. Prior to 1972, national strategy was based on a four-stage process: federal approval of state-established water-quality standards; state implementation plans, requiring industrial firms and municipalities along a river basin to reduce pollution discharges so as to meet the standards; federal grants-in-aid for the construction of municipal waste-treatment plants; and court enforcement against firms or municipalities whose failure to act caused a breach of water-quality standards.

For a host of reasons this approach failed, mainly because, on a river basin with many firms and municipalities, it is impossible to pinpoint the blame for a breach of water-quality standards, especially given the rules of evidence in judicial proceedings. The 1972 Water Pollution Control Act Amendments adopted a drastically new approach. The law required the Environmental Protection Agency to develop specific effluent limits on water-borne pollutants for each type of industrial process, and to issue permits to every industrial firm based on those limits. By 1977 the effluent limits are to be consistent with the use of "the best practicable control methods"; by 1983 tighter limits based on "best available technology" are to be enforced.

In carrying out these objectives EPA is directed to take into account "the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, nonwater-quality environmental impacts (including energy requirements) and such other factors as the Administrator deems appropriate." In addition, EPA must consider what is "economically achievable."

There are 62,000 point sources of water pollution in the United States, of which 9,000 are major sources, with huge variation among them in the factors that EPA is supposed to consider—industrial processes, age of equipment, economic situation, and so forth. EPA is therefore required to amend its effluent regulations in some detail. In any given situation there is usually a broad range of possibilities available for pollution reduction—changing the type of raw material used, altering the production itself, modifying the characteristics of the product, treating the wastes before they emerge from the end of the pipe, or sending the pollution through the sewer system and paying to have them treated at the municipal waste-treatment plant. Selecting the appropriate effluent limitation for each firm, in a way that will produce an efficient and effective overall strategy, depends on balancing these possibilities against their respective costs, taking into account the particular economic circumstances confronting each firm. To do this for 62,000 point sources of pollution demands omniscience from EPA.

By mid-1976 EPA had promulgated or was in the process of developing some 492 different effluent guidelines, and had issued 45,000 individual plant permits. Given the language of the act, there is substantial room for legal challenges. In April 1976 EPA withdrew all its guidelines for organic chemicals because of a court challenge. Requests for administrative hearings are pending for more than one-tenth of all the industrial permits issued. Moreover, while the law foresaw state governments taking over the permit programs, after EPA approval and with EPA monitoring, only twenty-seven states have done so, and, according to EPA, prospects for more doing so are very dim. Finally, an analysis of the program by the General Accounting Office based on a sample review found that most permits issued were not based on the final guidelines and, in any event, firms were not adhering to the conditions of the permits.

In effect, the current law sets up a central agency to determine a detailed control strategy for every polluting source, balancing environmental gains against economic costs. Difficult as this is in a static context, it is dwarfed by the continuing problem of keeping the guidelines up to date in the light of economic growth and technological change. And the very nature of the controls works in the direction of discouraging pollution-reducing technological change. The 1983 criteria bases effluent limits on "best available technology." But what firm will sponsor research or undertake experimentation to develop a new means of reducing pollution still further, if its very availability will generate new and more stringent regulations?

The entire approach provides strong and positive incentives for polluters to use the legal system to delay progress toward effective cleanup. It forces a central control agency to make thousands of decisions based on detailed considerations it cannot possibly know and, even less, keep up with over time. And most important, it provides absolutely no incentives to firms and municipalities to channel technological innovation toward the efficient reduction of pollution.

It is possible, on the other hand, to use an effluent charge to put a common price on each of the major forms of water pollutants. If the polluting side effects of industrial activity were priced, several consequences would follow. Depending on the size of the effluent charge, firms would have incentives to reduce pollution in order to increase their own profits, or to avoid losses. The higher the charge, the greater the reduction; hence, the fee could be adjusted to achieve any desired set of water-quality standards. Firms with low costs of reducing pollution would reduce their waste discharges by more than firms with high costs of production, which is precisely what is needed to achieve any given environmental standard at the lowest national cost. Even when the standards were met, firms would still have incentives to look for ways of reducing pollution still further because they would be paying a fee on whatever residual pollutants remained. And again, most important, there would be strong incentives throughout industry for the continuing development of new technology of a pollution-reducing character.

Effluent charges are by no means the sole answer. Enough studies have been carried out on river basins to provide guidance on the magnitude of effluent charges needed to achieve particular water quality standards. But since we have had no experience with them they would have to be introduced gradually—you can't create a large new market overnight. Regulations are already in force and they cannot simply be junked—effluent charges would have to supplement the regulations at first, not replace them. Moreover, as we have stressed earlier, some exotic and highly dangerous chemical discharges will always have to be controlled by regulations rather than incentive. After all the qualifications, however, the potential role for an incentive-oriented approach is very large, and its absence very costly.

FEDERAL GRANT PROGRAMS

In the fiscal year 1976, the federal government provided some $60 billion in grants-in-aid to state and local governments. Of that amount, $23 billion went for welfare, Medicaid, and other forms of payments to individuals; there was $14 billion in general revenue-sharing or broad bloc grants with few federal strings attached; and $10 billion went for three large capital grants—highways, mass transit, and waste-treatment plants. The remaining $13 billion was devoted to a very large number of relatively narrow categorical grants, under which the federal government specifies in some detail how the funds shall be used. Two kinds of problems characterize many of these categorical grants, both reflecting a lack of correspondence between the nature of the grant and the "market" failure it was supposed to correct.

The first problem arises from a failure to distinguish between two quite different social objectives. Starting about fifteen years ago, the federal government began to take on responsibility for assuring that the poor and the disadvantaged had access to certain critical services—health care, manpower training, day care, and the like. In many cases, existing institutions were very unsuited to the delivery of such services in poor urban or rural neighborhoods, and in other cases no institutions existed at all. Hence, it was necessary not only to provide the poor with financial resources to purchase such services, but also to create or improve the institutions which deliver them. In virtually all cases, the same grant was used for both purposes. In poor inner-city areas, where private physicians are scarce, neighborhood health centers are an attempt to provide a more attractive and effective alternative to the outpatient clinics of large city hospitals. Through grants, the federal government furnishes the operating funds for such centers, and their services are made available without charge to inner-city residents. But in doing so the program runs into major difficulties. In the first place, since the services are free (or require minimal fees), only the poor or near-poor are allowed to use them. This tends to create a two-class medi-

cal system. Second, the health centers do not have to stand the test of consumer acceptance—obviously, if they charge nothing they will be preferred to other sources of medical-care delivery that do charge. The federal government thus not only supports the initial establishment of such centers, but is permanently committed to supplying the annual operating funds, and hence to exerting continuing oversight.

If, on the other hand, the two objectives were recognized as being different, a more reasonable approach could be followed. Removing financial barriers to medical care for the poor could be accomplished by a system of medical insurance for the poor, either as a reform of the current Medicaid program or as part of a broader national health-insurance system. In turn, after providing the seed money to help new institutions like neighborhood health centers get started, the federal government could gradually withdraw the operating funds and require the institutions to charge fees covering costs. This would be no hardship on the poor, since their medical bills would be covered by federally supported insurance. But the neighborhood health centers would then have to stand the test of the marketplace, since potential clients would be able to choose whether to use the centers or to buy their medical care elsewhere. It would not be necessary to limit the centers' services to the poor, since everyone would be paying fees covering costs.

At least on an experimental basis, similar principles could be applied in other areas. If vouchers for manpower-training programs were available to eligible recipients, government-sponsored and private training programs could compete for clientele. A similar approach could be applied to day-care centers. The same principle suggests concentrating federal support for higher education on direct assistance to students rather than on subsidies to colleges.

FAILURE TO CONSIDER INCENTIVE PROBLEMS

Across a wide range of areas, social intervention often fails, not because it relies unnecessarily on regulation or other command-and-control devices, but because in other ways it ignores the role of properly structured economic incentives for achieving social goals. Sometimes this takes the form of social programs which themselves set up perverse and antisocial incentives. Sometimes it takes the form of failing to recognize how existing institutions channel private economic activity in the wrong direction.

Distorted pricing and incentives play a major role in creating urban problems. Virtually every city has a long-range development plan. But every one of them is imposed on a structure of investment incentives which invariably frustrates the objectives of the plan. We have already seen the congestion consequences of failure to charge motorists the full social costs of their commuting. Most cities set prices on sewer and water services which do not properly reflect the cost of installing sewer and water lines for new developments. Leapfrogging and urban sprawl are in effect subsidized, since longer lines carry no higher charges than close-in services. Profits from buying and holding land for speculation are taxed at capital gains rates, which are far lower than the normal tax rates paid on ordinary income from property improvements. Scarce entrepreneurial talent is channeled into land speculation. The after-tax gains from a combination of buying land and then securing favorable variances in the zoning code are much greater than from the socially desirable alternative of investing in property improvements under existing zoning. Given a limited access to capital, the investor in inner-city residential property gets a high return by extensive purchases of older property to hold, with improvements, against land-price escalation and capital-gains taxation. Applying the same funds to property improvements would yield income in the form of rents which are taxed at the higher tax rates of ordinary income.

One cannot prove the existence of a behavioral law or tendency simply by reciting examples. And yet I think it is clear that we do limit the politically acceptable techniques for social intervention to a few predetermined approaches, and usually block out of our vision that class of alternatives which uses marketlike principles to achieve social objectives.

We try to specify in detail the particular actions that generate social efficiency and then command their performance. But in complex areas of human behavior, neither our imagination nor our commands are up to the task. We often see the causes of market failure at superficial levels—a physical shortage of mass-transit facilities, municipal treatment plants, or local health clinics—and, instead of dealing with the root behavioral problem, try to build over it with construction grants. Instead of widening the area of individual choice for the poor and the disadvantaged by financial and institutional arrangements which give them alternative opportunities in day care, manpower training, health facilities, and the like, we tie the financing and the institutions together in a way which minimizes their range of choice. Consistently, where social problems arise because of distorted private incentives, we try to impose a solution without remedying the incentive structure. And, equally consistently, the power of that incentive structure defeats us.

If I am right that we tend to intervene in ways that are systematically biased in certain directions, then by definition the problem is not one of random error, or incompetence of legislators and administrators. There must be some underlying reasons in the structure of our beliefs or our political systems for us to act the way we do.

SELF-INTEREST AND SOCIAL ACTION

The bias in the American political system, to intervene through direct determination of outputs by regulation and other forms of centralized bureaucracy, is deep-seated. There are, I think, several major causes of that bias, none of which can be changed by some simple modification of the political process.

If one accepts the views of James Buchanan and some of his colleagues in the public-choice school of political economy, only a radical constitutional revision that severely restricts the scope of allowable social intervention can deal with the problem. His is a very deterministic view—people vote only their pocketbooks, are exceedingly myopic about their own long-run interests, and inevitably end up voting for excessive government and output-oriented intervention. Normative economics, which tries to spell out some "desirable" course of action to correct market failures, is quite irrelevant in view of the way voters actually behave.

In my judgment, this picture of the political process is far too narrow. People and legislators do vote their self-interest, particularly on matters which affect them starkly and directly. But they also have some views about the public good, quite apart from immediate effects upon themselves. People who vote against gun control and for a large defense budget, capital punishment, and balanced budgets at all times are not simply trying to maximize their own economic gains.

Politics can be, in some part at least, a creative process, not simply a deterministic response to the myopic self-interest of majorities or special-interest groups. There is still room for normative economic judgments, based on an analyses of market failure. Trying to discern the underlying causes for the output-oriented bias of existing social intervention can be a worthwhile task as the first step in an active political process.

There is virtually no act of social intervention which does not impose losses on some people. Pollution control will reduce profits for some firms, in most cases temporarily, but in particular instances permanently. Should outmoded transportation regulations be removed, the resulting reshuffling of the transportation system would bring losses to firms which were protected under the old system and to some communities whose value as shipping centers was sustained by artificially rigged transport rates.

An efficient social action will generate gains that exceed losses. In theory, therefore, the gainers from efficient social intervention could fully compensate the losers and still come out ahead. With no losers and some net gainers, the political obstacles to efficient intervention would be minimized. The potentially divisive struggle over income distribution could be divorced from the problem of efficiency. The difficulties of designing efficient instruments of social intervention would be solely technical in nature. While technical problems could still be formidable, and in the face of uncertainty require some nice judgments, a major roadblock to efficient social intervention would be removed.

In fact, of course, it is impossible in most situations to identify gainers and losers, to measure the size of their gains and losses, and to devise means of transferring income from gainers to losers by means which themselves do not interfere with efficiency. If a steel company responds to pollution controls by closing down some of its other coke ovens and building a new coke-oven complex, workers in the coke oven that were closed will have to find new jobs. If, after only a short period of searching, they find jobs at undiminished wages, and at nearby locations, their losses are small. But suppose they find employment only at lower wages, or only after incurring the expense of commuting fifty miles a day? How do we identify the short- and long-term losses when the outcome is likely to be different from each worker? What about the loss in tax revenue and retail trade in a one-factory community? And suppose the steel company shifts its purchase of coking coal from Kentucky mines to Pennsylvania mines?

Sometimes it is the problem of identifying the gainers and their gains which take center stage. Decontrolling domestic oil prices, and letting them move to equality with world oil prices, would promote efficiency. Imports are the residual source of oil supply. With domestic prices held below the world market as they are now, domestic consumption of petroleum is encouraged. Consumers currently make decisions based on the blended market price of oil, about $10 a barrel, but each added barrel of consumption costs the nation $14 to import, a $4 loss on every added barrel. Setting prices free to seek world market levels, however, would create a huge windfall to domestic producers with low-cost wells. If we knew the costs of production at each well, we could levy a tax well by well that still provided a generous return while capturing the windfall. But we cannot devise such a precisely calibrated tax. And without precise calibration, excessive taxes on high-cost wells would discourage domestic production and exploration. The upshot is that policies designed to promote an efficient energy program become hopelessly enmeshed in quarrels about income distribution.

Even if we had reached some broad political consensus on "fair shares" and an appropriate overall income distribution, and had installed a system of progressive taxes and transfer payments to achieve it, efficiency

measures would still be plagued by income distribution problems The overall distribution measures might ensure, for example, that no one would fall below the poverty line, and that generous unemployment compensation would be available for those temporarily out of work. But what about the fifty-year-old employee in a paper factory earning $15,000 per year, who is forced to settle for an $8,000-a-year job as a result of an environmental decision that shut his factory down? Or the owner of a small trucking company whose lifetime savings are destroyed when the transportation regulations that protected his firm from widespread competition are removed? Establishing a reasonably egalitarian distribution of income by income classes does not eliminate severe losses or sharp gains to individuals as a consequence of social and measures to improve efficiency.

DO NO DIRECT HARM

Incomes and property values are constantly being created and destroyed in the normal course of the economic changes that characterize a dynamic economy. But social attitudes toward losses are much more rigid when it comes to losses directly imposed by government action. The rule of "Do no direct harm" is a powerful force in shaping the nature of social intervention.

We put few obstacles in the way of a market-generated shift of industry to the South or the substitution of synthetic fibers for New England woolens, events which generate large losses to individuals, firms, and communities. But we find it extraordinarily difficult to close a military base or a post office. We have elaborate procedures for changing zoning regulations and provide case-by-case adjudication where losses in property values may occur. But movements of private industry that destroy property values occur at will. When we intervene through regulation, we try to write the regulations and provide administrative discretion to take care of as much individual variation in circumstances as possible, so as to prevent harm that can be immediately imputed to the regulation. Such regulations then grow at an exponential pace as experience in a far-flung economy steadily generates thousands of specific problems. More importantly, efficient ways of achieving results are often precluded because of a fear of some direct losses.

Any change brings losses to some. And however much we try to avoid large direct losses, there are always indirect losses as the effects of various policies work their way through the economy. But the extent of governmental moves to improve efficiency is sharply constrained, and the design of those moves importantly limited by attempts to follow the "Do no direct harm" rule. Because incentive-oriented approaches to social intervention rely on decentralized reactions to prices, they seem to remove from government the control of case-by-case results. If nothing else, this would make legislators nervous. They would have to forego the opportunity to hedge their programs about with all sorts of adjudication procedures drawn up to take care of specific losses. They would also forfeit the opportunity to second-guess administrators and to provide services for constituents through intervention in administrative decisions.

In the abstract there may seem to be no logic in our schizoid view of losses—allowable for purposes of efficiency in private markets, much less permissible for government actions. In fact, there is a historical rationale for our attitudes. The constitutional structures of most Western democracies arose as a response not to political anarchy but to the excessive power of monarchs. In the process, governmental power was not simply transferred from monarch to parliament or congress, but hedged about with safeguards. Protecting the rights of individuals in their property, as well as in their persons, against the arbitrary exercise of power by government was a dominant concern not only in framing constitutions and bills of rights, but in designing any subsequent legislation which conferred particular powers upon government. That economic change might impose severe losses on specific individuals was a fact of life, as were hurricanes and floods. Until the Great Depression they were not usually the subject of politics. What was to be prevented was the imposition of losses by government.

Where government was called upon to act, it was natural, in this environment, to write laws that specified the allowable actions in detail. And, as the complexity of the situations to be regulated grew, regulations were increasingly accompanied by various adjudicatory provisions, quasijudicial bodies, administrative hearings, and other devices to adjust governmental actions to individual circumstances. Making law is still considered the province of lawyers. Some 55 to 60 percent of the members of the United States Senate and the House of Representatives have a legal background. Legal training necessarily, and quite rightly, concentrates on the specification of rights and duties in law and judicial precedent and on the case-by-case adjudication of individual situations in the light of the law and the precedents. When society decides that the social behavior ought to be changed, the lawyer goes about the task by setting forth the particular rights and duties of the parties involved, including the rights and duties of government. By the very nature of the process, the protection of individual equities is a large consideration. A market approach, on the other hand, stresses not rights and duties but incentives. People or firms act in certain ways because their self-interest dictates doing so, given the existing set of incentives. Changes in social behavior can be accomplished by modifying the incentives that induce people to act. Individual equities are not a principal concern.

Where market failures can be handled by changes in the laws concerning property—for example, through improvements in the assignment of liability for side effects—the rights-and-duties approach is an efficient one. But carrying over the rights-and-duties approach to situations which demand much more complex forms of social intervention tends to produce output-oriented legislation—detailed regulation of outcomes accompanied by adjudicatory procedures to handle individual cases. In an age when government was not expected to intervene significantly in the marketplace, the problem was not very significant. But as both economic circumstances and public attitudes have changed to bring about a much wider sphere of social intervention, the carry-over of the legal approach takes on much greater importance.

Paradoxically, therefore, the historical development has come full circle. The underlying principle that government shall do no direct harm and the legislative technique of carefully specifying rights and duties was—in part, at least—an outgrowth of the movement to limit the power of government. But by applying the principle and the technique to situations in which social intervention must be pervasive and continuing, we have ended up extending the sphere of detailed governmental control far beyond what is necessary to accomplish the objectives we seek.

In the attempt to follow the "Do no direct harm" principle, we have also begun to transfer more and more decisions about individual economic equities from the market to the government. Regulations, however detailed, cannot be written to cover all the individual situations that arise. The prevention of direct harms is pursued by incorporating some broad standards of "fairness" in the legislation and providing individual rights of access to administrative hearing bodies and the courts for purposes of adjusting the regulations to individual circumstances. The legislation which gives EPA the task of setting detailed effluent limits also requires the EPA administrator to determine what is "economically achievable" and to take into account such things as "the age of equipment and facilities" (which necessarily varies from one firm to another). The determination of specific outcomes, and the fortunes of particular firms and communities, begins to be made on a case-by-case basis by the specific decisions of regulators, by administrative hearing panels, and by the courts—often by all three in sequence.

The application of general rules to individual circumstances through judicial interpretation is a vital and necessary part of governance. But too much of a good thing spoils the whole process. The toughest challenge to the political consensus necessary to keep a free society together arises when society itself has to make explicit decisions about the fate of particular groups and local communities. A large part of those kinds of decisions are now made by the market; government is not to blame for the outcome. Each economic change that produces efficiency does not have to be weighed on the scales against individual equities. As the volume of such decisions to be made by government grows, the strain put upon the political fabric grows at least proportionately. Every decision imposes a felt loss, either on those who want the regulation enforced rigorously or those who suffer its consequences. And the fact of loss can be directly attributed to a specific government decision. The result is probably that we get the worst of both worlds—many efficient moves are avoided because of the fear of being blamed for losses, while the anger and frustration over the losses that inevitably do occur are directly focused on an identifiable governmental decision.

A second consequence of our current approach is that more and more economic decisions are made neither by the Executive nor the Legislative branches of government, but by individual judges. In determining, case by case, whether particular regulatory decisions are compatible with the standards set forth in the legislation, the courts must determine what is an "economically achievable" effluent limitation or what variation in limitations should be allowed for the "age of equipment and facilities." The exceedingly complicated calculus of comparing benefits and costs, which the market and its feedback mechanisms carry out, is supplanted only in part by central regulatory bodies with their staffs of technical experts. It is also replaced by the decisions of countless individual judges, struggling under rapidly growing workloads. To deal with these cases, the courts have little technical assistance and must rely upon technical content of adversary briefs. As a means of adjudicating matters of personal and property rights, the adversary process has major advantages. But it is a poor replacement for making highly complex economic policy.

There are, in summary, solid grounds for the historical emphasis on "Do no direct harm" as a principle and the specifications of rights and duties as a technique in spelling out the legitimate role of government. But its application to the newer forms of social intervention required by an increasingly interdependent society yields an output-oriented, command-and-control approach to social intervention which is not only inefficient, but productive of far more intrusive government than is necessary.

CHANGING ATTITUDES

Replacing current command-and-control techniques with marketlike instruments will have to be done gradually. But not much thought has been given to the design of dynamic strategies which, step by step, mesh a slowly decreasing reliance on regulations with a cautiously increasing use of market instruments. Insofar as economists are concerned, let us not cast too much blame upon politicians for refusing to accept our marvelous instruments of efficiency.

When new forms of social intervention are being considered, we start with a more or less clean blackboard. We don't have to erase an existing maze of command-and-control laws. But a different kind of problem then confronts us—impatience. Major political initiatives only come after the public has been persuaded that an important problem exists. Pubilc interest groups concerned with the problem begin to convince more and more people that something must be done. The issue is taken up on the political hustings by candidates and parties. A sense of urgency develops. After a sharp struggle, enough opposition is overcome to put together an effective majority. After the public has been persuaded that a "critical" problem exists, it is exceedingly hard to put before them a ten-year plan for gradually developing a new market structure. The inevitable response is to enact highly ambitious legislation stipulating sharp and immediate results, and then to erode the regulations piecemeal with postponements and loopholes as the inevitable problems develop. The very rhetoric and political process that gets us to the point where something can be done often puts us in a position where what is done is done poorly. This line of thought points to a more general set of political difficulties that hinder efficient and effective social action.

The American political system has been a marvelously effective tool for providing both freedom and governance. Its institutions have been well suited for generating the compromises and accommodations about major issues of national policy needed in a large and heterogeneous society. But those institutions were particularly designed to settle issues of large value conflicts.

As the areas for social intervention have become more complicated, however, and particularly as social intervention is required to influence the decisions of millions of individuals and business firms, the critical questions increasingly involve choices which have a much lower ideological and ethical content. Issues will still, of course, arise where for economic or social reasons we may want deliberately to move some area of decision-making completely out of the market and into the sphere of specified rights and duties. And the necessity will remain to form political battle lines around the very real question of whether or not to intervene. We cannot abandon the standard techniques and institutions for forming consensus and negotiating compromises among groups with widely different values. But how does an ingrained political process, which stresses value adjustments, come to grips with a world in which the critical decisions are increasingly ones of chcosing among highly complicated alternatives? And, to make it even more difficult, how do we adapt when the very political techniques which themselves move society toward a decision make it difficult to pursue workable techniques of intervention? Identifying heroes and villains, imputing values to technical choices, stressing the urgency of every problem, promising speedy results, and offering easily understandable solutions which specify outputs and rights—all of these are the common techniques of the political process whereby consensus is formed and action taken.

There is no obvious answer to this dilemma. The suggestion that the political debate be confined to ends while technicians and experts design the means, once the ends have been decided, is facile and naive. Ends cannot be separated from means. The two cannot and should not be separated. In the real world they are inextricably joined—we formulate our ends only as we debate and consider the particular means of satisfying them. No electorate or politician can afford to turn over the crucial question of how social intervention is to be designed to supposedly apolitical experts.

There is no instrumental solution to the dilemma. The only available course is a steady maturing of both the electorate and political leaders. How to intervene, when we choose to do so, is ultimately a political issue. I am convinced that the economic and social forces which flow from growth and affluence will continue to throw up problems and attitudes which call for intervention of a very complex order. How we handle those questions will not only determine the success we have in meeting particular problems, but cumulatively will strongly influence the political and social fabric of our society. Even if it were politically possible—which it is not—we cannot handle the dilemma by abjuring any further extension of interventionist policies. But equally, we cannot afford to go on imposing command-and-control solutions over an ever-widening sphere of social and economic activity. I believe—indeed I have no choice but to believe—that the American people can intelligently deal with issues when they are drawn in hues more subtle than black and white. Indeed, the political winds of the last few years can be read as a sign that the electorate is somewhat ahead of many of its political leaders. The voters are not disillusioned with government per se. But they are fed up with simple answers to complicated problems. They are ready, I think, for a more realistic political dialogue. Almost two centuries ago the arguments for the ratification of the Constitution were laid out in the Federalist Papers—perhaps the most sophisticated effort at political pamphleteering in history. Surely today's voters can accept the same high level of political argument as the farmers, mechanics, and politicians of the eighteenth-century colonies.

ARKANSAS FAMILY OF FOUR WINS $10,000 IN "FOOD SELF-SUFFICIENCY" CONTEST

Mr. BUMPERS. Mr. President, an Arkansas family, Dr. and Mrs. Dan Taylor of Parthenon, Ark., were named winners of the Mother Earth News "food self-sufficiency" contest for getting electricity from batteries charged by wood-fed steam generators. I want to take this opportunity to congratulate this family for their achievement.

We pay lipservice to individual initiative but rarely is it rewarded. I want my colleagues to be aware of this modern-day "Swiss Family Robinson" and recognize their accomplishments.

Arkansas is known as the "land of opportunity," but the Taylor family has demonstrated that opportunity is a goal for which one works. It does not come easily. The Taylor family has created their opportunities through their own hard work. It is a lesson from which all of us can learn.

Mr. President, I ask unanimous consent to have the article from the Arkansas Gazette announcing the award printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARKANSAS FAMILY OF FOUR WINS $10,000 IN "FOOD SELF-SUFFICIENCY" CONTEST

JASPER.—Dr. and Mrs. Dan Taylor of near Parthenon (Newton County) and their two teenaged sons have been named winners of the $10,000 Mother Earth News "food self-sufficiency" contest for getting electricity from batteries charged by wood-fed steam generators.

They farm their 100 acres with oxen. "We raise our own fruit, vegetables, poultry, rabbits, beef, pork, milk and eggs," Dr. Taylor, 45, a former chemical engineer for Exxon Corporation, said.

"We butcher the meat we eat, can part of our surplus summer garden produce for the winter and use either the sun or wood fire to dry the rest.

"What little food we buy— some salt, sugar and vinegar for canning and a bit of baking powder and yeast for the bread and wine we make—is paid for with surplus from the farm.

"We tried farming with a tractor first, but we found it impossible to operate such a piece of equipment in our rough woodland and on the small patches of ground we farm," Dr. Taylor said, so the family went back to one of man's earliest forms of farm power—two oxen.

SOLAR OVEN USED

On the other technological extreme, they do much of their heavy cooking in a solar-heated oven.

Mrs. Mary Lou Taylor, a former high school English teacher, said, "We cook yeast bread, pan bread, potatoes, meats and a dozen other things in that solar oven and they all come out tasting better than when they're prepared in a regular stove. And think of all the time and work we save every time we don't have to cut wood for the preparation of a meal."

In a telephone interview from the farm Tuesday, Dr. Taylor said the prize money for placing first among 287 entries would be "invested in projects we have in the future." The family is "still working on the electrical system" powered by steam generators.

"Yesterday we washed clothes with the steam generator and we'll keep expanding on that," he added.

The family came to Parthenon in the late winter of 1973. Both Dr. and Mrs. Taylor are graduates of Rice University and Dr. Taylor received his doctorate in chemical engineering from Texas A. and M. University after four years in the Navy. He taught at South Dakota School of Mines, then worked as senior engineer at the Exxon Corporation operation at Baytown, Tex. He then taught for six years at the University of Puerto Rico.

LOOKING FOR PRIVACY

Then they drove through the United States, looking for "a place where we could have some privacy, a place we felt we could support ourselves." The Taylors and their sons, Mark, now 18, and Brad, now 17, chose the Arkansas Ozarks. Brad attends Jasper High School.

"The price of land in Northwest Arkansas had a lot to do with it," Dr. Taylor said. "At that time it was something we could afford and we love it here. It's beautiful country."

He said the neighbors had not "wildly accepted our ideas."

"Their standard response is 'We've never seen nothing like that before,'" he said. "We're kind of a curiosity to them."

The couple's parents "think it's a little bit crazy to abandon a $20,000-a-year income to go to zero income," Dr. Taylor said, but "they come to visit us all the time."

The families may have a point. He explained, "When you do the calculations, I

could buy groceries with 500 hours of work each year, about 20 per cent of my income. Now the four of us work about 5,000 hours a year just to produce our food. In that sense our food costs us now about 10 times what it used to cost.

"The benefit is that we know we put a minimum load on the environment and get to live and do the things we want to do. It's being a part of the environment and not just drawing from it and consuming."

"I'm not an earth-shattering end-of-the worlder," Dr. Taylor said, but he does predict that unless patterns change "energy is going to get shorter and shorter and prices will go higher and higher."

The Taylor family is featured in the May/June issue of Mother Earth News, a Henderson, N.C., bimonthly magazine with a circulation of 325,000, which emphasizes how-to-do-it articles for back-to-the-land-type farmers.

ARMS, ENERGY AND THE ATOM: THE LETHAL DILEMMA

Mr. CHURCH. Mr. President, last week, participating in its lecture series on World Change and World Security, I spoke at the Massachusetts Institute of Technology. I was asked to discuss a problem crucial to world security during the next two decades. There can be little doubt that the question of nuclear energy and weapons proliferation will have to be dealt with during this period, and even now demands our urgent attention.

Accordingly, I ask unanimous consent that my address, entitled "Arms, Energy and the Atom: the Lethal Dilemma," be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ARMS, ENERGY AND THE ATOM: THE LETHAL DILEMMA

(By Senator FRANK CHURCH)

The terms of reference given to me for this lecture were that I should speak on any aspect of change and security, subject only to the request that I do so within the time frame of possible developments over the next two decades. In his letter of invitation, your President, Jerry Wiesner, put it thusly: "A central and new factor in the present world situation is that the exploitation of science and technology has so accelerated the rate of change of man's condition that our traditional means for dealing with political, economic, social and military change are no longer adequate to the task.

This statement well describes the nuclear weapons proliferation dilemma. For here we have a classic case study of human technology outpacing our political capacity to tame the very atom which may either bestow energy salvation or lead us to destruction. That is the issue I wish to discuss with you today.

I do so with trepidation. For me to discuss the complexities of nuclear technology at M.I.T. is rather like my going to Mayo's to give a lecture on open heart surgery. Still, public policy, even in the most technical of fields, must ultimately be decided by elected officials. Every member of Congress must, therefore, do the best he can to grope with such subjects and communicate his conclusions to the public, at large.

The Administration's nuclear energy strategy has four major elements: (1) defer indefinitely nuclear fuel reprocessing; (2) restructure our nuclear breeder program by deactivating the ongoing effort to bring about its commercialization; (3) fund research and development in alternative fuel cycles "which do not involve direct access to materials usable in nuclear weapons"; and (4) increase substantially the number of conventional nuclear power plants (the light water reactors), together with our uranium enrichment capacity to fuel them both at home and abroad. In effect, by deferring nuclear fuel reprocessing and the introduction of the breeder, the Administration is attempting to avoid entering the plutonium stage of nuclear energy development. Plutonium, it is felt, increases the danger of nuclear weapons proliferation to an unacceptable level of risk. By our unilateral renunciation of plutonium-based breeder reactors and our offer to other nations of a guaranteed supply of enriched uranium to fuel their conventional reactors, the Administration hopes to set an example which others will follow.

However well-intentioned, I am convinced that the Administration's nuclear energy policy is a formula for nuclear isolationism. It will reduce—not enhance—U.S. influence in shaping worldwide nuclear policy. Thus, instead of advancing the control of nuclear weapons proliferation, our self-imposed restraint runs the grave risk of leaving an international vacuum, which is an invitation to nuclear anarchy.

I believe the Administration proposal is flawed for at least two reasons:

First, it does not take sufficient account of the energy vulnerability of countries lacking our resource base. The United States still produces nearly 60 percent of its oil needs, although imports have grown to alarming proportions. Moreover, we have massive coal reserves, oil shale potential and large domestic uranium deposits. But other industrialized nations like France, West Germany and Japan, and most developing countries, are not so fortunate.

These energy-deficit countries have also been traumatized by the 600 percent rise in the price of oil mandated by the OPEC cartel since October of 1973. During the past three years, the 13 oil exporting nations of OPEC have accumulated payments surpluses of $150 billion. The interest alone on the consumer debt brought about by these huge surpluses amounts to as much as the oil importers were paying for the oil itself before 1970. And the debt keeps mounting. Presently, the OPEC governments are taking in about $45 billion more each year than they can buy back in imports. Britain and Italy, borrowing to pay for the oil, ran out of private credit last year. Portugal, Spain, Greece and Turkey are heading into trouble now, with Belgium, Denmark, and Finland not far behind. France practicing austerity, is still able to borrow privately. But efforts to stimulate the French economy before next year's critical election will undoubtedly lift its import bill.

The breeder program is the only technology now on the horizon which holds out the promise of relieving Europe and Japan of an unremitting dependence upon foreign-held fuel supplies. The singular advantage of the breeder is that future models, on the basis of known technology, should produce more fuel than they consume. A breeder program makes possible the use of the otherwise worthless uranium 238 (which comprises 99.3 percent of natural uranium), and this becomes a potential fuel resource of incalculable value. Indeed, the United tSates already has in storage tons of tailings containing purified uranium 238 which, if used in a breeder program, could produce an electrical equivalent five times larger than all the oil in the Middle East!

Neither the governments in Western Europe nor Japan are going to remain bound in an energy straitjacket if they have a chance to achieve, through the breeder program, eventual energy independence. John Anderson, the energy specialist for the Washington Post, after a trip to major European capitals, concluded:

"The major European powers have already gone a very long way in their commitment to the development of plutonium breeder reactors. France and Britain have both had experimental breeders running since the 1960's. Germany has one in operation now, and there's another under construction in Italy. As for the much bigger commercial breeders, France has now decided to go ahead with the world's first—the 1200 megawatt Superphoenix. A 1300 megawatt breeder is under design in Britain.

"But they won't be competitive, in economic terms, unless they are widely used. There is going to be fierce pressure on European governments to export these machines, to help pay for the enormous development costs. The German sale of the plutonium reprocessing plant to Brazil isn't the last of these cases. It's more likely to be only the first."

The second flaw in the Administration's program is that it fails to offer a satisfactory substitute for the world's diminishing supply of oil. According to a CIA study made public recently, global oil supplies will begin to fall short of world demand by 1985, a few short years away.

In the face of this dire forecast, the Administration hopes to persuade other nations to stick with conventional reactors and agree to "one-use-only" of the enriched uranium with which they are run. Such a "throw-away" policy involves burying the used fuels rods with the unspent uranium and newly-created plutonium still inside, after they are removed from a nuclear power plant.

Inasmuch as the spent fuel rods can be reprocessed and recycled through the reactors again (adding 30 percent to the energy originally produced), and since the plutonium manufactured by the fission process could fuel the breeder (thus assuring the world an ample energy source for generattions to come), the Administration's plan is viable only if the supply of natural uranium were virtually unlimited.

This, of course, is anything but the case. The Administration relies upon a Ford Foundation study which assumes that there will be far more recoverable uranium found in this country than intensive exploration has indicated. The Ford study estimates a 3.7 million ton reserve figure. But a series of studies by federal agencies, including one conducted by the National Academy of Sciences, have concluded that the known and probable reserves of uranium in this country total about 1.8 millions tons. Such a quantity would provide only one-half of the nuclear energy production required by the United States alone between now and the end of the century. Even if the Ford Foundation prediction proved true, it is still apparent that the United States would be unable to produce, from its own natural uranium deposits, a sufficient supply of enriched uranium to meet our own needs and those of our foreign customers besides. We ask, in effect, that by abandoning the breeder, they exchange one depleting source of fuel, oil, for another, natural uranium. How can we expect them to do it?

Moreover, recent disclosures have shown that the foreign uranium production market may be susceptible to cartelization by a few producers. Prices have jumped to OPEC-type levels, so much so that the Westinghouse Corporation is now enmeshed in litigation which endangers its solvency as it was forced to renege on uranium supply contracts which had assumed relatively stable prices. In short, it is unrealistic to believe that other fuel-deficient governments are going to confine themselves to mutli-billion dollar conventional reactor programs, while delving upon a future supply of natural uranium which is unsure in quantity and suspectible to drastic price manipulation.

So we should not be surprised that oil-deficit nations are even now turning in the opposite direction, toward protectionist energy policies.

A Brazilian Government white paper on nuclear energy summed up this sentiment:

"Recent historical developments have demonstrated the dangers of relying heavily on external sources for the satisfaction of the basic input needs of the economy. . . . To avoid what happened in the case of oil—it was imperative that the solution in the case of nuclear energy be one that enabled the country to reach the indispensable autargy in the medium term.

"In other words, it was not acceptable to replace one form of dependence for another—the economic growth of the country, or its mere subsistence, cannot be dependent upon third countries' decisions as to prices and supplies of essential fuels."

Like it or not, in the post-OPEC world the breeder reactor has become the symbol of the nationalistic drive for energy independence. If there was any doubt on this score, surely it must have been dispelled by the April 23 West German Government announcement approving a four-year, $2.7 billion program of energy research, focusing on nuclear-power and plutonium-based reactors.

As against the energy potential of the breeder program and the reprocessing stage which is a necessary preliminary to the breeder, the Administration has cited the danger of nuclear weapons proliferation. It is important, therefore, to try to understand precisely what that danger is. Halting nuclear energy short of the plutonium stage will not eliminate the risk of proliferation. As the Ford Foundation study observes, the requirements for making nuclear weapons can be reduced to three:

1. Uranium,
2. Trained Personnel, and
3. Facilities to produce enriched uranium or plutonium from the natural uranium.

While uranium is unevenly distributed and most countries are dependent on imports, relatively little is needed to manufacture a bomb. Indeed, India obtained the requisite amounts from the imported fuel for its research reactor. Most of the technology necessary for a weapons program is readily available to scientists and engineers. The Ford study acknowledged that a weapons program is certainly within the capabilities of developed countries, and of many developing countries. And, although a very large investment has so far been required for uranium enrichment, new methods on a much smaller scale are in various stages of development. Today, it is easily within the means of any of a dozen advanced non-nuclear states to build a centrifuge plant adequate for a modest weapons program.

As Representative Mike McCormack noted in a recent article in The Washington Post:

"The reason that weapons have not been made from commercial nuclear power plant fuel is that it is much cheaper and simpler to make nuclear weapons from natural uranium using facilities designed and built exclusively for that purpose. Trying to divert nuclear power plant fuel into weapons production is the most expensive, clumsy, dangerous and inefficient way for any nation to make a weapon."

For these reasons, I believe that our energy policy must feature the reprocessing of spent fuel in the near future, accompanied by the research and development necessary to enable us, by the early 1990's, to place on the market some form of breeder technology. At the same time, I believe that this country must take the lead in strengthening and extending existing institutions like the International Atomic Energy Agency. We must do what we fell short of doing in the 1950's and '60's, namely, devise an international framework which will enable all non-weapons states to meet their genuine energy needs with nuclear power, while minimizing the risk of nuclear weapons proliferation.

The problem now, as I see it, is to devise an effective system of international controls. If we begin by laying down an American commandment: "Thou shalt not have access to nuclear reprocessing or possess breeder reactors," not only will we fail, but we will exacerbate nationalistic passions and lose the opportunity to build upon the embryonic international institutions which now exist.

Almost 25 years ago, the United States admitted that we could not prevent other countries from acquiring and developing nuclear technology. In his "Atoms-for-Peace" address to the United Nations on December 8, 1953, President Eisenhower outlined a new American policy based upon the recognition of this truth. He proposed the creation of a new organization under the UN to assist countries in developing nuclear energy for peaceful purposes. Recipients of this assistance were to agree to international inspection, in order to prevent diversion of materials for weapons use. As the world leader in nuclear technology, the United States sought to influence the peaceful development of this vast new energy source while, at the same time, restricting its use in building weapons arsenals.

So we took the lead in the creation of the International Atomic Energy Agency (IAEA). Ever since, the IAEA, with our strong support, has furnished technical assistance and materials to participating countries and has developed and administered a system of safeguards. Meanwhile, the United States, carrying out its commitments under the IAEA Statute and the Treaty on the Non-proliferation of Nuclear Weapons, has helped other countries acquire, research and power reactors. We have been the world's major supplier of nuclear materials, equipment, technology and training. But the infant system of international inspection and control that we fathered has not kept pace with the growing need.

I would, therefore, suggest that we abandon any new and demonstrably futile attempt to contain the flow of nuclear technology and try instead to channel it in directions that will provide adequate supplies of energy while minimizing the potential for making nuclear weapons. We should aim toward eventual international ownership and control of the fuel cycle necessary to sustain commercial reactors in all non-weapons states. Regional uranium-enrichment and reprocessing plants should be established under the auspices of the IAEA. This agency should own all the nuclear fuel in its global system, be responsible for the fuel's security, and accountable for its use. Fuel elements could be leased to the participating nations on the condition that the spent rods would be returned, and that each reactor in which they are inserted would be subject to IAEA inspection.

No plutonium or other weapons material would ever be produced in a form which could be used for weapons fabrication; the fuel would be blended with other materials to make it unworkable for bomb construction. For example, the reprocessing would produce only blended uranium and plutonium, usable for fuel elements, but unworkable in a weapon.

Fuel fabricating facilities would be built immediately adjacent to the chemical separation plant, as would a facility for glassification of all their waste for deep burial. New fuel elements could be slightly irradiated as a last step before being shipped from the facility. Thus, they would require the same heavy shielding that is necessary to return irradiated fuel elements from a nuclear power plant.

Such a system of international supply and control would not only provide maximum protection against diverting fuel to weapons but would meet the legitimate demands of the non-weapons states for an assured supply of nuclear fuel at a fair price. Just as the American Government now sells enriched uranium to commercial reactors in this country, the IAEA could make its fuel available to participating states at cost.

The system I have described would also furnish the best insurance against terrorists. By dealing only in irradiated fuel, it would be necessary to steal at least one, and perhaps several, 50-ton shipping casks, in order to obtain enough material to make a single weapon. Furthermore, it would be necessary to extract the weapons material from the hot fuel rods, a feat requiring elaborate facilities. This should reduce the potential for illicit diversion for weapons material virtually to zero.

I do not underestimate the formidable task of establishing such a global system. But while we work in that direction, our national policies should constitute the example of how such a system might work. In this regard, I agree with Congressman Mike McCormack, the Chairman of the House Science and Technology Subcommittee, who recently observed:

"Of course no system is perfect or foolproof. It should be obvious, however, that this nation and the world can have the energy required for economic stability and a high degree of nuclear security as well.

"If some nation decides that, in spite of all the attendant problems, it is determined to obtain nuclear weapons, then it will obviously be much easier to make the weapons outside the fuel cycle, as was done by India. This could be done secretly today, regardless of any restraints the United States places on its own energy programs. It is more likely to happen if the United States does not provide leadership for a workable program to assure adequate controls and supplies of energy.

"Above all else, this nation must lead, and from a credible position. The other nations of the world do not believe that we can provide them with nuclear fuel unless we have a breeder program and unless we recycle and reprocess our fuel."

PRESIDENT CARTER'S PROPOSALS ON SOCIAL SECURITY FINANCING

Mr. CHURCH. Mr. President, the social security system affects the lives of almost every American family in one form or another.

More than 33 million persons now receive cash benefits.

Approximately 104 million individuals will work in covered employment this year. In return, they will build future retirement, disability, and survivor protection for themselves and their families.

These facts underscore the importance of social security. They also make it imperative that it be built upon a sound financial and policy base.

As chairman of the Senate Committee on Aging, I consider legislation to restore the financial integrity of social security to be one of my priority goals.

I am pleased, therefore, that President Carter has made this a high priority for his administration.

His new recommendations to reduce the short-term and long-range actuarial deficits confronting social security merit prompt and thoughtful congressional consideration.

I strongly support his propsal to cor-

rect a technical flaw which makes the social security cost-of-living adjustment mechanism sensitive to high rates of inflation. This change, which is called "decoupling," would reduce the long-range actuarial deficit by about one-half.

His innovative countercyclical general revenue proposal to compensate the social security system for lost revenues during recessions would use general revenues to replace payroll tax receipts lost when unemployment exceeds 6 percent. This would help make social security less vulnerable to economic downturns.

I am especially pleased that the President does not propose immediate payroll tax rate increases for today's workers, as did the Ford administration. A rate increase now, it seems to me, would retard our economic recovery. Moreover, it would fall heavily on low- and moderate-income wage earners—individuals who now find it difficult to make ends meet.

President Carter's overall thrust of raising revenue by boosting the wage base in the future and reducing unemployment is a far more equitable way to improve the financing of social security than the Ford administration's proposed tax rate hike. Under this approach only about one of seven workers would have their future taxes increased, compared with today's scheduled rate and wage base rises. However, these individuals would receive improved retirement, disability, and survivor protection for themselves and their families. Under the Ford proposal, they would receive nothing in return for their increased payroll taxes.

I recognize that some features of President Carter's six-point plan to meet the short-term deficit may ignite opposition from the business community, particularly the removal of the wage-base ceiling for employers by 1981.

In addition, some measures will be spelled out in greater detail, such as the new eligibility test for dependent benefits to meet the requirements of recent Supreme Court decisions.

But on balance, the President's proposals represent a well-thought-out approach to strengthen the financing of social security. Some changes, I am sure, must be made. However, his approach presents a solid foundation for the Congress to begin work.

I look forward to working with President Carter in restoring the financial integrity of social security.

I am also hopeful that my proposal to reestablish the Social Security Administration as an independent, nonpolitical agency outside the Department of Health, Education, and Welfare can be enacted promptly. This measure, which is already sponsored by 23 Senators, has strong bipartisan support. It would not only improve the administration of social security but would also help to protect it from being exploited for narrow, partisan advantage. Together with the President's initiatives, it would do much to restore the public confidence essential for a strong social security system.

(This concludes additional statements submitted today.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

AMENDMENT OF THE STANDING RULES OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, has morning business been closed?

The ACTING PRESIDENT pro tempore. It has.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, what is the pending business before the Senate?

The ACTING PRESIDENT pro tempore. The clerk will state the pending motion.

The legislative clerk read as follows:

A motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

The Senate resumed with the consideration of the motion.

Mr. ROBERT C. BYRD. Mr. President, after listening yesterday to the expressions of concern that were stated by Senator JAVITS, Senator GRIFFIN, Senator BAKER, and others regarding the possibility that under Senate Resolution 5 a minority might be deprived of the opportunity to call up amendments, or might be deprived of recognition by a majority acting arbitrarily and in collusion with the Chair, and also the suggestion that motions to amend the Journal should be allowed some time for debate, I indicated at that time that an effort would be made to devise some language that would meet those objections and assure all Senators that under cloture, if Senate Resolution 5 is adopted by the Senate, a minority would be assured of recognition and assured of adequate opportunity to call up amendments, and that debate on a motion to correct the Journal would be provided for.

Following the recess of the Senate on yesterday, I discussed this matter with the Parliamentarians. I contacted my distinguished friend, the very able Senator from Alabama (Mr. ALLEN), and asked that he give the matter some consideration overnight, and this morning he contacted me and indicated that he had some suggestions in mind. I indicated to him that I had thought about the matter overnight and I had some thoughts in mind also.

So we sat down with the Parliamentarian, the Assistant Parliamentarian, and the Parliamentarian emeritus of the Senate, and devised some language which, in the combined judgment of the five of us—the three Parliamentarians, the distinguished Senator from Alabama, and myself—adequately met the objections that were raised during the debate yesterday by some of our friends on the other side of the aisle.

I consequently contacted the distinguished minority leader and asked if he and Senator GRIFFIN, and Senator JAVITS would find it possible to meet with us, inasmuch as the language that had been worked out was intended to address itself, in the main, to the objections that had been raised by those three Senators.

So we met, my proposed modifications were presented to them, and they took them under consideration. They are still considering the proposed modifications, and I should think that they have every right to expect some additional time to consider those modifications. I do not wish to press the matter by offering a motion today to invoke cloture at the time provided under the present cloture rule; so I am not going to submit any cloture motion today. I feel that they are entitled to additional time to consider those modifications even before I present a cloture motion, which may or may not be adopted once it is presented.

For the record, Mr. President, I should like to state what these modifications would entail.

One of the modifications would provide for 10 minutes of debate, to be divided equally between the majority leader or his designee and the mover of a motion to correct the Journal. That would appear to be ample time to explain an inaccuracy in the proceedings of the preceding day. So that proposal has been put into the form of an amendment. I submit the amendment for printing, and ask unanimous consent that it be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD's amendment (No. 256) is as follows:

AMENDMENT No. 256

On page 6, line 1, strike all after the word "privileged" and insert in lieu thereof the following: ", shall be confined to an accurate description of the proceedings of the preceding day, and debate thereon shall be limited to ten minutes to be equally divided and controlled between the mover thereof and the Majority Leader or his designee."

Mr. ROBERT C. BYRD. Mr. President, I cannot conceive of a situation in which the majority, working with the Presiding Officer, would deny recognition to a member of the minority, whether it be a partisan minority or otherwise. To do that would bring down the universal criticism of the country upon the majority party or upon the majority on a given question, and upon the Presiding Officer who is a member of the majority party. A majority leader worthy of the title of majority leader would not lend himself to that kind of scheme, to deprive any minority, once cloture is invoked, from calling up its amendments and from getting recognition.

So, to disregard the present majority leader, I cannot conceive of any majority leader at any time who would not defend a minority, once cloture is invoked, and do everything within his power to see that that minority was not treated arbitrarily in the recognition of Senators and in the calling up of amendments.

I say, Mr. President, while I do not discount the sincerity of those who make the objections, I simply cannot conceive of the objections being of substance from a practical standpoint.

Nevertheless, I certainly want to bend over backwards in making every effort that is reasonable adequately to protect a minority in that regard.

So, the language was worked out among Mr. ALLEN, the two Parliamentarians, and the Parliamentarian Emeritus and myself to do this. It, in essence, would accomplish the desired goal in this fashion:

The first 10 hours of debate after cloture has been invoked would be equally divided and controlled by the majority and the minority leader or their designee, so that any Senator on either side of the aisle or on either side of the question, would be assured of recognition. The minority leader would have 300 minutes under his control—5 hours. The majority leader would have 300 minutes under his control—5 hours.

So there is no way that a member of a minority would be deprived of an opportunity to call up his amendment and get a vote thereon. Any time yielded by a leader or his designee to a Senator, up to 30 minutes, would not be charged against the 30 minutes to which a Senator would be limited under the provisions of Senate Resolution 5.

In other words, if the distinguished Senator from Michigan were to seek recognition, he would be recognized by the Chair. If he were not, the minority leader or his designee would be recognized. The minority leader, or his designee, could yield up to 30 minutes of time to the Senator from Michigan without any of that 30 minutes being charged to the 30 minutes which the Senator from Michigan would have under the resolution. If the minority leader yielded 45 minutes to the Senator from Michigan, 15 minutes of that time, then, would be charged against the 30 minutes which the Senator from Michigan would have under the resolution.

As to the time for rollcall votes and quorum call votes, let us say the distinguished Senator from Michigan wanted a rollcall vote on his amendment and he could not get the support of a fifth of the Senators present and he needed to put in a quorum to get the yeas and nays. He would suggest the absence of a quorum. The time for the quorum call would not be charged against the 5 hours of the minority leader, and the time for the rollcall vote on the amendment by the Senator from Michigan would not be charged against the 5 hours of either leader. The time would be charged against the overall 50 hours.

So 600 minutes after cloture is invoked would be guaranteed for Senators on both sides of the aisle and Senators on both sides of the question, to be recognized, call up amendments, and have votes thereon; and I venture to say that, in nearly all instances, that amount of time alone would be ample to resolve the questions on serious amendments after cloture.

Additionally, during that 10 hours of controlled time, the majority leader or his designee or the minority leader or his designee would be recognized alternately; first one, then the other—which again, would assure fairness in recognition of the majority and minority.

In order to meet the suggestion that, once the 10 hours had expired, it would be possible for a majority to call up an amendment and just hog the time and run out the 50 hours, tie up the Senate in quorum calls and rollcalls on frivolous, tactical maneuvers and so on, thus depriving a minority of any further opportunity to call up any amendment, the following language has been added: "After the expiration of the 10 hours' controlled time, time for debate on any amendment or debatable motion shall be limited to 1 hour." That will assure Senators that there could in no way develop a situation in which a majority would gang up on a minority and not let the minority have opportunity to call up additional amendments.

Mr. President, I feel that this is a workable, reasonable, fair approach. I am happy to have had the assistance of the Senator from Alabama and the Parliamentarians in working together to develop this language to meet what I think was a sincere concern. It is one which could, conceivably, come to fruition, but one which I seriously doubt, practically speaking, would ever develop. Nevertheless, conceding that it could develop, and conceding that it could develop at least in some degree, if not to the total degree that has been expressed, this new language adequately protects a minority. It assures a minority of getting recognition, assures it of an opportunity to call up amendments, and assures it that the majority cannot act arbitrarily in depriving it of such opportunity.

Another modification which I have offered to make would strike all through and including the word "designees," on line 18 of page 4. Under the resolution as it was reported by the Committee on Rules, after cloture is invoked, a nondebatable motion would be in order to further reduce the time from 50 hours down to a floor of 24 hours. Such a motion would require a constitutional two-thirds vote. That language is left untouched by my proposed modifications.

The language of Senate Resolution 5, however, as reported also provides that after the lapse of 24 hours of consideration, any remaining time could be further reduced, but to not less than 2 hours, by the adoption of a nondebatable motion by a constitutional two-thirds.

I have offered to drop the second proviso dealing with reducing the time to 2 hours.

The legislation on page 6 and embodied in section 3 deals with rulings by the Presiding Officer that no business has been transacted following a quorum or following a rollcall vote on which a quorum is shown to have voted.

Under the provisions of Senate Resolution 5, no appeal would lie against such a ruling if the Chair is supported by the entries in the Journal book or by the official reporter's transcript.

I have offered to drop that language. It was never, I would say, so vital an issue that I would be willing to come to blows about it. There arise instances once in a blue moon when it might be useful, but I have offered to delete that from the resolution.

So, Mr. President, in essence, this, as I have described it, is the import of the various modifications I have suggested.

I, therefore, ask unanimous consent, Mr. President, to offer the amendments and I ask unanimous consent that they be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments, No. 257 and No. 258, are as follows:

On page 4, beginning with the word "at", on line 11, strike all through and including the word "designees," on line 18.

On page 4, between lines 20 and 21, insert the following paragraph: "The first ten hours of debate after cloture has been invoked shall be equally divided between the Majority Leader and the Minority Leader or their designees, and any time yielded by a leader or his designee to a Senator up to 30 minutes shall not be charged against the 30 minutes to which a Senator is limited under the provisions of this rule; and provided that amendments which are in order may be called up by any Senator to whom time is yielded, and the time expended in roll calls thereon or on quorum calls shall not be charged against such ten hours of controlled time. During such ten-hour period, the Majority Leader or his designee and the Minority Leader or his designee shall be recognized alternately for the yielding of time. After the expiration of the ten hours controlled time, time for debate on any amendment or debatable motion shall be limited to one hour."

On page 6, strike section 3.

Mr. ROBERT C. BYRD. Mr. President, I hope that all Senators—and I will not deprive the distinguished minority leader of the floor much longer—will examine the language of these proposed modifications as they will appear in the RECORD of today.

I hope, while no Senator will be perfectly satisfied with the proposed modifications, that all Senators would strive to accommodate whatever concerns may remain to early action on the motion to proceed and action on the resolution itself.

I think it has been demonstrated that there needs to be a change in the Senate rule to deal with the situation following the invoking of cloture.

It is not the desire of this majority leader to make it possible for any majority to be arbitrary, but I believe that the Senate has a responsibility to expedite the business of the people. I believe that that responsibility does not lie alone with the majority party. I believe that the responsibility to expedite the business of the people lies with both parties in the Senate.

It is in that spirit that I offered the resolution and have offered some modifications to the language as reported by the Rules Committee, of which I am a member.

I do not know what the Senate will finally do in regard to this matter. But I do commend the modifications that I have submitted in the RECORD to the attention of all Senators. I hope that they will study them and that we may proceed within a reasonable period of time to act on them.

Mr. BAKER. Mr. President, I take this opportunity to extend my thanks to the distinguished majority leader for his efforts to find and reconcile our different points of view on this measure.

I also sit on the Rules Committee. I recall the disagreement that we had on certain aspects and provisions of this

bill at the time of the hearings and markup, and certain modifications that were made with the majority's acquiescence in the course of that consideration.

The bill was then reported and, on yesterday, I found it necessary to object to its immediate consideration. The majority leader moved that we proceed to the consideration of the measure and that, of course, is the business that the Senate has before it now.

On yesterday, I expressed my hope we could find a common ground for the reconciliation of the remaining issues in dispute between us, reciting then as I recite now that the original concept had been for the reduction of the time for debate from 100 hours as it presently reads to 50 hours, with 1 hour to a Senator.

It was then changed to 50 hours with a half hour for a Senator. I was happy for that change.

I also expressed, as did the distinguished Senator from Michigan and the distinguished Senator from New York, our concern that another change in Senate Resolution 5 would have a similar exclusionary effect, that is, the change in the rule that says that the 50 hours is not time for debate, but is time for consideration of the measure.

So even though it is proposed to reduce the time from 100 hours to 50 hours and time for a Senator from 1 hour to 30 minutes, while that ought to go around, 30 minutes for 100 Senators equals 50 hours, it does not if we consider we must charge the time for rollcalls, quorum calls, and other measures and matters, to that 50 hours, as well. So we are right back where we started and may end up with only a small fraction of the Senators having any time at all to speak.

I agree with the distinguished majority leader when he observes that this is extremely unlikely. But it is one of the responsibilities of the leader of the minority, and anybody in the Senate, to be concerned for what is possible as well as what is likely.

It is possible that could occur. It is possible that with the change in the rule as proposed in Senate Resolution 5, so that there be 50 hours for consideration of the measure as distinguished from 50 hours for debate, that some of my Members on this side might not get any time at all.

So I have to be and I am concerned about that.

Today, as my colleague, the distinguished majority leader, has already pointed out, there was a meeting in his office. I was privileged to attend that meeting, along with the Senator from Michigan and the Senator from New York, to discuss further possibilities of accommodation. At that meeting, the suggestions were made which the majority leader has now sent to the desk for printing and for inclusion in the RECORD, dealing with the fears that I continued to express yesterday and then again today.

For example, I think that the proviso for 10 hours of debate, equally divided between the majority leader and the minority leader, is a step forward and does meet in part my concern that Republicans might be frozen out. But it does not meet the whole concern; because, as the majority leader states, while the time for quorum calls and rollcalls is not charged against the 10 hours, it still is charged against the 50 hours. We still might not have time for members of the minority—I agree that it is unlikely, but it is possible— to say anything at all during the 50 hours permitted under rule XXII, as proposed to be amended by Senate Resolution 5.

Mr. President, the other proposals made by the majority leader today are all steps in the right direction. I believe that the proposal for 10 minutes to debate proposed changes in the Journal, the elimination of the 2-hour rule, and the possible elimination of the nonappealable rulings of the Chair are all steps in the right direction.

However, two things of principal concern to me remain and still must be dealt with, in my view.

One is the elimination of the postcloture possibility, by rollcall votes, by quorum calls, by other devices; that either the 10 hours equally divided between the majority leader and the minority leader, or the 50 hours of total available postcloture time, might be used up before any or a significant number of Senators on the minority side of an issue, or on the minority side of the aisle, have a chance to be heard. That is the first concern.

The second concern has to do with whether or not a Senator can have an amendment called up and dealt with. Nothing is more fundamental, it seems to me, than the right of a Senator to submit and to require action by the Senate on his amendment or proposal or bill or resolution.

Under Senate Resolution 5, as I interpret it, if the time is otherwise consumed and there are amendments at the desk and no time remains, there is no way for a Member of the Senate to be assured that his amendment will be presented, even without debate, and considered by the Senate. That is a substantial departure from rule XXII as it now exists.

So, Mr. President, my two principal concerns were and are: First, the question of making such that every Member of the Senate, majority and minority—party or issue—has an opportunity to be heard at least on some limited basis; second, that every Member of the Senate has an opportunity to obtain a vote on any amendment that is at the desk and qualified under rule XXII of the Standing Rules of the Senate.

I may say, in all candor, that I would not have suggested that rule XXII be changed to reduce the time to 50 hours, but I cannot honestly say that I am greatly disturbed by that. It would not be my preference that the time for each Senator be reduced from 1 hour, as it presently is stated in rule XXII, to 30 minutes. That would not be my preference, but I would not be greatly distressed by it. However, Mr. President, I am greatly concerned for the nature of the Senate, for the fundamental obligations of our representation in this body, for the rights of the minority, whether it is a partisan minority or an issue minority, to be heard, if we tinker with those two provisions, if we change the existing rule so that there is no longer a guarantee that every Senator can be heard for a brief time, postcloture, and change rule XXII so that every amendment at the desk which is otherwise qualified cannot at least get its day in court, its opportunity to be voted up or down.

Those two issues still remain and greatly concern me.

Mr. President, once again I commend the majority leader for his efforts to negotiate a satisfactory solution to this matter. He has been forthcoming and generous. He has been considerate in trying to work a compromise in this situation, and I can understand his concern. He is primarily responsible for ordering the business of the Senate and it does become a burdensome responsibility to try to move the legislation that is before this body.

However, Mr. President, I cannot in all candor say that the advice given me by the majority of Republicans, when they received the proposals of the majority leader, that they wished to consider it further, that they wished to think this through clearly and fully before they made a final decision, was wrong. I do not think it was wrong. I think the changes are so fundamental and so sweeping that that is the very least that would be expected on my side of the aisle.

I am surprised and pleased that the majority leader has forgone his opportunity to file a cloture motion today. I was under the impression that he might. I am glad he did not. It does give us a little extra time to consider the matter.

In the same spirit, I intend today, with Senator GRIFFIN, to ask a little later for consent to have certain amendments printed and included in the RECORD, which would state a remedy for the fears that I have tried to express here today.

I am sure that my friend, the majority leader, understands the necessity for my concern in this respect and for my caution. I am sure he understands that we have tried, as he has tried, diligently to find solutions. We have not found them yet, and we will continue to examine the matter for the time being.

Mr. GOLDWATER. Mr. President, I rise not to discuss any of the legal parts of this approach, because I am not a lawyer. I will leave that to my friends who are.

Yesterday, I asked the majority leader whether he knew how much of the 100 hours for each cloture had been used. He said that he did not know, and I find that nobody really knows.

I inquired of the Library of Congress, and their trouble in figuring out the answer to the question I asked is that so many times we have had a two-track system that it is difficult for them to break it down. I think it can be broken down, and they have volunteered to do it when they have the time.

However, the figures I have put to-

gether—which I will leave for the RECORD—indicate to me, a lay Member of the Senate, that there is no great need to change rule XXII in the way we are attempting to change it.

In all the years I have been in the Senate, I have resisted changes in rule XXII, but I have lived to see that it has not made a great deal of difference. However, this change is in a little different direction from that which we lived through before. This change is to speed up things.

If there is one thing that the Library of Congress discussion shows, it is that we have done very well with cloture. From 1947 through 1976, the period for which I have figures, we had 69 cases of cloture being invoked. The longest period of discussion involving the calling for cloture was 40 days, which was on the civil rights bill, back in 1960.

However, I recall that a number of years ago—I cannot recall the exact date—when we first began to attack the military authorization bill, we spent the better part of 3 months discussing that matter on the floor of the Senate—not entirely, but it was the better part of that time—and it never was put to cloture.

I find, for example, Mr. President, that days "debated after the last cloture vote"—and this is on measures requiring two successful cloture votes—the total for "days debated after the last cloture vote" represents the days debated after the second successful cloture vote.

So to show you how fast we have moved, we have not even required 1 day to take care of those matters.

The longest period of time we have been in cloture that I can find is again on civil rights after cloture had been invoked when we were in session for 19 days. So the longest we spent before invoking cloture again were 40 days on the civil rights movement of the same years I have discussed.

So I am led to believe, Mr. President, as a lay Member, we really do not need a change in the present rule XXII. If I felt it would help expedite the business of the Senate, I might see it differently. I am not as inclined to fear the 30 minutes versus the 1 hour because I have never, to my memory, used more than a few minutes of the hour allowed to me.

I think by the time we invoke cloture the Senate has a pretty good idea of what is going to happen. Those who are looking defeat in the eye have come to accept it. Those who are experiencing the thrills of victory are already experiencing them, and I do not think it makes that much difference.

I would question really seriously whether we need in the name of speeding up the changing of rule XXII, and with no disrespect meant to any Member of this body or any Member of the majority leadership or the minority leadership, here we have been in session this week 2 days and we have not cast a vote.

Now it is great to come in at 4 o'clock, because it allows us time to do committee work. But with this recently computerized, reoriented committee system we cannot get as much work done as we used to. I find myself flipping a nickel each morning to see which one of four committees or subcommittees I will attend.

While the extension of time during which we cannot sit as a subcommittee, because of objection to unanimous consent, has been somewhat alleviated by the 4 o'clock time, nevertheless, we come in at 4 o'clock, and it is now 5:30, and we have not passed a measure. There are measures on the calendar—we were told by the majority leader that two would be considered today, and I have an interest in one of them, but that is not important. We can wait.

It seems to me we waste too much time on the Senate floor. If we could alleviate in some way the unnecessary rollcall votes we have on every subject known to man, if we could establish a procedure on the floor when business would be transacted one, two, three, instead of one, two, and a long dash, and three and three long dashes and four, I think we could get the business done.

But, in spite of all those things, I see no reason for the leadership of this body to feel they are not doing their jobs because we do pass legislation. We pass a lot of legislation. We have lots of periods of argument, and the fact that it now takes us 12 months a year to do our job compared to the 3 or 4 months when I first came here indicates only one thing, that the country is growing, that the problems of the country are growing, that our relationship with the world is far, far more intimate than it used to be; that things we do and say on the Senate floor have a far greater bearing on the peace of the world than anything that was said in the United States 25 or 30 years ago.

So, Mr. President, I have spoken my little bit on this matter this evening.

I ask unanimous consent that this paper given to me by the Library of Congress entitled "Filibuster and Cloture Related Delays in the Senate, 1947–76" be printed at this point in my remarks.

I might say the author of this paper was Paul S. Rundquist, analyst, Government Division, and it was done on February 28, 1977.

I yield the floor.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

FILIBUSTER AND CLOTURE RELATED DELAYS IN THE SENATE, 1947–76 [1]

Measure	Days before Senate	Date 1st debated	Date last debated	Number of cloture votes	Number successful	Days debated after last cloture vote
Poll tax, H.R. 29	5	July 29, 1948	Aug. 4, 1948	0	0	----------
Rule XXII, S. Res. 15	15	Feb. 28, 1949	Mar. 17, 1949	0	0	----------
Fair employment, S. 1728	12	May 10, 1950	July 12, 1950	1	0	2

[1] Source: Congressional Record, Daily Digest. "Days Before Senate" includes only those days in which the specific measure was actually considered by the Senate. Excluded are days when the Senate was not in session, or when the measure was passed over for consideration of another measure. On measures requiring 2 successful cloture votes, the total for "days debated after last cloture vote" represents the days debated after the 2d successful cloture vote.

The PRESIDING OFFICER (Mr. FORD). The Senator from Michigan.

Mr. GRIFFIN. Mr. President, I would add to the discussion and say to the distinguished majority leader that when I left the meeting this morning and went to the policy meeting of the Republican Senators, while I was not ready to accept his proposals as presented, I must say I was inclined to try to go as far as possible.

I would say, however, that the more I listened to the discussion and the debate of my colleagues, the more I realized that the concern is not just the concern of a minority in the Senate. What we are really tampering with, what we are really doing here with the changes that are proposed in Senate Resolution 5, is to erode the rights of individual Senators in this body, and the individual Senators can be on this side of the aisle or on that side of the aisle. It is a very basic change, I suggest, as far as the institution itself is concerned.

Let me emphasize this point: Under rule XXII, as it stands today, each individual Senator in this body after cloture is invoked has a right to speak for 1 hour. He does not have to get permission from the majority leader or the minority leader or seek the sufferance of any Member: he has a right to speak for 1 hour if he so chooses.

If the proposals in Senate Resolution 5 are adopted, even as now modified by the distinguished majority leader, a single individual Senator would have no right to any particular amount of time after cloture was invoked. He might get 30 minutes, if there were not too many rollcalls and too many quorum calls which decreased the total amount of time available. He might get part of the 5 hours, that are proposed to be reserved to the minority or to the majority, at the sufferance of the majority or minority leaders, but he has nothing as a matter of right as an individual Senator in this body. His rights as a Senator have been substantially altered.

Now under the rules as they stand today, each Senator, if he puts his amendment at the desk before cloture is voted, has a right to vote on that amendment. That is a very precious right of each individual Senator, and he does not have to get the permission of any leader on either side of the aisle.

If these amendments and Senate Resolution 5 were adopted he would not have such a right. So his prerogatives as an individual Senator would be substantially eroded.

Without doubt this institution is unique because of the importance and power of each individual Senator. I well recall the time when, as a relatively new and freshman Senator, I decided that I opposed the nomination of Mr. Fortas to be the Chief Justice of the United States. My minority leader did not agree with me. He was on the other side. The majority leader was on the other side. I was in the minority of a minority, and yet as a single Senator exercising his rights and using the rules I was able to carry on a discussion for a considerable period of time.

While some will disagree, I think that the ultimate purpose was a good purpose, and that the country is better off today because the right and the power of a single Senator was exercised. There will not be that same opportunity, and the power of a single Senator will not be the same, but will be significantly diminished if Senate Resolution 5 is adopted, even as modified.

I concede, as the minority leader has, that the changes proposed by the distinguished majority leader would be an improvement, but still, to this Senator, it would be moving in the wrong direction to adopt Senate Resolution 5. So I am even stronger in my opposition today than I was yesterday.

I yield the floor.

Mr. ROBERT C. BYRD. Mr. President, it has been said that the power of a single Senator would never be the same if Senate Resolution 5 is adopted. When formerly a constitutional two-thirds vote was required, the same argument was made when it was changed to two-thirds of those present and voting. The same argument was made when it moved from two-thirds present and voting to three-fifths of those present and voting.

So, one can make the argument, but that does not justify a single Senator using his power to tie up the Senate interminably and to delay the business of the people. There comes a time when a majority of the Senate is entitled to work its will. It is not the power of a Senator that is so much involved here as it is the ability of the Senate, which is larger than its 100 component parts, to work its will in transacting the people's business.

It has been said that under Senate Resolution 5 a Senator would not have as a matter of right the ability to speak for an hour, and that he would not have as a matter of right the offering of an amendment.

Mr. President, once cloture is invoked every Senator gives up certain rights, if that term is appropriate, that he possesses at other times. For example, once cloture is invoked under the present rule every Senator gives up the right to offer a nongermane amendment. He normally has the right to speak as long as he can stand on his feet, but this right is taken from him by the invoking of cloture. So once three-fifths of Senators who are chosen and sworn manifest their will to bring a matter to a close, that vote indicates that every Senator here has to ad-

just himself to the changed circumstance that has been brought about by the invoking of cloture.

So, perhaps he loses a right or privilege when cloture is invoked in any event and under any cloture rule. One can express concern that in a hypothetical situation, if Senate Resolution 5 is adopted, a Senator might be deprived by an arbitrary majority working with the Chair of being recognized or of calling up an amendment and having it voted upon. Mr. President, that simply is not realistic. Senators would have 600 minutes, half of which would be under the control of the majority leader and half of which would be under the control of the minority leader or their designees. This would assure members of a minority that they are going to have the opportunity for recognition and for calling up amendments. After that 10 hours has expired, a time limitation of 1 hour on any amendment further assures Members that they will have an opportunity to call up amendments, because this provision would preclude a situation in which one amendment would be before the Senate over a period of many, many hours thus consuming the remaining time within the 50-hour time limit. No Member would have to go to his leader and ask for a "right" to get a vote or a "right" to call up his amendment. One can put it in that context, but that, I think, is a statement without merit.

I welcome the suggestions that will be presented by Mr. GRIFFIN and Mr. BAKER in the form of amendments. I wish to have the opportunity to consider those amendments, and I am glad that they are going to propose such amendments and have them printed. I would hope that the Senate would take a look at those amendments and that the Senate would proceed to the consideration of Senate Resolution 5 so that the Senate can debate those amendments and vote on them. If it is the will of the Senate that any amendment by Mr. GRIFFIN, any amendment by Mr. BAKER, or by any other Senator should be adopted to this resolution, so be it. So, I would be delighted to see the Senate proceed to the consideration of Senate Resolution 5, hopefully, in the very near future, so that all Senators would have the opportunity of offering whatever amendments they wish to offer and to get a vote thereon.

It is within the purview of every Senator in this body to offer amendments to this measure, and it is certainly within the abilities of every Senator in this body to offer amendments that might improve upon the legislation that has been reported from the committee. So I would hope that Senators would offer amendments and then that we could proceed to consider Senate Resolution 5, let the Senate work its will thereon, and go on to other things.

I shall not keep the distinguished Senator from North Carolina standing on his feet long. I simply say this, that the modifications that I have presented today as having been worked out by the distinguished Senator from Alabama and myself, and the Parliamentarian, Assistant Parliamentarian, and Parliamentarian Emeritus are realistic approaches to dealing with the expressed concerns of Senators.

I believe that if one looks at the situation realistically, one would have to agree that from a pragmatic standpoint these modifications are going to guarantee Senators ample time for debate and the calling up of serious amendments.

There would come a time, at the end of the 50 hours, it is true, when amendments at the desk and not pending could not be called up. But after 50 hours, and with a time limit on any amendment after the first 10 hours of controlled time, it is pretty inconceivable to me that there are going to be any amendments left at the desk, especially when we consider that the resolution provides at least an additional 24 hours before a motion to invoke cloture can be entered on a substantive matter.

So there are 24 additional hours, and then there is the day on which the cloture motion is introduced, even if it is introduced immediately after those first 24 hours have expired. Then there is a second day after the cloture motion is entered, and 1 hour on the third day in which Senators may offer amendments to the measure and have them voted on.

So there are not only the 50 hours after cloture, but there are those many hours that precede the invoking of cloture. Moreover, if cloture fails, then the whole procedure has to start over again.

I beg the Senator's pardon; I yield to the Senator from North Carolina or I yield the floor, whichever he prefers.

The PRESIDING OFFICER. The Senator from North Carolina is recognized.

Mr. MORGAN. Mr. President, I rise to express my concern about the proposed rule change, and express my appreciation to my colleagues on both sides of the issue for their discussion of this very important issue.

I must say in all fairness, Mr. President, that I have had somewhat of a saddened feeling, as I listened to the discussion of these rules, that if these rules changes are adopted, even with the amendments offered this afternoon, unless they are more meaningful than I could determine from listening to the reading of them, we will have seen this body pass from a great deliberative body—the only deliberative body of its kind left in the whole world—to just another parliamentary body.

I know it is true, Mr. President, that at times it is difficult to have endless hours spent on the floor in debate in what appears to be a waste of time. But on the other hand, Mr. President, it affords to all of us and to all the people of America, I think, some assurance that somewhere in this Congress, and especially in the Senate, our voices can be and will be heard.

It is said that these rules changes do not apply unless cloture is first invoked. One of the first things I learned in the Senate after I came here 2 years ago, Mr. President, was that quite often cloture is invoked with almost no substantive debate on the issues of a bill before it is invoked.

I found that out when the distinguished Senator from New York (Mr. JAVITS) raised a point of order on an amendment which I had thought had merit, but, because I had not heard the bill debated before cloture was invoked, I was not cognizant or aware of the need for that amendment. I will grant you that I should have been, had my staff been as alert and well prepared as they should have been, or had I been.

The facts of life in the Senate are that with so many pending issues, we quite often cannot get around to these important things until the time is crucial. I am disturbed at the mere fact that there are so many possibilities which could exclude an individual Senator from having his voice heard.

Our distinguished majority leader, in whom I have a great deal of confidence, said that he could not conceive of a majority leader depriving a Member of a minority, whether it is a minority on the issue or a minority partywise, of the right to be heard or to call up a motion. I think maybe I have seen such an occasion happen in the Senate, in the heat of debate, when passions were running high.

I am reminded of a comment of Jefferson that I read some time ago. I cannot recall exactly where I read it, but it went something like this. Jefferson said:

> When dealing with the affairs of government, place no future confidence in man, but tie him down with the Constitution.

He was alluding, of course, to the constitutional debate that took place before the adoption and ratification of the Constitution. I would apply that same principle to say that in dealing with the right of individual Senators to engage in free and open discussions and debates, let us not entrust it to individual Members of the Senate, who may be acting from the best of motives but also in the heat of debate and in the heat of passion, but let us tie those rights down with the rules.

I shudder at the thought, Mr. President, of having no opportunity to question the corrections of the rules. As I understood the proposed amendment offered this afternoon by unanimous consent, if a motion is made to correct the Journal, there shall be 10 minutes of debate divided between the person making the motion and the majority leader.

I would hate to rise on the floor of the Senate with a sincere and honest question about the correctness of the Journal, and have either the majority leader or the person making the motion yield me one-half minute or 1 minute to express my concern about that. I do not believe that time is that much of the essence on the floor of the Senate.

I think all of us, in fairness, would have to admit that the greatest abuses that have taken place over the unlimited debate rule in the Senate have come from civil rights legislation. While I was not a party to any of those debates, as I recall—I do not know where I stood on the Voting Rights Act—I think we all would concede that a vast majority of those debates are behind us.

But I did participate for some 2 or 3 weeks, with the permission of the very distinguished late Senator from Michigan, Mr. Hart, in the debate on the antitrust bill, and I was one of those who

voted for cloture and assisted in the debate during the many hours of debate on that measure. As I recall, there were something like 73 motions or amendments made and debated by the opponents.

Mr. President, after several days of debate on that bill, as strongly as I was for the bill and as strongly as I am for it now, I concede that it came out a far better piece of legislation than it was when it was commenced. It came out a piece of legislation that the President signed into law. Had it not been hammered out with hours and hours of debate on the floor of the Senate, I suspect that the will of the majority of us—and I was in the majority in that particular case—would have enacted a bill which would have had many, many fallacies in it, which probably would have led to a veto.

I say, Mr. President, with the vast majority of really controversial issues behind us, I really see no need for changing these rules. If we are going to change them, then let us try to change them after full and complete debate, with Members of the Senate being informed. This presents a great frustration.

Some time ago I was vitally interested in an issue that was going to be pending before the Senate. I discussed with my staff how we could get across our message to the Members of the Senate. I told them that I was firmly convinced that if I could get a majority of the Members of the Senate in their chairs in the Senate Chamber for 15 minutes, I could prevail with my point of view. But I was just as satisfied that that would have been impossible, for, except on a few occasions at night, when we have had extended debate, we have not seen that many Members of the Senate here, willing and ready to listen to the arguments of any Senator.

Then we discussed how to communicate with my fellow Senators. We said, "Let us write a 'Dear Colleague' letter." To those who are not familiar with it, this is the one standard device by which we are supposed to be able to communicate our views to our fellow Senators. But we all know, as a matter of fact, that those "Dear Colleague" letters arrive so frequently and in such large numbers that, even though they are from our colleagues in the Senate, we quite often do not have the time to read them or, many times, do not see them.

So we were absolutely stymied as to how we could get across to Members of the Senate our point of view. Finally, in desperation, I wrote a letter and stood on the floor of the Senate and handed it to as many as I could, and for those I could not hand it to, I put it on their desk. After the Senate debate was over and the amendment had been voted on—fortunately, we prevailed. I do not think my letter would have made much difference one way or the other. But I looked around and over half of the letters that had been put on the desks of the Senators had not been opened.

That is what disturbs me about the rules of the Senate. If I had not been here this afternoon and yesterday afternoon for a short period of time, I would not, probably, have realized what I think may be the dire consequences of this rule. I have to confess that I probably would not have been here this afternoon if my physical condition had permitted me to be elsewhere.

Mr. President, I have no hopes of prevailing upon anyone to change his vote, except to say that, with civil rights back of us—and that was a big bugaboo in the unlimited debate situation—let us give it another session of Congress to see how it works. Let us not preside over the enactment of Senate Resolution 5, which, in effect, will, I think, in all seriousness, eliminate the Senate, once and for all, as the most deliberative body in the whole world.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from North Carolina, the State in which I was born, and the motto of which is "To be rather than to seem," makes a very compelling and persuasive argument. I just have two things that I would like to say in response, however.

One is that the Senator from West Virginia is just as interested in maintaining the integrity of the position in our constitutional system that the Senate was intended to hold as is any Senator. I respect the Senator from North Carolina for his viewpoint and for the concerns that he has expressed with respect to the role of the Senate and the possible impact upon that role that the adoption of Senate Resolution 5 would have. Mr. President, I think the Senate does have the responsibility of being a deliberative body and, under its rules, that it is an appellation that has been attached to the Senate of the United States. It is a deliberative body, and has sometimes been called the greatest deliberative body in the world.

But there comes a time, Mr. President, when the Senate is not acting in a deliberative way. It is not acting deliberately. It is not deliberating. It ties itself up in timewasting wrangles. When it reaches that point, then I think it renders injury to its image and does an injury to its appropriate role. I have seen it reach that point at least a few times in my 19 years here.

In this respect, Mr. President, I feel that Senate Resolution 5 would have an impact. I think it would prevent the Senate from too often presenting the image of something far different from a deliberative body.

It is not the intent of the author of Senate Resolution 5 and it is not the intent of Senate Resolution 5, to take away from the Senate its appropriate role of deliberating. But there does come a time when the Senate is not deliberative and when it inflicts wounds upon itself, and when it is not acting to duly expedite the business of the people. It is those instances to which the resolution is directed. Its intent is to avoid and, hopefully, preclude such situations to a considerable degree after cloture is invoked.

It should have the effect of making the Senate more truly deliberative. The adoption of this resolution is not going to make this body a second House of Representatives. Nobody is going to move the previous question. There is going to be ample time for Senators to speak and offer amendments after cloture, and, as I say, they would have at least some additional time prior to the invoking of cloture to call up serious amendments and to contribute serious debate.

I have never seen a time following the invoking of cloture when even a majority of the Members of the Senate utilized the 1 hour that is available to them. I have no record before me, but I doubt if there has ever been a time, after cloture has been invoked, that one-third of the Members of the Senate have utilized their full 1 hour.

I doubt, Mr. President, that there has ever been a time following invoking of cloture that even one-fourth of the Members of the Senate have used their full 1 hour.

As a matter of fact, it is probably the case in most instances following the invoking of cloture that a majority of Senators have not used even 1 minute of their hour under the rule.

So, while in theory, I suppose, one could fear for the future role of the Senate in saying that Senators could be deprived of an opportunity after cloture to offer amendments and get votes thereon, I say that, from a practical standpoint and based on the experience that we have before us, Senators would have ample time under the resolution, especially as it would be modified by my amendments, to contribute to serious debate, call up worthwhile amendments, and get votes thereon.

The second thing I would say has reference to the distinguished Senator from North Carolina's statement regarding the corrections of the Journal.

As I say, he makes a very compelling argument as to the limit of 10 minutes for debate on correcting the Journal. He has indicated that he would not want to have to ask for a minute or 2 minutes, or whatever it might be, for debate in that regard.

Mr. President, I think the history of this body will show that there have been very, very, very few occasions in which the Journal has been "corrected" of an inaccuracy in the proceedings of the preceding day.

For the most part, the so-called "correction" of the Journal has consisted, over the years, of frivolous efforts to delay the action of the Senate, and generally one when the Senate is involved in a cloture situation—either preceding the invoking of cloture or following the invoking of cloture. For example: Inserting the Lord's Prayer as a "correction" in the Journal when, as a matter of fact, the Lord's Prayer was not uttered during the proceedings of the preceding day.

Now, that is not a "correction" of the Journal. By a correction of the Journal is meant just that—to correct an inaccuracy in the Journal with respect to the proceedings of the preceding day.

Nobody would object to correcting an inaccuracy in the Journal, and 10 minutes would be ample time to cite a true inaccuracy in the proceedings of the preceding day. Every Member of the Senate, no matter what the situation may be—post cloture, precloture, or absolutely

without thought of cloture—every Senator would want the Journal to be correct, and if more time were required than 10 minutes to be absolutely sure that the inaccuracy was appropriately corrected, there would be no problem in getting additional time by unanimous consent.

Nobody wants to avoid correcting the Journal, but it can be shown that the so-called "corrections" of the Journal have usually occurred in an effort to delay the work of the Senate and not in reality to cure inaccuracies in the Journal of proceedings of the preceding day.

It is because of the fact that the maneuver can be used, when there is no actual inaccuracy to be corrected, to delay Senate business that I have included the provision in Senate Resolution 5.

I assure the distinguished Senator from North Carolina that where there is, indeed, an inaccuracy which ought to be corrected—and which we all have a responsibility to see is corrected—that situation will not prove to be a problem.

Mr. MORGAN. Will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

The PRESIDING OFFICER (Mr. SASSER). The Senator from North Carolina.

Mr. MORGAN. That could only be done by unanimous consent, could it not?

Mr. ROBERT C. BYRD. No.

Mr. MORGAN. The time could be extended without unanimous consent?

Mr. ROBERT C. BYRD. No, the time could not be extended without unanimous consent, but what I am saying is that I am sure no Senator would object to additional time it were necessary. I cannot conceive of more than 10 minutes being necessary for a Senator to point out an inaccuracy in the previous day's Journal and nobody is going to object to that inaccuracy being corrected.

Mr. MORGAN. I say to the Senator that what appears to me to be a real inaccuracy might not appear to be an inaccuracy to one of the opponents who would object and then we would be limited by that 5 minutes.

Mr. ROBERT C. BYRD. Well, I respect the Senator for his position and for his argument. But I have to say as to the history, as far as I know anything about the history of correcting the Journal, I have discussed this with the Parliamentarian, I have discussed it with individuals who have made it the work of a lifetime to study and record the experiences and the history of the Senate, and I have not found one yet who would not say that, for the most part, the "corrections" of the Journal have, indeed, not been serious efforts to correct a true inaccuracy in the Journal of the proceedings of the preceding day. In most instances, there was no inaccuracy to correct.

I want to see any inaccuracy corrected. But the Senate Resolution 5 language is only to discourage efforts to delay the actions of the Senate rather than to correct a true inaccuracy in the RECORD.

Mr. HART. Will the Senator yield for a unanimous-consent request?

Mr. ROBERT C. BYRD. Yes, I yield.

Mr. HART. I thank the majority leader.

REQUEST FOR JOINT REFERRAL

Mr. HART. Mr. President, I am introducing today a bill which will amend the Public Works and Economic Development Act which will establish a comprehensive program to provide financial and technical assistance to States, local governments, and Indian tribes, to control the effects of rapid energy development.

I ask unanimous consent that the bill be referred to both the Committee on Environment and Public Works and the Committee on Governmental Affairs, and that, if and when one of those committees reports the bill, the other committee has not to exceed 45 calendar days to report the bill or be discharged from its consideration.

I note, Mr. President, that this request meets with the approval of both the chairmen and ranking members of the Governmental Affairs Committee and the Environment and Public Works Committee.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, did I understand the distinguished Senator to say that this request had been cleared with the chairmen and ranking minority members of the appropriate committees?

Mr. HART. Of both committees, that is correct.

Mr. ROBERT C. BYRD. Of both committees.

Mr. BAKER. Mr. President, reserving the right to object, may I have a moment? Will the distinguished Senator from Colorado withhold his request for a moment? I have not been advised of the agreement.

Do I correctly understand that the Senator has cleared it with the ranking member of the Environment and Public Works Committee?

Mr. HART. That is correct—and the ranking member of the Governmental Affairs Committee.

Mr. BAKER. Mr. President, before the request is acted upon, I wonder whether I may suggest the absence of a quorum.

Mr. ROBERT C. BYRD. Mr. President, will the Senator withhold his request?

Mr. HART I withhold the request.

ORDER FOR RECESS UNTIL TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE STANDING RULES OF THE SENATE

The Senate continued with the consideration of the motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

Mr. ALLEN. Mr. President, first, I commend the distinguished majority leader for his conciliatory approach with respect to his efforts to amend the rules in the manner set forth in Senate Resolution 5.

The two apprehensions I had when it seemed that an effort was to be made to further amend Senate rule XXII were that an effort would be made to lower the number of Senators required to invoke cloture from the present 60 Senators to possibly three-fifths of a quorum present; that an effort would be made to amend the rules by majority vote, as was done 2 years ago.

The distinguished majority leader, in his effort to amend the rules, as provided by Senate Resolution 5, is not seeking to do either of these things because of the apprehension of the Senator from Alabama. I do not believe that the right of Senators who favor free and open debate in the Senate will be damaged greatly by the adoption of Senate Resolution 5; and as the resolution is now drafted, it is my intention to vote for the resolution, if it comes up for a vote.

Mr. President, I commend the majority leader for the amendments he has filed—they will be printed and will be on the desk of each Senator tomorrow—having to do with seeking to assure that every Senator would have a right to speak after cloture had been invoked and that every Senator would have the right to call up his amendment or amendments after cloture had been invoked.

At the request of the majority leader, in seeking to allay the fears of those who felt that someone might be cut off after the invoking of cloture, I did participate in the drafting of a suggested amendment that, to my mind, from a practical point of view, does guarantee that every Senator will have a right to speak, that every Senator will have a right to call up his amendment or amendments.

There was some thought by some Senators that the proponents of the measure, after cloture had been invoked, might monopolize all the time and that, therefore, every Senator would not be given an opportunity to call up an amendment or an opportunity to be heard.

Mr. President, I have participated in quite a number of extended discussions on the floor of the Senate. The problem is not that we are limited by the 1 hour accorded to each Senator under the present rule. The problem is getting the Senators to use that time. The distinguished Senator from North Carolina (Mr. HELMS) is here, and he, too, has participated in a number of extended discussions on the floor of the Senate. He and I have used our hour sparingly, over a period of quite a few hours, using a few minutes at a time, on many occasions. We always had an opportunity to use our hour, and from time to time we would importune other Senators to use their time. But it becomes somewhat difficult late at night to get Senators to use their time. So I really do not believe that the 50 hours is going to handicap the Senators who desire free and open debate.

I see measures coming down the pike in the coming weeks that are going to be subjected to full discussion on the floor of the Senate. I imagine that the Senator from Alabama and the Senator from North Carolina will discuss some of these measures. I do not believe we are going

to be inhibited a great deal by this 50-hour rule, because, at the request of the Senator from Alabama, the distinguished majority leader agreed to a provision—and it is in Senate Resolution 5—that a cloture motion could not be filed until the matter as to which cloture is to be involved has been pending before the Senate for 24 hours. That is a departure from the practice in the past, when, on many occasions, a cloture motion was filed literally within seconds after the matter came before the Senate.

As I have pointed out on the floor of the Senate, some of these cloture votes never would have taken place if we had had that 24-hour cooling-off period under the present rule. But with a cloture motion filed simultaneously with the matter being laid before the Senate, what could one do but discuss the matter? With a 24-hour cooling-off period, I anticipate that fewer cloture motions will be filed. No such motion will be filed unless it seems definite that there is to be extended debate with reference to the measure.

The way in which this amendment which the distinguished majority leader has presented would guarantee to every Senator an opportunity to call up an amendment and to speak would be that the first 10 hours after cloture had been invoked would be divided equally between the majority leader and the minority leader or their designees.

The Presiding Officer would recognize the leaders alternately so that—and it is provided in the amendment—any Senator on being recognized can call up an amendment. Then when that amendment is disposed of, the other leader would be recognized, and he could yield the time to anyone he saw fit.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield at that point?

Mr. ALLEN. Yes.

Mr. ROBERT C. BYRD. Does not the Senator agree that in a practical situation in most instances it really would not be the majority and minority leaders——

Mr. ALLEN. No.

Mr. ROBERT C. BYRD. It would be our designees, the chairmen and the ranking members of the committees.

Mr. ALLEN. Yes, or the leader of the opposition to the bill

Mr. ROBERT C. BYRD. Yes.

Mr. ALLEN. I think that is the reason the word "designees" is inserted.

So the opposite sides of the question would be recognized alternately, and a Senator might use only 5 minutes and then call up his amendment and, of course, it would be 15 minutes for a rollcall, and that is not counted against the 10 hours, nor is a quorum call.

So there would be 5 hours on each side of debate only. The other, the quorum calls and the rollcalls, would come out of the 50 hours, but not the 10 hours.

The leaders or the Senators in control of the time could yield up to 30 minutes to a Senator and that would not be charged against his 30 minutes to which he is limited under Senate Resolution 5.

So the practical effect would be that these 10 hours of debate time in all likelihood would take 20 or 25 hours to consume on account of the quorum calls and the rollcalls. But that then would give every Senator with this 5 hours of controlled time on each side an opportunity to bring up his amendment and, obviously, they would have some sort of priority on the amendments to bring up the important amendments first.

So I feel that those of us who are going to want to discuss some of these issues later, after cloture has been invoked, are not going to be inhibited a great deal. A 50-hour limit would take some 5 days, I would think, of debate, plus the 2 days prior to invoking cloture and the 1 day prior to presenting the cloture motion, which would leave approximately 8 days of discussion. Very few filibusters have lasted longer than that.

I have agreed to support this resolution as it now pends in the Senate and, as I say, I have done so because it does not contain or the effort to pass this does not have the two features that gave me cause for alarm, and that is the reduction of the 60-vote requirement and the seeking to pass a resolution by majority vote, as was done outside the rules 2 years ago.

So I feel I will be given all the rights I need as an average Senator on the floor to fully discuss this matter after cloture has been invoked. I believe every other Senator will have ample opportunity.

I do not favor any amendment of rule XXII. As I say, I would like to go back to the situation that prevailed in the 93d Congress, but, if the rules are to be amended, I believe the distinguished majority leader has adopted a very reasonable approach.

Actually, with the lapse of time it would seem there is no approach with respect to the amendment of rule XXII other than a reasonable approach. It looks to the Senator from Alabama that much of the steam has gone out of the effort to amend rule XXII. Where are the zealots in the Senate who were here 2 years ago breathing fire and brimstone seeking to cut down the number of votes required for invoking cloture? They are not here.

I wonder if this really, the absence of a drive to amend the rules, I am just wondering if that is not something of an endorsement of the efforts made by the Senator from Alabama and the Senator from North Carolina in the past to slow down some of this legislation that in the past has sped through the Senate? So apparently there is not too much of a zealous hard-driving approach to amend the Senate rules. So nobody is too strong for radical revision. I think that is certainly very commendable on the part of the Members of the Senate.

All in all, I do not see that the rights of those who seek to carry on an educational campaign here in the Senate with respect to a measure are being greatly diluted. If they were being diluted a great deal, well, you can rest assured the Senator from Alabama would have his say.

I might say further I stated in the Rules Committee when this resolution was being considered that if an effort is made to make it easier to invoke cloture or to further restrict the right of the Senators to speak, the Senator from Alabama would seek as best he could to prevent the adoption of the resolution. Further, if any of my colleagues disagreed with me on this being a reasonable approach, if an approach has to be taken, if they disagreed with me on that and desired to discuss this matter at length I would certainly support that effort by voting against cloture every time the issue comes up for a vote.

I do not believe the distinguished majority leader is proposing something here that is unreasonable, and I do not believe it is depriving any Senator of an opportunity to have his say on the Senate floor, have his amendment considered, have his amendment voted on. If I thought it deprived anybody of that right, I would certainly be speaking against the resolution.

In view of all the circumstances, I do not feel this resolution is going to harm any Senator who wishes to make a full discussion of the issue here on the Senate floor.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from Alabama for his correct analysis of the measure and the modifications that have been offered.

I appreciate his support of the language of the resolution, and I appreciate his helpfulness in devising the language of the amendments which I have offered.

I ask unanimous consent that the distinguished Senator's name, the name of the Senator from Alabama, be attached to the amendments that I have offered.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the name of the distinguished Senator from North Carolina (Mr. HELMS) be added to those same amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from Alabama has said that he believes there is an absence of a drive to change the rules, that the "steam" has gone out of the desire to change the rules. It may appear, Mr. President, that that is the case. I would say, however, that this year there has been no filibuster. There may be one getting under way now, but thus far there have been no filibusters and things have been rather quiescent.

But as the distinguished and very able Senator from Alabama has also said, there are some measures coming down the pike that will receive considerable attention and debate, and when those times come I would imagine that we will see a little more steam than may be manifesting itself as of this moment.

It is my sincere desire that we not see the kind of steam that would develop that would force this Senate 2 years from now to resort to an effort, to which I have never yet lent my support, of changing the rules at the beginning of the session on the premise that the Senate is not a continuing body and that at the beginning of each new Congress it may adopt new rules by majority cloture.

That effort has been made and it can be made again, and it may very well be made again.

I have seen that effort possess considerable steam. I have not, however, proposed to go that way. But I do not say today that I would never support that approach. I have changed my viewpoints on more matters than one since I came to this body. When I first came to the body I said that I would never, never vote for cloture. Well, I have learned that one should never say "never." So I do not know what my position would be 2 years from today. But I do not want to see that situation come about.

And it is in a sincere effort to avoid that route, that I have endeavored to bring about what I feel is a realistic, fair, and necessary change in the rules. It is a fair approach. It is a reasonable approach. As the distinguished Senator from Alabama says, it does not impinge much, if any, on Senators who sincerely attempt to soberly debate a matter and offer worthwhile and good amendments and get votes on them.

But what it does do, even if amended as I have suggested, is provide a light at the end of the tunnel. It says that at a given point down the road the Senate will finally vote up or down, but in the meantime there may be quorum calls, rollcall votes, the reading of amendments, appeals from the ruling of the Chair, votes on rulings, votes to reconsider, votes to table the motion to reconsider—all of these things, which can otherwise tie up the Senate and stretch out the time interminably, will be running down the clock. I would bet that the Senator from Alabama, the Senator from North Carolina, and I, if we were ever to join forces in this body, we could, if we were so determined, tie up this Senate on any measure for 6 months, after cloture had been invoked. I am confident that we could do it. The 3 of us could stand against the 97 others and, not because of my position as majority leader but as a Senator from West Virginia, the 3 of us could tie up this Senate for weeks upon weeks, and we could do great damage to the Senate, and to ourselves, but I dare say that would be the last time 3 Senators could ever do it.

Mr. President, I repeat, the rules change that I am supporting here is a very reasonable and realistic one. It does not intend to impinge upon the fair and reasonable deliberations of the Senate or upon the reasonable rights of Senators to debate and offer amendments. But it does say that once the Senate has invoked cloture—it does not say the Senate will ever invoke cloture—but it says that once cloture is invoked there will be a certain day of final judgment somewhere down the road, 50 hours away, when the Senate will vote up or down.

That is all I want. I just want to provide assurance that three or a handful of Senators cannot delay this Senate to the extent that we miss the hoped-for October adjournment date, or that we "deliberate" to the extent that we are no longer deliberating, but are impinging upon the right of the Senate to work its will finally on a measure on which cloture has been invoked.

ORDER THAT H.R. 6774 BE HELD AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 6774, to make certain technical and miscellaneous amendments to provisions relating to higher education contained in the Education Amendments of 1976, be held at the desk pending further disposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 167—AUTHORIZING THE PRINTING OF A REPORT

Mr. ROBERT C. BYRD. Mr. President, Mr. RIBICOFF asked me to submit a Senate resolution on behalf of himself and Mr. BAKER, authorizing the printing of the report entitled "Senate Delegation Report on American Foreign Policy and Nonproliferation Interests in the Middle East," and ask for its immediate consideration on behalf of Mr. RIBICOFF. I, therefore, do that at this time.

The PRESIDING OFFICER. The clerk will state the resolution by title.

The legislative clerk read as follows:

A resolution (S. Res. 167) authorizing the printing of the report entitled "Senate Delegation Report on American Foreign Policy and Non-Proliferation Interests in the Middle East."

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The resolution was agreed to as follows:

Resolved, That the report entitled "Senate Delegation Report on American Foreign Policy and Non-Proliferation Interests in the Middle East" be printed as a Senate document, and that three thousand additional copies of such document be printed.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I believe there was a request for a committee to be authorized to meet at a certain time on Friday. The Human Resources Committee wishes permission to meet on Friday from 11 a.m. to 2 p.m.

Mr. BAKER. Mr. President, I may be able to agree to that later. I respectfully report that I cannot agree to it today.

Mr. ROBERT C. BYRD. All right. Mr. President, I shall try again tomorrow, after the distinguished minority leader has an opportunity to explore the possibilities.

Mr. President, I yield the floor.

Mr. BAKER. Mr. President could I inquire of the majority leader about the schedule for tomorrow? As I understand him, he has previously asked for and been given an order for the Senate to convene at 12 o'clock; is that correct?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. As I recall also, committees are cleared to meet tomorrow during the session of the Senate except the Committee on the Judiciary. I would ask if that is the status of the matter.

Mr. ROBERT C. BYRD. I do not believe I have made such a request.

The PRESIDING OFFICER. It has not been requested as yet.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate tomorrow.

Mr. BAKER. Mr. President, reserving my right to object, if the majority leader would revise that request to exclude the Committee on the Judiciary, I would have no objection to it.

Mr. ROBERT C. BYRD. Mr. President, I so revise the request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, this would mean, however, that, notwithstanding the objection, the Committee on the Judiciary can meet during the morning, of course, when the Senate is not in session, and during the session of the Senate tomorrow until 2 o'clock p.m.

The PRESIDING OFFICER. The Senator is correct.

RECESS UNTIL 12 NOON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 12 o'clock noon tomorrow.

The motion was agreed to; and at 6:53 p.m. the Senate recessed until tomorrow, Wednesday, May 11, 1977, at 12 noon.

EXTENSIONS OF REMARKS

A TRIBUTE TO FRED WILBUR

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. CONTE. Mr. Speaker, this coming Saturday night, on May 14, 1977, Troop 5 of Greenfield, Mass. will honor Mr. Fred Wilbur, a man who has given over 50 years of his life to all phases of the Boy Scout movement. Fred will be honored by his many friends, coworkers, fellow Scouters, and family at a testimonial dinner in order to celebrate his many years of service and achievement to young boys and the community.

It is fitting that this recognition be extended to Fred Wilbur. For years he has given untiringly of himself to the boys who have been members of his various Boy Scout troops. These boys and young men all came to realize that it was their good fortune and privilege to share Scouting with Fred. For he did not just give of his time, he gave of himself.

Mr. Speaker, Fred is well known for the time which he has personally made available to boys who were in trouble, who needed help in some way, or who turned to him as a substitute father. He

has always been ready and willing to pitch in and do what he could, and this commitment has directly affected the lives of literally thousands of youngsters. Boys knew that he cared, and they knew that if they had a problem Fred would listen and do all he could to help. Through his service to the community in this way, it is probably impossible to even estimate all of the good that this one man has done.

Fred Wilbur's involvement with the Scouting movement began only 6 years after it was founded in the United States. Becoming a Boy Scout in November of 1916, he joined Troop 1 of Greenfield. He earned the highest rank of the Boy Scouts in 1926, when he became an Eagle Scout. At the same time he became the first scoutmaster of Troop 32 of Richmond, Va., where he had moved in 1919.

After returning to Greenfield, he became associated with Troop 5 for the first time in 1941 as a member of the troop committee. He then assumed the position of scoutmaster less than a year later in 1941. Fred held the scoutmaster's post until 1951, at which time he was named district commissioner for Franklin County. Three years later, in 1954, he accepted the office of council commissioner for the Hampshire-Franklin County area.

Mr. Wilbur became scoutmaster of Troop 5 once again in 1958. During the course of the next several years, Fred not only undertook the duties of Troop 5, but served as scoutmaster of Troops 1 and 68 at times when both were without a leader. He continued his able direction of Troop 5 until 1970, at which time he relinquished the post of scoutmaster so that a younger man could serve.

Mr. Speaker, during this long and illustrious career in Scouting, Fred Wilbur has been honored in many ways by his grateful peers and friends. But of all of these honors, none speaks higher than the silver beaver award. Fred was presented a silver beaver in 1954 by the Hampshire-Franklin County Council for distinguished service to boyhood. This honor, the highest which the council can present, was a testament to the very fine mark which Fred Wilbur has made in Scouting and in his community.

Even after 50 years in Scouting, Fred still remains very much involved. Last summer he served as the senior camp commissioner at the Chesterfield Scout Reservation, and he hopes to continue in the same post in the coming summer. Surely few of us can point to any greater dedication anywhere than that which Fred has demonstrated in the Boy Scout program. As a result, the testimonial dinner to be held for Mr. Wilbur this Saturday night in Greenfield is both fitting and richly deserved.

I congratulate Fred Wilbur for his 50 years of fine service.

AFFIRMATIVE ACTION

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10, 1977

Mr. HARRY F. BYRD, JR. Mr. President, Thomas Sowell, of the Center for Advanced Study in the Behavioral Sciences at Stanford, a black, recently summarized the affirmative action controversy in these words, "Tests are not unfair. Life is unfair, and tests measure the results."

Mr. Sowell is not alone in his concern over trends toward white paternalism and reverse bias. In fact, a recent poll conducted by George Gallup establishes that nonwhites oppose affirmative action programs by a margin of 2½ to 1.

Nationally, 83 percent of the American people opposed reverse discrimination, whereas only 10 percent favored it. This should give pause to those who would advocate discrimination in order to alleviate discrimination.

Mr. President, I ask unanimous consent that Dr. Gallup's study be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

MAJORITY REJECTS "REVERSE DISCRIMINATION"

"The American people, by an overwhelming majority, believe that ability, as determined by examination, and not preferential treatment to correct past discrimination, should be the main consideration in selecting applicants for jobs or students for college admission.

"The issue of 'affirmative action'—described by its critics as 'reverse discrimination'—will come before the U.S. Supreme Court this fall.

"Even non-whites and women, who have most to gain by affirmative action, vote for making ability, as determined by tests, the main consideration in filling places in industry and in college.

"Overall the public votes 8 to 1 in favor of ability. Non-whites vote more than 2 to 1 on the same side; women vote almost as men do—8 to 1—for objective criteria.

"The question asked to determine attitudes toward affirmative action in hiring and education:

" 'Some people say that to make up for past discrimination, women and members of minority groups should be given preferential treatment in getting jobs and places in college. Others say that ability, as determined by test scores, should be the main consideration. Which point of view comes closest to how you feel on this matter?'

"Rarely is public opinion, particularly on such a controversial issue, as united as it is over this question. Not a single population group supports affirmative action. Attitudes are fairly uniform from region to region and among all age groups. Some differences do exist by education, but all groups back objective data such as test scores as the main qualification in jobs and education.

"The national results as well as the findings by important population groups:

SHOULD WOMEN AND MINORITIES BE GIVEN PREFERENTIAL TREATMENT IN JOBS, EDUCATION?

[In percent]

	Yes, should be compensated	No, ability should be determinant	No opinion
National	10	83	7
Men	10	84	6
Women	11	82	7
Whites	8	86	6
Nonwhites	27	64	9
College	10	84	6
High school	8	87	5
Grade school	18	70	12
East	11	83	6
Midwest	9	84	7
South	12	82	6
West	9	85	6
Under 30 yr	11	83	6
30 to 49 yr	10	84	6
50 yr and older	9	83	8

VA SETS EXAMPLE IN EMPLOYMENT OF THE HANDICAPPED

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. TEAGUE. Mr. Speaker, in conjunction with my survey of the Federal departments and their affirmative action programs in employing the handicapped, I am pleased to bring to your attention, today, the report of the U.S. Veterans' Administration.

The Veterans' Administration has not only exercised its responsibility and excelled in its employment of disabled veterans; but has managed to recruit and retain a high level of handicapped civilians—approximately twice the national, Federal-wide employment average. More than 1 in every 10 of the VA's employees have some disability.

With the appointment of the exceptional new Administrator of Veterans' Affairs, the Honorable Max Cleland, and the example he sets as a capable public servant, I trust the employment record of the Veterans' Administration in these areas will continue to excel and, under his leadership, move upward during this administration.

I commend the employment record of the Veterans' Administration and the following report to the attention of my colleagues and the several other Federal departments and agencies as an example to follow:

WASHINGTON, D.C.,
April 22, 1977.

Hon. OLIN E. TEAGUE,
Chairman, Committee on Science and Technology, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: As the Administrator of Veterans Affairs, I am deeply concerned that disabled veterans and other handicapped individuals be accorded full employment opportunities not only within the VA itself, but throughout the public and private sectors as well.

We are happy, therefore, to provide you with the best available information in response to your several questions about employment of handicapped individuals in the Veterans Administration. The responses are sequenced in accordance with the numbers of your questions.

(1) The current VA affirmative action program plans covering both headquarters-level and field station-level requirements are contained in VA Circular 00–76–12. Enclosed are copies of this circular and the supplement which extended its expiration date to June 30, 1977. (See enclosures 1 and 2.)

(2) The latest available data show that as of December 31, 1976, the VA employed 12,499 individuals with reported handicaps. (The categories of reportable handicaps have just been expanded from the 17 in effect on December 31, 1976, to 58. Because data under this expanded handicap coding system will not be available for some time, all of the figures cited in this letter are as of December 31, 1976.)

It is also noteworthy that the VA employed 14,520 disabled veterans. Of these disabled veterans, 4,122 are included among the 12,499 employes reported as handicapped. The disabling conditions of the remaining 10,398 disabled veterans were not covered by any of the 17 handicap categories then in effect.

Handicapped individuals and disabled veterans taken together numbered 22,897; this

amounts to more than one in every ten of VA's 222,567 employees.

(3), (4), and (5) As the listing on enclosure 3 shows, all 17 types of handicaps recorded by Federal agencies were represented within the VA work force. The handicap category with the highest number of VA employees—more than 3,000—was deformity or impaired function of the lower extremity or back another five categories each include more than 1,000 employees.

We cannot give any authoritative basis for why some handicap categories are represented in greater numbers than others. The VA does not prohibit the employment consideration of persons with any category of handicap. Rather, the principle under which VA operates is one of selective placement which encourages the matching of each handicapped individual with a suitable position. We expect that this approach will continue to foster the successful employment of individuals with a wide range of disabilities.

(6) Handicapped employees were employed in nearly all of VA's more than 300 occupational series. All VA positions are considered open to qualified handicapped individuals.

(7) Efforts to remove existing architectural barriers from VA buildings and to ensure that new VA construction is barrier-free are helpful in making the VA's work environment accessible to handicapped individuals. In addition, job site modifications are made to accommodate the needs of individual handicapped employees when appropriate. Examples of the aids which have been provided to handicapped employees include Braille reference books for blind individuals, telephones with amplifiers and special sight signals for deaf and hearing-impaired persons, tape recorders for those with impaired writing functions, etc.

In addition to the above, we are providing you with a copy of two recent VA issuances which cover VA's employment of handicapped persons and are closely related to the questions in your letter. (See enclosures 4 and 5.)

We hope that you find this information helpful.

Sincerely,

MAX CLELAND,
Administrator.

Data as of December 31, 1976

Handicap category:	Number of VA employees
Amputation—1 major extremity	470
Amputation—2 or more major extremities	90
Deformity or impaired function—upper extremity	1,128
Deformity or impaired function—lower extremity or back	3,054
Vision—one eye only	1,111
No usable vision	223
Hearing aid required	492
No usable hearing	261
No usable hearing with speech malfunction	108
Normal hearing with speech malfunction	59
Tuberculosis—inactive pulmonary	1,393
Organic heart disease (compensated) valvular, arrhythmia, arteriosclerosis, healed coronary lesions	1,429
Diabetes—controlled	1,213
Epilepsy—adequately controlled	304
History of emotional or behavioral problems requiring special placement effort	585
Mentally retarded	426
Mentally restored	153

THE BUREAUCRATIC TANGLE

HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mrs. MEYNER. Mr. Speaker, governmental regulation of the private sector is a concept that is deeply imbedded in American history. Legislative attempts to unravel the bureaucratic tangle are equally ensconced in our history. The 1960's represents the decade of regulation, while in the 1970's we are witnessing numerous attempts to dismantle the regulatory structure. I do not quarrel with the fact that the efficient management of the Nation requires a reasonable level of governmental intervention. Certainly, the regulation of private industry has promoted many important social and economic objectives. However, I do contend that our present regulatory structure is an outdated and inefficient one. It becomes more and more outdated and inefficient the longer it exists.

While the President has repeatedly stressed his desire to reorganize the Federal bureaucracy, I am afraid that, like the welfare system, the problem is almost too massive to control. After months of work, members of the "President's Reorganization Project" have compiled a list of departments, agencies, commissions, boards, committees, and various other organizational units of Government. The list, which was recently published in the Washington Post, is an exhaustive one, but is probably not complete. Perhaps even more astounding than the length and breadth of this report, is the fact that it is the first document of its type. There simply is not one single list of the units of the Federal bureaucracy. While I would like to submit this material for the RECORD, I have been informed that the estimated cost of publishing the list would be $1,610. Therefore, I refer my colleagues to the "Outlook Section" of the Sunday, May 8, 1977, Washington Post for this graphic illustration of the size and unmanageability of the Federal Government. For those who wish to see the 1,179 Federal advisory committees which have not been included in the list, I refer them to the "Fifth Annual Report of the President on Federal Advisory Committees." While I do not wish to prematurely judge the value of these committees, I must admit that I would appreciate an explanation of the duties and activities of committees such as the Industry Sector Advisory Committee on Photographic Equipment and Supplies for Multinational Trade Negotiations, or the panel on school capacity for problem solving. I urge my colleagues to carefully study this material so that they may instantaneously distinguish the Cardiovascular and Renal Advisory Committee from the cardiovascular and renal study section.

Mr. Speaker, this is not a laughing matter. Governmental regulation is an albatross around the necks of the private sector, and has grown to proportions that are too large to allow effective oversight by either the Congress or the President. I am in total support of the President's wishes to reorganize the Federal Government and I pledge to support him in this endeavor. However, I am concerned that by allowing appropriations for these extraneous committees in the fiscal year 1978, we are encouraging the continuation of the massive bureaucracy. While I would prefer a comprehensive approach to the elimination and consolidation of the bureaucratic structure, I do believe that we should attack the problem immediately by those avenues we possess. Therefore, I plan on continuing my study of the bureaucracy and I may offer a series of amendments during the consideration of the fiscal year 1978 authorization and appropriation bills to abolish, consolidate, or revise a number of advisory committees. I believe that this approach is fair to both the taxpayer and the department officials. I would hope that my colleagues also scrutinize the available material and join me in unraveling the bureaucratic tangle.

A TRIBUTE TO MARY LASKER

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. BRADEMAS. Mr. Speaker, one of the outstanding citizens of our country is Mrs. Albert D. Lasker. Her efforts in the fields of medicine, art, and the beautification of the environment are manifold, imaginative, and generous.

On May 2, 1977, the World Rehabilitation Fund honored Mary Lasker at a dinner in New York.

In tribute to Mrs. Lasker, the World Rehabilitation Fund is establishing the Mary Lasker Fund to bring to rehabilitation personnel in underdeveloped nations training, equipment, supplies, and consultative services in modern rehabilitation medicine.

Mr. Speaker, as chairman of the subcommittee in the House of Representatives with jurisdiction over measures that affect the arts, rehabilitation of the handicapped, and environmental education—and as Mrs. Lasker's friend—I am personally aware of the remarkable contributions of this extraordinary woman to achievement in all these fields.

Mr. Speaker, at this point in the RECORD I insert the text of the tribute paid by the World Rehabilitation Fund on May 5, 1977, to Mary Lasker:

MRS. ALBERT D. LASKER

Physical rehabilitation, medical research against cancer, heart diseases, mental illness and other major killers and cripplers of the human race are among the chief fields to which Mrs. Albert D. Lasker has brought her energy, imagination and devotion. As a private citizen, she has continuously urged the feedral government to appropriate increased funds for medical research against major killing and crippling diseases.

Mrs. Lasker is President of the Albert and Mary Lasker Foundation—a field of public education and promotion of medical research, public health and other areas of human wel-

fare. Since 1944, Albert Lasker Awards have been given annually to honor and encourage physicians and scientists for outstanding achievements in the fields of medical research and public health administration. The history of medicine of the last 30 years was made by the men who have won Lasker Awards in this period.

Widely travelled in this country and in Europe, Mrs. Lasker carries her interest in medicine, art, gardens and public plantings wherever she goes.

Mrs. Lasker has received eight honorary degrees, and in 1969 she received the Medal of Freedom Award—the highest civilian award an American citizen can receive. She is a member of the French Legion of Honor and has also received the Cross of the Office of the Legion of Honor.

Mrs. Lasker conceived and was a founder of the World Rehabilitation Fund, providing the impetus through which Dr. Howard A. Rusk (three time Lasker Award recipient) and his colleagues have helped disabled people throughout the world rebuild their crippled bodies and regain their self-esteem. An indefatigable supporter of the Fund, Mrs. Lasker's activities have helped to bring over a million artificial limbs and braces to the underprivileged of underdeveloped countries, along with the regenerative benefits of modern rehabilitation medicine. Through the World Rehabilitation Fund's programs of direct services and professional training for over 5,000 physicians, hundreds of thousands of disabled men, women and children have found satisfying and productive lives.

For her unique contribution to the betterment of life in the United States and abroad, for all those without arms and legs, for those who are paralyzed or disabled, the World Rehabilitation Fund is establishing:

THE MARY LASKER FUND

to bring personnel in underdeveloped nations training, equipment, supplies, and consultative services in modern rehabilitation medicine.

TAKEN FOR GRANTED

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ABDNOR. Mr. Speaker, I have little to add to an excellent editorial from the Belle Fourche, S. Dak. Daily Post. It states very well why South Dakotans want a realistic farm program, and why it is in the best interests of the Nation for Congress to enact one. I commend the Post's comments to the attention of my colleagues:

PRODUCE MORE

"Mr. Abercrombie Deepthinker yesterday called upon the American farmer to produce more if he is to feed an increasingly hungry world."

You can bet that on any given week, somewhere in this country, some person of stature is going to make that statement.

It would seem to be a fairly safe statement, but we are sick of hearing it, because it's really not fair. They not only want the American farmer to do the work, they want him to pay the bill.

We've talked about this before, but we can't help bringing the matter up again, because we keep hearing how the American farmer is supposed to feed the world.

What they are saying, in effect, is that the American farmer can produce all the way to the poor house.

The theory should be that if the American farmer produces more he should be rewarded accordingly. That, however, is theory. If the American farmer produces more he is actually going to wind up with less. That's fact.

Look at the livestock business. The American farmer and rancher has produced like mad, only to have the price of his product drop to the point where his production system is basically not an economic one in the face of rising costs. If it looks as if he may be on the way to getting a better return, imports are stepped up to prevent it.

The American farmer produces a bumper crop of wheat and the market goes to hell.

The corn fields of America's breadbasket turn out a super crop of corn and the reward is lower prices.

While the American farmer is being told to produce more, congress comes up with farm legislation that inhibits increased production.

Frankly, dear people, we've been lucky that the farmer has not taken the matter into his own handle. With a little organization he could reduce his crop production to the point where he could make much more by producing much less. If you don't think that system works, look at the price of coffee.

We shudder at the thought that the American farmer may yet get tired of being taken for granted. He may yet get his belly full of the warped priorities in this country. Housing costs, for example, have escalated to the point where for many families keeping a roof over their heads requires half of their income, while keeping them fed and nourished takes about 17%.

We know that people would like to keep it that way, but how can they expect it to stay that way if they fail to recognize that the people who produce that food are also entitled to participate in growth and prosperity.

"The American farmer must produce more if he is to feed a hungry world." We hope the next person who says that, also adds that the American farmer should receive an appropriate incentive to produce more.

OUR SENIOR CITIZENS

HON. CARLOS J. MOORHEAD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. MOORHEAD of California. Mr. Speaker, there are those of us who look to our senior citizens for guidance and wisdom. Others, however, look to our senior citizens as easy prey, making them victims of street crimes, rape, burglary, bunco, and other forms of violence more than any other age group in the country. May is Senior Citizens Month and it would seem, therefore, a timely occasion to call attention to a group of action-oriented senior citizens in Pasadena, Calif., who make up the Community Resource Involvement Council—better known as CRIC.

Sponsored by the southern California region of the National Conference of Christians and Jews in cooperation with the Pasadena Police Department, these senior citizens have taken the attitude that the better informed one is in crime prevention techniques, the more one's chances are reduced of becoming a victim.

The National Conference of Christians and Jews and the Pasadena Police Department provide guidance and training in special crime prevention techniques to the members of CRIC. Following an orientation and training period, CRIC members distribute informational material provided by the police department to other senior citizens in an effort to educate their neighbors in ways of protecting property, making them alert for suspicious or unusual activity and encouraging them to report same to the police. CRIC develops and makes presentations through a speakers bureau to senior citizens groups and works with commercial establishments in an effort to make the businessman aware of the senior's needs as they relate to crime prevention. An example of this is asking for better protection of seniors in parking lots. Another segment of CRIC works closely with the electronic and print media, encouraging the media to accentuate senior citizen crime prevention information. CRIC's victim assistance team acts as a support system for seniors who have actually been victimized by crime. Coordinated by Fuller Theological Seminary's Graduate School of Psychology, the team helps seniors fill out forms, get medical aid, housing, and in general, sees the victim through the trauma of it all—even staying with the victim if necessary until a relative or friend arrives.

The Community Resource Involvement Council has been working hard for more than a year in Pasadena. It is hoped that CRIC will continue its crime prevention activities with the guidance and training provided by the NCCJ and Pasadena Police Department. If more and more older persons can be reminded to stay alert, learn ways of avoiding crime, and cooperate in neighborhood watch programs, the joint efforts of citizenry and law enforcement can have a major impact in the prevention and resolution of crimes against a very valuable segment of our society—our senior citizens.

OUR AMERICA

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. EVANS of Delaware. Mr. Speaker, one of my constituents, C. M. Cox, has written a poem about America. In this day of cynicism, it is a comfort to find a patriotic American, who is not ashamed to give voice to his feeling toward his country. I wish to share these with my colleagues:

OUR AMERICA

(By C. M. Cox)

Come, Ye Sons and Daughters
of the U.S.A.
Stand Up and Be Counted
What Have You to Say?

For This Land We Call America,
A precious jewel to See
Entrusted to Us By Others,
Just Like You and Me.

Will We Cherish This Treasure,
A Birthright That Set Men Free?
If So Stand Up and Be Counted.
Join the Millions Who Agree.

Don't You Hear the Bells, a-Tolling,
Don't You Hear the Voices Cry?

Put On Your Cloak of Honor,
Hold Old Glory Way Up High.

Wake Up, Ye Sons and Daughters
Come Sing a Marching Song,
Too Long Have We Been Sleeping;
The Night Has Been Too Long.

Listen to the Bells, a-Tolling
Listen, to the Voices Cry
We Must Not Lose Our Freedom,
See our Forests and Rivers Die.

To Make Our Land More Beautiful to See,
Plant Flowers Or a Tree
Don't Sit Around Upon the Hill
In Careless Apathy.

When You're Driving On the Highways,
Or Traveling Along Parks and Streams,
Don't Be One Who Mars Their Beauty,
Be One Who Keeps Them Clean.

Wake Up Ye Sons and Daughters,
Come Sing a Marching Song,
Too Long Have We Been Sleeping
And The Night Has Been Too Long.

Listen to the Bells, a-Tolling,
Hear the Voices Cry,
Save Our Eagles, Our Mighty Symbol,
Don't Let Them Vanish From the Sky.

Stand Up and Be Counted,
One For All, and All For One,
Remember the Many Battles Won
By So Many of Our Sons.

Put On Our Cloak of Honor,
And March With Those Who Cry,
We'll Be Worthy of Our Trust and Honor,
America, We'll Purify.

March With Those Who Cherish Freedom,
Join the Voices Who Cry.
We Don't Want to Lose Our Freedom,
See Our Forests and Rivers Die.

Then Give Thanks to our Maker
For All the Joys to See,
Yes, America the Beautiful,
You Mean So Much to Me.

ROMANIAN INDEPENDENCE DAY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. DERWINSKI. Mr. Speaker, the 10th of May is the Romanian commemoration of their declaration of independence. This year's commemoration is of great significance for the Romanian people as it marks the 100th anniversary of the most glorious and happy event in their history.

On May 10, 1866, the people of Romania ended a long period of domestic turmoil by proclaiming Charles, Prince of Hohenzollern-Sigmaringen of the Prussian royal family, as the Bucharest Prince of their country. Thus, Romania became a principality and obtained her first constitution and introduced parliamentary government.

Later, on May 10, 1881, Charles I was crowned King of Romania. The country prospered for more than six decades, contributing significantly to the peace and stability of the Balkans and Eastern Europe.

But, most important and noteworthy, on May 10, 1877, the Romanian people proclaimed their independence. They won their freedom, which they announced in the turmoil of the Russo-Turkish War. The Romanian army defeated Turkish forces and effectively freed itself from the Ottoman Empire.

This independence was affirmed by the Treaty of San Stefano and recognized internationally by the Treaty of Berlin of 1878. Ironically, it was with the aid of Russia that liberty was gained in 1877–78 as it would be to and through Russia that liberty would be lost at the end of World War II. Romania, under the leadership of King Michael, was forcibly seized by the Russian armies.

The 10th of May remains a symbol of the happy and glorious events in history of Romania. It is my hope that the determined spirit of the Romanian people will lead them once again to true independence.

HUMAN RIGHTS POLICY

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, Secretary of State Vance has made a valuable contribution to the current discussion of human rights considerations in American foreign policy in his Law Day speech to the University of Georgia's Law School on April 30, 1977. The Secretary reiterated the resolve of the administration "to make the advancement of human rights a central part of our foreign policy," but emphasized that "our human rights policy must be understood in order to be effective." To that end, his speech has significantly increased American and international understanding of this administration's human rights policy.

Secretary Vance has defined "human rights" to include: first, the right to be free from government violation of the integrity of the person; second, the right to the fulfillment of such vital human needs as food, shelter, health care, and education; and third, the right to enjoy civil and political liberties. The Secretary reminded his audience of President Carter's U.N. remarks in which he said that, since all signatories of the U.N. Charter have pledged themselves to observe and respect human rights, "no member of the United Nations can claim that mistreatment of its citizens is solely its own business."

Perhaps the central question addressed in the Secretary's speech was just how the United States would go about applying its human rights policy. In this regard, I think Secretary Vance has enunciated a prudent and realistic policy. To quote from his speech:

> In pursuing a human rights policy, we must keep in mind the limits of our power and of our wisdom. A sure formula for defeat of our goals would be a rigid, hubristic attempt to impose our values on others. A doctrinaire plan of action would be as damaging as indifference. We must be realistic. Our country can only achieve our objectives if we shape what we do to the case in hand.

The Secretary went on to indicate what questions will be considered by the administration in determining how to respond in each situation. These questions include the nature of the case confronting us—the kind of violations, their extent, whether they constitute a pattern, whether there is a trend toward or away from concern for human rights, the degree of control and responsibility of the government involved, and whether independent, outside investigation is permitted. The second set of questions involve the prospects for effective U.S. action, that is, whether our action will be useful in promoting the overall cause of human rights or whether it will make matters worse. And the third set of questions involve maintaining a sense of perspective—whether we have steered away from the self-righteous and strident, whether we have been sensitive to genuine security interests, whether we have considered all the rights at stake such as how our actions will affect "the hungry and poor who bear no responsibility for the abuses of the government."

Secretary Vance went on to indicate that our emphasis will be on the positive and constructive in promoting human rights. In his words:

> If we are determined to act, the means available range from quiet diplomacy in its many forms through public pronouncements to withholding of assistance. Whenever possible, we will use positive steps of encouragement and inducement. Our strong support will go to countries that are working to improve the human conditions.

The Secretary stressed the need for "informed and careful judgment" and warned that "no mechanistic formula produces an automatic answer."

Secretary Vance concluded his speech by underscoring the need for realism in our expectations of the administration's human rights policy:

> We can nourish no illusions that a call to the banner of human rights will bring sudden transformations in authoritarian societies. We are embarked on a long journey. But our faith in the dignity of the individual encourages us to believe that people in every society, according to their own traditions, will in time give their own expression to this fundamental aspiration.

Mr. Speaker, because Secretary Vance's speech is one of the most comprehensive and coherent explanations I have read to date of the Carter administration's human rights policy, I want to commend it to the reading of my colleagues and insert it at this point in the RECORD. The speech follows:

HUMAN RIGHTS POLICY

(By Secretary Cyrus R. Vance on Law Day before the University of Georgia's Law School)

Dean Beaird, students, faculty and alumni of the University of Georgia Law School, distinguished guests: I am delighted to be here with you on Law Day. And I am honored by the presence of my friend Dean Rusk, a distinguished member of your faculty.

I speak today about the resolve of this Administration to make the advancement of human rights a central part of our foreign policy.

Many here today have long been advocates of human rights within our own society. And throughout our Nation that struggle for civil rights continues.

In the early years of our civil rights movement, many Americans treated the issue as a "Southern" problem. They were wrong. It was and is a problem for all of us. Now,

as a Nation, we must not make a comparable mistake. Protection of human rights is a challenge for all countries, not just for a few.

Our human rights policy must be understood in order to be effective. So today I want to set forth the substance of that policy and the results we hope to achieve.

Our concern for human rights is built upon ancient values. It looks with hope to a world in which liberty is not just a great cause but the common condition. In the past it may have seemed sufficient to put our name to international documents that spoke loftily of human rights. That is not enough. We will go to work, alongside other people and governments, to protect and enhance the dignity of the individual.

Let me define what we mean by "human rights."

First, there is the right to be free from governmental violation of the integrity of the person. Such violations include torture; cruel, inhuman, or degrading treatment or punishment; and arbitrary arrest or imprisonment. And they include denial of fair public trial, and invasion of the home.

Second, there is the right to the fulfillment ot such vital needs as food, shelter, health care, and education. We recognize that the fulfillment of this right will depend, in part, upon the stage of a nation's economic development. But we also know that this right can be violated by a Government's action or inaction—for example, through corrupt official processes which divert resources to an elite at the expense of the needy, or through indifference to the plight of the poor.

Third, there is the right to enjoy civil and political liberities—freedom of thought, of religion, of assembly; freedom of speech; freedom of the press; freedom of movement both within and outside one's own country; freedom to take part in government.

Our policy is to promote all these rights. They are all recognized in the Universal Declaration of Human Rights, a basic document which the United States helped fashion and which the United Nations approved in 1948. There may be disagreement on the priorities these rights deserve, but I believe that, with work, all of these rights can become complementary and mutually reinforcing.

The philosophy of our human rights policy is revolutionary in the intellectual sense, reflecting our Nation's origin and progressive values. As Archibald MacLeish wrote during our Bicentennial a year ago, "The cause of human liberty is now the one great revolutionary cause. . . ."

President Carter put it this way in his speech before the United Nations:

". . . All the signatories of the United Nations Charter have pledged themselves to observe and to respect basic human rights. Thus, no member of the United Nations can claim that mistreatment of its citizens is solely its own business. Equally, no member can avoid its responsibilities to review and to speak when torture or unwarranted deprivation occurs in any part of the world. . . .

Since 1945 international practice has confirmed that a nation's obligations to respect human rights is a matter of concern in international law.

Our obligation under the UN Charter is written into our own legislation. For example, our Foreign Assistance Act now reads: "A principal goal of the foreign policy of the United States is to promote the increased observance of internationally recognized human rights by all countries." In these ways our policy is in keeping with our tradition, our international obligations, and our laws.

In pursuing a human rights policy, we must always keep in mind the limits of our power and of our wisdom. A sure formula for defeat of our goals would be a rigid, hubristic attempt to impose our values on others. A doctrinaire plan of action would be as damaging as indifference.

We must be realistic. Our country can only achieve our objectives if we shape what we do to the case at hand. In each instance we will consider these questions as we determine whether and how to act:

First, we will ask ourselves, what is the nature of the case that confronts us? For example, what kind of violations or deprivations are there? What is their extent? Is there a pattern to the violations? If so, is the trend toward concern for human rights or away from it? What is the degree of control and responsibility of the Government involved? And, finally, is the Government willing to permit independent, outside investigation?

A second set of questions concerns the prospects for effective action. Will our action be useful in promoting the overall cause of human rights? Will it actually improve the specific conditions at hand? Or will it be likely to make things worse instead? Is the country involved receptive to our interest and efforts? Will others work with us, including official and private international organizations dedicated to furthering human rights? Finally does our sense of values and decency demand that we speak out or take action anyway, even though there is only a remote chance of making our influence felt?

We will ask a third set of questions in order to maintain a sense of perspective. Have we steered away from the self-righteous and strident, remembering that our own record is not unblemished? Have we been sensitive to genuine security interests, realizing that outbreak of armed conflict or terrorism could in itself pose a serious threat to human rights? Have we considered all the rights at stake? If, for instance, we reduce aid to a Government which violates the political rights of its citizens, do we not risk penalizing the hungry and poor who bear no responsibility for the abuses of their Government?

If we are determined to act, the means available range from quiet diplomacy in its many forms through public pronouncements to withholding of assistance. Whenever possible, we will use positive steps of encouragement and inducement. Our strong support will go to countries that are working to improve the human condition. We will always try to act in concert with other countries through international bodies.

In the end a decision whether and how to act in the cause of human rights is a matter for informed and careful judgment. No mechanistic formula produces an automatic answer.

It is not our purpose to intervene in the internal affairs of other countries, but as the President has emphasized, no member of the United Nations can claim that violation of internationally protected human rights is solely its own affair. It is our purpose to shape our policies in accord with our beliefs and to state them without stridency or apology when we think it is desirable to do so.

Our policy is to be applied within our own society as well as abroad. We welcome constructive criticism at the same time as we offer it.

No one should suppose that we are working in a vacuum. We place great weight on joining with others in the cause of human rights. The UN system is central to this cooperative endeavor. That is why the President stressed the pursuit of human rights in his speech before the General Assembly last month. That is why he is calling for U.S. ratification of four important human rights covenants and conventions, and why we are trying to strengthen the human rights machinery within the United Nations.

And that is an important reason why we have moved to comply with UN sanctions against Rhodesia. In one of our first acts, this Administration sought and achieved repeal of the Byrd amendment, which had placed us in violation of these sanctions and thus in violation of international law. We are supporting other diplomatic efforts within the United Nations to promote basic civil and political rights in Namibia and throughout southern Africa.

Regional organizations also play a central role in promoting human rights. The President has announced that the United States will sign and seek Senate approval of the American Convention on Human Rights. We will continue to work to strengthen the machinery of the Inter-American Commission on Human Rights. This will include efforts to schedule regular visits to all members of the Organization of American States, annual debates on human rights conditions, and the expansion of the inter-American educational program on human rights.

The United States is seeking increased consultation with other nations for joint programs on economic assistance and more general efforts to promote human rights. We are working to assure that our efforts reach out to all, with particular sensitivity to the problems of women.

We will meet in Belgrade later this year to review implementation of the Final Act of the Conference on Security and Cooperation in Europe—the so-called Helsinki conference. We will take this occasion to work for progress there on important human issues: family reunification, binational marriages, travel for personal and professional reasons, and freer access to information.

The United States looks to use of economic assistance—whether bilateral or through international financial institutions—as a means to foster basic human rights.

We have proposed a 20 percent increase in U.S. foreign economic assistance for Fiscal Year 1978.

We are expanding the program of the Agency for International Development for "new initiatives in human rights" as a complement to present efforts to get the benefits of our aid to those most in need abroad.

The programs of the U.S. Information Agency and the State Department's Bureau of Educational and Cultural Affairs stress support for law in society, a free press, freedom of communication, an open educational system, and respect for ethnic diversity.

This Administration's human rights policy has been framed in collaboration and consultation with Congress and private organizations. We have taken steps to assure firsthand contact, consultation, and observation when members of Congress travel abroad to review human rights conditions.

We are implementing current laws that bring human rights considerations directly into our decisions in several international financial institutions. At the same time, we are working with the Congress to find the most effective way to fulfill our parallel commitment to international cooperation in economic development.

In accordance with human rights provisions of legislation governing our security assistance programs, we recently announced cuts in military aid to several countries.

Outside the Government, there is much that can be done. We welcome the efforts of individual American citizens and private organizations—such as religious, humanitarian, and professional groups—to work for human rights with commitments of time, money, and compassion.

All these initiatives to further human rights abroad would have a hollow ring if we were not prepared to improve our own performance at home. So we have removed all restrictions on our citizens' travel abroad and are proceeding with plans to liberalize our visa policies.

We support legislation and administrative action to expand our refugee and asylum policies and to permit more victims of repressive regimes to enter the United States. During the last year, the United States spent some $475 million on assistance to refugees around the world, and we accepted 31,000 refugees for permanent resettlement in this country.

What results can we expect from all these efforts?

We may justifiably seek a rapid end to such gross violations as those cited in our law: ". . . torture, or cruel, inhuman or degrading treatment or punishment, or prolonged detention without charges. . . ." Just last week our Ambassador at the United Nations, Andrew Young, suggested a series of new ways to confront the practice of torture around the world.

The promotion of other human rights is a broader challenge. The results may be slower in coming but are no less worth pursuing, and we intend to let other countries know where we stand.

We recognize that many nations of the world are organized on authoritarian rather than democratic principles—some large and powerful, others struggling to raise the lives of their people above bare subsistence levels. We can nourish no illusions that a call to the banner of human rights will bring sudden transformation in authoritarian societies.

We are embarked on a long journey. But our faith in the dignity of the individual encourages us to believe that people in every society, according to their own traditions, will in time give their own expression to this fundamental aspiration.

Our belief is strengthened by the way the Helsinki principles and the UN Declaration of Human Rights have found resonance in the hearts of people of many countries. Our task is to sustain this faith by our example and our encouragement.

In his inaugural address, three months ago, President Carter said: "Because we are free, we can never be indifferent to the fate of freedom elsewhere." Again, at a meeting of the Organization of American States two weeks ago, he said: "You will find this country . . . eager to stand beside those nations which respect human rights and which promote democratic ideals."

We seek these goals because they are right, and because we too will benefit. Our own well-being, and even our security, are enhanced in a world that shares common freedoms and in which prosperity and economic justice create the conditions for peace. And let us remember that we always risk paying a serious price when we become identified with repression.

Nations, like individuals, limit their potential when they limit their goals. The American people understand this. I am confident they will support foreign policies that reflect our traditional values. To offer less is to define America in ways we should not accept.

America fought for freedom in 1776 and in two World Wars. We have offered haven to the oppressed. Millions have come to our shores in times of trouble. In time of devastation abroad, we have shared our resources.

Our encouragement and inspiration to other nations and other peoples have never been limited to the power of our military or the bounty of our economy. They have been lifted up by the message of our Revolution, the message of individual human freedom. That message has been our great national asset in times past. So it should be again.

COLLAPSE OF EXECUTIVE PRIVILEGE REVEALS FRAUD POTENTIAL OF H.R. 5400

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. FRENZEL. Mr. Speaker, last week, Deputy Attorney General Flaherty made the first executive privilege claim by the Carter administration. The information he refused to give the Senate Rules Committee, and which had been refused a House Member 30 days prior, was a Justice Department memorandum. It stated that H.R. 5400, the voting day registration bill, has "an enormous potential for fraud."

Somewhere in the administration, clearer heads prevailed the next morning. The memorandum was sent to the Senate Rules Committee and the House Administration Committee.

The memorandum does come down hard on the fraud question. Worse, it contradicts the Attorney General's congressional testimony. Worst of all, it indicates that the Attorney General's testimony was prepared in the White House.

The total effect of the overnight executive privilege and the 30-day minicoverup is to raise doubts about the independence of the Justice Department, and to exacerbate already serious concerns about the fraud potential of H.R. 5400.

The memorandum follows:

COMMENTS ON H.R. 5400 TESTIMONY BY ATTORNEY GENERAL

At your request, we have reviewed the testimony which the White House has apparently suggested that the Attorney General give before the House Administration Committee on April 6 during hearings on H.R. 5400. This bill is the Administration's proposal to do away with pre-election registration requirements which the vast majority of the 50 states presently impose as a prerequisite to the exercise of the federal franchise, and substitute in their place a system permitting otherwise locally-eligible electors to register at the polls on the day of an election.

I. THE BILL

We emphasize at the outset that this Division has not had any input into this bill. We have not even seen a copy of the bill, and our comments thereon have never been sought.

The proposed legislation, from sources available to us, would appear to supercede state and local voter registration procedures with a uniform procedure applicable to all contests for Federal office. The Federal procedure under H.R. 5400 would permit an individual who is otherwise qualified to vote under the state law to register to vote at the polls on the day of an election. To prevent abuses of this relaxed registration procedure, H.R. 5400 would create a new Federal felony to punish those who wilfully or fraudulently cast ballots under its provisions, add a level of administrative sanctions to be enforced by the Federal Election Commission, and permit local poll officials to require electors seeking the franchise by virtue of these relaxed provisions either to produce some identification before being permitted to vote, or to execute affidavits attesting to the fact that they meet local voting requirements.

If these preconditions are met, H.R. 5400 would require local voting officials to extend the federal franchise notwithstanding an elector's failure to comply with state registration laws.

II. THE PROPOSED TESTIMONY

The testimony which it is suggested the Attorney General give on this bill is highly comendatory of its purpose of facilitating the exercise of the franchise, critical of present state registration laws as "outmoded and unnecessary", and strongly in favor of H.R. 5400's enactment.

III. DISCUSSION

Personally, based on our enforcement experience in the election law field, I do not share these observations and conclusions. I oppose the concept embodied in H.R. 5400 as a dangerous relaxation of what precious few safeguards presently exist against abuse of the franchise. Most certainly, I would not recommend that the Attorney General support this legislation in the proposed glowing terms without expressing some caveats based on enforcement experience.

A. Function of preregistration

Voter registration statutes presently on the books of the vast majority of the states usually require that a prospective voter present himself at the appropriate registration office at least 30 days prior to the election in which he wishes to vote, and there provide pertinent data concerning himself and his residence in the election district. He is also customarily required to provide information about where he may have been registered to vote previously to enable the prior registration to be purged before the new one becomes effective, and to provide a sample of his signature which can be used at the polls during the election as a control to assure that the registrant and the person who seeks to vote in his name are the same person.

These requirements serve at least two critical functions in preserving the integrity of our elective system:

First, the fact that a prospective voter is required to appear in person and to provide pertinent information about his qualification to vote at least 30 days before an election provides local election officials with ample time to check the veracity of his claim to the franchise to assure the previous registrations he may have had are voided before the election takes place. This in turn insures that a registrant is indeed qualified to vote in the place where he is seeking the franchise, and that he is permitted only to vote in that one place. Secondly, by providing for a "control" sample of the registrant's signature, registration laws enable many states to protect themselves against vote fraud by additionally requiring a voter to sign a roster at the polling station itself. The signature which the registrant executes on election day at the polls can easily be checked against the control on his permanent voter registration card, which in many places is the sole viable method of insuring that the person seeking to vote is indeed the same person whose registration the local election board has previously approved and accepted.

B. Effect of repeal of preregistration laws

Abolition of pre-election registration will, for all intents and purposes, prevent the states from protecting themselves against individuals who may seek to vote at several locations where they are known (a factor which becomes all the more critical with the continuing increase in the mobility of our population), as well as prevent them from assuring that a voter is indeed qualified to vote before he casts his ballot. At the same time, the elimination of the "control" signature which usually appears on a voter regis-

tration card will deprive precinct officials of an objective standard by which to judge the qualifications of persons presenting themselves to vote, while at the same time making proof of election fraud in a criminal case substantially more difficult.

In this latter regard, this Division has had substantial experience over the years in prosecuting election fraud cases under applicable Federal statutes presently on the books. This in turn has demonstrated to us graphically the importance of having a pre-registration and verified "control" signature against which to compare the signature of individuals presenting themselves to vote at the polls on election day. On the basis of such comparisons, 25 election officials have been indicted during thet past few weeks in the Eastern District of Louisiana for forging the signatures of "no-shows" on the election day rosters which Louisiana law requires voters sign before they obtain a ballot. Similar comparisons between "controls" and the signatures appearing on election day rosters have long been used as the principal method of proving election fraud cases in Chicago, Illinois.

C. H.R. 5400's alternative safeguards

In the place of the protection which pre-election registration provides as a guard against election fraud, H.R. 5400 offers four purported safeguards. We feel that all are inadequate.

The requirement that persons seeking to vote without prior registration, produce some form of identification at the polls, or perhaps swear to the factual predicate for the franchise under local law, is essentially meaningless. Even with the pre-election registration which most states require today, election fraud is widespread in both State and Federal elections. With the stakes as high as the power of the elective offices in dispute, it would not be unreasonable that those bent on corrupting the system would be able to find false identification, and would be willing to lie on whatever affidavits they are asked to sign. Moreover, once possessed with what we suggest is easily obtained false identification, a person could successfully wander from precinct to precinct and cast as many ballots as he dares on election day, with election officials being powerless to stop him provided he was willing to execute the required affidavit. Even assuming that subsequent inquiry was able to establish that such an individual used the relaxed procedures accorded by H.R. 5400 to defraud his fellow citizens of an election fairly conducted on the "one man-one vote" principle, the fradulent votes would have already have been cast and the damage done, to the detriment of the precious balance on which our democratic elective system is based.

The addition of a new Federal felony which specifically provides for fairly serious penalties for those persons who would seek to abuse the lenient provisions of H.R. 5400 are of little foreseeable help. Federal law presently contains numerous statutes, most of which are felonies, directed at protecting the system against voter fraud. Under 13 U.S.C. 241, it is a ten year felony to conspire to stuff ballot boxes or to commit other varieties of election frauds directed at depriving the public of a fair and impartial election, *U.S.* v. *Classic*, 313 U.S. 299 (1941). This Section has recently been extended to include election frauds directed at corrupting only State or local elections, where the defendants involved are themselves election officials of some sort, *U.S.* v. *Anderson*, 481 F.2d 685 (4th Cir., 1974). Under 18 U.S.C. 242 it is a misdemeanor to deprive the electorate of a fairly-conducted election under color of official right; under 42 U.S.C. 1973 (1)(c), it is a 5 year felony to provide certain types of false information concerning one's residence to a voter registrar for the purpose of qualifying to vote in an election where Federal candidates will be on the ballot; and under 42 U.S.C. 1973(1)(e), which was enacted last year, it is a 5 year felony to vote more than once in an election where there are Federal candidates on the ballot. This impressive stable of statutes has been the source of numerous prosecutions lately, especially in states like Illinois and Louisiana where State laws require voters not only to pre-register but also to sign rosters at the polls. At the present time, the Criminal Division has active investigations involving this sort of offense before grand juries in Tennessee, Illinois, Louisiana, and Virginia. Complaints involving isolated instances of fraudulent registrations and multiple votes have been so numerous since 42 U.S.C. 1973 (1)(c) and 1973(1)(e) were enacted that the Division has had to routinely defer such matters to the States, all of which to our knowledge have their own extensive and intricate network of criminal statutes which seek to protect against election irregularities. Clearly if all of these statutes, many of which carry substantial penalties, have been unsuccessful in deterring those bent on corrupting the elective system through vote fraud, one more such statute will not help much. Quite the contrary, our not insubstantial experience in this area has demonstrated that the type of person who is most apt to commit election fraud feels that he is "above" the system, that he will not be caught or punished and is thus not deterred in the slightest by the presence on the books of facially awesome criminal statutes.

IV. THE FEDERAL ELECTION COMMISSION DOES NOT BELONG IN THE ENFORCEMENT MACHINERY OF LEGISLATION UNDER H.R. 5400

I feel that anyone who seeks to corrupt our Democratic system in this manner should be subject to nothing short of criminal prosecution. Also, I have reservations as to whether the subject of ballot security and election fraud falls logically within the FEC's present mandate over the financial disclosure provisions of the Federal Election Campaign Act. Moreover, the FEC's small and underfinanced staff is singularly ill-equipped to take on the awesome responsibilities for the preservation of ballot security which H.R. 5400 contemplates for it. And finally, the parallel civil and criminal proceedings which are bound to arise from the efforts of FEC and this Division to simultaneously fulfill our respective enforcement mandates under the Act are bound to create conflicts which will prove detrimental to overall law enforcement in this critical area.

V. CONCLUSION

While we naturally support the fundamental objective of making it easier for citizens to exercise their federal franchise, we would have preferred that a method be devised which would minimize the opportunity for electoral fraud while at the same time maximizing the opportunity for citizen participation in the electoral process. If we had more opportunity for consideration of the general concept and, particularly H.R. 5400, presumably we could make some more constructive comments. Having received this package yesterday afternoon without even a copy of the bill, we have done our best to indicate some of our concerns. I assume that the Administration as a matter of policy is going to support the concept embodied in H.R. 5400. However, if the attorney general testifies or this bill, he should, in my judgment, qualify his support thereof with the caveat that despite the favorable experience in several states, the experience of the Criminal Division in enforcing the federal election laws indicates that there is a tremendous potential for fraud in H.R. 5400.

REPORT ON QUESTIONNAIRE RESULTS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. FORD of Michigan. Mr. Speaker, I am pleased to share with you and our colleagues here in the House the results of my 13th annual questionnaire survey of my constituents in Michigan's 15th Congressional District.

Copies of the questionnaire were sent in late February to each of the more than 170,000 homes in the district. The percentage results I am reporting today represent the tabulation of the first 8,000 questionnaires returned. These tabulations were done by volunteer workers in my district office.

In the following summary, I am repeating each question as it appeared on the questionnaire, followed by the percentage response to each question:

1. Economists differ on the most effective means of reducing unemployment and revitalizing the economy, without creating more inflation. Some favor Federal spending on public works programs to create jobs Others would emphasize a one-time tax rebate. Which would you favor?

	Percent
(a) Public Works Employment	63
(b) A One-Time Tax Rebate	37

2. The unusually cold winter has again demonstrated the dependence of our economy on petroleum products, and particularly on imported foreign oil. It is obvious that we must reduce our energy consumption, or face even more serious problems in the near future. How would you reduce consumption?

	Percent
(a) Ration petroleum products	33
(b) Remove all price controls	22
(c) Increase taxes on gasoline and oil	10
(d) Other	35

3. The United States now imports nearly half its petroleum, but even foreign sources will be exhausted in the next few decades. It is apparent that a massive attempt must be made to find new and efficient energy sources. Which do you prefer?

	Percent
(a) Nuclear energy	18
(b) Solar energy	40
(c) Wind energy	12
(d) Geo-Thermal energy	9
(e) Hydro (water) energy	13
(f) Other	8

4. Congress again this year will consider legislation to create a National Health Insurance Program, to provide complete health care for everyone. It would be financed through a payroll tax like Social Security, but not connected in any way with the Social Security Program. Some would prefer to provide such insurance only for catastrophic health problems, while others would leave health insurance entirely in the hands of private companies. Which would you prefer?

	Percent
(a) National Health Insurance for everyone	40
(b) Federal Insurance for Catastrophic Illness	23
(c) Let Private Companies Provide Insurance	31
(d) Other	6

5. President Carter has indicated that he may recognize the Government of Vietnam,

and drop our fight to block admission of Vietnam to the United Nations. How do you feel?

	Percent
(a) Recognize the present Vietnamese Government	24
(b) Permit Vietnam to enter the United Nations	23
(c) Neither	53

6. Four years ago, the Selective Service System was ended, and the United States turned to voluntary enlistment, rather than the draft, to fill the ranks of our Armed Services. Today, there is talk of returning to the draft system, or compulsory military service. Which would you prefer?

	Percent
(a) Return to the Draft system	38
(b) Continue voluntary enlistment	50
(c) Other	12

7. President Carter recently announced a general amnesty for those who evaded the draft during the Vietnam War. How do you feel about this amnesty plan?

	Percent
(a) Agree	27
(b) Disagree	62
(c) Uncertain	11

8. Do you think amnesty should also be granted to those who deserted from the Armed Forces, rather than fight in Vietnam?

	Percent
(a) Agree	21
(b) Disagree	68
(c) Uncertain	11

9. Congress is considering a Federal Budget of nearly $440 billion. Congress will be considering proposals to increase or decrease this budget in various areas. In which of the following areas would you reduce the Federal budget?

	Percent
(a) Foreign Aid	81
(b) Welfare Programs	65
(c) Space Exploration	45
(d) Military Spending	30
(e) Jobs & Training Programs	12
(f) Other	11
(g) Education	7
(h) Fighting Crime & Drugs	6
(i) Health Programs	6
(j) Senior Citizens	3
(k) Energy Research	2

10. In which of the following areas would you increase the Federal Budget?

	Percent
(a) Energy Research	56
(b) Fighting Crime and Drugs	55
(c) Senior Citizens	45
(d) Education	36
(e) Health Research	35
(f) Health	35
(g) Jobs and Training Program	35
(h) Military Spending	14
(i) Space Exploration	9
(j) Other	4
(k) Welfare Programs	2
(l) Foreign Aid	001

11. To conclude this questionnaire, what do you consider the single most important problem facing our nation today?

	Percent
(a) Crime	44
(b) Energy	40
(c) Drugs	32
(d) Inflation	27
(e) Unemployment	26
(f) Welfare	9
(g) Health Care	7
(h) Education	6

Mr. Speaker, this annual survey is one of the most valuable projects available to Members of Congress to obtain an insight into the thinking of their constituents.

Many of those who responded to my poll took the time to write notes on the questionnaires or send accompanying letters, amplifying their views and commenting on issues not covered in the questionnaire.

The survey results, Mr. Speaker, represent a cross-section of my constituents, who I believe are fairly typical of America. My district is largely suburban, is part of a large metropolitan area, and embraces 21 communities.

I believe the results of my poll offer a good insight into the thinking of middle America, and I commend it to the attention of our colleagues.

ONE-HUNDREDTH ANNIVERSARY OF ROMANIAN INDEPENDENCE DAY

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. DELANEY. Mr. Speaker, I would like to take this opportunity to commemorate the glorious occasion of the 100th anniversary of the declaration of Romania's independence. One century ago today, the freedom-loving people of Romania cast off the last vestiges of Ottoman Turk subjugation and declared their homeland a free and sovereign state.

For the next six decades the Romanian people enjoyed a prosperous period of economic growth along with civil liberties and political self-determination. During this era they saw their country develop some of its great domestic wealth, such as oil, wheat, and timber, while simultaneously playing an important role in the international politics of Europe.

Tragically, however, with the end of World War II came the dawn of a new dark age of terror and oppression for the people of Romania. Ironically, as czarist Russia had been instrumental in helping them achieve freedom 70 years earlier, it was now Communist Russia which fastened the new yoke upon Romania, and it was the cruelest one by far—Communist totalitarianism. The scenario was all too familiar to the countries of Eastern Europe at that time. First the Soviets demanded the formation of a new "representative" government including Communists at high levels, despite the virtual nonexistence of a Communist Party in Romania at the time. Next came the forced resignation of the king, and finally the complete domination of the government by the Communist Party. All accomplished under threat of military action by the Soviets. All facetiously perpetrated in the name of establishing a new people's "republic."

Despite their tragic betrayal, the Romanian people today remain strong willed and determined to be free. Very slowly they are making headway against the flood of Communist control which has inundated their native land. Increased control of the government by Romanians rather than the Soviets, insistence on more recognition of various aspects of their colorful culture, and increasing political, economic, and cultural contact with the West helps make the hope of true freedom in the future more a goal than a dream. Thus, on the 100th anniversary of their independence day, we extend to all Romanians and American-born Romanians our best wishes, and salute their valiant spirit.

CHARITABLE GIVING IN THE HOUSE: A CALL FOR IMPROVEMENT

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, on May 4, 1977, the gentleman from Virginia (Mr. FISHER) and I sent out a "Dear Colleague" letter seeking cosponsors on our resolution to permit voluntary payroll deductions for House employees' contributions to the Combined Federal Campaign, CFC—the Capital area's Federal Government charity drive for the United Way and other voluntary health and welfare agencies. We opened our letter by saying—

> Because the honor of the House is involved, we would like to have 100% cosponsorship of our resolution.

As past House chairmen for the CFC drives in 1975 and 1976 respectively, Congressman FISHER and I have become painfully aware that, as we put it in our letter—

> House participation and giving levels in CFC in past years have been abysmal if not scandalous.

I recently asked the CFC to prepare for me a detailed comparative analysis of how congressional giving to CFC has stacked up against that of the Federal Government employees overall, and each branch individually. These statistics bear out our assessment of the disgraceful charitable giving performance of House and Senate employees. In 1975, only 9 percent of the House employees gave anything to the CFC drive while the overall participation rate for Federal employees in the Capital area was 77 percent. And while the average House contribution was $24.53, the average gift of all Federal employees was $35.96. In 1976, our performance was even poorer, mainly because the drive took place in the middle of the fall campaign. Only 5 percent of House employees gave in that year with an average gift of $23.76. The participation rate for all Federal Government employees was 75 percent in 1976, and the average gift was $37.93.

We have no illusions that permitting employees to have their contributions deducted from their monthly paychecks will automatically boost House participation and giving levels. But at the same time, the evidence does seem clear that this system, in effect since 1961 in the

executive branch, has been a factor in the vastly better performance of that branch which registered an 80 percent participation level last year and an average gift of $37.50. The CFC notes that while the average gift by cash or check was $18 in 1976, the average contribution through payroll deductions was $60.

Mr. Speaker, I think these facts do confirm our judgment that the honor of the House is involved in our participation in the CFC drive and that something must be done to improve on our charitable performance and restore coequality between the branches of our Federal Government. We think a voluntary payroll withholding system will induce more employees to give more and urge the House Administration Committee to take immediate action on our House Resolution 12 to establish such a system.

At this point in the RECORD I include the information provided me by CFC on charitable giving in the Federal Government over the years. I urge my colleagues to examine this data and join with us as cosponsors of House Resolution 12 which we will be reintroducing on Wednesday, May 18. The CFC analysis follows:

TABLE 1.—COMBINED FEDERAL CAMPAIGN: SUPPORT FROM STAFF OF U.S. CONGRESS

Year	Number of employees	Number of contributions	Percent of participation	Dollars raised	Dollars per employee	Dollars per contribution

MAYOR R. J. ROPER

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. SKELTON. Mr. Speaker, there are many sorts of monuments which a person can create in his or her lifetime—monuments of stone or of paper; palaces, pyramids, or poetry. For a public servant, the greatest monument is a long, productive career. It is for that reason that I ask the House's attention to note the career of R. J. Roper, mayor of the community of Sugar Creek, Mo., for 36 years.

Rudy Roper became mayor of Sugar Creek in 1941. Since then, he has served 18 consecutive 2-year terms and, just recently, he was elected without opposition to a 19th term. He has the longest tenure of any mayor in the State of Missouri and possibly in the whole of the United States.

During his years in office, Mayor Roper has presided over many changes in the community of Sugar Creek. Major accomplishments in that time include extension and enlargement of the city's water distribution system, extension of the sanitary sewer system, and construction of district sewers, storm sewer improvements, purchase of park property and major park improvements including shelter houses and one of the first well-lighted ball parks, construction of a municipal swimming pool, construction of two modern buildings to house city offices and the police and fire departments, and establishment of a citywide refuse collection system.

Throughout his years in office, Mayor Roper has shown the kind of vision necessary to keep pace with a rapidly changing world. His steady hand at the helm has brought Sugar Creek through a turbulent era. This is his monument and it will endure as long as the community does.

THE PROBLEM OF FERAL BURROS

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. WHITEHURST. Mr. Speaker, I regret that it is not possible to reprint comic strips in the RECORD, because I would like to share with my colleagues the current "Mark Trail" series in the Washington Post. In it, Mr. Ed Dodd, the author, who is a well-known conservationist, is dealing with the problem of the feral burros in a balanced, accurate way.

Since the series itself cannot be reprinted, let me simply take this occasion to urge my colleagues to find the occasion to read "Mark Trail;" Mr. Dodd has done an outstanding job of clarifying the situation.

Thank you, Mr. Speaker.

MINING CONTROL AND RECLAMATION ACT OF 1977

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. DOWNEY. Mr. Speaker, on Friday, April 29, as a member of the Board of Visitors of the U.S. Military Academy I was at West Point for the annual meeting of the members.

But, I want to make clear what my vote would have been on April 29 if more pressing business had not prevented me from attending the House session that day.

I believe that a national energy policy can go hand in hand with a rational environmental policy. Therefore I support the Mining Control and Reclamation Act of 1977. I also support the amendment offered by my colleague Congressman BAUCUS which will provide added safeguards for the fragile water system of the West by prohibiting surface mining within an alluvial valley in the West.

I represent a district in Long Island where I doubt electric consumers know what a terrible price the people of Appalachia and other regions of the country have to pay to mine the coal which keeps our lights on. The Mining Control and Reclamation Act is a signal to those who mine our coal that Congress considers that price too high.

DISCRIMINATION AGAINST FATHERS

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Ms. HOLTZMAN. Mr. Speaker, on April 26 the Supreme Court, in the case of Fiallo against Bell, upheld the constitutionality of sections 101(b)(1)(D) and 101(b)(2) of the Immigration and Nationality Act, two provisions which blatantly discriminate against the fathers of illegitimate children.

These sections of the Immigration Act permit an illegitimate child to be brought into the United States by its mother or even by an unrelated stepmother with special preference immigration status. The child cannot, however, be brought in by its natural father, even when its mother has died or abandoned it. Similarly, an illegitimate child who is a U.S. citizen may bring its mother or stepmother into the United States, but not its father.

In upholding these sections, the Court declared that Congress has virtually unlimited latitude in setting admission requirements for aliens, including ones that are discriminatory.

This unfortunate decision makes it all the more important that Congress remedy this discrimination. I have introduced a bill, H.R. 409, which addresses this problem, and should be enacted as promptly as possible.

As I noted when I introduced this bill, a father can have a strong and loving relationship with his children regardless of whether he is married to the mother of those children. To pretend otherwise is nonsense.

Although the Supreme Court refused to acknowledge the rights of fathers, I am confident that my colleagues in the House will no longer accept the discriminatory stereotypes which sections 101(b)(1)(D) and 101(b)(2) of the Immigration Act reflect.

MEDICARE-MEDICAID ADMINISTRATIVE AND REIMBURSEMENT REFORM ACT

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ROGERS. Mr. Speaker, I am introducing today the Medicare-Medicaid Administrative and Reimbursement Reform Act of 1977. Members will recognize this legislation as a bill developed and originally introduced by Senator TALMADGE of the Senate Finance Committee. The bill that has come to be so closely identified with him surely must be considered as one of the major proposals in the field of hospital reimbursement reform. As such, it was my feeling that this legislation should be available to Members of the House as we undertake our own deliberations on appropriate ways to deal with the alarming problem of increases in hospital costs and other health expenditures. Members are aware that this week the Health Subcommittees of the Interstate and Foreign Commerce Committee and the Ways and Means Committee are holding joint hearings on H.R. 6575, the administration's proposal for an approach to provide a transitional solution to this problem while more permanent reforms are under consideration. Clearly the Talmadge approach deserves—and will receive—careful consideration as well, both as an alternative short-term approach and as a model for a longer term solution.

The Medicare-Medicaid Administrative and Reimbursement Reform Act contains a number of other provisions beyond those relating to reform of medicare and medicaid hospital reimbursement practices, including an experimental program to pay for the closing and conversion of underutilized facilities, establishment of a closer tie between the payments of the financing programs and decisions by health service agencies, proposals to increase the assignment rate among physicians participating in medicare, provision of authority to the Federal Government to certify long-term care facilities participating in medicaid, and establishment of specific performance criteria for State medicaid agencies, among others. I am attaching a summary of the bill explaining these and other provisions in greater detail.

Introduction of this measure, of course, does not represent endorsement of each and every provision contained in the bill. However, it clearly contains much of significance. The Talmadge bill can claim recognition as one of the major proposals to change our current health care financing programs introduced to date in the Congress. I am pleased to cosponsor its introduction in the House.

The material follows:

SUMMARY: MEDICARE-MEDICAID ADMINISTRATIVE AND REIMBURSEMENT REFORM

I. HOSPITAL REIMBURSEMENT REFORM

Sec. 2. Criteria for Determining Cost of Hospital Services:

This section of the bill would establish a new method of reimbursement for routine operating costs for hospitals under the Medicare and Medicaid programs. The new mechanism, to be phased in by FY 1981, would provide for incentive reimbursement—rewarding hospitals whose routine operating costs are below average, and penalizing hospitals whose routine operating costs are substantially above average. The Secretary of HEW would be directed to develop comparable approaches to paying for the costs of other hospital departments.

Operation of Reimbursement Mechanism.—Comparisons among institutions would be facilitated by:

Classifying hospitals in groups, by bed size and type of hospital, or other categories found to be appropriate;

Establishing an accounting and uniform cost reporting system;

Limiting the incentive reimbursement system to routine operating costs (for example, routine nursing, administrative, maintenance, supply, and food costs), and excluding cost elements such as costs of capital, costs of education and training programs, malpractice insurance, etc. Such costs would continue to be reimbursed under current law; and

Adjusting routine operating costs to take into account the effect of area wage differences.

A per diem rate for routine operating costs would be determined for each hospital by:

Calculating the average per diem routine operating costs within each group of hospitals under the classification system; and

Determining the per diem rate for each hospital in the group by adjusting the personnel cost component of the average to reflect the difference in wages in effect in each hospital's area compared with average wages in effect in all of the areas in which the hospitals are located.

Hospitals whose actual routine operating costs fell below their payment rate would receive one-half of the difference between their cost and their payment rate, with the bonus payment limited to five percent of their payment rate. Hospitals whose actual costs exceeded their payment rate, but were no more than 120 percent of that rate, would be paid their actual costs. Those with costs above 120 percent of their payment rate would have their reimbursement limited to that amount. The payment rate could be adjusted to take into account any wage and price changes, subject to certain limits, actually taking place after determination of the rate.

Exceptions Procedures.—Provision is made for a hospital to demonstrate that its unusually high routine costs are caused by (1) underutilization of beds or facilities, but only where such beds or facilities are necessary to meet the needs of an underserved area, or (2) an unusual patient mix which results in a greater intensity of routine care. To the extent that such additional costs could be justified, they would be excluded from the reimbursement criteria provided for in the bill.

If the Secretary is satisfied that a State hospital reimbursement system results in lower aggregate payments to hospitals in a State than the system established by the bill, then payments to hospitals in that State could be based on the State system.

Phasing in of Reimbursement System.—The bill provides for a phasing-in to per-

mit orderly implementation and to allow ample opportunity for hospitals to make appropriate professional and administrative decisions. FY 1978 cost data would be used in developing a listing of payment rates for FY 1980 on an advisory and informational basis only. This would permit hospitals to become familiar with the new methodology. FY 1979 data, based on the accounting and uniform reporting system, would be used in determining the payment rates to be fully effective in FY 1981.

Report and Further Development by the Secretary.—Subsequently, the Secretary could develop and submit to the Congress comparable approaches to paying for the costs of other hospital departments such as radiology, laboratory, etc., and for payment to skilled nursing facilities.

Sec. 3. Payments to Promote Closing and Conversion of Underutilized Facilities:

This section provides for including in hospital reasonable cost payment, reimbursement for capital and increased operating costs associated with the closing down or conversion to approved use of underutilized bed capacity or services in nonprofit short-term hospitals, (limited to increased operating costs in for-profit short-term hospitals). This would include costs which might not be otherwise reimbursable, because of payment "ceilings" such as severance pay, "mothballing" and related expense. In addition, payments could be continued for reasonable cost capital allowances in the form of depreciation or interest on debt which would ordinarily be applied toward payment of debt actually outstanding and incurred in connection with the terminated beds. In the case of complete closing down of a hospital, payments would continue toward repayment of any debt, to the extent previously recognized by the program, and actually outstanding.

Appropriate safeguards are to be developed to forestall any abuse or speculation. During the first two years not more than 50 hospitals could be paid these transitional allowances in order to permit full development of procedures and safeguards. This limited application will also provide Congress with an opportunity to assess the effectiveness and economic effect of this approach in encouraging hospitals to close or modify excess and costly capacity without suffering financial penalty.

Sec. 4. Federal Participation in Hospital Capital Expenditures:

Changes are made in the current law limitations on Medicare and Medicaid payments related to certain hospital capital expenditures. These changes link the procedure to the new health planning law, and require that the designated planning agency approve capital expenditures in excess of $100,000 as a condition to Medicare and Medicaid reimbursement for capital and direct operating costs associated with those expenditures. A special procedure is established for proposed capital expenditures in metropolitan areas which include more than one State or jurisdiction. All States or jurisdictions in the area must approve the expenditure, or it would be considered disapproved for purposes of reimbursement subject to review by the Secretary.

II. PRACTITIONER REIMBURSEMENT REFORMS

Sec. 10. Agreements of Physicians to Accept Assignment of Claims:

Under the bill there would be "participating" physicians, a concept employed by many Blue Shield plans.

A "participating" physician is an M.D. or D.O. who voluntarily and by formal agreement agrees to accept the Medicare reasonable charge determination on an assignment basis, as the full billing amount for all services to all Medicare patients. Agreements would be cancellable or concluded on the basis of 30 days' notice "Non-participating" physicians could continue to elect to use the assignment method of billing on a claim-by-claim basis, as under present law.

In the case of a participating physician: (1) the Secretary would establish appropriate procedures and forms whereby such physician may submit his claims on one of various simplified bases and these claims would be given priority handling by the Part B agent.

An "administrative cost-savings allowance" of $1 per eligible patient would be payable to a participating physician covering all services provided and billed for with respect to an eligible patient which were included in a multiple billing listing. Two separate allowances would not be made for billing on two listings of items ordinarily included in a single visit of service, nor for different services which were provided to the same patient within a seven-day period.

With respect to inpatient or outpatient hospital care, the administrative allowances would be payable only in the case of: (1) a surgeon or anesthesiologist, or (2) attending physician or consultant whose principal office and place of practice outside the hospital, and where in the case of (1) and (2) such physicians ordinarily bill and collect directly for their services.

No administrative allowance would be payable in the case of claims solely for laboratory tests and X-rays undertaken outside of the office of the billing physician.

As an example of how this would operate, take the case of a physician who does not accept assignments today and whose routine office visit charge is $10. If he became a "participating" physician, he would receive an extra $1 allowance for that visit plus probably save at least another $1 in billing, collection and office paperwork costs. In effect, his net practice income would increase by 20 percent as a result of "participation". The physicians with the lowest charges (often those in rural or ghetto areas) would benefit proportionately most from participation, as the cost-savings allowance and the office cost cutting would represent a greater percentage of their charges.

Sec. 11. Criteria for Determining Reasonable Charge for Physicians' Services:

Medicare presently allows a new doctor to establish his customary charge at not greater than the 50th percentile of prevailing charges in the locality. The bill would permit new physicians in localities with low fee levels to go in at the 75th percentile (rather than the 50th) as a means of encouraging doctors to move into low-fee, physician shortage areas.

Medicare utilizes more than 200 different "localities" throughout the country for purposes of determining Part B "reasonable" charges. In some States there are as many as 15 different localities. This has led to irrational disparities in areas of the same State in the prevailing charges for the same service. For example, the prevailing charge under Medicare was $450 in Los Angeles for a hemorrhoidectomy but only $280 in San Francisco for the same procedure. Additionally, under present law, all prevailing charges are annually adjusted upward by a fixed percentage to reflect changes in the costs of practice and wage levels. The effect of present law is to further widen the dollar gap between prevailing charges in different localities.

A section of the bill would require calculation of Statewide prevailing charges (in any State with more than one locality) in addition to the locality prevailing charges. To the extent that any prevailing charge in a locality was more than one-third higher than the Statewide average charge for a given service, it would not be automatically increased each year. This provision would not reduce any prevailing charges currently in effect—it would operate, to the extent given charges exceed the Statewide average by more than one-third—to preclude raising them.

Sec. 12. Hospital Associated Physicians:

Another section preserves the eligibility of radiologists, pathologists and anesthesiologists to be paid by Medicare and Medicaid on a fee-for-service basis for patient care services which they personally perform or personally direct. The bill provides that reimbursement for the portion of his services which the physician may perform for the hospital as an executive, educator, or supervisor would be paid on a basis related to what would be paid in the case of a salaried physician performing similar work for an institution. Percentage or lease arrangements would ordinarily not be recognized for Medicare and Medicaid reimbursement purposes. These provisions were developed with the help of representatives of the American College of Radiology and the American Society of Anesthesiologists. This section will avoid excessive payment to some physicians for services which they do not personally provide.

The provision in present law which permits 100 percent payment for inpatient radiology and pathology tests, instead of 80 percent as is the case with all other physician services under Medicare, would be restricted to physicians who agree to become "participating physicians."

Sec. 13. Payment for Certain Antigens under Part B of Medicare:

Present law would be amended to provide that allergists might be paid directly for preparation of a reasonable supply of antigens which would be dispensed or administered by another physician. This is designed to deal with the situation where a doctor refers his patient to an allergist who may then prepare a supply of antigens for the referring doctor's use. Today, the allergist has to be paid by the referring physician.

Sec. 14. Payments on Behalf of Deceased Individuals:

A technical change would permit payment by Medicare on the basis of a non-receipted bill for care directly to the spouse or other legal representative of a deceased Medicare beneficiary. Under present law, Medicare can only pay where the physician accepts an assignment or where the family has actually paid the bill. Where a physician refuses an assignment, families have encountered difficulty in raising sufficient cash to pay the bill in order to be eligible for payment by Medicare.

Sec. 15. Use of Approved Relative Value Schedules:

The bill authorizes the Secretary to approve the use of terminology systems and relative value schedules by physicians in billing Medicare, Medicaid, and for other purposes. The purpose of this amendment is to establish a common language to describe the kinds of services that are covered under public and private health benefit plans and to provide for a more rational basis for evaluating the reasonableness of fees.

III. LONG-TERM CARE REFORMS

Sec. 20. Hospital Providers of Long-Term Care Services:

The bill includes a provision to make better and more flexible use of underutilized hospital beds in rural areas by providing for a simplified cost reimbursement formula which avoids the current requirement for separate patient placement within the facility and separate cost finding.

Sec. 21. Reimbursement Rates under Medicaid for Skilled Nursing Facilities and Intermediate Care Facilities:

This section would allow States to include a reasonable profit in determining reimbursement on a cost-related basis.

Sec. 22. Medicaid Certification and Approval of Skilled Nursing Facilities:

The bill includes a section comparable to an amendment approved by the Finance Committee and Senate in 1972 which would make the Secretary of HEW the final certifying officer for skilled nursing and intermediate care facilities. Today, the Secretary has

such authority with respect to skilled nursing facilities participating under Medicare only, or both Medicare and Medicaid, but not where they participate only under Medicaid. The principal purpose of this provision is to assure more uniform application of health and safety standards and timely termination of facilities with serious deficiencies.

Sec. 23. Visits Away from Institution by Patients of Skilled Nursing or Intermediate Care Facilities:

The bill would prohibit the Secretary from imposing numerical limits on the number of home visits which might be made by skilled nursing home or intermediate care patients. Questions as to the appropriateness of the extent of such visits are matters for professional review rather than absolute numbers.

IV. ADMINISTRATIVE REFORMS

Sec. 30. Establishment of Health Care Financing Administration:

The bill combines the Medicare, Medicaid, Office of Long Term Care, and Bureau of Quality Assurance agencies into a single Administration for Health Care Financing headed by an Assistant Secretary. Medicare would continue to use the Social Security computer and District office systems. This is designed to promote uniform policy-making and enhanced accountability.

Sec. 31. State Medicaid Administration:

Specific performance criteria would be established with respect to State administration of Medicaid. These would require timely determination and redeterminations of eligibility; prompt payment of proper claims; effective review of those providing services and the services provided; and timely development and submission of program operating data. The Secretary would review, on-site, each State's compliance, with the Comptroller-General certifying the methodology used by the Secretary. Deficiencies would be required to be corrected within periods not exceeding six months. At Federal expense, States would be provided any necessary technical or professional assistance they requested to improve their systems or correct deficiencies. Graded penalties relating to Federal matching for administrative costs would be assessed for uncorrected deficiencies. All review reports and findings would be made available to Governors and State legislatures on a routine basis.

Sec. 32. Regulation of the Secretary:

A minimum period of 60 days would be required for comment on proposed HEW regulations with respect to the Social Security Act, except for those of an urgent nature.

Except where specifically provided otherwise, final regulations would be required to be issued within one year of enactment of this bill.

Sec. 33. Repeal of Section 1867:

The Health Insurance Benefits Advisory Council (HIBAC) would be terminated.

V. MISCELLANEOUS REFORMS

Sec. 40. Procedure for Determining Reasonable Cost and Reasonable Charge:

Reimbursement to contractors, employees or related organizations, consultants, or subcontractors at any tier would not be recognized where compensation or payments (in whole or part, in cash or kind) were based upon percentage arrangements. This would include payment of commissions and/or finders' fees and lease or rental arrangements on a percentage basis. This would also include management or other service contracts or provision of services by collateral suppliers such as pharmacies, laboratories, etc. The percentage prohibition would flow both ways either from the supplier or service agency back to the provider or organization or from the original provider or organization to the supplier or service agency.

Sec. 41. Ambulance Service:

Today, Medicare will pay for the ambulance service only to a hospital if it is the nearest participating institution with adequate facilities. A problem has arisen in that sometimes the nearest hospital doesn't have a staff member qualified to undertake the care (i.e., no neurosurgeon where neurosurgery is involved). A provision in the bill would cover ambulance service to more distant hospitals where the nearer hospitals do not have staff qualified to undertake the care required.

Sec. 42. Grants to Regional Pediatric Pulmonary Centers:

A section of the bill incorporates an authorization of up to $5 million annually for the support of pediatric pulmonary centers. This is identical with an amendment approved by the Senate in 1972, but which was not acted upon by the House.

Sec. 43. Waiver of Human Experimentation Provision for Purposes of Cost Sharing:

Under current law, State Medicaid programs may impose nominal cost-sharing requirements on Medicaid eligibles. Recently, some cost sharing provisions have been challenged as violations of the Human Experimentation statute. These challenges would have the effect of nullifying the intent of cost-sharing under Medicaid. The bill would exempt the Medicaid cost-sharing provisions from the Human Experimentation statute.

Sec. 44. Disclosure of Aggregate Payments to Physicians:

The bill would prohibit the release of the names of physicians who have been paid large amounts for treating Medicare patients. Similar information on Medicaid payments could be relased by a State if it choose to do so. While lists of highly paid physicians are useful to the administering agencies in identifying possible program abusers, they also serve to unjustifiably embarrass honest physicians who have a large number of elderly patients.

Sec. 45. Denial of Medicaid Eligibility for Intentionally Disposing of Assets:

The bill would allow States to deny Medicaid benefits for up to a year in the case of persons who give away their property to relatives in order to reduce their resources to the eligibility level.

BUREAUCRATIC BUMBLING BURRIES BEATTY

HON. JIM SANTINI

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. SANTINI. Mr. Speaker, as many of you know, I have been a consistent advocate of the multiple-use concept for our public lands. This is an attitude and conviction shared by most Nevadans; 87 percent of Nevada is federally owned. Every new Federal regulation or change in the public land law usually has an influence on either the lifestyles or livelihoods of our Silver State residents.

Nevadans are never reluctant to voice their displeasure about the bureaucratic agencies that impact or influence their daily lives. Usually this frustration is expressed in the form of a letter to their lone representative in the Congress.

Not long ago, I received a most original epistle of exasperation from a Nevadan living in the Bullfrog Mining District in Beatty, Nev. The original form and the imaginative content should be shared.

The following is Effie Siedentopf Spicer's poetic protest:

EFFIE SIEDENTOPF SPICER'S POETIC PROTEST

It looks to me like bureaucrats are laughing up their sleeve
While patting us upon the head and listening to our peeves.
They've used "divide and conquor", an art as old as time,
Now listen, all Nevadans, to the message of this rhyme.

We all agree on something, and that's our public lands,
No matter what our lives may hold, we have a problem on our hands.
We fit all categories out here, from A to Z,
But multi-use in concept of our lands is what we plea.

This latest scheme by number, N-one-six-oh-nine-five,
Hidden from the public because it would deprive
The miner and the rancher, who have the most to lose,
But don't you think that everyone should have the right to choose?

The military wants our land, "This has been an easy show"
The BLM says, "Take it, the public doesn't have to know.
We've kept them all so busy with our set-up hearings, asking
For all the input they could muster, now they think they're basking."

"We've listened to their griping and their protests and their reason,
We've read their letters pile by pile since last year's Christmas season,
Now the last extension's past, and we can do our thing,
It's time the public listened to the message that we'll bring."

If anybody does find out and make a scene about it,
We'll say he's just a rebel, unpatriotic as he shouts it.
We'll say he doesn't care about the safety of our skies,
We'll never mention that he's lost his right to his free enterprise.

"We'll cry how hard we tried and failed, there's nothing we can do,
We have them bogged with dialogue, they'll forget it all in a day or two.
We'll just go about our realm, making regulations by the score.
They'll be so surpressed they'll just give up, we have won the war."

Now that's the end of conversations that we all know did take place,
Somehow it's connected to their desire to end Nevada's production base.
They forgot they're paper people, knowing not the art of work.
Can you see them with a shovel? No! Callouses they shirk.

Now you may be asking, "Just what are we to do?"
We want our public lands the same, just the way we're used to.
Everyone who wants, can work. Remember all your history?
You've never fought a war before? This one could be blistery.

Get out your pen, or dial the phone, protest the secret meetings.
Demand they listen to you, or we'll all get eviction greetings.
Don't sit back and wait for action, don't play right into their hands.
Insist they read the constitution, and play fair with public lands.

Stop and think of what you need, no longer will be filled.
If N-one-six-oh-nine-five goes thru, your independence will be stilled.

Tell them that the military has enough of our domain,
Remind them that our dear Nevada open multi-concept use must remain.

FOUR MYTHS ABOUT WORLD HUNGER

HON. THOMAS J. DOWNEY
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. DOWNEY. Mr. Speaker, yesterday's Washington Post carried an excellent article on world hunger. The article suggests that the public's perception of this very real problem may, itself, be one of the roadblocks standing in the way of efforts to adequately feed the world population.

Mr. Speaker, I include this thoughtful article in the RECORD:

FOUR MYTHS ABOUT WORLD HUNGER

(By Frances Moore Lappe and Joseph Collins)

Learning often begins with unlearning. Several years' research on world food problems has helped us see through four pervasive myths that keep most Americans paralyzed by guilt and fear. These myths prevented us from grasping how hunger is generated and that basic food self-reliance is possible for every country in the world.

Myth one: People are hungry because of scarcity—both of food and of agricultural resources. They are hungry because populations exceed the limited amount of food-producing resources.

Can scarcity seriously be considered the cause of hunger when even in the "food crisis" of the early 1970s there was plenty to go around—enough in grains alone to provide everyone with 3,000 calories a day and ample protein?

Such global estimates mean little, we are told; what matters is the food available for each person in the "hungry countries." We found, however, that in countries accounting for 86 per cent of the total population of the underdeveloped world, food production has kept pace with and often exceeded the growth in population during the last 20 years.

The very countries that most of us think of as food-deficient and import-dependent are themselves major agricultural exporters. Forty per cent of all agricultural imports into the United States, itself one of the world's top three agricultural importers, come from countries of supposed scarcity. In 1973, 36 of the 40 nations classified by the United Nations as being most seriously affected by inflated world food prices actually exported agricultural goods to the United States.

Agricultural exports from the Sahelian countries dramatically increased during the early 1970s, in the face of drought and widespread hunger. Still, a U.N. Food and Agriculture Organization survey, squelched by displeased aid-seeking governments, documented that every Sahelian country, with the possible exception of mineral-rich Mauritania, actually produced enough grain to feed its total population, even during the worst drought year. So, while many went hungry, it was not because of scarcity of agricultural production or even of food.

And what of land scarcity? Several authoritative studies agree that only 44 percent of the world's cultivatable land is actually being cropped. Many landowners who hold land as an investment, not as a source of their food, leave vast amounts unplanted. In Colombia the largest landholders, in control of 70 per cent of the agricultural land, planted only 6 per cent in 1960. But it was in assessing *what* is grown that we came to understand the true magnitude of the waste of land needed by hungry people. In Central American and Caribbean countries, where as many as 70 per cent of the children are undernourished, at least half of the agricultural land, often the best land, is made to produce crops for export, not food for the local people.

If "too many people" were the cause of hunger, we should expect to find more hungry people in countries with greater density of people per agricultural acre. We can find no such correlation. In China, for example, 80 per cent more people live from each cultivated acre than in India. Yet today, in what was once called the "land of famine," no one starves. Country-by-country investigations, even of the so-called basket cases like Bangladesh, led us to believe that in fact there may well be no country without adequate agricultural resources to feed its population.

Neither the size of today's population nor population growth is now the cause of hunger. But it is self-evident that continuing to grow at current rates would seriously undercut the future well-being of all of us. This self-evident truth should add even greater urgency to the search for the *real* causes of rapid population growth. And these causes—the insecurity and poverty of the majority caused by the monopolization of food resources by the few—are the same as the real causes of hunger.

Myth Two: The solution to the hunger problem is to produce more food.

Diagnosing the cause of hunger as scarcity inevitably leads to thinking that greater production itself will solve the problem. Thus, for at least 30 years, governments, international agencies and multinational corporations have promoted greater production through "modernization"—large-scale irrigation, chemical fertilizers, pesticides, machinery and the seeds that give higher yields if they receive such inputs.

But when a new agricultural technology enters a system shot through with inequalities, it profits only those who already have some combination of land, money, credit "worthiness" and political influence. This fact alone has excluded most rural people and all the world's hungry.

Once agriculture becomes a speculative investment in which sheer control of the basic inputs ensures financial success, a catastrophic chain of events is sent into motion. Competition for land sends land values soaring. Higher rents drive tenants and sharecroppers into the ranks of the landless who now makes up the majority in many countries. With their increased profits, the powerful buy out small farmers. Large commercial operators, taking advantage of government credits and subsidies, mechanize to avoid labor "management problems." Many made landless by the production focus, finding ever fewer agricultural jobs, join the hopeless search for work in urban areas.

To be cut out of production is to be cut out of consumption. The observation of a 36-cent-a-day agricultural laborer in Bihar, India, confirms this truth: "If you don't own any land, you never get enough to eat, even if the land is producing well."

Indeed, in many countries more food per person is being produced, yet many are more hungry. This is not a theoretical point. Study after study around the world documents a consistent pattern: the retrogression of much of the rural population even as production advances. One extensive, just completed study of seven Asian countries containing 70 per cent of the rural population of the non-socialist underdeveloped world concludes that "the increase in poverty [of 20 to 80 per cent of the rural population] has been associated not with a fall but with a rise in cereal production per head."

Ignoring the social roots of hunger and focusing instead on production increases has taken us backward, not forward. The real obstacle to people feeding themselves is that they do not have control over productive resources. People who know they control their resources will, through their ingenuity and labor, make them ever more productive. The Chinese experience shows that people are a country's most underutilized resource. Human energy, properly motivated and organized, has transformed deserts into granaries.

The reality is that democratic redistribution of control over agricultural resources has historically been shown to result in dramatic production advances in countries as different as Japan, Taiwan, China and Egypt; moreover, it is the only guarantee that the hungry will eat.

Myth three: An underdeveloped country's best hope for development is to export crops in which it has a natural advantage and use the earnings to import food and industrial goods.

There is nothing natural about concentrating on a few, largely low-nutrition crops. The same land that grows cocoa, tea and sugar could grow an incredible diversity of nutritious crops. Nor is there any advantage. Reliance on a limited number of crops generates economic as well as political vulnerability.

Among the many flaws in the natural advantage theory, the most serious is that the people who benefit from the foreign exchange earned by the agricultural exports are not the people who work to produce those exported crops and who need food. Even when part of the foreign exchange earned is used to import food, it is generally not the needed staples but items to satisfy the tastes of the better-off urban classes. In Senegal, the choice land is used to grow peanuts and vegetables for export to Europe. Much of the foreign exchange earned is spent to import wheat for foreign-owned mills that turn out flour for French-style bread for the urban dwellers.

Indeed, the very success of export agriculture can further undermine the welfare of the poor. When world commodity prices go up, self-provisioning farmers may be pushed off the land by cash crop producers seeking to profit on the higher commodity prices. An increase in the world price of a commodity can actually mean less income for the plantation worker or the peasant producer. When the price of sugar on the world market increased several-fold a few years ago, the real wage of a cane cutter in the Dominican Republic actually fell to less than it was 19 years earlier. A nominal increase in the wage of the cane cutter did not compensate for the inflation set off by the sugar boom.

Governments fixated on agricultural exports suppress labor reforms they believe would make their exports uncompetitive. Furthermore, in countries such as the Philippines, governments exempt land producing for export from land reform, and thereby not only maintain the poverty of the rural landless but further undercut food production as growers shift to export crops to avoid redistribution.

By contrast, food self-reliant policies would measure success in terms of the welfare of the people, not export income. Food self-reliance is not isolationist. But trade would become an organic outgrowth of development, not the fragile hinge on which survival hangs. Clearly, no country can hope to "win" in international trade as long as its people's very survival depends on selling one or two products. Once the basic needs are being met, however, trade will no longer

be at the cost of the food well-being of the people, as evidenced by countries such as Cuba and China.

Myth Four: Hunger is a contest between the Rich World and the Poor World.

Terms like "hungry world" and "poor world" make us think of uniformly hungry masses, while in reality hunger afflicts the lower rungs in both so-called developed and underdeveloped countries. Worse still, the "rich world" versus "poor world" scenario makes the hungry appear as a threat to the majority in countries like our own. In truth, however, the problems of the hungry will never be addressed until the majority in the United States can see that the hungry abroad are their allies, not their enemies.

The poor majority in underdeveloped countries and ordinary Americans are linked through a common threat: the tightening of control over the most basic human need—food—both within countries and on a global scale. The very process of increasing concentration of control over land and all other productive resources that we have identified as a direct cause of hunger in underdeveloped countries is going on right here at home. Only 5.5 per cent of all farms in the United States have come to operate over one-half of all land in farms. The resulting landlessness and joblessness in rural America are at the root of much of the persistent hunger in the midst of agricultural bounty. In food manufacturing, the top four firms in any given food line control, on the average, over half of the market. In 1972, the Federal Trade Commission staff calculated that such oligopolies in 13 food lines cost consumers $2.1 billion in overcharges. For the 1 out of 10 Americans who must spend 69 per cent of all income on food, such inflated prices mean undernutrition.

Many of these same oligopolistic corporations are now expanding their operations into underdeveloped countries. Multinational agribusiness is busily creating a Global Farm to serve a Global Supermarket. Finding production sites in underdeveloped countries, where land and labor can cost as little as 10 per cent of stateside costs, large food corporations are shifting production of high-value items—vegetables, fruits, flowers and meat—out of the industrial countries. They find ready partners in foreign elites who, given the increasing impoverishment of much of the local population, face a stagnated internal market for their production.

In the Global Supermarket the poorest in the Philippines, Colombia and Senegal must reach for food on the same shelf as hundreds of millions of consumers around the world. Every item has a price and that price is determined by what the Global Supermarket's better-off customers are willing to pay. And the sad reality is that even Fido and Felix in countries like the United States can outbid the world's hungry. Consumers in the industrial countries unwittingly become a suction force, diverting food resources in the underdeveloped countries away from local needs.

And the significance for us? In our country, farmers and workers are losing their jobs as agribusiness roams abroad. The United States imports annually between $9 billion and $10 billion in agricultural products, two-thirds of which compete directly with what farms grow here. Moreover, a Global Farm gives the U.S. government further rationale for supporting political and economic structures abroad that block hungry people from growing food for themselves. Nor should we conclude that consumers here get cheaper food. Studies show that lower production costs for food oligopolies on foreign soil do not get passed on to consumers.

The Global Supermarket is the type of interdependence no one needs. "Interdependence" in a world of extreme power inequalities becomes a smokescreen for the usurpation of food resources by the few for the few.

MAY NEWSLETTER

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. AMBRO. Mr. Speaker, I will soon be sending the following newsletter to my constituents in New York's Third Congressional District on Long Island and would like to share its contents with my colleagues.

I would like to draw your attention in particular to the story about my mobile congressional office which has received an extremely favorable reaction among my constituents:

CONGRESSMAN JEROME A. AMBRO: REPORTS FROM WASHINGTON

MOBILE OFFICE ROLLS INTO SERVICE

WASHINGTON.—Believing that more can be done to increase public involvement in his Long Island district office operations, Congressman Jerome A. Ambro has enlisted the use of a specially-equipped van as a mobile office that, hopefully, will encourage his constituents to utilize the services of his local staff and facilities.

"There seems to be a reluctance to approach Congressional offices for assistance and information, much of which is readily available," Ambro explained. "I think some of that reluctance may be overcome by putting my office on wheels and rolling it right into those communities I serve in Congress," he said.

The 22-feet-long, air-conditioned van, staffed by a full-time member of Ambro's district office, will travel a circuit throughout the Third Congressional District from Glen Cove through Oyster Bay, Plainview, Syosset, Farmingdale into the Massapequas and up to Huntington, Melville and East Northport. It will remain at each location for several hours daily.

District residents will soon be receiving a tentative schedule which may be amended as areas of light and heavy activity and interest are identified.

The van is equipped with regular office furniture and contains informational guides and brochures on a variety of federal programs, including Social Security and veterans' benefits.

The staff member in the van is an experienced caseworker who spent almost two years in Washington winding his way through the federal maze. His job is to provide district residents with assistance with problems that develop with the federal government and its agencies. "We're not miracle workers," Ambro said, "but we often can work our way quickly through the bureaucracy and get fast results."

Cases which cannot be resolved quickly will be assigned to the Washington office where close contact with the particular federal agency involved usually gets results in a short time.

The mobile office concept is designed to extend the partnership in government, to provide easy access to decision-makers, to assist citizens with problems and to break through the bureaucracy.

The district's community newspapers will be informed as to when the mobile office will be in local areas. Small postcards also will be sent occasionally, announcing dates and places the van will be at a fixed location in your community.

MONORAILS—PIE IN THE SKY? MAYBE NOT

Because of his often expressed concern about the lack of coordination between the Department of Transportation and related agencies (UMTA, FAA, etc.) and research, development and demonstration programs in transportation, Congressman Ambro was asked to chair hearings in this area last month. He focused the four-day hearings on the need for a better integrated approach to the subject.

Ambro serves on the Surface Transportation Subcommittee on the Public Works Committee as well as the Transportation Research and Development Subcommittee of the Science and Technology Committee.

Through informal contacts with subcommittee chairmen and his former Congressional colleague Transportation Secretary Brock Adams, Ambro has begun a campaign to promote better, more flexible, door-to-door mass transportation methods.

The central theme of the hearings was the lack of concerted effort by the federal government for the deployment of new modes of transit, for which technology exists. Witnesses described great resistance to that development by state and local governments, industry, labor unions and a variety of vested interests.

"Instead of incessantly promoting new highways and conventional bus systems, why can't we move forward with monorails, air cushion vehicles, hydrofoils, magnetic trains, electric jitneys, starr cars and the like," Ambro asked. 'Pie in the sky'? Maybe not."

The transportation situation on Long Island was frequently used as an example of the need for non-conventional transit systems.

LOCAL DEFENSE INDUSTRY ESCAPES BUDGET AXE

Long Island's two major weapons systems, Fairchild's A–10 anti-tank Air Force attack plane and Grumman's F–14 Navy fighter-interceptor, went untouched in President Carter's initial request for a $2.8-billion defense cut, preserving thousands of jobs locally.

Both firms are headquartered in the Third Congressional District. Production of the A–10 and the F–14 employs thousands of Long Islanders and contributes hundreds of millions of dollars annually to the local economy.

More than 5,000 Grumman employees living in the Third District earn an estimated $94.3-million annually. Fairchild has a $65-million Long Island payroll. Both firms receive about 90% of their work in government contracts.

Constant controversies surround these weapons systems vis-a-vis competing planes produced in other parts of the country.

One very important aspect of any Congressman's job is to lobby in behalf of those federal programs important to his district. In our case, that means protecting both the A–10 and the F–14 from Congressional pirates who would channel military programs away from Long Island and into their districts in California, Texas and Missouri.

In 1975, Congressman Ambro was asked to lead a floor fight against St. Louis' F–18, a direct competitor to the F–14. That opposition to the Missouri plane was interpreted by some, unfamiliar with the background, as an anti-defense position.

The fact that the A–10 and F–14 survived the first round of budget cuts indicates that the White House and Pentagon, at least at this point, share our confidence in the intrinsic value of these planes to our national security.

L.I. OFFICES

Congressman Ambro has District Offices in both Nassau and Suffolk Counties in addition to the mobile office. They are located in:

The Nassau Building, Rm. 308, Third Floor, 7600 Jericho Turnpike, Woodbury, N.Y. 11797, (516) 364–2177.

The New Yorker Building, Rm. 420, Fourth Floor, 755 New York Avenue, Huntington, N.Y. 11743, (516) 673–9050.

Both offices are open Monday through Fri-

day from 9 a.m. to 5 p.m. and are staffed by full-time professionals.

AMENDMENT TO STEER ISABELLE TO L.I. LAB

Construction of Project Isabelle,* an unprecedented U.S. high-energy physics research effort, may begin next year at the Brookhaven Laboratory in Upton, L.I.

Isabelle will provide answers to the secrets of the atom, the proton and matter generally. It will contribute to our nation's search for alternative energy resources and help maintain U.S. primacy in the world of pure scientific research, a field in which the Europeans and the Japanese have made great strides recently.

Its total projected costs will be $150,000,000 and, as a result of a proposed amendment to an energy bill by Congressman Ambro, would be built at the Brookhaven site. In addition to its great scientific value, Isabelle is expected to provide hundreds of jobs for our local construction trades.

Late last year, Long Island lost an $80-million linear reactor because of a political decision that worked against New York. That loss came on the heels of Long Island's withdrawal from competition for the $70-million U.S. Solar Energy Research Institute for want of a contractor-manager.

Along with Congressman Pike, Downey, Wydler and the support of the entire, 39-member New York State Delegation, Ambro is hopeful Isabelle will ultimately go to Long Island.

Laying the groundwork for the amendment has required a great deal of time and effort by Ambro and his staff. The next newsletter will outline the progress of the Isabelle amendment to the budget authorization for the U.S. Energy Research and Development Administration as it winds its way through the legislative process.

SALT VS. RIGHTS A STANDOFF?

There is a very legitimate concern over the fact that the Soviet Union has been attempting, in the past few years, to gain a military weapons systems advantage over the United States, and a political extension of its influence in Africa and Asia.

The SALT talks are geared to restoring military balance, to stopping the arms race, to cutting back on the production and proliferation of nuclear weapons.

Speaking out on human rights, on the other hand, is the core of our foreign policy message. It cannot be linked to the Soviet buildup or the SALT talks.

Respect for human rights and individual liberties are bedrock principles upon which this Republic was founded. World events have never shaken this nation's commitment to those principles or weakened our determination to defend them in any international forum.

The United States must reassert itself as the advocate for globalwide human rights while continuing to be the protector of the free world against Soviet domination, the leading protagonist for both arms reduction and the end to nuclear weapons—a neat trick, but at last we've started.

PROGRESS REPORT

Committee Assignments.—Congressman Ambro has retained his major committee assignments in the 95th Congress, moving up in seniority on each of the important panels. He will continue serving on the House Science and Technology Committee, which deals with energy and the environment, and the Public Works and Transportation Committee where he is the ranking New York majority member.

Credits for College (Tuition).—Tax credits for up to 50% of the cost of higher education to a maximum of $1,500 annually would be given to parents of college students, under terms of an Ambro bill now before the House Ways and Means Committee. Taxpayers and their spouses could also receive a similar credit for the cost of their own education, according to the legislation.

Senior Citizens Bill.—Legislation that will give Long Island's Senior Citizens major tax breaks for a portion of their housing costs was introduced by Congressman Ambro on the first day of the new Congress. The bill, the Senior Citizens Property Tax Relief Act, will permit Older Americans to choose a federal income tax credit for 50% of their property taxes or 20% of their annual rent (the estimated amount that represents property taxes paid by their landlord).

SW Sewer Relief.—The New York Regional EPA Offices recently released an additional $33-million in federal funds to help defray skyrocketing construction costs for the Southwest Sewer District. The sewer project, the subject of a Congressional hearing chaired by Ambro last September on Long Island, is in line for at least $70-million more in federal assistance.

Free Publications.—The following free publications are available by writing to Congressman Ambro at 1313 Longworth H.O.B., Washington, D.C. 20515:

Money-Saving Main Dishes. Recipies and cooking tips for economical main meals. 48 pp.

Infant Care. Health and hygiene guide for those critical first weeks of baby's life. 72 pp.

Your Child from 1 to 6. A highly-informative, 98-page pamphlet of child-rearing advice for the formative years before grade school.

*Intersecting Storage Accelerator.

DO NOT BLAME WHEAT FARMERS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ABDNOR. Mr. Speaker, the facts cited in this article from Today's Farmer speak for themselves. They also speak to the need for adequate target prices and loan rates in the farm bill we will soon be considering on the House floor.

It is easy to blame farm prices for the size of the grocery bill. But today, as in previous years, the farmer gets only a small portion of the grocery dollar. The rest goes to the processing, packaging, transportation and selling. These are claiming an ever-bigger part of the food dollar, but you never hear about these in media comments on food costs.

The article follows:

IF WHEAT WERE FREE

Three years ago, wheat was selling for about $6 per bushel. A one-pound loaf of bread was selling for 32.5 cents.

At that time, you may recall, the American Bakers Association—in an attempt to blame higher prices on farm prices—was predicting $1-a-loaf bread. Although the prediction was almost baseless, consumers were alarmed. Grain export embargoes followed.

In the light of what has happened since, the rhetoric of three years ago should not be forgotten.

Wheat now is selling for about $2.50 per bushel. So the price of bread should be lower, right? But not so.

Average price of a one-pound loaf of bread is 35.4 cents, according to the latest USDA report. That's 2.9 cents higher than when wheat was selling for $6 per bushel.

The value of wheat in that loaf of bread now is only 3.3 cents. So if farmers were to give their wheat to bakers—if wheat were free—the price of bread would now be almost the same as it was three years ago when wheat was selling for $6.

Meanwhile—even with higher costs for labor, equipment, energy and transportation—many baking firms are showing record earnings. And farmers, alone, bear the burden of curbing bread price inflation.—Today's Farmer

A MAN TO WATCH

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. RANGEL. Mr. Speaker, in 1958, St. Phillip's Church which is in my district and is one of the oldest and largest Episcopal churches in the country acquired a new minister. That minister. Rev. M. Moran Weston, initiated and continues to develop innovative changes in the Harlem community. Like the great Martin Luther King, Jr., he has a dream. That dream is "to bring God into life." However, according to Reverend Weston "you cannot bring God in life without improving it." It is that improvement he is now seeking.

This outstanding clergyman has developed projects for the elderly, low- and middle-income people, and even one providing a variety of services for youths and preschool children. Last night his friends and associates paid tribute to him at a dinner in New York. As his Representative in Congress I would like to pay tribute to him by saying thank you and keep up the good work.

An article appeared today in the New York Times describing the outstanding contributions of this clergyman. For that reason I would like to share with my colleagues the article delineating Dr. Weston's accomplishments.

The article follows:

MINISTER HAILED FOR EFFORT TO IMPROVE LIFE IN HARLEM

(By Charlayne Hunter-Gault)

When the Rev. Dr. M. Morgan Weston first went to St. Philip's Church in Harlem—one of the oldest and largest Episcopal churches in the country—the streets were always heavily strewn with unsightly litter that built up between sanitation pickups.

One of the first projects the new rector undertook was to organize the maintenance men from nearby tenements to sweep the streets in front of their buildings.

At that time—1958—The New York Herald Tribune predicted that Dr. Weston, an economist and a third-generation Episcopal minister, would be a "Man to Watch."

The Trib did not survive, but its prediction came true. Over the next 19 years, as friends and associates recalled last night at a dinner in Dr. Weston's honor, he continued to organize. He became a quiet, powerful force in the black community, who, as one Harlem minister recalled, took "quite literally the biblical injunction 'by His works shall ye know Him.'"

Not only is much of the litter gone, but so is a lot of the despair suffered by the tenants who lived in the neighborhood's rundown, overcrowded tenements.

A SOURCE OF HOPE

Much of their hope lies in projects Dr. Weston has initiated. They include senior house, a $6.4 million 200-unit apartment

house for the elderly; St. Philip's on the Park, a $10.4 million 260-unit low- and moderate-income building, and a $2.5 million community center providing a variety of services for youths and preschool children.

The housing units were developed with Federal and private funds and private housing for more than 1,300 people. The community center, which offers hot meals, tutoring, supervised recreation and other services, was built solely with private funds.

For Dr. Weston, a tall and distinguished man in his 60's with a deceptively soft manner, a major part of a minister's mission is to "bring God into life."

"And you cannot bring God into life without improving it," he said.

Dr. Weston added that the financial resources available were not adequate "nor is the awareness of understanding of the level on which these resources are needed."

"With respect to the symptoms of the erosion of black life in Harlem," Dr. Weston went on, "the problem has increased catastrophically."

"Yet," he said, "we expect too much of people living under conditions which are inadequately understood, even by the people of good will. The policy makers look at statistics, not people."

ALLAN R. IDE—MAN OF THE YEAR

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ANDERSON of California. Mr. Speaker, on June 11, 1977, the City of Hope will present its annual Man of the Year award to a person who has been a good friend for many years. Allan Ide, a man whose success in life has only been matched by his generosity and service to his community, is truly a deserving recipient of this honor.

Allan was born in San Pedro, Calif., on May 8, 1917. San Pedro is a town that is proud of its multifaceted ethnic heritage, and Allan Ide certainly reflects that background as his parents had arrived from Sweden earlier in the century.

For most of his life, Allan has been connected with the waterfront, starting his career in port operations in 1937. He enlisted in the Seabees at the beginning of World War II, as 3d class petty officer and instructor of rigging, winch driving, stowing and discharging of cargoes, wire and rope splicing. He was stationed in Williamsburg, Va., and Port Hueneme, Calif., before he was sent to the Pacific theater as chief boatswain's mate, later rising to chief warrant boatswain. After being transferred back to the Seabees base in Rhode Island, Allan completed officer's training school and eventually became officer in charge of the Stevedore Training School at Port Hueneme, Calif. Following the conclusion of World War II, he was honorably discharged from the Navy.

After spending some time in the building trade business between 1948 and 1952, Allan returned to the waterfront, working for the Associated Banning Co. in Port Hueneme until he returned to Los Angeles in 1955. He was sent to Stockton in 1960 and placed in charge of the Stockton Stevedore Co., which was owned by Associated Banning. Allan Ide was promoted to vice president of Associated Banning Co. in 1964 and was transferred to San Francisco.

When the Metropolitan Stevedore Co. bought Associated Banning in 1967, Allan was asked to serve as executive vice president as the new ownership recognized his talent and ability. Ide has been an innovative force in the stevedore industry, having designed new equipment and holding several patents. In perfecting operational techniques and plans, he has been responsible for increased efficiency throughout the cargo handling industry. In July 1974 Allan Ide reached his present position—president of the Metropolitan Stevedore Co.—working once again in the Los Angeles-Long Beach Harbor complex.

Allan Ide's professional career shows him to be a man of rare energy, ability, and leadership, and those qualities are also reflected in the many community activities with which he has been involved. He has served as an executive for fundraising activities for many organizations such as the American Red Cross and the City of Hope. A "Pacesetter" for the United Way, Inc., of Long Beach; Ide is also a past director and executive committee member for Goodwill Industries, and former member of the board of directors for the Visiting Nurses Service of Long Beach.

Currently, Allan Ide works on various committees for the National Conference of Christians and Jews, serves on the Advance Gift Committee for the Young Men's Christian Association, the advisory board of the Boys Club of Wilmington, and is a member of the board for the American Cancer Society.

In addition, Allan is a member of the President's Advisory Council, California State University at Long Beach; a member of the board of trustees for the Long Beach Community Hospital; and belongs to the Foreign and International Trade Task Force and the Long Beach Chamber of Commerce.

Allan's leadership in the cargo handling industry is demonstrated by his position on the board of directors of the Master Contracting Stevedore Association of the Pacific Coast, he is a past president of the National Maritime Safety Association and now serves on the board of governors, and is chairman of the Coast Safety Committee.

Mr. Speaker, in the years I have known Allan Ide he has always impressed me with his outstanding strength of character. He has enjoyed a highly successful career, and through his many activities Allan Ide has made our community a better place to live.

My wife, Lee, joins me in expressing our warmest congratulations to Allan as he is named "Man of the Year." The City of Hope has once again made an excellent selection in honoring a person who has demonstrated outstanding community leadership.

We would also like to express our congratulations to Allan's lovely wife, Blanche, and their children Regina, Allane, and Marlyc, who must all be justly proud of the recognition Allan is about to receive.

MILITARY PENSIONS

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ROUSSELOT. Mr. Speaker, there has been a great deal of controversy in recent months over the issue of military pensions and pay for retired armed services personnel. Much of the discussion has centered around an Associated Press story which appeared in the January 25 edition of the Los Angeles Times. The Times article portrayed a slightly tilted view of the military's pension program and corresponding costs. In fact, the article only tells part of the story.

A constituent of mine, Lt. Col. William C. Strickler, retired, has brought to my attention an article by Col. Minter L. Wilson, Jr., editor of the Retired Officers magazine, March 1977, which refutes the Associated Press/Los Angeles Times allegations. Inasmuch as this issue of military retirement and Government pensions will be considered by Congress in the coming months, I am submitting both the Associated Press/Los Angeles Times story and the Retired Officers rebuttal and urge that my colleagues read them and take the varying views under reconsideration:

INTELLECTUAL DISHONESTY

(By Col. Minter L. Wilson, Jr., USA, Retired)

Recent articles on military retirement sent out over the Associated Press wire, together with a shorter story in the Sunday supplement, Parade, have raised a storm of protest among our members. Most characterized the wording as deliberately misleading and slanted—a vendetta against the military and military retirees. They believe the stories to be full of partial truths as well as outright errors. We agree.

TROA PROTESTS

TROA's telegram (not yet answered) to the Washington Bureau Chief and the AP President in New York read:

"We protest AP's intellectually dishonest story 'Military Pensions' by Brooks Jackson which moved on the wire at 10:10 EST today.

"The story is unworthy of the good name of the Associated Press. Not only does the author compare retired pay costs (not pensions) of military retirees from all the armed services to active pay costs for the Army alone, but also he fails to recognize in any way that those military retirees earned their retired pay. That pay was part of the total compensation package earned over their productive years which for most covered three wars—WW II, Korea, and Vietnam.

"At this late date, to imply, as the writer does, that each retiree is drawing an unjustifiably huge amount is ridiculous. Your readers should know that the average retired pay of all military retirees is $6,648 annually—not much above the official poverty level. And the military retiree pays taxes, too.

"The obvious bias of your story is too much. We request you set the record straight."

SETTING THE RECORD STRAIGHT

Since AP officials have not yet seen fit to set the record straight, what are the facts?

First, those stories appear to have been based on a U.S. Civil Service news release of November 2, 1976. The AP moved them over their wires on January 24 and 25, 1977—twelve weeks after the basic news release. That is not precipitate action and should have given adequate time for research. It

seemed strange to us that AP's Pentagon correspondent hadn't written the stories. Perhaps he would have brought too much expertise to the job—even managed to bring some balance to the picture presented.

PARADE'S STRANGE REASONING

The Parade material seems to be based largely on a Harpers magazine (Dec. '76) article by Rep. Les Aspin (D-Wis). As is usual in Aspin's "destroy by press release" style, the "facts" are selected to give the desired effect. In this case, Parade editors did nothing to give balance to his prejudiced views. They merely compounded the problem by providing poor perspective for the figures used.

Consider this example. As of June 30, 1976 (latest available data) there were 1,096,184 military personnel receiving retired or retainer pay. Parade mentioned that, but forgot to tell you 751,244 were enlisted persons. That is 69 percent enlisted, 31 percent officer. Yet, Parade chose to focus on an officer (a recently retired colonel whose retired pay is obviously considerably higher than the $6,648 average) and suggest to its readers that once the officer retires he should somehow be restricted in the freedom all Americans enjoy (out of the military service) to work where and for whom they please. The Parade editors obviously don't believe a military retiree should be allowed to work for the federal, state, or municipal governments, regardless of the expertise they bring to the job.

In their view, we deduce, Congress should pass laws which prevent government retirees from working for any other level of government because they might qualify before they die for a second retirement income. They forgot to mention—or possibly they do not know—military retired pay is not only deferred compensation earned over 20, 30 or more years arduous service, but is also retainer pay which keeps the retiree subject to the Uniform Code of Military Justice and recall to active duty at any time.

There is no logical reason why the military retiree should be deprived of retired pay or restricted in his quest for a job to better support his family and community.

Parade repeats the ludicrous Aspinism that the "current armed forces pension plan will cost the American taxpayer $34 billion a year by the year 2000." To be factual, they could have added that Aspin's annual salary of $57,500, based on the same five percent inflation factor, will be almost $200,000 annually. Or, your $5,000 automobile will cost about $17,000. And, an Army private would be making $25,356.

Absurd? You bet! Given certain assumptions, the figures don't lie, but the politician surely does manipulate them to his own ends. And the journalist who should put them in perspective for you fails. Worse yet, he doesn't even try.

THE AP STORIES

Returning to the Associated Press stories, let's consider why they were so objectionable.

It would be proper to recognize at the start that the logic in paying the military person a fair salary is at least as compelling as for politicians or anyone else. From time to time, that compensation needs to be reviewed to insure that it continues to be based on conditions today and is designed to attract quality men and women to make the sacrifices necessary in the defense of the United States in the future.

These AP stories failed to recognize that simple truth. As with so many press accounts, the negative aspects were emphasized. Service people readily recognize the errors, omissions and distortions, but what is the effect on the public? Too many, not knowing any better, become resentful of the "military."

PARTIAL TRUTHS AND OUTRIGHT ERRORS

AP reports military "retirees—about half in their late 30's and early 40's—can legally receive full pension checks and full pay for their civilian federal jobs." The Dual Compensation Act of 1964 provides that *regular* officers who are civilian employees of the U.S. government currently forfeit 50 percent of all retired pay above the first $4,045. Enlisted men and *reserve* officers are exempt from those provisions. In addition, the unfortunate wording of the AP statement projects the untrue inference that half the retirees holding federal jobs are in their late 30's and 40's. The fact is only 28 percent are under 45 years of age.

By selective omission of pertinent facts, AP manages to imply that most military personnel voluntarily retire after 20 years service, regardless of age. To be objective, AP should have mentioned that only one of every ten individuals who enter the military service ever reach retirement eligibility. Not only is the military career more hazardous than the civilian occupation, but it also demands a unique degree of dedication to duty even above self and family. Few are able and willing to stay in service, despite the possibility of early retirement. Consider, too, that many who have served honorably are forced out early—some prior to retirement eligibility—victims of the "up or out" policy which is designed to keep only the best leaders. Others, having served 20 or more years, are retired involuntarily to keep the ranks filled with young, vigorous personnel.

Serious factual inaccuracies were repeated by AP in stating that the military retiree "gets from 50 to 70 percent of salary as pension." Military retired pay is computed on *base* pay, not on salary. The military equivalent of salary for purposes of compensation comparison is Regular Military Compensation (RMC). RMC is defined in law as the sum of basic pay plus quarters allowance plus subsistence allowance plus federal tax differential. For retirement at 20 years service, military retired pay is between 33 and 40 percent (depending on grade) of RMC. The maximum possible retired pay for 30 or more years service is between 49 and 61 percent of RMC. Therefore, the range of retired pay as a percentage of "salary" is 33 to 61 percent—not AP's 50 to 70 percent.

In contrast, to AP's statement that "many private pensions provide less than half final salary as a pension," we must point out that the *typical* private pension plan provides the retiring employee with more than half his salary. The further statement that "most private pensions (are) generally smaller than the military stipend" is a generalization which is unsupported by available data.

AP points out that "the annual cost of all military pensions has grown almost 10-fold since 1962, to $8.2 billion, while the entire defense budget has not quite doubled." Since there is no explanation, many people incorrectly assume some sinister reason. It wouldn't have taxed AP's staff unduly to have pointed out four things: (1) In recent years, funds authorized for repair or modernization of existing weapon systems, for procurement of new weapons, and for research and development, have been limited, thus automatically making personnel costs, including that for retired pay, a proportionately larger percentage of the overall budget; (2) Use of 1962 data provides a distorted base because the 1962 retired population (313,436) largely reflects the abnormally small standing forces maintained prior to World War II; (3) Since 1962, the Consumer Price Index has more than doubled; (4) The present number of retirees, while increasing will be essentially stable into the forseeable future.

MORE AP DISTORTIONS

"Military retirement includes free medical care when space available in military facilities, or free health insurance when it isn't" says AP, forgetting that money and doctors for military facilities have been chronically short in recent years and that the "free" health insurance is not free. The retiree pays the first $100 in charges for family per fiscal year and 25 percent of allowable inpatient and outpatient costs thereafter. In most cases, doctor and hospital fees are higher than allowable charges under the Civilian Health and Medical Program of the Uniformed Services. In addition, no reimbursement is granted for an increasing number of treatments. So the typical retiree pays substantially more than AP alleges.

"Free travel when space is available on military transport" sounds great! It is on occasion. But how many have waited days for that elusive "space," only to have to return home disappointed? Or, waited weeks overseas only to return via commercial means? Some have the time, patience, and money to wait, many don't.

"They (military members) make no cash contribution to their pensions." Since the trend in the private sector is towards noncontributory retirement systems, AP could have easily added that this is in line with the 1975 Bankers Trust Study of Corporate Pension Plans which reveals that 75 percent of private plans do not require employee contributions.

AP asserts "the costs of military pensions have grown rapidly because they are pegged to active-duty pay, which has been increased to attract an all-volunteer force." What are the facts? The increases in pay to prepare for the all-volunteer force were primarily for lower grade officer and enlisted personnel—i.e., the pay grades from which members do not retire. Until Congress set aside the system in June 1958, retired pay was "pegged to active-duty pay" and recomputed each time there was a pay raise for the active forces. Since October 1963, retired pay has been adjusted as the CPI rose. The result is a system of 15 different retired pay scales in which persons of the same grade and service receive as much as 50 percent less than later retirees. Understandably, those on the short end are bitter.

There are other "facts" which could be cited to illustrate the intellectual dishonesty of the Parade and AP stories—to reinforce that a new low in incompetent and unfactual reporting has been reached. Additional light on these matters is shed in the "Washington Scene" column on pages 14–17 ("An Observation on Proposed Military Retirement Changes) and "Benefit Erosion," pages 48–50.

GRAVY TRAIN?

For the life of us, we can't find the gravy train. If there really is one, why aren't all those unemployed flocking to the recruiting stations. We do not argue that military retirement is a "bum rap." It isn't. But it is earned through long, hard hours and years of demanding, dirty and dangerous work. Nothing the serviceman or woman gets is "free."

The individual who elects a military career accepts its unique conditions—both good and bad. These include frequent separations from family, sometimes for extended periods; inconvenient moves resulting in financial loss as well as moves at inopportune times; substandard housing; and a host of other items too numerous to mention. But one more item must be listed. That is the willingness to make any sacrifice to include laying down one's life if called upon.

Military retirees fulfilled the provisions of their contract stipulated by the American people through the United States Congress.

Military retirees have nothing to apologize for.

At the very time President Carter has granted amnesty to those who refused to serve their country in time of war, it is a gross paradox that some short-sighted persons would suggest the American people renege on the benefits promised those who served their nation faithfully.

Now is the propitious time for our civilian leadership to reafirm their faith in the men and women who have chosen the military career. It is they who should be in the forefront in setting and keeping the record straight.

RUNDOWN OF "LOSSES" IN PAY AND BENEFITS

Washington—The "losses" in military pay and benefits—actual and predicted—have been subject of numerous reports by the services and military associations.

The following rundown, though not released, has been circulated in the Pentagon.

Some of the abbreviations refer to:

USAFI—U.S. Armed Forces Institute, a correspondence study program.

SBR Program—Selective reenlistment bonus for critical skills.

RMA—Retirement modernization act, the DoD plan for overhauling the retired pay system.

MILITARY BENEFITS AND PAY REDUCTIONS (SINCE FISCAL YEAR 1973)

Date	Item	Sponsor	Impact
Fiscal year 1973	CHAMPUS benefits	OSD	Eliminated certain previously provided care.
January 1973	Shipment of foreign POV's	Congress	Eliminated entitlement increased $400–$600 cost per vehicle to member.
November 1973	USAFI	do	Program eliminated. Member cost $50.
Fiscal year 1974	Reduced medical support	OSD /services	Increased medical cost to member (CHAMPUS).
June 1974	Savings deposit program		Eliminated (loss of 10-percent interest source).
July 1974	Regular reenlistment bonus	OSD/Congress	Up to $2,000 loss to some members.
October 1974	Education/commissioning program for EM	Congress	Eliminated funds. EM must pay at least part of cost.
December 1974	Lump-sum reenlistment bonus	OMB	Lump sum payment eliminated. $5,000 bonus equates to $3,790 over 6 yr with inflation.
January 1976	Travel pay on reenlistment	Congress	Lost for immediate reenlistment. Average $110 per member.
July 1975	Shortage speciality pay	do	Pro pay eliminated for most skills.
Fiscal year 1975	SRB program	OSD	Skills reduced.
October 1975	5-percent pay cap	OMB	Loss of purchasing power—raise less than inflation and the recommended 8-plus percent.
1976	Leave sellback	OSD/Congress	Limit to 60 days in career and loss of allowance entitlements.
1976	Disability retirement tax exemption	Congress	Reduces retired pay for some members.
1976	Pay raise reallocation	OSD/OMB	Reduction in future retirement base, 1.2 percent in 1976.
1976	1-percent kicker to CPI retired pay adjustment	do	Eliminated.
1976	Reduced pay raise (4.83 percent)	OMB	Adjustment mechanism changed which reduced pay raise from 8-plus percent level.
1976	CHAMPUS—Reimburse on 75th not 90th percentile	OSD	Increased cost to patient when doctors refuse to participate.
1977	GI bill	Congress	Current program terminated. New program contributory.

BENEFITS AND REDUCTIONS UNDER CONSIDERATION

1974–75	Retirement program	OSD/OMB	Reduction in retired standard of living expectation.
1975–77	RMA pay raise reallocation, Representative Aspin	Congress	
1974–77	Pay caps	OMB	Further purchasing power reduction.
1977	Salary system	OMB/Congress	Perceived pay and benefit reduction based on past OSD.
1977	Sales and excise taxes on PX/commissary sales	Advisory Commission on Intergovernmental Relations.	Monetary loss to members.
1977	Further reduction medical support	OSD	Increased medical cost to member.

MILITARY PENSION COST TO EXCEED ARMY'S PAYROLL

(By Brooks Jackson)

WASHINGTON.—The Pentagon will pay more to retired military personnel this year than the Army pays to all active-duty soldiers.

This growing pension expense is more than the Air Force has budgeted this year to buy planes and missiles. And it is more than this year's Navy budget for shipbuilding.

Since 1962, the total defense budget has almost doubled, rising from $51.1 billion to this year's $100.1 billion. But the cost of military pensions has grown nearly tenfold to $8.23 billion.

In 1962, military pensions amounted to 1.7% of the Defense Department budget. For 1977 the figure is 8.2%.

In the next fiscal year, the cost will probably reach $9 billion, and it will be pushing $10 billion in the year after that.

Unless the system is changed, the annual pension cost could exceed $30 billion by the year 2000, according to an estimate by the General Accounting Office. That estimate is based on holding inflation to 5% a year.

The cost of military pensions has grown rapidly because the pensions are pegged to active-duty pay, which has been increased to attract an all-volunteer force.

In addition, the number of military pensioners has more than doubled since before the Vietnam war. Now, more than 1 million persons are receiving pensions, and the number is expected to increase to 1.3 million by 1980.

This year's $8.23 billion pension cost exceeds the $8.19 billion budgeted for pay, allowances and travel for all Army personnel, the $6 19 billion for Navy shipbuilding and the $7.92 billion for Air Force missile and aircraft procurement.

The military pension system is more generous than the federal government's civilian retirement system, and all major private pension plans.

Today, a typical career E–7 sergeant retires at age 41 after 22 years of service. He or she would draw $534 a month for life. A typical career lieutenant colonel would retire after 25 years of service at age 46, and would draw retirement pay of $1,282 a month.

Military retirement includes free medical care when space is available in military facilities, and free health insurance when it is not. It includes shopping privileges in cut-rate commissaries and free travel on military transport when space is available.

Military retirees are covered by Social Security and draw those benefits in addition to their pensions when they reach age 65, for men, 62 for women.

Military personnel make no cash contributions to their pensions, which are automatically protected against inflation.

Calls for change in the system are coming from several directions, including the Pentagon itself. None of the proposals calls for cutting payments to those already retired, and military lobbying groups generally oppose reducing benefits of future retirees.

"If you start cutting back on our benefits, how about cutting back on some of the others? said Robert B. Laurents of the National Assn. for Uniformed Services, a group representing active and retired military personnel. He said the cost of the Social Security system and other pensions was rising too. "We object to being singled out," he said.

But budget pressures are forcing a new look at the military benefits. One of President Carter's budget advisers, Barry M. Blechman, estimated last year that $2 billion to $3 billion could be saved each year by cutting military pensions to bring them more in line with the civil service retirement system.

Carter has pledged multibillion-dollar savings in the Pentagon budget, and Defense Secretary Harold Brown has said pensions will be among the items examined for possible savings.

The Pentagon has proposed changing the system to encourage 30-year military careers. Currently the average career officer retires after 25 years, enlisted personnel after 22.

The Pentagon proposal would reduce the pensions for those serving less than 30 years. It would also trim military pensions by half of the amount of any Social Security payments received.

Last year the blue-ribbon Defense Manpower Commission proposed granting military pensions after 30 years in noncombat jobs or after 20 years in combat jobs. Currently, a file clerk and a front-line soldier get equal credit toward retirement.

Rep. Les Aspin (D-Wis), a former Defense Department economist who is now among the leading critics of military waste, has proposed deferring pension payments until age 55 or later, depending on length of service, for voluntary retirements.

For forced retirements, both Aspin and the Pentagon would continue to pay immediate pensions, although Aspin's plans would cut those pensions by $1 for every $2 the retiree earns in a civilian job.

EX-FELON VOTING RIGHTS BILL

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing a bill today

that would restore voting rights to ex-felons in Federal elections. This matter has been a subject of comment and controversy over a period of many years and I think that the time has come for definite and positive action on a right that has been too long denied for those who have paid their debt to society in full.

This bill would authorize the States to make provisions for all ex-offenders to participate in the direct vote of Federal officials during general, runoff, or primary elections.

This bill would erase a serious defect in our system of justice. If a person has completed the period of confinement, paid all fines, and satisfied all other penalties, then he should be able to exercise his vote. And, the bill provides for men and women on parole to vote also.

The right to vote is fundamental in our society. Once a person has paid his debt, there is no justification for shutting him out from full citizenship.

REMEMBER THE CITIES

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. WEISS. Mr. Speaker, despite declarations to the contrary, the urban crisis is not over. In fact, it has intensified in many ways as the economic problems of our country are felt most acutely in our cities.

In New York City, for example, unemployment has remained consistently well above the national average for the past few years. More than 10 percent of New York's workforce cannot find jobs.

The housing stock of our Nation's largest city is rapidly decaying, with abandonment each year claiming thousands of structurally sound units.

New York's extensive mass transit system is sinking into dilapidation. The fares increase steadily as service precipitously declines.

America's cities have repeatedly been assured that the Federal Government is aware of their needs and that help will soon be forthcoming. But our urban population now questions whether these promises were intended as serious pledges of assistance. The people of the cities wait in vain for action to supercede words.

An article by James Weighart in the May 4 New York Daily News aptly and eloquently catalogs urban America's unmet needs and calls on President Carter to make his economic and legislative programs more responsive to the more than 100 million Americans who live in urban areas.

Mr. Weighart's analysis is a compelling one that should prompt us to take immediate, remedial action. I wholeheartedly commend it to your attention. Its text follows:

HEY, JIMMY, REMEMBER US, THE CITIES?

(By James Wieghart)

WASHINGTON.—President Carter has shown little sign that he intends to repay the city-dwellers who voted for him in droves in hopes that he would reverse the tide of urban decay that threatens to overwhelm most of the large central cities in the North and East.

The latest sign of Carter's less than red-hot commitment to the cities was his welfare reform message Monday, in which he deferred for four years any meaningful action to federalize the welfare burden that is crushing many of the big cities.

But this was no surprise in view of Carter's earlier decision to delay for at least several years—perhaps until his second term—a comprehensive national health insurance program, and his flimsy $15 billion economic stimulus package for this fiscal year. Instead of focusing on jobs, the package was largely made up of tax breaks for individuals and business, and he dropped more than $11 billion of this when he withheld the ill-fated $50 tax rebate plan.

The lack of urgent concern for the problems of the cities was also reflected in Carter's energy plan. Although the energy package will go part of the way toward curbing the enormous waste in oil and gasoline that goes on in this wacky automobile culture of ours by jacking up fuel prices so high that only the rich will be able to indulge themselves, it does little or nothing to spur a change in lifestyle that will eventually be required as oil reserves are depleted.

Thanks to the auto mistique and billions of dollars in federal spending for interstate highways, middle-class housing subsidies and the creation of dozens of federal tax shelters and loopholes, Americans are now so dispersed in suburbia, exurbia and rural areas that they need several cars per family just to get to work and school and the shopping center. Public transportation is not even a feasible alternative for most of them because of the low density dispersal of housing.

Any sensible, long-term energy package should have included incentives not only to lure people back to the cities, but also to rehabilitate substandard housing and build new housing so that they would have a decent place to live when they got there.

It may be still too early in Carter's term to rule out all hope that he may yet come up with some bold and imaginative programs to help put the financially pressed cities back on their feet again. Treasury Secretary W. Michael Blumenthal continues to voice public support for creation of a national urban development bank that would help cities finance rehabilitation and new construction. And Carter has expressed interest in stepping up youth employment programs, although he clearly favors a gradual approach.

But despite the administration's continued lip service to press for full employment and to support youth job programs and to provide financial help to troubled cities, the money sought for such efforts has been modest to say the least. In fact, the most influential Carter Administration official in the area of finances—Budget Director Bert Lance—makes no bones about his conviction that holding down inflation and achieving a balanced budget by 1980 (coincidentally, a presidential election year) are the top priorities as far as he is concerned. Lance is convinced that the best way to reduce unemployment and lay a firm foundation for full economic recovery is through restoring confidence in the private sector, not through increased federal spending.

Thus, Lance is opposed to any massive increase in federal spending for youth employment or public jobs programs. Instead, he favors federal exhortation or tax incentives as the best means of getting the private sector to create new jobs for the unemployed. Federal job programs, he says, merely make the recipients dependent on the government instead of creating permanent employment. When the federal program ends, the jobs end and the worker is right back where he started, jobless and once more on the street.

Sensible as this may sound to the business community, which, after all, benefits from a large pool of unemployed from which to choose, it is not very reassuring to those looking for work. There are now more than 7 million persons looking for work who cannot get jobs, half of them youngsters from 16 to 24 years of age. In addition there are millions of others unemployed who have given up even looking for jobs, either through frustration or lack of motivation. A disproportionate number of these are young men and women who have never held a full-time job.

CENTURIAN BUSINESSES AND INDUSTRIES HONORED

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. WALSH. Mr. Speaker, it is my pleasure today to pay tribute to 46 businesses and industries being honored at a luncheon of the Greater Syracuse Chamber of Commerce for being "centurian" members of the central New York business community.

Each of these firms, whose founding dates as far back as 1825, has unquestionably demonstrated its faith in the economic climate of central New York and the Finger Lakes region. Each has faced some boom years; each has faced some very difficult years. But in weathering the cycles, each has become an important part of the economic backbone of the area.

It gives me great pleasure to acknowledge their individual and collective contribution to the community, not only in a business sense, but also in terms of the civic leadership each has provided over the years.

The list of those being honored, by founding date, are:

	Date
Chapman Lumber Company	1825
The Post-Standard	1829
Gere & Stohrer Inc	1839
Syracuse Herald-Journal	1839
Frazer and Jones	1845
Connecticut Mutual Life Insurance Co	1848
Bowen, Perry & Fobes Inc	1849
Niagara Mohawk Power Corp	1849
Church & Dwight Co., Inc	1849
Syracuse Savings Bank	1849
Thomas Talbott & Sons	1859
Merchants National Bank	1850
Powers Drug Co	1854
The Onondaga Savings Bank	1855
Will & Baumer Candle Co., Inc	1855
Syracuse China Corp	1871
Hiscock, Lee, Rogers, Henley & Barclay	1858
Massachusetts Mutual Life Insurance Co	1859
H. J. Howe, Inc	1860
Yackel and Rupp, Inc	1864
Dey Brothers, Inc	1877
Greenleaf Funeral Home	1865
Syracuse Lithographing Co	1865
Auer & Company	1865
J. & F. B. Garrett Co	1866
Armour and Company	1867
J. F. Friedel Paper Box Co	1867
Charles Hubbard Son & Co., Inc	1867
Tip Top Bakers	1867
The Borden Company	1868
F. H. Ebeling Company	1868
First Trust & Deposit Company	1869

Sherwood Inn	1807
King and King Architects	1868
St. Joseph's Hospital	1869
Syracuse University	1870
P. Drescher Co., Inc	1870
Marsellus Casket Co., Inc	1872
Dun and Bradstreet, Inc	1872
Equitable Life Assurance Society of United States	1875
Edward Joy Co	1875
Lipe Rollway Corp	1875
Oberdorfer Foundries, Inc	1875
Crucible Steel Co. of America	1876
John Deere Co	1876
McKesson and Robbins, Inc	1866

POLITICAL DEFECTOR BLASTS VIET REPRESSION

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. McDONALD. Mr. Speaker, the cry against our involvement in Southeast Asia was to "stop the war" or "stop the killing" in years past. But neither the killing nor the fighting stopped when the United States retreated from Southeast Asia. We were always told that all that was needed in South Vietnam was to get rid of the "oppressive Thieu regime" and all would be well. We were further told that a "third force," neither Communist nor part of the "Thieu clique," could solve all the problems of South Vietnam if the United States would just permit it. So now we have the spectacle of a prominent member of this so-called "third force" emerging to tell there are things worse than Thieu, there are the Communists who are even more oppressive. He also tells us of 200,000 people in prison. He further suggests that the Vietnamese now could use more guns with which to throw out the Communists and that our intervention was right. The article from the Christian Science Monitor of May 4, 1977, follows for the consideration of my colleagues:

POLITICAL DEFECTOR BLASTS VIET REPRESSION

(By David Tharp)

TOKYO.—A representative to Communist Vietnam's National Assembly charges that fundamental human rights do not exist in his country, that 200,000 political prisoners are held, and that armed resistance to Communist rule still continues.

Nguyen Cong Hoan, elected to the assembly from Phu Khanh Province and his secretary, Tran Quang Hiep, secretly escaped from Vietnam aboard a small motorboat with Tran Van Thung and Tran Van Son, former opposition politicians.

An anti-American leader of the "peace bloc" under the regime of President Nguyen Van Thieu, Mr. Hoan had opposed U.S. intervention in Vietnam. He had welcomed the Communists as liberators at the fall of the Saigon government in April, 1975, and was selected by the Vietnamese Communist Party as a representative to the Hanoi assembly in April, 1976.

ONLY RIGHT: TO AGREE

As one of the 5 percent of non-Communist Party members in the 280-seat assembly, Mr. Hoan served on the Cultural and Education Committee, but the only power he had was to raise his hand to agree with party policies. He said he "agonized" over the decision to leave his wife and four children behind in Vietnam so that he could speak out against the present regime.

"I realized that the Communists were worse than I had imagined," he said.

"In Vietnam today the fundamental human rights are not guaranteed. No freedom of religion, speech, or movement. In a word, there is no freedom at all, except the freedom to obey the orders of the Communist Party, otherwise you will be put into prison."

"Reeducation," Mr. Hoan continued, means simply to be in prison. The 1973 Paris agreement stipulated that the Hanoi government would not punish officers and employees of the Saigon regime, but he told of 200,000 former military men and civilians being kept in prison camps throughout Vietnam.

CAMBODIAN COMPARISONS

"When the Khmer Rouge took over in Cambodia, they killed their opposition immediately. . . . The Vietnamese Communists are wiser. They compiled lists, classified people according to their importance, and sent them to different camps. Those who are killed are killed secretly."

"The Communists sent nearly all senior officers and high-ranking officials of the Saigon regime to the large prisons in Ha Bac Province near the Chinese frontier," he said.

Prisoners do hard labor. Mr. Son described some of his duties as cleaning toilets for Communist cadres and cutting trees in the jungle near his "reeducation" camp.

Food was minimal. "We were given 200 grams of rice a day with some salt. Once a week we had some vegetables, and dried fish perhaps once a month," Mr. Son said. "We had no meat and worked eight hours a day. There was no political indoctrination."

FOOD AS A WEAPON

Mr. Son and Mr. Hoan described the lack of food not as a matter of shortages but as a means of breaking down resistance.

All religious publications have been stopped. In former Roman Catholic schools throughout the South teachers must present Marxist-Leninist lectures, the two men said.

Admission to universities and technical schools is reserved strictly for students whose parents did not serve the Saigon government in any capacity. Increased segregation in high school admissions will start this year, Mr. Hoan added.

Newspaper articles strictly follow the party line, and when ordinary Vietnamese meet foreign journalists, they must speak through an official interpreter, even though the Vietnamese may be fluent in the language used by the newsman, said Mr. Hoan.

NEWSPAPERS SILENT ON VISIT

No Vietnamese paper carried news of the recent mission on men listed as missing in action sent to Vietnam by President Carter, Mr. Hoan said.

He said he had no complaints about the hard work necessary to reconstruct Vietnam after 30 years of war.

"We wanted peace because people had suffered from war and political oppression under the old social institution. But now we realize we lost a precious thing—freedom," he said. "The American intervention was right. Just the manner was wrong. They supported a weak government."

Mr. Hoan said he now thinks many Vietnamese are prepared to accept another war to sweep out the Communists.

He said the biggest ammunition dump at Ling Binh, the former U.S. Army headquarters near Saigon, was blown up March 19 by resisters to Communist rule.

The blast lasted four hours and shook all of Saigon. You should see the faces of the Saigonese when they hear explosions and gunfire now; they break out in smiles."

Mr. Hoan is applying for asylum in the United States. He said he would ask Americans to enlist international political help to free the southern Vietnamese. He also wanted weapons, food, and medical supplies for anti-Communist guerrilla bands.

"If there were free elections in Vietnam today, sponsored under the United Nations, the Vietnamese would overwhelmingly reject the Communists," he predicted.

CONCERNING THE INDICTMENT OF FBI AGENT JOHN J. KEARNEY

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. KOCH. Mr. Speaker, I am sure that many of our colleagues have received letters, both pro and con, concerning the Justice Department's involvement in the indictment of FBI Agent John J. Kearney. In response to constituent inquiries, I asked the Congressional Research Service to provide me with a background memorandum on the issues involved in the indictment. Because of the complexities involved in this matter, I thought it would be of benefit to all our colleagues to have this memorandum inserted in the RECORD so that each Member can examine the issues involved. The text of the memorandum follows:

THE LIBRARY OF CONGRESS,
CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., May 4, 1977.

To: Honorable Edward Koch.
From: American Law Division.
Subject: Issues Raised by Indictments for Wiretapping and Mail Opening by FBI Personnel Prior to 1973.

In response to your inquiry and our subsequent telephone conversation we are enclosing a report prepared on the issues raised by indictment of FBI personnel for wiretapping and mail opening prior to 1973. You will note that because the case is still pending and because a number of critical facts are as yet unknown, no definitive judgment can be made with respect to the availability of various defenses. We are also enclosing a copy of *United States* v. *Erlichman*, 546 F. 2d 910 (D.C. Cir. 1976); *United States* v. *Barker*, 546 F. 2d 940 (D.C. Cir. 1976) and the Justice Department Report on its decision to forego prosecution for the CIA mail cover operation which ended in 1973.

CHARLES DOYLE,
Legislative Attorney.

ISSUES RAISED BY INDICTMENTS FOR WIRETAPPING AND MAIL OPENING BY FBI PERSONNEL PRIOR TO 1973

On April 7, 1977, the Department of Justice announced that John J. Kearney had been indicated on two counts of conspiracy,[1] two

[1] 18 U.S.C. § 371. Conspiracy to commit offense or to defraud United States. If two or more persons conspire either to commit any offense against the United States, or to defraud the United States, or any agency thereof in any manner or for any purpose, and one or more of such persons do any act to effect the object of the conspiracy, each shall be fined not more than $10,000 or imprisoned not more than five years, or both.

counts of obstruction of correspondence[2] and one count of unlawful wiretapping.[3] The indictments charged that Mr. Kearney while an FBI agent in New York City conspired, directed and assisted in the interception of wire communications and the opening of mail from August, 1970 to June, 1972 in connection with FBI attempts to locate and apprehend Weatherman fugitives. While the press release is silent on the question, no warrant was apparently ever issued authorizing such activity.

(3) Nothing contained in this chapter or in section 605 of the Communications Act of 1934 (48 Stat. 1143; 47 U.S.C. 605) shall limit the constitutional power of the President to take such measures as he deems necessary to protect the Nation against actual or potential attack or other hostile acts of a foreign power, to obtain foreign intelligence information deemed essential to the security of the United States, or to protect national security information from foreign intelligence activities. Nor shall anything contained in this chapter be deemed to limit the constitutional power of the President to take such measures as he deems necessary to protect the United States against the overthrow of the Government by force or other unlawful means, or against any other clear and present danger to the structure or existence of the Government. The contents of any wire or oral communication intercepted by authority of the Presidet in the exercise of the foregoing powers may be received in evidence in any trial hearing, or other proceeding only where such interception was reasonable, and shall not be otherwise used or disclosed except as is necessary to implement that power.

It has been suggested that prosecution of these similar indictments would be unfair and/or subject to a complete defense because (1) of the unsettled state of the law at the time, (2) of the policy or absence of policy of the Department of Justice at the time, (3) of the absence of a requisite specific intent, and/or (4) because of the Department of Justice's determination not to prosecute similarly situated personnel of the CIA.

On February 18, 1976, the Department of Justice announced that it would not prosecute former CIA Director Richard Helms for authorizing a 1971 break-in conducted as part of a national security investigation. The reason given was the difficulty of prosecuting a case under 18 U.S.C. § 241 (conspiracy to violate civil rights) where the accused could claim the absence of the requisite specific intent to deprive civil rights based on his authority to protect intelligence sources from unauthorized disclosure, press release reprinted in *United States* v. *Barker*, 546 F. 2d 940, 951n. 36 (D.C. Cir. 1976).

On January 17, 1977 the Department released its report on investigations and prosecutions with respect to CIA mail opening from 1953 to 1973. The report concluded that CIA personnel associated with mail openings from 1953 to 1973 should not be prosecuted. Several reasons were offered for this determination: (1) During the period that the mail was opened there were grounds for believing that this was legally permissible as part of a foreign intelligence gathering operation. (2) While the operation may well have been known to officials at the highest levels there was apparently little clarification of the law or direction of subordinates from these officials. (3) Institutional changes and developments in the law could better assure there would be no repetition of the activities than prosecutions which might well fail. (4) There were serious questions as to whether the evidence would support convictions.

Under common law, federal statutes and the Constitution, the Executive Branch acting through the Department of Justice is vested with prosecutorial discretion, *United States* v. *Cox*, 342 F. 2d 167 (5th Cir. 1965); *Newman* v. *United States*, 382 F. 2d 479 (D.C. Cir. 1967; *Inmates of Attica Correctional Facility* v. *Rockefeller*, 477 F. 2d 375 (2d Cir. 1973). It decides when to initiate and when to terminate a prosecution. A unilateral determination not to prosecute is within its discretion. Subject to constitutional restrictions such as double jeopardy and statutory limitations such as the statute of limitations, such a determination may be unilaterally changed and prosecution initiated. Likewise, the determination not to prosecute a particular individual or group will not ordinarily preclude the prosecution of similarly situated individuals or groups unless selection for prosecution is based on race, religion or some like motivation, *Oyler* v. *Boles*, 368 U.S. 488 (1962); *United States* v. *Smith*, 523 F. 2d 771 (5th Cir. 1975); *United States* v. *Bell*, 506 F. 2d 207 (D.C. Cir. 1974). Finally, a decision not to prosecute for certain violations is no impediment to prosecution for other indictable charges, *Minkin* v. *United States*, 383 F. 2d 427 (9th Cir. 1967); *United States* v. *Jones*, 527 F. 2d 817 (D.C. Cir. 1975). Thus, as a matter of law, earlier announcements of the Justice Department of its intention to decline prosecution of certain CIA personnel would not, in and of itself, bar subsequent prosecution of either the CIA personnel or of similarly situated FBI personnel for violation of these statutes or other applicable provisions of law. Of course, the Department might consider the factors which led to the original determinations of continued validity. Moreover, those factors and adherence to the decision to forego prosecutions of CIA personnel might present strong arguments in favor of a like determination in the case of similarly situated FBI personnel on policy grounds. However, there may be important distinctions between the two groups of potential defendants which influence a different prosecutorial determination for each.

The possible defenses with respect to mistake of law and mistake of fact are more difficult. In order to understand them it is necessary to appreciate the confusion that surrounds the law of search and seizure, wiretapping and national security. From 1928 and for almost forty years the interception of telephone conversations was not considered a search or seizure within the meaning of the Fourth Amendment, see *Olmstead* v. *United States*, 277 U.S. 438 (1928); *Berger* v. *New York*, 388 U.S. 41 (1967), unless the tap was accomplished by some trespass on private property. However, from 1934 to 1968 provisions of the Communications Act outlawed wiretapping when accompanied by disclosure of the intercepted conversation, 42 U.S.C. § 605 (1964). During much of this period the Department of Justice maintained that Government wiretapping and internal use of the results was not outlawed since there was no requisite disclosure, i.e., Department of Justice wiretapped and there was no disclosure outside the Department. Moreover, for most of this period there was an ever broadening use of wiretaps for national security purposes in spite of the language of the Communications Act which was subsequently held not to bar such activities, *United States* v. *Butenko* 494 F. 2d 593 (3d Cir. 1974). The list contained in 18 U.S.C. § 2511(3) reflected what some believed where the boundaries of permissible warrantless interception under the Communications Act and the 1967 interpretations of the Fourth Amendment.

On June 19, 1972, the Supreme Court rejected the Government's contention that warrantless wiretaps could be utilized against purely domestic threats to national security, *United States* v. *United States District Court*, 407 U.S. 297 (1972). The question of whether warrantless interceptions are constitutionally and statutorily permissible when conducted under the President's authority to conduct foreign affairs and as Commander-in-Chief is still unclear, compare *United States* v. *Butenko*, *supra*, with *Zweibon* v. *Mitchell*, 516 F. 2d 594 (D.C. Cir. 1975).

These facts suggest the possibility of a mistake of law defense in Mr. Kearney's case. Ordinarily, ignorance or mistake of the law is no defense to a criminal charge, *United States* v. *International Minerals & Chemical Corp.*, 402 U.S. 558 (1971). However, there may be at least two exceptions to this general rule. The defense may exist in connection with an offense which is not *malum in se* and the accused reasonably relied on a mistaken pronouncement of the law by a court or executive officer empowered to interpret or enforce the law, *United States* v. *Mancuso*, 139 F. 2d 90 (3d Cir. 1943); *Cox* v. *Louisiana*, 379 U.S. 59 (1965). A defense may also exist where the offense requires a specific intent which the accused could not have if mistaken as to the lawfulness of his act. Of course, no recourse to the defense need be made if there is a statutory defense.

Mr. Kearney has been indicted for violation of 18 U.S.C. § 2511(1)(a). Section 2511 (3) provides that section 2511(1)(a), *inter alia*, shall not be construed as limiting the constitutional authority of the President (1) "to protect the Nation against actual or potential attack or other hostile acts of a foreign power," (2) "to obtain foreign intelligence information deemed essential to the security of the United States," (3) "to protect national security information from foreign intelligence activities," and (4) "to protect the United States against the overthrow of the Government by force or other unlawful means, or against any other clear and present danger to the structure or existence of the Government." In order to establish section 2511(3) as a defense in a particular case it would have to be shown that (a) the President had the constitutional power to act and (b) that he exercised that power. In *United States* v. *United States District Court*, the Supreme Court held that the President might not constitutionally order the warrantless interception of the conversations in connection with purely domestic threats to national security. The question of whether he might issue such an order where foreign involvement was concerned is as yet unclear as noted earlier. Whether the President or some permissible delegate authorized the interceptions in Mr. Kearney's case as part of an operation involving a foreign government is unclear. If not, then section 2511 (3) can only be used as part of a mistake of law defense to a charge under section 2511 (1)(a). Assuming that some Department of Justice official with authority to interpret or enforce the law had advised Mr. Kearney

---

[2] 18 U.S.C. § 1702. Obstruction of correspondence. Whoever takes any letter, postal card, or package out of any post office or any authorized depository for mail matter, or from any letter or mail carrier, or which has been in any post office or authorized depository, or in the custody of any letter or mail carrier, before it has been delivered to the person to whom it was directed, with design to obstruct the correspondence, or to pry into the business or secrets of another, or opens, secrets, embezzles, or destroys the same, shall be fined not more than $2,000 or imprisoned not more than five years, or both.

[3] 18 U.S.C. § 2511. Interception and disclosure of wire or oral communications prohibited—

(1) Except as other specifically provided in this chapter any person who—

(a) willfully intercepts, endeavors to intercept, or procures any other person to intercept, any wire . . . communication; . . . shall be fined not more than $10,000 or imprisoned not more than five years, or both.

* * * * *

prior to June 19, 1972 that section 2511(3) and the general case law with respect to the powers of the President as principal agent for foreign affairs and Commander-in-Chief permitted the use of wiretapping against purely domestic threats to national security, the defense of mistake of law may have some vitality. However, even under these facts there are some difficulties. The mistake of law defense even under these circumstances requires a reasonable, good faith reliance. Yet, from January, 1971, the only case law squarely on point repudiated such a theory, see *United States* v. *Sinclair*, 321 F. Supp. 1074 (E.D. Mich. 1971); *United States* v. *United States District Court*, 444 F. 2d 651 (6th Cir. 1971). On the other hand, under such circumstances, Mr. Kearney might find support in *United States* v. *Ehrlichman*, 546 F. 2d 910 (1976) and *United States* v. *Barker*, 546 F. 2d 940 (D.C. Cir. 1976) (Enclosed).

A similar analysis might be applied to 18 U.S.C. § 1702. That section contains no provision comparable to section 2511(3) but there is some indication that what "is required to establish a prima facie violation of section 1702 is a showing that (a) that defendant opened mail in postal channels with 'design to obstruct the correspondence, or to pry into the business or secrets of another' and (b) *the defendant lacked lawful authority to do so.*" Department of Justice Report at 23 (emphasis added) citing *United States* v. *McCready*, 11 F. 229, 236 (W.D. Tenn. 1882). Here too the question of whether Mr. Kearney had lawful authority may turn on facts that are unavailable or upon establishing a defense of mistake of law which may prove difficult. However, in the case of 1702 there is definite authority to suggest that a specific intent is required, *United States* v. *Brown*, 425 F. 2d 1172 (9th Cir. 1970), and although the Justice Department suggests that this is not the better view it would give added strength to any assertion on Mr. Kearney's part that his reasonable view of authority prior to *United States* v. *United States District Court* bars conviction.

Of course the failure of possible defenses as a legal matter does not mean the facts might not suggest that as a policy matter prosecution should have been foregone. The CIA mail covers and break-ins which the Department has declined to prosecute are analogous to Mr. Kearney's case in a number of respects. They may differ in one important respect, the CIA activities seem more clearly directed at foreign activities or foreign threats to national security. However, prior to 1972 the Justice Department contended that this was not a meaningful distinction and Mr. Kearney's activities apparently ceased at approximately the same time as the Supreme Court's repudiation of this position.

CHARLES DOYLE,
Legislative Attorney.

REV. JESSE JACKSON ON THE URBAN SCHOOL CRISIS

HON. GEORGE M. O'BRIEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. O'BRIEN. Mr. Speaker, Rev. Jesse L. Jackson is founder and president of Operation PUSH, a Chicago-based organization dedicated to inspiring blacks to greater self-help efforts. A close associate of the late Rev. Martin Luther King, Jr., Reverend Jackson headed Operation Breadbasket, a successful economic mobilization drive during the 1960's.

When Jesse Jackson speaks, he is worth listening to.

I wish to commend to the attention of my colleagues in the Congress a recent essay by Reverend Jackson entitled "Urban Schools: Institutionalizing Mediocrity," in the Washington Post for April 27, 1977:

URBAN SCHOOLS: INSTITUTIONALIZING MEDIOCRITY

(By Jesse L. Jackson)

It's the age of the one-way guarantee. Guaranteed income. Guaranteed employment. Guaranteed health care. Guaranteed benefits. Guaranteed admission. Guaranteed everything.

Except one thing. What about guaranteed production? Ask that, and you get an outraged reply: "That's guaranteed performance, guaranteed measurements! That's discriminatory!"

Nowhere is the suggestion drawing more blood than in American public education, where the guarantee of performance doesn't extend even to producing high school graduates who can read and write.

The trend, especially in urban centers, is for public education to get out of the education business. Public education's identity crisis is so severe that as it has locked out the communities and children who need education the most.

Today' big education story is not what's happening in the classrooms but the struggle of public-schools-as-employment-agencies v. public-schools-as-education-agencies.

Guess who's winning.

It's happening everywhere, but the most ludicrous and cruel examples are in big cities, where teachers and administrators are most powerful, where budgets are biggest and the children the least educated.

Consider Chicago. Its school budget is just over a billion dollars—$1.05 billion to operate a system serving a half million children, a majority of them black, who attend classes in more than 600 buildings operated and staffed by 40,000 employees, only 26,000 of them classroom teachers.

Eighty per cent of the budget pays salaries. So it's easy to guess what Chicago schools do best: They pay well, they employ well, and because of union power and contractual guarantees, they've institutionalized mediocrity. Needless to say, there's not much money or imagination left over for education. An employee's or teacher's ultimate reward is based on seniority and tenacity rather than service and proficiency.

If cities like Chicago don't survive, neither will America. The people we must depend on to rebuild them are the people who live in them. It's their children who will make the final difference, but not if they are not educated first.

The Chicago campus of the University of Illinois admits young men and women who are in the upper half of their high school graduating classes, whether the schools are in cushy suburbs or the inner city. To its horror, the university found that many of its Chicago high school graduates (remember, they're the upper half) can't read above the eighth-grade level.

My organization, Operation PUSH, arranged the testing of one Chicago high school sophomore, to see what he knows compared with others around the country. We found he was reading below the third-grade level. Among other things, he thinks that George Washington is the man who discovered America. His mother was alarmed, school officials were embarrassed but no one could be held accountable—no one had guaranteed he'd learn. Unless he drops out, he most likely will graduate in two years.

Young men and women like these are being falsely certified. They are functionally illiterate, but they are being passed off to the world—and themselves—as functionally literate. What meaning does a diploma have if the person who has it can't read, can't count, can't reason, can't get a job and can't understand that he's been violated?

There's a conceit in education today that holds you don't train hands, you train heads. The idea is that you train hands only if they don't have heads. So schools like Chicago's go through a mindless charade of preparing people to go to college—even though they can't teach them to read.

Yet who ever met a bricklayer who didn't have a functional grasp of basic algebra and geometry? If the cities are to be rebuilt, don't we need bricklayers? And plumbers, plasterers, glazers and carpenters?

Non-educational forces have gained a stranglehold on the education industry. The people in control have only a secondary interest in kids. Face it: The interest of the organized—teachers, principals, janitors, office workers—is protective. It's only the unorganized—children and parents—who are in jeopardy. There is no children's and parents' association with power that has as its principal job the protection of children.

It's not clear who made the mess: some living, some dead, some rich, some poor. It is clear who must accept the challenge: us—all of us. Pain and sacrifice must necessarily accomplish change and the cure. We must be willing to pay the price to achieve the noble end of saving our children.

Educational interest must seize the power in the education industry. Some combination of massive parental organization and media must be forged to create a new day in American education.

FARM PRODUCTION AND THE LAND

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. GRASSLEY. Mr. Speaker, even those of us who own farms sometimes do not realize how fragile our food production system is in the United States. Unless farmers receive an ample return for their investment, they cannot afford to produce our food and fiber. To insure that farmers do receive a good return, we must keep our agricultural export markets open.

An article in the November 1976 edition of Land O'Lakes Mirror, "Something To Tell the City Folks: Five Acres Between You and Starvation," gives a good, broad overview of the farmer's financial concerns:

SOMETHING TO TELL THE CITY FOLKS: FIVE ACRES BETWEEN YOU AND STARVATION

Our country is blessed with a good agricultural climate, ample resources distributed from one end of the nation to the other, and a large acreage of good farmland.

But these assets are finite—they are not growing. Population is.

If we are going to maintain our affluence—or increase it—we must somehow make our farm acreage more productive to keep up with the growth in population and demand.

Our agricultural assets are in the hands of farmers. It is up to them to take care of these valuable resources and make them more productive. The key to the success of meeting the demand of future populations for food and fiber is in their hands.

There is just over a billion acres of farmland in the United States. That is an average of 5 acres per person. So, each of us depends on 5 acres of land for our food and some of our clothing and lumber.

How much is 5 acres? Well, the playing boundaries of a football field cover just over an acre. So, 5 acres is slightly less than five football fields. But the 5 acres you depend on aren't all flat and suited to be cultivated for growing crops. Just over two of the football fields—2.2 acres—are cropland.

It takes 37 gallons of fuel and 185 kilowatts of electricity to produce the food and fiber on your 5 acres of farmland. Any interruption of this flow of fuel and power can affect your food supply.

Your 5 acres has a one-fifth interest in a beef cow, and a one-nineteenth interest in a dairy cow. Somebody must take care of those animals. It is important to you that the person who is tending those animals sees that he can make some money doing it, or else you will be the one who suffers from a restricted supply of meat, milk, cheese and other dairy items.

A farmer has to spend many long hours working on that 5 acres to produce your food and fiber. It's hard work and takes a lot of skill. It is important to you that he has enough incentive to do it, and do it well.

A farmer has an investment of $2,294 in physical assets in that average 5 acres that grows your food and fiber. The farmer has made the investment because he wants to make a profit taking care of that investment and the 5 acres. For this, you, as an average consumer, would pay the farmer $427.54 last year. He gets about 40 cents out of each dollar you spend for farm-produced food.

The farmer used that $427.54 to pay $353.17 in production expenses. That left $74.37 for the farmer who took care of the 5 acres, and who took care of the one-fifth interest in the beef cow and the one-nineteenth interest in the dairy cow.

How much is $74.37. Well, a 3.5 percent return on the $2,294 investment in physical assets made on your behalf is $80.29. So, the farmer who was looking after your average 5 acres of land didn't get back quite 3.5 percent cash on his investment—and he threw in his labor. If you put $2,294 in a savings account—where there is no risk—you'd be rightfully upset if you didn't receive at least a 5-percent return of $114.70 on your investment at the end of a year.

Since you depend on that 5 acres to sustain your life, you have a big stake in seeing that the farmer tending your 5 acres has the equipment, supplies, and know-how, and the incentive to do the job.

You need to be concerned, then, as to whether the farmer taking the risk on your 5 acres of land is going to be able to maintain the fertility of his soil and invest in the mechanization and new techniques necessary to maintain your food supply. He's doing it well now, but as the population grows, you will have to share part of your 5 acres with other people.

Fifty years ago there was an average of more than 10 acres of cropland per person in the United States. Thirty years ago it had declined to 8 acres, 15 years ago to 6.5 acres, and now to 5 acres.

If you take a close look at your 5-acre share of farmland you'll notice that about 0.45 acre is used to produce for our export markets. (In fiscal 1976, almost one out of every three harvested acres was used for export, making the quoted 0.45 acres erroneous for this period of time.)

The farmer's efficiency is so great that he can produce on these 5 acres about 3 times as much wheat as you can eat, twice as much rice, about 40 percent more cotton and soybeans than you can use, and a fourth more feed grains than it takes to feed the livestock and poultry producing your meat, milk, and eggs.

Since you can't use all the food the farmer raises on your 5 acres, the farmer looks for an export market overseas. If he can't find a market, he will have to cut back production. That's bad for you, because the more the farmer cuts back his production, the higher his costs per bushel and bale will go—and your food and fiber will cost you more. So the export market for the 0.45 acre helps hold down your food costs.

As long as the farmer can produce more than you need and can find export markets, then it's good news here and overseas. Although other countries are less efficient in agriculture, many do produce things you need—petroleum and minerals, bananas and coffee than we don't grow, cameras, small cars, motorcycles, TV sets, radios, clothing, and many consumer items that they often can produce more cheaply than we can.

These countries are happy to sell you their goods and use the money to buy the extra food and fiber the farmer produces on your 5 acres. Our total farm exports also make jobs for a half million nonfarm people. The money earned from farm exports strengthens the dollar in international trade, allowing you to get more for your dollar when you buy imports. Stronger dollars also hold down inflation.

The 0.45 acre that is growing exports on the 5 acres is not a "cushion" to take care of your own increasing food needs in the years ahead. The largest increases in population will take place elsewhere around the world. Other people already depend on that export acreage for their daily bread. They will look increasingly to us in years ahead, putting more pressure on the 5 acres growing your food and fiber.

Your future needs for fuel and minerals and consumer goods from overseas also will grow. We now pay for much of it from the favorable balance that we have in agricultural trade. We exported $12 billion more food than we imported last year. We will have an equal or growing need in future years to sell farm products in order to get the exchange to buy vitally needed imported items.

Food, then, is more than just the key to your affluence up to now. It will become much more important in years ahead. The critical problem of meeting expanding food needs is one that you share with all others. The outcome will center on what happens as the farmer tends the 5 acres of cropland that grows your food and fiber.—Adapted from "The Secret of Affluence," a pamphlet by the USDA.

The average 5 acres of U.S. farmland include:

2.12 acres—grassland and pasture.
0.53 acre—woodland.
0.41 acre—crop pasture.
0.09 acre—idle.
0.13 acre—farmstead and roads.
1.27 acres—crops for U.S. market.
0.45 acre—crops for export.

ARMY SECRETARY ALEXANDER: "THIS IS A QUALITY ARMY"

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. STEIGER. Mr. Speaker, as he assumed the position of Secretary of the Army Clifford Alexander found the military under sharp attack from its traditional critics. To his credit, and to the Nation's benefit, he did not retreat in the face of their unfounded criticisms.

As mentioned in my May 2 extension of remarks, Secretary Alexander evaluated the criticisms and checked the facts. The facts show that all-volunteer army is a bargain for taxpayers and that it has improved the quality of our military force while reducing the turbulence the draft brought with it.

In a speech to the National Association of Media Women, on April 15, Secretary Alexander gave some of his perceptions of today's Army's pluses and minuses. "This is a quality Army," said Cliff Alexander. He described those now serving in the Army as "energetic, physically fit, and competent in performing their mission. I would commend to those who would criticize the Volunteer Army such trips to the field. Look for yourselves. Talk to those who command, and then reach your conclusions."

"Today's Army is," Secretary Alexander said, "better disciplined, confident of their skills, with a strong sense of their mission." This is not to say he is unaware of the Army's problems. He acknowledges those problems, but emphasizes that unjust criticisms have caused the real problems to be obscured in the eyes of many.

It is good that we have as head of today's Army a man who sees past the illegitimate carpings and who takes a realistic view of just where the Army stands. I hope those who read the RECORD will give thoughtful attention to the Alexander speech, which follows:

It's a pleasure to be here in Chicago, and to see so many old friends again. I would like to talk this evening about an issue that's been getting a good deal of attention in the media lately, as well as on Capitol Hill. That issue is whether America needs to return to a draft, or whether the All Volunteer Force is working and can continue to work in the years ahead.

Let me tell you at the outset that I am a strong advocate of the Volunteer Army. I favor free choice over coercion, and I don't believe the draft was ever equitable in spreading the obligation of military service.

I have only recently started grappling with some of the problems we face in making sure the Volunteer Army continues to meet our national security needs—and there are some problems, that is clear. We should focus on solving those real problems. We should not succumb to the myths that seem to have grown up around our four-year old venture with the All Volunteer Force, and give up on a concept that has worked well so far for the Active Forces and has enormous promise.

One such myth is that the cost of a volunteer force has driven up defense spending to the point where manpower costs are now about 60 percent of the Army budget. From that follows the fear that inevitable future increases will either put a squeeze on our ability to develop, buy and operate necessary equipment within reasonable constraints on defense spending, or will force us to spend unacceptable amounts in total on our military establishment.

Well, let's look at that one for a moment. First of all, in our FY 78 budget request, pay and allowances for the active and Reserve components of the Army total only about 30 cents of each Army budget dollar. Civilian personnel costs make up another 17 cents, and other personnel related costs, mainly retirement pay, account for about 11 cents. That's where the total of about 60 percent comes from. I think this helps to start putting military pay costs into perspective. It helps, too, to remember that most of the pay increases that have brought military pay and allowances to the level they are at today occurred well before the advent of the volunteer force: In 1971 when the Congress de-

cided to make military pay more equitable in relation to civilian pay levels.

If we returned to the draft tomorrow, I don't think anyone would seriously argue that we should start paying our soldiers less. There are not yet any definitive studies on what the total savings might be under a new draft. But when the dollar costs of operating a draft are weighed against the savings in recruitment costs, and the myriad effects on the way we train, assign, and promote our soldiers are thrown into the equation, we might well find the draft a more expensive way of meeting our needs than the volunteer force. Remember, the Volunteer Army has built into it important efficiencies which we would lose under a return to the draft for active service. The volunteer force, with its longer tours of duty, means that at any given time we have a smaller fraction of our total strength in what might be called "overhead" status—trainees and students, people on their way into and out of the Army, to and from new assignments.

Some have questioned the "motivation" of those who join a Volunteer Army. They say young people are escaping unhappy home lives, overcrowded slums or doing it just to make a buck. The critics go on to say that love of country is waning as a motive for joining the Army. Well, there are almost as many reasons for volunteering for the Army as there are volunteers. Whatever those reasons—and I have no skills as a mind reader to list them—all the reasons for joining the Army miss the point.

The point is, what is the quality of the soldier. The answer is clear. This is a quality Army. Young men and women, if they did not focus on it when they joined, come to appreciate the significance of the service they are providing their country. They work hard—often on lonely, sometimes foreign fields. They take their training and their missions seriously. They are well motivated and we should take pride in what they are doing for their country and for themselves.

People should remember that during the history of this Nation, most of the time we have relied on a volunteer Army. A draft was rejected in the early 1800s. It was instituted for two years during the Civil War—again for a few years during World War I and ended in 1919. In 1940 the draft was reinstituted, ended in 1947, and revised in 1948 to end most recently in the early part of this decade. It is clear, therefore, that volunteer service is more a part of our history than conscription.

Fortunately, we're finding today that there are enough young men and young women who want to be soldiers that, with some hard work, we can meet our needs in the active component. We are having trouble keeping our reserve forces up to strength; but today's active Army is, according to the commanders with whom I've talked, the best motivated, best trained and most skilled they have seen—ready to make the daily personal sacrifices that military life entails, and recently to make the ultimate personal sacrifice that combat may require if it ever comes to that.

Since becoming Secretary of the Army, I have had the opportunity to visit with the leaders of the Army who command our soldiers in the field. General Vessey, who commands our troops in Korea, says his soldiers are the best he has seen in over 30 years of service. General Blanchard, who commands the American Army in Europe, states that he, too, finds this to be the best Army he has seen. Recently, in Panama, I saw firsthand our troops in the 193d Infantry Brigade, commanded by General Richardson. As I traveled through the jungle, along the roads, and across open fields, I talked to the individuals who make up today's Army. They were energetic, physically fit and competent in performing their mission. I would commend to those who would criticize the Volunteer Army such trips to the field. Look to yourselves. Talk to those who command, and then reach your conclusions about the quality of the Volunteer Army.

Further, there is a host of statistics that underline the success in the active force since the beginning of the Volunteer Army. These statistics are not merely numbers. They show a rapid diminution of problems that have plagued the Army in the past. Some examples are as follows: in 1974, 108 out of each 1,000 soldiers went AWOL; in 1976 it was down to 56 per 1,000. In 1974, 33 soldiers per 1,000 deserted; in 1976 only 14. In 1974, 25 soldiers per 1,000 were court-martialed; in 1976 only 11. In 1974, 28 soldiers per 1,000 were separated under less than honorable conditions; in 1976 22 per 1,000 were so separated.

This positive statistical trend reflects an Army that is better disciplined, confident of their skills, with a strong sense of their mission. It is not an Army without problems. No amalgamation of close to 800,000 people would be without problems. Nor is it an Army that can't be better. It can and will be.

If the Volunteer Army is not inherently more costly than a largely conscripted army, and if it is performing well, why are so many people apparently ready to believe the worst, to magnify its every problem? I'm not sure I know the answer to that. Perhaps part of it is the fear that a corps of professional soldiers will drive us into military adventures abroad. But this spectre is absurd. It ignores the very existence of civilian control. It also would imply that draftees set policy and that their presence in large numbers would somehow influence that policy. I think anyone who has been a draftee, or knows one, knows that draftees rarely attain policy making positions in the armed forces.

There is another factor, whether voiced or left unspoken, that makes many people wary of the Volunteer Army and ready to give it up at the first sign of difficulty. That is the growing proportion of minorities in the Army. We hear voiced the belief that too large a minority representation means a disproportionate burden on a segment of our society already disadvantaged. Left unvoiced are less noble sentiments. One, born of racism, is that an Army that recruits too many Blacks portends an Army of lower quality.

As for the "quality" argument, it hardly merits a response. Suffice it to say that the first-term dropout rate among Blacks is within a percentage point of the rate for whites.

Whatever it is within society makes Black youngsters and other minorities perceive better opportunity in the Army than in civilian life is the same something that prompts lack of confidence in, or fears of, an Army too Black, too Puerto Rican, too Mexican American . . . and that something is racism.

Society must focus not on the 27 percent of its soldiers who are Black or other minorities, but on the 40 percent unemployment rates among minority teenagers which make the prospects of military service more attractive. And when something is finally done about these conditions, when the residue of past and present discrimination is washed away, so too can be those guilty or paranoid fears of growing hordes of minority ex-servicemen, trained in the arts of killing and roaming the streets of our cities.

If there are proportionally more Blacks—or any other ethnic minorities—in the Army by free choice than there are in the population at large, so be it. To try and control this proportion would be at best paternalistic: for the whole concept of a volunteer army is predicated on the assumption that individuals take on the risk and responsibility of military life by their own free will. And at worst, such an effort to control representation would be downright discrimination; for what we would be doing would be denying people an opportunity that might not exist elsewhere.

After we move beyond some of the imagined concerns expressed about today's Volunteer Army we can devote more public attention to the significant problems it faces today. Unfortunately, there is a shortage of people volunteering for the reserve components.

In the past this has been true of both the Army Reserve and the National Guard, but over the last three months there have been encouraging signs in National Guard recruiting. Army Reserve figures, however, have not shown the same encouraging upturn experienced in Guard recruiting.

Under today's total Army concept the Reserve, the National Guard, and the active Army are all significant parts of our ready forces. Active and immediate attention is being given to methods of attracting more volunteers to the Reserves. The search for these methods will need creativity and input from society as a whole.

Another issue that may affect the flow of available young men and women for the future Volunteer Army is the projected diminishing number of 17–21 year olds in the years ahead. The Army faces this problem just as do other institutions in the society. Also, while we would hope that there will be a significant decrease in overall unemployment for teenagers, black and white, if this significant decrease takes place it will necessarily cut down somewhat on potential recruits. These issues, and possible solutions, are receiving our close attention.

Can we keep the Army an attractive place to serve while maintaining it as an efficient and effective force? It has been part of the U.S. Army tradition that soldiers complain. It used to be about KP. During basic training it's that hard-nose drill sergeant. During maneuvers it's the mud—the bugs—the hours—the chow. That kind of complaining hasn't changed much I understand—and personally I'm glad for it.

The American soldier of yesterday and today is high spirited and raised in the tradition of an open society. Gripes are aired. So when someone tells you that soldiers are complaining about something—ask them "so what else is new?"

The soldiers of today, just as yesterday, do not let those complaints get in the way of their mission. They understand and take orders. They are exposed to risks involving their lives and they, more than anyone, understand the need for strict obedience to orders.

Members of our Army realize they must be able to operate the complex equipment that is an integral part of their mission and you will be happy to know they are the most highly trained technical Army this Nation has seen.

Yes, this is the Volunteer Army. With rare exceptions, it is ready to perform its mission. It is made up of men and women who, like you and I, care deeply about preserving the fundamental principles of freedom, free expression and a society governed by equitable laws.

It is a quality Army, this Army that is protecting those principles. It is staffed by people well qualified to do their jobs. As Secretary of the Army, I will do my utmost to make it an even greater army, and to keep it an attractive place to serve for the young men and women who fulfill its mission.

TRIBUTE TO DR. HAROLD WILKIE

HON. RICHARD L. OTTINGER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. OTTINGER. Mr. Speaker, I would like to take this opportunity to pay tribute to a most extraordinary individual

from White Plains, N.Y.—Dr. Harold Wilkie. Dr. Wilkie directs the Healing Community and has brought hope and rehabilitation to thousands. Despite this full time load, Dr. Wilkie still manages to be an active member of the Ridgeview Church community as well as an inspiration to the city as a whole. Recently an article on Dr. Wilkie appeared in the Reporter Dispatch and I would like to share this with my colleagues at this time:

HEALING COMMUNITY TRIES CONQUERING ALIENATION

(By Shirley Friedman)

Trying to get alientated members of society back into the mainstream of community life is the aim of an organization known as the Healing Community. It is also the guiding force in the life of its director, Dr. Harold H. Wilkie of White Plains, who has worked for this cause as a minister, author, chaplain and world-wide lecturer.

Daily, Dr. Wilkie drives a car, writes, types, dials a telephone and commutes to his office in New York. What makes all this unusual is that Dr. Wilkie was born without arms, and while this is considered a handicap by most people, he has proven that with proper training a disabled person can function as well as any other person.

This is the message Dr Wilkie and the Healing Community are trying to convey to churches, synagogues and voluntary agencies in the community, which serve as healing and rehabilitation agents. In pilot projects in St. Louis, a congregant of the Ethical Culture Society has built ramps in several churches and synagogues so that people in wheel chairs can attend services. Another church there is working with the aged

In San Francisco, four churches are sponsoring a half-way house for Vietnam war veterans. A synagogue there is helping to rehabilitate patients released from mental hospitals. In Indianapolis, the Second Presbyterian Church is advising battering parents and teaching their procedures to other groups.

Mrs. Louise Ransom of Bronxville is a member of the Board of Directors of the Healing Community and Dr Roger W Johnson, pastor of the Scarsdale Congregational Church, is the chairperson of the group

An old friend of Dr Wilkie's, Dr Johnson is well acquainted with Dr Wilkie's work during his 20 years as Director of the United Church's agency responsible for national programming for 9,000 ministers One of the ministers that Dr Wilkie has counseled and advised is his friend, Dr Andrew Young, U.S. Ambassador to the United Nations

Dr. Wilkie has been a minister in a Chicago suburban parish, a campus pastor at the University of Missouri, and a hospital chaplain for the armed forces and the Veterans Administration He is the immediate past chairman of the General Commission on Chaplains and Armed Forces Personnel in Washington. A former vice president of the National Easter Seal Society, he still is an active board member

Recently, Dr Wilkie was the keynote speaker at a Rotarian Dinner in Chicago, kicking off the chapter's rehabilitation aid program.

He sums up the three influences that motivated him to a useful and rewarding life First, his Rousseau inspired parents who brought him up on a farm in Missouri He was never treated differently from his siblings and he knew they expected him to pull his own weight around the farm They never allowed him to think that there was anything he couldn't do and there was no question that he would do it.

Second, his peers. After being rejected from the local school because the teacher thought he would distract the other students Dr Wilkie's father persisted until he found a one-room school that would accept him. He had to walk through woods, run through a pasture, dodging a bull, and ford three streams with the other children. In ball games, he caught the ball differently, but he had to follow the rest of the rules of the game.

Third, his church, which was totally acceptive. They welomed him and gave him a chance to express himself. Dr. Wilkie says he feels that their willingness and approval gave him the chance to live up to his abilities.

Dr. Wilkie's wife, Margaret, is a psychotherapist at the New York Gestalt Center for Psychotherapy and Training. They have five sons: a minister, a physicist, a musician, a teacher and a college student.

Through the Healing Community, Dr. Wilkie has set an example to those who are different. He hopes that the three major faiths and their congregants "will change Pope John the XXIII concept of 'open the windows' to open the doors to the disabled."

HOW CAN A CONSUMER CZAR REPRESENT US ALL?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ASHBROOK. Mr. Speaker, the Committee on Government Operations has once again reported out a bill to establish an Agency for Consumer Protection. This bill should be defeated.

I have consistently opposed the creation of such an agency. It would add one more costly layer of bureaucracy onto the backs of the taxpayers. It would also mean further harassment of our Nation's businessmen in the name of some undefined concept, the "consumer interest".

The problem of trying to represent something as ambiguous as the consumer interest is explored by Leon Jaworski, former Special Watergate Prosecutor. In a letter to the Committee on Government Operations, Jaworski asks who are the new agency's constituents?

They are called "consumers" as if there were a difference between a "consumer" and a "person". In fact, there is none. The agency will ostensibly represent the interest of every man, woman and child in this nation.

This leads to the question of how the interest of the people will be determined in a given matter. There are no criteria in the bill for defining that interest, nor could there be.

Definition of the national interest is the most difficult and most fundamental objective of the government; and ultimate responsibility for its accomplishment is placed by the Constitution upon the elected members of Congress and the President. I have severe reservations about the delegation of so broad and basic a role to one unelected official.

Simply put, a consumer czar could not represent us all. Following is Jaworski's letter as it appeared in the May 6 edition of the Washington Star.

CAN A CONSUMER CZAR REPRESENT US ALL?

(By Leon Jaworski)

My years of law practice, both as a private and public citizen, have taught me that the stability and effectiveness of government depend upon balance among its institutions. Political power inadequately confined creates imbalance and invites abuse. The new Agency for Consumer Protection would be vested with authority so broad that it could easily be turned to the political advantage of those who control it. There are no checks sufficient to harness that authority.

The ACP would be charged to "protect" and to represent" the "interests of consumers" in nearly every activity of our federal complex. The legislation would grant its administrator the right to appear before agencies and departments of government, the right to collect information by compulsory process from within and without government, the right to sue the government in federal court, and the right to speak from any platform—all on behalf of the "consumer interest" which he "represents."

Let us consider the implications of this authority. We must first inquire who are the new agency's constituents. They are called "consumers" as if there were a difference between a "consumer" and a "person." In fact, there is none. The agency will ostensibly represent the interest of every man, woman and child in this nation.

This leads to the question of how the interest of the people will be determined in a given matter. There are no criteria in the bill for defining that interest, nor could there be. Definition of the national interest is the most difficult and most fundamental objective of government; and ultimate responsibility for its accomplishment is placed by the Constitution upon the elected members of Congress and the President. I have severe reservations about the delegation of so broad and basic a role to one unelected official.

The administrator would be empowered to appear before executive and independent departments and agencies, before the courts, before committees of Congress, and before any individual or entity outside the government to express the national interest as he defines it.

More importantly, there is no effective check against abuse of that authority by the elected branches. The bill contains no provision for a term of office or for the circumstances under which the administrator may be removed. These factors indicate congressional intent that he be subject to removal at the discretion of the President and therefore that he would be within the President's control.

On the other hand, the agency is empowered to sue executive departments and agencies, implying that the administrator would be independent from the President. Given that the power to sue executive departments is a keystone of the legislation, I assume that the administrator would not, in fact, be subject to control by the President.

This conclusion is buttressed by the ability of the administrator to intervene and sue in the context of independent agency activity. Were he subject to the control of the President, his actions before independent agencies might constitute improper executive interference. If the ACP were to function as it is conceived in the bill, the power of the administrator could not be checked by the President.

Neither could Congress nor the judiciary provide an effective balance against the activities of the agency, so long as it remained within its practically limitless statutory authority. Congress could theoretically abolish the agency or limit its appropriation, but in practice would probably not do so. As the designated representative of all consumer interests, the administrator would have a far greater opportunity to influence public opinion than most members of Congress

I do not care to speculate that any person would use the new agency as a vehicle to distort the political process for personal gain or for any other reason. I need not do so to prove my point. Power would be vested in the administrator of the new agency that could be wrongfully manipulated.

That alone is sufficient to justify laying the concept to rest once and for all. It is contrary to the most fundamental of our demo-

cratic principles to vest in one unelected person the authority to represent, legally and politically, the interests of all of the people.

ANDREW YOUNG, U.S. AMBASSADOR TO THE U.N.

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1977

Mr. CLAY. Mr. Speaker, Ambassador Andrew Young has introduced to the United States and to the world a foreign entity in the annals of world politics. That element is total and complete honesty.

His candor and open discussion of vital issues has been enormously unsettling to those who would prefer the "business as usual" approach. Ambassador Young has shown that he does not intend to conduct the business of this country toward the undeveloped nations "as usual." Ambiguities, deception, and imperialism are out. Clarity, honesty, and self-determination are in.

We can hope that the Andy Young style will catch on and future international relations will be handled in accordance with the rules of true statesmanship. That he has the blessings and support of President Carter gives us the opportunity to initiate the badly needed confidence in the political arena of world affairs.

Mr. Speaker, I would like to share the April 25, 1977, weekly column of my colleague, the Honorable AUGUSTUS F. HAWKINS of California:

MR. AMBASSADOR ANDREW YOUNG

Remember Daniel P. Moynihan? In case you don't remember—he was that loud, blunt, caustic-speaking, sarcastic, undiplomatic U.S. Ambassador to the United Nations, appointed by former President Richard Milhous Nixon.

He brought notoriety and noise to that previously quiet, subdued post.

He criticized the Russians, the Chinese, the Arabs and the Africans, and was cheered on by Americans.

He defended Israel; he sometimes applauded the rightwing positions of governments that should have long ago been on our non-support, "hit" list. For these gestures he got roses and gardenias.

It was rumored that Kissinger didn't like him. In numerous showdowns with Kissinger and other State Department types, Moynihan was supported by both Presidents Nixon and Ford.

Now we have another man in the White House, and another U.S. Ambassador to the U.N., the former Congressman from Georgia, Andrew Young.

If you don't recognize the name—Andy Young—then you haven't been watching TV, listening to the radio, or reading your local newspaper.

He's not quite a household word yet, but he is on the tongue of a lot of Americans these days.

And like it or not when Andy Young says something he gets quoted. Sometimes he's mis-quoted, but whatever, his name is news, and so are his views.

In style he's different from Moynihan. He's outspoken, true enough, but he's polite, tactful, courteous, temperate, careful and considerate of the words he uses.

His tone is friendly. He's not hostile or overly agressive.

He describes himself as President Carter's point man and was recently quoted as saying that the President remarked to him awhile back, "I hope you're going to stick with me. It gets kind of rough out there. I don't intend to shut up and I hope you wouldn't let them intimidate you either".

So far, the President has been a firm public supporter of Andy Young's style. A case in point is Ambassador Young's view that Cuba has had a stabilizing influence in Angola.

The President says he agrees with Mr. Young's position on this issue.

How long can Andy Young continue making foreign policy pronouncements in the public arena, which seem at variance with what is called "official policy", without getting his hands slapped, seems moot at this point. Nevertheless, it is a serious question raised by many experts in the foreign affairs community.

But this is a different ballgame now, and maybe some of the old rules inherent in the usual State Department secrecy bag, are no longer useful tools.

One thing is certainly obvious, Africa has gained stature since Mr. Young assumed his Ambassadorship. Not only has the status of this continent improved, but the serious questions regarding Africa's new world role have taken on significant meaning. So much so, that President Carter has assigned Vice President Mondale as the leader of the Administration's study on African policy.

Andy Young's typical response to Mondale's important task was that, "There's enough work there for anyone who wants to do it".

To me, Andy Young is a breath of fresh air, needed in these days of hush-hush overseas diplomacy.

I can hardly wait to read my morning newspaper nowadays, to see what other telling points Mr. Young raises on issues that ought to be public.

Right-on Andy!

ENERGY AND RURAL AMERICA

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ABDNOR. Mr. Speaker, South Dakotans, like other Americans, are concerned over our Nation's energy problems. And, like other Americans they are ready to do their part in relieving the situation. They are concerned, however, that their unique situation of living in an area where the lack of public transportation and the distances between communities providing vital services make private automobile use mandatory, may result in disparities in establishing equity, and that the tiny minority of the population living in rural America may be called upon to shoulder an undue share of the energy burden.

The view from rural America is stated in two editorials which I commend to the attention of my colleagues:

[From the Timber Lake (S. Dak.) Topic, Apr. 28, 1977]

IT SEEMS TO ME

(By Mary Byington)

If President Carter has his way, driving any kind of a gasoline-powered four-wheeled vehicle is going to get mighty expensive.

We can think of reasons why increased taxes on gasoline would be unfair. It would be unfair to people in places like western South Dakota, where there is a lot of distance between farms, ranches and towns. It would be unfair to people who work in cities, and have to compute from their homes to work. We can also think of some good such taxes would do in cutting gasoline consumption. It would be an added incentive for city workers to either form more car pools, or use mass transit systems. It might make farm people program their work so that fewer trips are made. And hopefully, it would cut down a lot of the unnecessary driving that goes up and down Main street every evening.

The perfect (?) solution to the gasoline crisis is get a horse! Just think, if we went back to horse and buggy days, farmers would have a market for all the grain they are raising, and the price of feed grains, especially oats, would go up. Not only would horses furnish power, but they would also furnish some of the fertilizer we need. A lot was lost when automobiles and tractors took the place of horses!

Seriously, though, a lot of people are casting about for solutions to the energy crunch. Some cities are experimenting with methane gas derived from their garbage to supply power. Experiments are underway, too, to harness the sun and wind for power.

The most promising substitute, and one that farmers should boost, is grain alcohol for fuel. Some places are using it, but it's still a little expensive—over $1.00 a gallon. Using a renewable resource, such as grain, is the most sensible thing to do. American farmers have proven they can raise the grain if it's needed.

If the Wheat Commission hasn't already done so, they should direct more of their funds to fuel source research.

President Carter has asked the Congress to tax gas guzzlers, and perhaps offer rebates to economy cars. He would like to discourage big cars, and have everybody driving bugs.

We look for someone, in the not too distant future, to come up with a carburetor that will cut down on gasoline consumption. There really is no need for big, high-powered engines, now that the speed limit is 55 miles per hour. Instead of abandoning large cars, auto manufacturers will no doubt come up with smaller, more efficient engines. It's high time!

[From the McLaughlin (S. Dak.) Messenger, April 1977]

THE ENERGY PLAN

President Jimmy Carter last week outlined his proposals for energy. It is up to congress to decide what form these proposals will take in law.

Carter generally seeks to force conservation of energy by using taxes to make gas and oil expensive. His theory is fuel will cost so much people will cut down on its use.

We doubt if it will work out that way in the long run. The price of non-essentials like tobacco and alcoholic drinks have been pushed up and up by taxes and people keep right on using them. There has been no dramatic drop in the use of coffee although the cost of that product has risen astoundingly in the last year.

It is more likely people will continue to use the same amount of gas but will pay more for it. It will be a regressive form of tax because it will hurt the people with low incomes while it will not be such a burden to those who have a lot of money. Both have to use fuel to get to their jobs, churches, schools and stores.

For some time the Hate Business people have been putting penalties on the oil producing companies. They have discouraged exploration by cutting down on tax incentives for exploration. We are now paying the fiddler for those policies to the tune of fuel shortages.

England, on the other hand, has encour-

aged exploration. They have now found huge quantities of oil under the North Sea and drilling to put it to use. They expect not only to fill their own needs in a matter of a few years but to have enough left over to export.

Increased production of power is the most feasible long-range solution.

Efforts can be increased to develop heat and power from the wind and sun. We are going to have to use more coal and spend more money to restore the environment once that coal is mined. Alternate ways may be found to power cars, such as electricity. Our surplus grain might be turned into alcohol to be used as fuel or as an additive to stretch the petroleum fuels.

We are fearful the proposals of the president will simply mean people are going to spend more money. This contributes to inflation and the demands on the government printing presses to crank out more dollars.

HELPING THE 1 MILLION AMERICANS IN PUBLIC INSTITUTIONS

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. KOCH. Mr. Speaker, I wanted to bring to the attention of my colleagues an editorial which appeared in the New York Times this past Sunday concerning legislation introduced by my friend and colleague ROBERT KASTENMEIER. The bill, H.R. 2439, would give the Justice Department the authority to initiate suits against institutions which display a pattern of denying institutionalized persons their civil rights. I am a cosponsor of H.R. 2439 and wanted to bring the legislation and the Times endorsement to the attention of our colleagues. The editorial follows:

STATES' RIGHTS VERSUS VICTIMS' RIGHTS

Imagine (and these are real-life cases, typifying conditions in several states) having a relative in a public mental hospital and learning he had been subjected to electric shock treatment 800 times. Or imagine being held with others for two weeks in a cell without windows, bed or toilet and trying to sleep on that floor. If you were lucky, you might find a lawyer or public interest group to bring suit. If society was lucky, that suit would not only address the individual case but also be broad enough to force the cleansing of the whole snakepit. But why should minimal decency depend on luck at all?

There are one million Americans in public institutions—jails and prisons and homes and hospitals for children, the retarded, the elderly. They are, in a way, the most vulnerable Americans. Why can they not be systematically protected against electrodes or cockroaches or rape?

Creating such protection is the aim of a proposal, now pending in Congress, by Representative Robert Kastenmeier of Wisconsin The bill raises interesting and difficult questions of victims' rights versus states' rights, of further extending the "imperial judiciary." Nonetheless, it has won clear support from the Carter Administration; it deserves enactment.

Recognizing that private suits against barbaric conditions are chancy, the Kastenmeier proposal would employ the Justice Department as the agent of reform The department's authority to initiate suits against institutional abuses is now questionable The bill would give it clear legislative authority to do so—against abuses that fall into a broad, repeated "pattern or practice."

It is not easy to oppose legislation that seems so humane and sensible. But the National Association of Attorneys General feels obliged to fight, nonetheless. It argues that enactment would lend Congressional endorsement to a trend that disturbs the state attorneys general deeply: the growing intrusion of Federal courts in state affairs.

The abstract argument is that this trend runs counter to states' rights. The practical argument is that Federal judges are ordering states to spend millions, a judgment that should be left with state legislatures. How can a judge, the argument goes, balance the competing claims of a prison, say, with those of a state program for the handicapped, or against air pollution?

There is some appeal in these contentions. By ordering expensive reforms in an offending institution, a Federal judge is compelling a state to cut spending for something else, or to raise taxes. But there are other—overriding—considerations. However poor a state's purse and however precious its autonomy, it still must subscribe to the Constitution of the United States. And to our reading, that document says with majestic clarity that there are some powers—like practicing, or condoning brutality—that a state may not retain; there are some economies—like depriving the feeble-minded of care—that a state may not demand.

It is not as though Federal courts have intruded blithely into the business of blameless states. On the contrary, they appear to have done so with the greatest reluctance. David Bazelon, chief judge of the United States Court of Appeals for the District of Columbia, applies this question as his test of whether a situation justifies intervention by Federal authorities: "Does it make you sick?"

Nor are the remedies imposed by the courts unreasonable and excessive. When Governor Wallace of Alabama asserted that court-ordered reforms of the state prison system had created a "hotel atmosphere," here is how, in part, District Judge Frank Johnson responded: "The elimination of conditions that will permit maggots in a patient's wound for over a month before his death does not constitute creation of a hotel atmosphere."

The Kastenmeier bill should arouse no concern in a state that maintains minimal standards in its institutions. It will have already accepted the state responsibilities that must go with state rights.

CONSERVING ENERGY

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. MAZZOLI. Mr. Speaker, the President has called on all of us to save energy, and experts agree that conservation is a necessary part of our energy program.

I would like to share with my colleagues this April 10, 1977, article from the Washington Post, which contains many practical suggestions for saving energy:

THE BEST ENERGY POLICY WASTE NOT WANT NOT

(By Lee Schipper)

We are bombarded with ingenious new ideas to create energy The cold fact is that, for the next quarter century, the best way to produce more energy is to conserve it.

If we in the United States fully utilize all the known methods to use energy more efficiently there is no doubt that energy needs wil. grow very slowly rising by the year 2000 to only 50 per cent greater than today. Compared to industry and government forecasts of a few years back, this represents a saving of the energy equivalent of around 30 million barrels of oil per day.

The flawed Nixon-Ford reaction to the 1973 oil embargo and price increase, encouraged by energy producers, was virtually to ignore conservation and to concentrate on finding ways to increase energy production. Certainly, we must boost production of oil and gas and find new ways to dig and burn coal without pollution. And we must proceed with research into nuclear energy, geothermal energy and synthetic fuels.

No matter what we do, however, energy production costs will rise steadily for the rest of the century. It becomes increasingly cheaper—and, generally, cleaner and less risky—to save rather than find new resources.

Unfortunately, we are often given a false view of energy conservation by energy companies and even by some politicians. We are told that conservation means sacrifice and curtailment of human activities. It does not. It means more effective use of energy and our other resources—in other words, doing better, not doing without.

The Swedish example is instructive. For every dollar of gross national product the Swedes use only two-thirds as much energy as we do. Various factors are involved in that dramatic contrast, but certainly energy efficiency is a major element.

Thus, autos in Sweden average 24 miles per gallon, as opposed to less than 14 gallons in the United States. In part at least, that is a result of tax policy—there is a 60 cent a gallon tax on gas and a weight-related tax on new cars.

In producing raw materials, Sweden generally uses less energy per ton than we do. This is not accidental but the result of installation of modern equipment and use of heat recovery techniques.

The interaction of high energy costs and informed policy in construction is striking. Space heating in Sweden is twice as efficient as in the United States. To put it another way, a home in Sweden requires only slightly more heat than a similarly-sized dwelling in San Francisco, despite the great differences in climate. Insulation, solid construction and other weatherization practices make the savings possible.

Again, this is not accidental. Sweden's mortgage law of 1957 gave homeowners and builders access to extra investment for energy saving features in homes; tough building codes assure that few sloppy buildings are built; inspections that include use of infrared leak-seeking cameras, as well as training programs for homeowners and apartment and building managers, assure that the system is efficiently run.

Nearly a billion dollars is available over several years in the form of government grants or loans towards energy conservation in public and private buildings and in industry. This amount is ten times greater than the sums tappable for conservation here.

Most other industrialized nations have also begun major energy conservation programs, revising demand forecasts downward considerably. This despite the fact that even now they are generally more efficient users of energy than the United States, despite the fact that they have many unsatisfied demands for autos, appliances and homes.

OUR LEAKY HOMES

What about our own prospects?

Today 22 percent of our energy goes to homes. This winter's cold wave should have reminded us that many American homes are leaky. Most of the leaks, fortunately can be plugged. Adding insulation, especially to the millions of bare attics, would save at least 30 percent of the energy which goes to heat our homes. Thermostat setbacks to 65 degrees by day, 58 by night, would save another 20 per cent; weather-

stripping and storm windows would further decrease the energy loss.

Our use of hot water within the home can also be rationalized. The methods are now available: insulation kits that fit over the jacket of water heaters, temperature setbacks to 120 degrees, installation of inexpensive flow restrictors on hot water faucets.

Obviously, the possibilities are even greater in new homes. Recent research, as well as the example of homes actually built, suggest that it would be easy in mild climates to cut heating needs by one-half and possible to reduce requirements by three-quarters. The sample homes are less drafty than conventional homes. They are better insulated at slightly higher cost, but that investment is offset by reduction in the size of heating-cooling units and lower fuel bills.

New appliances can also help. Microwave ovens use less energy than conventional electric cooking, and a new generation of kitchen gadgets—such as the hamburger cooker—save energy by heating only the food, not the oven or the entire kitchen.

A redesigned frost-free refrigerator, studies show, could use half the electricity required by comparable models today. True, the purchase price would be 10 to 15 per cent higher, but the extra investment could be won back through savings in electricity bills in the space of a few years. Even now, efficient models can be bought at no more cost.

Suppose that consumers ignore the more efficient refrigerators. Nationwide, by 1990, the utility companies would have to build at least eight large power plants at greater expense and there would be inevitable further costs—construction of transmission lines, fuel use, maintenance costs, pollution.

There is some hope in the fact that government agencies, consumer organizations and even utilities are beginning to provide consumers with information on the "life cycle" cost of operating appliances and even homes. If consumers can be convinced to take these total costs into account, they and the nation will earn handsome dividends.

Solar heaters, too, can save money in an era of rising energy costs. Solar water heating is particularly attractive today, except where controlled fuel prices are low.

But some architects and engineers have pointed out that, if we would design our homes with care in the first place, we could use the sun to eliminate perhaps as much as 80 to 90 per cent of the heating/cooling cost.

The trick is in "passive" solar conditioning. Large masses of insulation or concrete will absorb solar radiation through south-facing windows in the winter daylight hours and re-radiate this stored heat during the evening hours; shades and overhangs over the windows will prevent the sunlight from entering the building during the warmer months. Carefully planted deciduous trees would provide shade in summer; in winter, with the trees bare, the sun would filter into windows and walls.

The prospects for such "passive" solar homes are so bright that the addition of an active solar collector system—including pipes, water storage and pumps—may prove unnecessary or even uneconomic. Whatever remaining space heating and air conditioning would be needed could be supplied by relatively minute quantities of fuel or power.

In overall terms, if we tap both conventional and new creative resources, we should be able to reduce energy use in existing homes by 20 per cent by 1985. And within a few years, most new homes should require 40 to 50 per cent less energy than comparable homes of today.

COMMON SENSE

Even greater savings are possible in commerce buildings, for many of them were carelessly designed in a period of cheap energy. Experience demonstrates that it is possible to reduce energy costs in existing buildings by 25 per cent with little additional equipment. New business structures, if properly designed, will require half or less the energy previously thought necessary. The new California State Office Building in Sacramento, as architecture professor Edward Dean of the Berkeley faculty put it, "will substitute common sense, new technology and good design for 80 per cent of the energy otherwise required."

Take the case of daylighting. At the Lawrence Berkeley Lab., Prof. A. Rosenfeld employs Mylar strips on the upper edges of venetian blinds. The Mylar reflects sunlight onto the ceilings of each perimeter room, replacing great quantities of lights, which in turn would have required air conditioning for heat removal.

Windows of existing and new buildings can be shaded so that little sunlight leaks in during the warm months (except for that permitted for daylighting), while maximum sunlighting and, therefore, heat capture are assured in the winter when the sun is low. It is such ideas, dormant for years when energy was unimportant, that make the conservation potential so attractive.

Innovations of this nature also lower construction costs because they eliminate the waste in climate control systems. Overall, by proper design, we should within a few years be able to reduce the energy costs in existing buildings by 25 to 33 per cent. In new buildings, the savings could range anywhere from 33 to 80 per cent.

INDUSTRIAL HOUSEKEEPING

Industry uses 42 per cent of our energy today. Most of that energy provides heat, not power, and so possibilities for immediate savings are easy to spot—waste heat, steam leaks, missing furnace insulation, oven doors carelessly left open, badly tuned boilers. In the past the low cost of energy enabled most firms to forget good housekeeping. Higher fuel costs should assure that industry will reduce the energy requirements of existing equipment by 10 to 15 per cent in the foreseeable future.

Potential improvements in effectiveness are much greater because of the simple fact that use of heat in most industries is so inefficient. Indeed, research by the Thermoelectron Co., of Waltham, Mass., indicates that in most costs industrial heat use is less than 20 per cent efficient. The company's scientists believe great savings are possible, through the use of new design and technology, in the process industries which use the largest percentage of our industrial energy: papermaking, oil refining, steel and aluminum, chemicals, cement making. These conservation practices will lower costs. Indeed, in the past, industry continually lowered energy requirements while increasing productivity.

Thermodynamics, the science of energy use, is still insufficiently appreciated in industry. Charles Berg, former chief engineer with the Federal Power Commission, contends that many processes considered efficient are really wasteful. In many metal fabrication processes, for example, the material is constantly heated, cooled and reheated. Berg argues that there is an urgent need for increased research in basic industrial processes.

The very notion of waste heat is under attack. What happens to the hot gases that emerge from today's high temperature furnaces and ovens? Though it is true that more and more factories use the exhaust to heat incoming air or materials, most gases are vented to the atmosphere, wasted. And yet high temperature heat is a resource—it can make steam to run electrical generating equipment, it can be piped for low temperature heat use, it can even be sold to surrounding communities for use in home heating, a standard practice in Sweden.

The most important of these heat-using processes is called cogeneration, meaning the simultaneous creation of electricity and usable heat. Though largely neglected in the United States, this combined cycle process, engineers believe, can generate electricity and heat with four-fifths to three-quarters as much fuel as when the heat and electricity are produced separately.

The Thermoelectron firm, which has installed cogeneration equipment in many countries, may be considered an interested party, but there is reason to respect its view that at least a quarter of the nation's electrical needs could be generated "by recovering waste heat and by using combined cycles (cogeneration)." A study directed by Dow Chemical points to another advantage, noting that use of cogeneration would save billions of dollars in capital outlays. But electric utilities have shown considerable resistance to this more efficient competition from industry.

Overall, there is no reason why American factories should not be able to institute energy savings of 10 to 20 per cent by 1985 and 20 to 50 per cent by the year 2000. Smaller savings should be possible in construction, agriculture and energy extraction itself.

THE GAS-GUZZLERS

Transportation uses 25 per cent of our energy, and automobiles alone consume half of this.

The possibilities for conservation are obvious. Trucks can be redesigned to reduce wind resistance and rolling friction and to utilize more effective engines. By the 1980s, long-haul trucks should require 20 per cent less energy than today's models. Small trucks, while not as significant in the full picture as highway rigs, can make even greater proportionate savings; inefficient, high horsepower models should be replaced by lighter models with four-cylinder gas engines or diesel motors.

Moreover, changes in freight handling procedures should assure that trucks are more fully utilized. The simplest but perhaps most important change would be to permit interstate trucks to carry full loads in both directions rather than return home empty.

Strangely enough, today's commercial aircraft fleet suffers from similar problems—inefficient motors, designs which increase wind resistance and, worst of all, under-utilization. An example of what can be done when necessity demands is the fact that, since the 1973 crisis, the percentage of occupied seats in commercial planes has risen to the point where we are saving at least 5 per cent of the energy required to move people.

New designs should reduce airline energy use even further. By the 1990s we should have airliners requiring only 80 per cent as much fuel per passenger as today's models.

What of the automobile? We can double the mileage of our auto fleet with only a slight increase in the cost of new cars. In the longer run even greater increases are possible. Since most cars run with more empty than full seats, smaller cars seem acceptable in theory.

Incentive is important to improving the efficiency of autos, especially to meet the 27.5 MPG target mandated for Detroit by Congress. Whether consumers actually buy the right proportion of small cars that satisfy the standards depends on whether Congress will enact both a gasoline tax, affecting existing cars and driving in general, and a tax on the weight or horsepower of new cars.

The existing law tries to force Detroit to think small while consumers are tempted to buy large. Changing habits with taxes may be uncomfortable in the short run, and Detroit will resist, but the long run savings are too great to ignore.

Surprisingly, mass transit does not figure prominently in energy conservation scenarios in the near future. Only in the long run, when properly designed transit systems stim-

ulate careful suburban growth mated to revitalized central cities, will transit make an important dent on travel—and energy use.

To summarize, prospects for conservation in transport use of energy are great. Auto fuel use should soon begin to decline. It is realistic to believe that the projections—made before the 1973 crisis—of auto fuel use in the year 2000 can be reduced by at least 40 percent and perhaps as much as 60 percent. The very volume of travel will grow more slowly than in the past.

It is clear that the overall potential for reduction of energy needs to perform key tasks—production, space conditioning and transportation—can be enormous in the medium and long term. Modification of existing buildings and factories and smaller automobiles will have the first impact (during the next five years) while replacement of inefficient appliances, industrial plant and buildings goes on at a slower rate but begins to add up to larger savings in the 1980's. Many who have looked closely at the uses of energy see a reduction of nearly 40 per cent of the energy used per unit of activity compared with the projections offered by the Bureau of Mines a few years back. Since these results will not appear immediately, however, Congress, the President and the American people will have to be patient.

It is neither reasonable nor necessary to expect people to give up basic conveniences. But small adjustments in behavior patterns—turning thermostats down in winter, shutting curtains at night, generally exerting more care in energy use at home, at work, on the road—will result in considerable savings.

And gradual, evolutionary changes in American lifestyles can have an energy-saving impact. To give but one example, careful urban and land-use planning could have a tremendous effect by permitting us to live nearer to work and services and by providing the patterns of living and community necessary if mass transit is to increase its share of passenger traffic.

But issues of urban planning, mass transit, railroads versus trucks, urban sprawl vs. high density apartment living, while they affect energy needs enormously, must not be decided solely on the basis of their energy impacts. Thus, should we remove the tax deduction for mortgage interest payments solely because this subsidizes single family homes over apartment dwellings and encourages greater use of autos and heating?

Clearly, the Carter administration decisions on energy must take into account the broader questions of lifestyles and national goals.

At the same time, it is evident that, with education, government and business leadership, and a consensus on the reality of the energy problem, it is likely that Americans might reduce energy needs at least 10 per cent below the savings offered by technical means alone, over the next few decades. In the long run the changes could be even bigger.

THE OBSTACLES

Nature's laws, our technological capacity, our intellectual ingenuity, the adaptability of our people—none of these stands in the way of energy conservation. What then, is delaying realistic conservation policy and action?

Perhaps the greatest obstacle is the myth of cheap energy. The cost of adding one barrel of oil or any other form of energy to our supply is considerably greater today than what we charge ourselves when we use that energy. This is what economists call the difference between the "marginal cost" (of new supply) and the "average cost" (of all existing supply) If we were to take the higher "marginal costs" into full account, the resulting rise in prices would be dramatic—and, doubtless, so would our conservation effort.

But price controls and most utility rate structures for electricity and gas do not yet allow us to practice "marginal cost" pricing Therefore, it is crucial that political leaders and the public recognize that our energy prices are unrealistically low, that in a sense we live in a fool's paradise.

The picture is also distorted by our national refusal or inability to include the social and environmental costs of energy in pricing. Deep-mined coal may be cheap and it is often used inefficiently, but the taxpayer carries the burden of black-lung rehabilitation for the coal miners who dig that coal. Strip-mining, auto pollution, industrial emissions, nuclear risks also have their unpaid costs.

There are other pricing distortions. Utilities now are campaigning to increase the tax credit when they invest their income in new capacity. This would amount to a subsidy. The oil and gas depletion allowance is also a subsidy. But homeowners who take the trouble or insulate their dwellings do not receive similar tax credits. Thus, the government rewards production and inhibits thrift.

Another barrier to conservation is the stance of many important industries. Some oil companies and electricity producers persistently misrepresent energy needs and conservation prospects. The auto industry drags its heels and one of its top leaders recently blasted the idea of a tax on gas-guzzling cars.

Some in industry like to tell us that the "free market" will handle our problems. But the market is not and cannot be free—the federal government has subsidized energy in some areas, held the price down by controls in others, regulated the activities of energy producers to protect the environment and the public.

THE ACTIONS NEEDED

What can be done? It is clearly in the national interest for the government to step in with enlightened regulations, a flow of helpful information and direct aid. Some of the required steps are obvious:

Efficiency standards for cars, trucks, appliances and buildings are needed, because the producer pays little attention to operating costs and the buyer usually is concerned only with the purchase price. Intervention here will, it goes without saying, increase the overall efficiency of the economy.

Consumers and small businessmen often have difficulty raising capital at low rates for improvements. Banks and, indeed, utility companies should be encouraged to assist in the financing of energy efficiency, for measures such as insulation and double-glazing represent low risks with high payoffs.

Tax incentives would encourage businessmen and consumers to take conservation steps. Action here is urgently needed because, as one insulation firm executive put it, "uncertainty is deadly. People are waiting for a firm policy before they decide what to do."

Standards for new factories are probably unnecessary since, in the nature of things, plant designers must take long-term energy costs into account—their products would be too costly if they did not. But it is clear that government must utilize progressive regulations to encourage auto producers, utilities and manufacturers to avoid waste in new products and in existing plants.

Rising costs will hit the poor hardest. The national government must provide a buffer for that section of the population in the form of direct cash aid and financial help and advice in conservation measures.

But we cannot delude ourselves by maintaining the fiction of low energy prices for all consumers. The public must be made aware of the rising real cost of energy by means of gradual and predictable increases in energy prices. Knowing what to expect, businessmen and consumers could plan accordingly.

Such realistic price increases, however, should not result in undue windfalls for energy producers. The answer, a virtual necessity, is a tax on energy. The tax would have to be large, increasing over a period of years to as much as $6 per barrel of oil. This would work out to about $1 per thousand cubic feet of gas, $25 per ton of coal, 1 cent per kilowatt hour of electricity.

This would bring enormous sums of money into the government, sums that would have to be returned to the economy immediately. Refunds could take place by reducing other taxes, especially more regressive ones like sales taxes. Some of the funds could go directly to aid low-income consumers, or provide funds for energy conservation loans and extension services. Or all the money could simply be rebated directly to consumers.

What is important is that we raise the cost of energy relative to other resources or goods and services without removing anything from the economy. The alternative is to allow the energy producers, or OPEC, to extract higher energy prices or run the risk of either sudden or gradual supply shortfalls. The faster the demand grows, the more the real cost of production rises. The imposition of a tax could slow this escalation. Ultimately, we own our own domestic resources: We may be selling them off too cheaply.

Is energy really scarce? Pronouncements from industry, consumerists and even environmentalists which quote only amounts of fuel in the ground are of little meaning. We need to take into account the cost of these supplies, extraction technology and the environmental risks as well. Moreover, the argument that some producers are "holding back" supplies is not important in the long run; the quantities involved are too small to make much of a difference. Given all the uncertainties in future supplies and costs, however, it is far better to hedge our bets with conservation today, especially against threats of embargos or cruel winters.

HELPING THE ECONOMY

There is no logical reason to fear that the slower growth of energy consumption will drag down the overall growth of the economy. An interim report of an ongoing National Academy of Sciences energy study had this to say: "There exists substantial technological leeway, over the long term, in the amount of energy required for a given rate of growth of GNP and employment."

Conservation will allow us to save tens of billions of dollars of energy-related investments and expenditures. These sums could be funneled into the rest of the economy, which produces considerably more employment per dollar invested or spent. For example, efforts to build better homes and save energy in factories inevitably will result in increased demand for construction labor. On the other hand, without the benefits of significant conservation, consumers and businessmen will have to sacrifice increasing shares of present and future income to pay for more expensive and underutilized energy. Thus, conservation is a boon to employment and the economy as a whole.

Is conservation sacrifice, as the administration is fond of murmering? Not if we acknowledge that energy is scarce and appreciate the economic benefits of more effective use. Not if we take into account reduced risks to national security and the environment. Not if we take into account the downward pressure on energy prices that conservation exerts. Not if we value reducing our imports of oil and gas.

Conservation is not always easy, but it demands less "sacrifice" than pushing for "too much energy supply, too soon," as Berkeley Prof. John Holdren warns.

At today's unrealistic price, it is clear, we do indeed waste more energy than we import If we utilize all the possibilities for improving energy use in the long run, much of our projected energy needs will become superfluous. But reducing waste entails a strong commitment to investment, adaptation and,

most important, careful thought. As Kenneth Boulding, former president of the American Economic Association, put it: "Conservation is just thinking before using energy."

THE NEED FOR ADEQUATE FIRE PROTECTION IN DISTRICT OF COLUMBIA

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. FAUNTROY. Mr. Speaker, last week, I inserted into the RECORD, a statement which reflected the need for adequate fire protection in Washington, D.C. A firefighter for the District of Columbia, Mr. Albert Kirchner, also testified to the need at the recent House hearings, and I wish to share with my colleagues his revealing statement.

The statement follows:

PREPARED STATEMENT OF ALBERT G. KIRCHNER, JR., BEFORE THE SUBCOMMITTEE ON THE DISTRICT OF COLUMBIA APPROPRIATIONS COMMITTEE, U.S. HOUSE OF REPRESENTATIVES

I am Albert Kirchner, a member of the International Association of Fire Chiefs, the National Fire Protection Association, and the International Association of Fire Fighters. I have been in the fire service for ten years, serving in paid and volunteer capacities, civilian and military, in four states and the District of Columbia. I am a graduate student in public administration at The American University, and a professional firefighter assigned to Truck Company Number 2 of the District of Columbia Fire Department. I am not here today as an agent or representative of the Fire Department. Rather, I have come to express the "grass roots" point of view of the firefighter who must witness the tragic outcome of reduced funding and false economy in providing fire protection for the nation's capital. I am certain that my own feelings of helplessness, disappointment and defeat, are shared by each of my fellow firefighters as we watch the department's capabilities, proudly developed over a 100 year period, stripped away by budget cuts, inflation and rapid technological and social change in our culture. I am here to solicit your interest in funding the Fire Department so that it can grow beyond that which is eaten up by inflation and allow it to respond adequately to the dynamics of our society that makes our job increasingly difficult to accomplish.

SOUND POLICY AND PROFESSIONAL JUDGMENT

Each of us present in this room today can appreciate the awesome and eerie responsibility of the Fire Chief and his staff. He cannot "staff up" or order supplies ahead of time for the next catastrophe; he has no idea of what the demand rate for his department's services will be even two hours from now. However, by means of careful analysis and good professional judgment, he is able to strike a balance between the level of risk that the community can assume and the financial burden he must place upon these same citizens. Once this has been established, it is the Fire Chief's job to manage and maintain the Fire Department in a state of readiness to meet that assumed risk.

At the turn of the century, after many cities had been brought to rubble by conflagrations, the National Board of Fire Underwriters (now called the Insurance Services Office of the American Insurance Association) developed guidelines to define levels of fire protection, to formulate insurance rates as well as to assist fire chiefs in the nation's cities. These guidelines, known as "The Grading Schedule for Municipal Fire Departments," serve as the blueprint for our fire defenses in the District of Columbia. The underlying considerations used in developing the principles set forth in the Grading Schedule are still valid and correct today in older cities such as Washington. According to these standards, the D.C. Fire Department holds a Class 1 rating, the highest, which is enjoyed by only three other cities. As a result, the city's residents and business community are able to have the best possible fire insurance rates.

Using the Grading Schedule as a measuring stick, the department has, in the past, been able to deliver effective service with conservation budget requests, while still maintaining its Class 1 rating. In the last ten years, however, a multitude of social and technological phenomena created sudden problems to challenge the best minds in the nation's fire service, including Washington's. Staggering increases in false alarms and waves of criminally-motivated arson fires stunned and confused fire protection efforts, while technologically advanced "skin and frame" building construction, together with the massive shift to plastic interior furnishings, were questioning the effectiveness of time-honored strategies and tactics of fire prevention and control. As the Fire Department attempted to meet these new demands through training, research and management efforts, programs of uncontrolled spending elsewhere in the city government were quickly leading to financial crisis.

FIREHOUSE ROULETTE AND CITIZEN OUTCRY

Already down to bare essentials for operating funds, the Fire Department's budget was cut to an unquestionably inadequate level. This reduction forced the department to economize in one final area: firefighting operations. A rotational plan was devised that put as many as five units out of service during a tour of duty. It didn't take long for a fire fatality to occur 550 feet from the front door of a closed-down engine company. Ten more people died under similar circumstances. There was a citizen outcry; the press labeled the rotation plan "firehouse roulette"; community and business groups spoke out; press conferences were held; and a special citizen's group (Concerned Citizens for Fire Protection) was formed to address this issue alone. Firefighters were heartwarmed by the community support; they tried harder and took on the additional work load without complaint. They still could not beat the odds with a stacked deck. Response distances were still longer, and company teamwork was eroded by the use of personnel from out-of-service companies sent to fill in vacancies that should have been filled by "new hires."

The Mayor finally responded, half-heartedly, with reprogrammed funds. The new allotment was not enough to return the department to full strength. With the additional funds, and a cutback in a different service area, Fire Department officials were able to guarantee the operation of all engine and ladder-truck companies throughout the city. The catch was that two of the elite Rescue Squads would be permanently disbanded, and cross-manned with a parent engine company. Realizing the inherent dangers of this plan, fire officials switched an additional engine company to the cross-manning plan. This involved nothing more than parking the reserve rescue vehicle at a firehouse, and telling the members of the engine company to jump on whichever type of unit was called for.

This plan is still in effect today because of a questionable set of priorities of city officials, pretending to be economy-minded. Here is what this latest patchwork plan does for those who live and work in Washington: First, it splits up two of our finest firefighting units. Rescue Squads exist as elite units in many United States cities. They represent a concentration point of talent and ability within a fire department. For example, when the New York Fire Department found out that they had registered male nurses in their ranks, it was a natural to assign them to a rescue company; the same is true in Chicago with their diving teams, assigned to the squads. Rescue squads not only carry the diversity of specialized skills of their members; they also transport a vast array of sophisticated tools and equipment for jacking, shoring, cutting, and extricating. It is important to have the capability of these men and machines together as a unit. The second fault in this plan lies in the availability time of each component, engine or rescue squad, of these cross-manned units. In order to have the rescue capabilities where they are needed most, the disbanded squads remained in the same stations that they ran out of as independent units, and were cross-manned with the engine companies in those firehouses. These engine companies, however, were also very busy, handling a high volume of "nickel and dime" runs such as false alarms, trash and abandoned automobile fires. Consequently, the cross-manning with the rescue squad frequently saw the rescue vehicle left behind, unmanned and unavailable for another rescue emergency. The cross-manning plan has greatly compromised the rescue service in this city. Concern is growing that the plan may not be adequate for a major emergency, particularly involving the Metro subway system.

RETURN FULL FUNDING FOR FIRE PROTECTION

I can not blame the Fire Chief or his staff for this current state of affairs. A special Task Force was organized to study the problem. It consisted of our best educated, most talented and experienced officers. All members of the department were solicited for their ideas and suggestions. The union was called upon for input. Collectively, the department has done its best to accomplish its mission with insufficient resources. Nothing more can be done without adequate funding. The citizens, workers, and visitors of Washington deserve better—they have had it in the past.

WILLIAM ALTON CARTER III, CALL YOUR BROTHER

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. MICHEL. Mr. Speaker, Nation's Business recently published an interview with Mr. William Alton Carter III, a Georgia businessman. Mr. Carter, whose family peanut business has prospered under his guidance, offers his views on everything from the evils of the minimum wage laws to stupidity of some of the rules of the Occupational Health and Safety Administration—OSHA. Mr. Carter's brother is currently employed by the U.S. Government. It is my hope that William Alton Carter's gems of wisdom about the minimum wage and other matters come to his brother's attention. At this point I would like to insert "Billy Carter: Frustrations of a Small Businessman" into the RECORD:

BILLY CARTER: FRUSTRATIONS OF THE SMALL BUSINESSMAN

William Alton Carter III, businessman, points to a stack of paper on his desk and

says, "A lot of what they ask for in those government forms they send out is nobody's damned business."

Billy Carter, outspoken folk hero, points to his Amoco station down the street and wisecracks, "It's a beer joint—we sell gas as a sideline."

The public image of Billy Carter, brother of the President of the United States, is that of a hell-raising, hard-drinking, irreverent yokel. It is an image that he likes to project, but it is not necessarily the real Billy Carter.

SOUND AND SUCCESSFUL

When he assumes the role of William Alton Carter III, businessman, a role seldom captured in television or newspaper accounts, he is a no-nonsense, hard-driving executive.

He has helped propel a small, family-owned farm products enterprise into a thriving multimillion-dollar business. Much of this growth occurred while his older brother, Jimmy, was governor of Georgia or running for President.

"No matter what you read about Billy in the papers, he is a very sound and successful businessman," one of his business associates in Plains, Ga., says.

Billy Carter, who has just turned 40, is a self-made success. He learned the peanut business from the ground up. Unlike his famous brother, he had only a smattering of college. He has had plenty of practical experience, however. He can look at four tons of peanuts on a truck and tell you within 200 pounds what they weigh, and that is something you don't learn from schoolbooks.

PROBLEMS WITH BUREAUCRACY

In many ways, like other businessmen, small and big, Billy Carter is fed up with the Washington bureaucracy as it affects his business. The infectious Carter grin fades when he talks about worker safety and health laws, air pollution edicts, government paperwork, taxes, and unemployment compensation. The expression turns almost grim when welfare is mentioned.

Some of the problems which bother Billy Carter the businessman could be eased by Jimmy the President if the latter carries out some of the promises he made before and after his election.

Speaking of the Occupational Safety and Health Administration, a thorn in the side of most small businessmen, the President said recently "If I can clean up the mess in OSHA, I can be reelected." The President also has launched an attack on government paperwork.

Billy Carter, who twice ran unsuccessfully for mayor of Plains, population 683, says he rarely discusses affairs of state with his brother.

"The only thing I'll raise hell with him about is agriculture," he says. Hesitating, he tones down his comment. "I won't say raise hell, but I have called Secretary Bergland [Secretary of Agriculture Bob Bergland] a couple of times."

PROBLEMS WITH OSHA

Operating the Carter warehouse, which buys, processes, stores, and markets peanuts and sells fertilizer, lime, and other farm products, has brought Billy Carter into conflict more than once with OSHA and with the federal Environmental Protection Agency. EPA inspectors from time to time have claimed the peanut shelling process has polluted Plains.

The President is well acquainted with Billy Carter's feelings in some of these areas.

"Jimmy knows what trouble I've had with pollution because I raised so much hell at the state level when he was governor," the younger brother assets. "He knows how much I've had to spend on pollution."

CARTER FARM LEASED

The Carter family interests include the warehouse, in which the President has controlling interest, and Carter Farms, Inc., a 3,061-acre farm outside Plains which is owned jointly by seven members of the Carter family.

Under an agreement signed by President Carter shortly before his inauguration, the farm has been leased and the warehouse will be sold. The President's holdings in both properties have been turned over in trusteeship to Charles Kirbo, an Atlanta lawyer who is a close friend and adviser to the President. Billy Carter's livelihood depends on the family business, and President Carter has asked Mr. Kirbo to keep that in mind in whatever disposition is made of the properties.

Billy Carter told NATION'S BUSINESS he has been given first option to buy the warehouse, which already has attracted several potential buyers.

"I know what the warehouse is worth, so I'm not going to pay a premium for the Carter name," he says. "I've already got the name. In effect, the warehouse will be placed on the open market for sale, and it will be a straight business transaction."

The Carters spent about $1.2 million on warehouse improvements during the past two years, largely involving a new peanut shelling plant with facilities for additional storage.

"We simply could not meet OSHA requirements in the old plant," Billy Carter says.

Jimmy Carter, Annapolis graduate, designed the plant, and Billy Carter, onetime paint salesman and construction worker, supervised construction.

"That's where I got an education," Billy Carter explains. "I worked with the builders from the first day to the last so I could learn every inch of the operation. When it was finished, I trained the workers."

IRKSOME COMPLAINTS

He estimates that 22 percent of the spending on shelling equipment in the new plant—the total came to $800,000—was dictated by OSHA and EPA requirements. Despite that expense, he says, federal inspectors still are on his back with niggling complaints.

Pointing to the top of a grain elevator where the shelling operation starts, he says, "We had to spend $400 for some guardrails up there, but one man might go up there once a year."

At the peak of the processing season, in the fall, the Carter warehouse employs up to 75 men and women. The number of employees has been falling off as more and more labor-saving devices have been installed and the trend can be expected to continue.

Unfortunately, the victims of the labor-saving devices are some of the hard-core unemployed in the area.

PROBLEMS WITH MINIMUM WAGE

"Every time the minimum wage goes up, we have to lay off a few more people," Mr. Carter says. "I'd rather give these people jobs, but I have to look at costs."

At one time he had 24 women sorting peanuts by hand. Virtually all have been replaced by a series of electric eyes which sort the peanuts mechanically.

In the peanut shelling plant that was shut down because it could not meet OSHA requirements, there were jobs for about 35 men and women.

"We are doing five times more production in the new plant, and we can get by with 15 people," Mr. Carter says.

Billy Carter hired a student at a nearby school for problem learners to sweep the plant and do other odd jobs.

"I could have given jobs to five of six boys in that school if it weren't for the minimum wage," he comments.

He says he would favor a two-tiered minimum wage system in which teenagers could be hired at a lower rate.

"Actually, I would much prefer some kind of system where we could hire people at a lower figure and gradually raise them to the minimum wage," he says. "That way, we would have a chance to see if they can do the work, or even show up for work, before giving them a regular job.

"I'm really on the spot. Every time the minimum wage goes up, I have to raise my other employees. It's not fair to have your better employees making the same as those who don't put as much into their work."

He pauses a moment and laughs. "You know, I shouldn't be talking like this. Every time I say anything about the minimum wage, I get more hell. Especially from the unions. But I'm going to say it again. A lot of people simply aren't worth the minimum wage."

PROBLEMS WITH WELFARE

Billy Carter is convinced that Washington is to blame for some of the unemployment in this country, not only because of the minimum wage, but because of unrealistic, unsound, and sometimes ridiculous regulations on unemployment compensation and welfare.

"We have a lot of trouble in this area with welfare," he says. "In Sumter County we have as many people administering welfare and related programs as there are in the rest of the county government. Five years ago we had eight people handling welfare; now there are close to 60. They raise hell if people getting welfare go to work.

"Here's a good example of what I mean. I had a man working for me—a big, strapping fellow—who had some kind of chronic leg ulcer. He went to a new doctor who told him he had to stay off the leg for a couple of weeks. They put him on welfare. At that time the work was seasonal, and he was making as much on welfare as by working. That was 15 years ago.

"I see him every once in a while walking down the street. On Saturday afternoon he's drunk and raising hell. I finally complained to the welfare people, and you know what they told me? 'Well, we check him every Thursday afternoon, and he's always there sitting in a chair with his foot propped up.' I got mad. I said, 'Damn it, if I was drawing what you're paying him, I know damned well that one afternoon a week I'd sit there and watch television with my foot propped up when you come in.'

"The trouble with the welfare program is that the more people they have on the payroll the more they hire, and the more they hire the more the director gets."

Billy Carter is no less disenchanted with the way the jobless pay system is operated.

UNEMPLOYMENT PAY ABUSE

"Our unemployment compensation system is so much abused," he complains. "I guess we brought 50 people here from the state employment office this year when the rush season was on. I know of only one man who took a job and stayed on for a few weeks. The only thing most of them want to do is come out here and get us to sign the slip showing they applied for a job. Then they go back home and continue drawing benefits. We operate 60 and 70 hours a week in the rush season, so we had the jobs if people really wanted to work.

"When unemployment was at the highest, I needed a man to run a peanut drying machine. It would have paid $250 to $300 a week. I couldn't hire a single person. They would rather draw $90 in unemployment benefits every week and pick up food stamps at the same time."

FIRING CHALLENGED

Because of the jobless pay system, Billy Carter finds that firing can be as difficult as hiring.

Several times he caught one of his workers sleeping in the warehouse. On one occasion he had to send the man to the hospital, where an examination showed a heavy concentration of alcohol in his bloodstream. After re-

peated warnings, Mr. Carter let the worker go because, among other reasons, he worked around dangerous machinery.

State unemployment compensation officials objected to the firing, and Mr. Carter's contribution to the jobless pay system was increased as a result.

"I appealed, but the government ruled in the man's favor," Mr. Carter recalls. "They said that I had no proof the man was drunk on the job, that he was probably only sleeping. I even had the hospital report which showed the man's drunken condition."

TAX INSPECTORS CALL

Being the President's brother doesn't discourage visits by federal tax inspectors. Billy Carter interrupted his interview with a Nation's Business editor when two Internal Revenue Service officials called at his warehouse office. Later he explains:

"They came to talk about an audit. Said we were selected at random for a complete check—my records, Mother's, the warehouse's, the service station's, Jimmy's, and the farm's. All six of us at one time—and at random.

"When I heard they were coming over, I put out the word in Atlanta that they'd have to get a court order if they wanted to see all these records. That shook 'em up. I won't do it, of course."

NO. 1 PROBLEM: GOVERNMENT

Ask Billy Carter what is the greatest problem the small businessman has to contend with and he answers with one word—government.

"No question about it, government at all levels, but especially at the federal level," he elaborates.

"I'm not going to deny that some of those OSHA and EPA regulations are good. They are. But I'm talking about all the ridiculous regulations we have to put up with.

"The major complaint I have is that 90 percent of the folks they send here to inspect us don't know anything. We have some kids right out of college who don't know a damned thing. I could tell them this [pointing to his bookcase] is a peanut sheller, and they wouldn't know the difference. The trouble is that they don't educate these inspectors before they send them out."

What, he is asked, would make OSHA and EPA more workable? His answer is simple: "A little common sense."

The Carter warehouse at one time ginned cotton for farmers in the area, but gave it up. Cotton ginning, like mechanical peanut shelling, is noisy, a circumstance which brought Billy Carter and OSHA into one of their confrontations.

WORKS MACHINERY HIMSELF

"All of the employees working around the gin had to wear earplugs," he explains. "So I had to do the ginning. You see, as the owner, there was no way I could be made to wear earplugs. There are about 80 electric motors on a cotton gin, and the only way you can tell when there is a problem is to hear it. You can't convince OSHA about things like that.

"I had to put in an expensive wall across the whole new shelling plant to cut down the noise. That wall is completely worthless for anything else."

After the plant was completed, OSHA ordered Billy Carter to install additional toilets as well as hot water in the washrooms.

"Now they're after me to put a couch in the women's washroom in case someone get's sick," he says. "Hell, I don't have room to put in any couches. So I told 'em to go to hell, and I haven't done it yet."

Does Billy Carter believe his brother will succeed in cutting back federal paperwork?

"I sure hope so."

TIME FILLING OUT FORMS

Until the federal government let up somewhat on some forms that had to be filled out and returned to Washington, according to Mr. Carter, his office staff was spending about 15 percent of their time filling them out.

"Some of these quarterly, semi-annual, and annual reports are a three and four-day job," he explains. "Some are almost impossible to fill out. I had some forms that had to be filled out by the 15th of the month, so for five days before the 15th we didn't do a thing but government paperwork."

Billy Carter says that much of the information sought by government agencies should be seen by only one agency, the Internal Revenue Service, if any.

"Take these crop reports and the agriculture census," he says. "A lot of them have to do with my finances. I don't like that information going through 40 government hands. Me, I'm kind of peculiar. I have six or seven bank accounts because I don't like everybody to know how much money I have in the bank.

"When they do these agricultural censuses, you can almost say the hell with everything else for almost a month because it's going to tie you up that long. I have to help the farmers who deal with us. The only place they can get the information to fill out their own census forms is right here. So we have to go through all our back records to satisfy the government. And you can't get out of it because it's required by law."

TAX REBATES—TOO COSTLY

Mr. Carter used to get a rebate from the State of Georgia for taxes he paid on diesel fuel for his tractors that bring in peanuts from the farms. The voluminous paperwork forced him to forgo the rebate.

"The cost of keeping the records and filling out the forms just wasn't worth it," he says. "Every time a tractor filled up with diesel, I had to send a man out to get a record of the transaction. At the end of the month we had to add everything up and fill out a five-page form. If that wasn't enough, the state had somebody down here asking us for proof. I lost about $50 a month, but it wasn't worth fooling with."

Like all businessmen, Billy Carter is hit by paperwork from all sides. In one EPA check of his new plant, inspectors came across a piece of peanut cleaning machinery which fell short of certain pollution control requirements.

"The permit I had to get to put in the controls was so complicated it cost me $200 just to get the damned thing filled out," he recalls sourly.

Billy Carter has invested much effort in learning about business. That he has learned well is shown by the fact that the warehouse, during the six years he has been responsible for its daily operations, has seen gross sales shoot up from $1 million annually to $5 million.

BUSINESS STARTED IN 1930'S

Billy learned a lot about the business hanging around the warehouse as a child. He was extremely close to his father, Earl, who launched the business in the 1930's, selling fertilizer, lime, and general agricultural supplies, as well as storing peanuts and ginning cotton. When the elder Mr. Carter died, Billy was only 14, and Jimmy was forced to abandon a career in the Navy to return to Plains and take over the farm and warehouse.

Billy Carter, meanwhile, joined the Marines after graduation from Plains High School and spent four years in uniform, serving for a while in the Far East. He was 18 and on leave from Marine boot camp when he married his childhood sweetheart, Sybil, who was 16.

In 1959, when he was discharged, he tried a succession of jobs—construction work, selling paint in Macon—and enrolled for a brief period at Emory University in Atlanta. In 1962 he went to work with Jimmy at the warehouse.

BUSINESS IN GOOD HANDS

"Miss Lillian," as Jimmy's and Billy's mother is affectionately known around Plains, says the family business is in good hands.

"Billy is more popular with the farmers than Jimmy was," she says. "He's more down to earth. Despite what some people think, Billy is just as well read as Jimmy, and he is really smart. He's well loved, especially by the farmers and the newsmen. His only trouble is he cusses too much and drinks too much beer—but not on duty."

David Reeves, assistant manager of the Carter warehouse, says that "Billy knows everything about peanuts. He can pick a peanut out of a truck and tell you the moisture content within five percent. Or he can pull a young peanut out of the ground and predict the maturity date within a week."

Ernest Turner, owner of Turner's Hardware and Department Store and chairman of the board of deacons at the Plains Baptist Church, was a partner in the fertilizer portion of the Carter warehouse business for almost 15 years.

Mr. Turner says:

"Billy is a smart businessman. He is very capable of running the family business. He gets along very well with the farmers and talks their language."

NOT A DEMOCRAT

While it may surprise some readers, Billy Carter does not consider himself a Democrat.

"Basically, I'm not political," he told NATION'S BUSINESS. "Basically, I'm not a Democrat. I voted straight Democratic in the last election for the first time in my life. I vote for individuals, not party."

If Billy Carter is impressed by the political achievements of his older brother, he doesn't let on.

"Yes, we chat every once in a while," he says. "But I let him call me; I don't call him."

What does he consider his brother's single greatest attribute?

"His determination to be a good President. I said in the beginning that if determination and hard work would get the presidency, he would be President. I was proved right.

"I'm not saying he'll be an extremely popular President, but he'll get things done. They said he owes so much to the blacks and the unions that his hands will be tied. I guess you see who's raising the most hell since he got in: the blacks and the unions."

Billy Carter gives Jimmy Carter high marks for his performance so far.

"I think he's doing a good job, although I'm like everybody else—I'm not extremely happy with all his appointments. There's a couple of them I'd like to see fired."

He won't say who.

Although he ran twice for mayor of Plains—losing by six votes in 1972 and 19 last year—Billy Carter concedes he had little chance of winning "because I'd just as soon drink a beer out in the street."

TRANSFORMATION IN PLAINS

Actually, Billy Carter wanted to be mayor because he loves the town dearly.

He is saddened, frustrated, and angry over the suddent emergence of Plains as a tourist mecca.

"Plains has gone from a quiet little town to the biggest junk shop in the United States," he complains.

Virtually every store along block-long Main Street has been converted into a souvenir shop selling cheap mementos, some demeaning to America's first family. Three bus firms hustle tourists past landmark attractions—the homes of Miss Lillian, the President, Billy, and cousin Hugh Carter; Billy Carter's Amoco station; and, of course, the warehouse.

Tourists are pouring into Plains by the hundreds daily, their numbers to swell by the thousands this summer. There are no

hotels or motels. Portable toilets have been installed in a small park. Real estate prices are skyrocketing.

BUSINESS HARDER TO RUN

Billy Carter is finding it harder and harder to run his businesses. He has lost his privacy. Tourists cluster around the Amoco station and the warehouse, waiting for a glimpse or an autograph. Visitors sometimes force their way into his office. He rarely goes to the station, once his favorite hangout.

"Sometimes, to conduct business, I have to go to my lawyer's office, or a beer joint down the road, or just jump in my truck and do business with people while we're driving around," Mr. Carter says.

Tourists tramp over his lawn at home. One demanded admittance at 7 a.m. one Sunday to take pictures inside. As a result of threatening letters, the younger of the six Carter children no longer are allowed to move about freely. The Carters recently announced they would have to move out of Plains because of fear for the safety of their children. They have bought a house out in the countryside, 19 miles north of the town, and plan to begin living there this summer.

In a quiet way, Billy Carter is trying to diminish the onslaught on the character of Plains. He recently accepted appointment as one of three county assessors.

SELFISH AND UNSELFISH

"I did this for selfish and unselfish reasons," he explains. "Plains is basically a town of widows. Most of the people here are old and on fixed incomes. With land values shooting up the way they are, the taxes on these people's properties will go out of sight."

Mr. Carter will, however, have to give up the assessor's job when he moves from Plains.

As an example of the rising value of property in Plains, he says he can get $1,500-a-month rent on a Main Street building he owns that brought only $40 a month three years ago.

Hiring lawyers out of his own pocket, Billy Carter has successfully fought five rezoning cases in which residential properties would have been made available for commercial development.

He says he is convinced that, if the junk-shop sprawl continues, "it will be impossible for the people who want to live here to stay, and the town will become a major rip-off spot for the tourists."

CIVIC PROJECTS

If he can't halt the proliferation of souvenir stands, he has at least found a way to convert some souvenir sales into civic betterment. For some years he has held a lease on the old Plains railroad depot, where his brother launched his presidential drive, and has used it to store lime and fertilizer. After the election he helped form a group called Plains Civic Projects—he is president and his wife is treasurer—which opened a souvenir shop in the station.

"Billy has insisted that all the profits be used for worthwhile civic projects," says Ralph Cornwell, a retired Sears, Roebuck merchandise manager who now runs the depot shop. "He'd like to take over one of the old buildings, for example, and show historic movies of this area to the tourists."

Mr. Cornwell says he met Billy Carter about 11 years ago, when he moved to Plains.

LIKES TO MAKE MONEY

"I was and still am very impressed with him. When it comes to money, he is a very serious man. And he is quick to accept ideas on how to make money. I remember he was looking for a cotton gin a few years ago, and I told him about one I had heard was for sale in Tampico, Mexico. He was way ahead of me. He had already contacted the Mexican government and was making plans to buy it."

Billy Carter has hired an agent to handle speaking requests and public appearances as well as to ward off scores of promoters who want him to join in ventures exploiting the Carter name.

AT WORK BY SIX

Except for the pressures imposed on him and his family by the hordes of tourists—"we used to get three a year, and two of them had just lost their way"—Billy Carter has resisted the presidential aura that touches all of the Carter clan, and he clings to his old life-style.

He is usually at his office no later than six in the morning. He wears blue jeans or other work clothes. When he is not conducting warehouse business, there is always a coterie of good-old-boy friends who drop in for small talk. But he misses his old hangout, the Amoco station.

Washington leaves Billy Carter cold. The White House has no appeal for him. He would not find it difficult to choose between attending one of his brother's state dinners or drinking beer with his buddies.

"When Jimmy was governor I went to only one function," he recalls. "That was when he had a reception for the Vietnam prisoners of war. These things are too stiff. They don't turn me on at all."

Billy Carter sums up his feelings in a few words:

"I don't like to go anywhere if I can't get back the same night."

FORMER SPECIAL PROSECUTOR JAWORSKI'S OPPOSITION TO AN AGENCY FOR CONSUMER PROTECTION

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. LEVITAS. Mr. Speaker, we are shortly going to be asked to consider once again a bill to establish an Agency for Consumer Protection.

In the last Congress, both the House and Senate passed such a measure which was never sent to the White House because President Ford has promised to veto it, justifiably so. Such an agency would have added one more executive agency to our Government, already overburdened and encumbered with hundreds of ineffectual agencies, bureaus, and commissions. Worse still, it would itself be a public deception. The proponents of this Agency allow people to think that this new Agency will cure their consumer complaints when, in fact, the Agency as constituted in H.R. 6805 would do no such thing. It is not even intended to resolve consumer complaints and is not capable of doing so in any event.

It would, however, create an agency that would have extensive powers and no accountability. H.R. 6805's ACP would be responsible neither to the legislature, nor to the President.

The dangers of such unlimited authority have been brilliantly expressed by a renowned expert in the field of governmental abuses, former Special Prosecutor Leon Jaworski. I am including a copy of his letter to the Committee on Government Operations on this subject and I commend it to the reading of the Members of this body for their consideration:

FULBRIGHT & JAWORSKI,
Houston, Tex., April 27, 1977.

Re H.R. 6118; Consumer Protection Act of 1977.

Hon. JACK BROOKS,
Chairman, Committee on Government Operations, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing, in lieu of a personal appearance, to present my views on the bill H.R. 6118. I respectfully ask that this letter be placed in the record of proceedings before your Committee on the bill.

I have reservations about many of the provisions of H.R. 6118, most of which have been addressed by others. I wish to concentrate in this letter on a matter of particular concern—the potential for disruption of our political system that the bill creates.

My years of law practice, both as a private and public citizen, have taught me that the stability and effectiveness of government depends upon balance among its institutions. Political power inadequately confined creates imbalance and invites abuse. The new Agency for Consumer Protection, as it is called in the bill, would be vested with authority so broad that it could easily be turned to the political advantage of those who control it. There are no checks sufficient to harness that authority. Under these circumstances, creation of the new agency is unwise.

The Agency for Consumer Protection would be charged to "protect" and to "represent" the "interests of consumers" in nearly every activity of our federal complex. The legislation would grant its administrator the right to appear before agencies and departments of government, the right to collect information by compulsory process from within and without government, the right to sue the government in federal court, and the right to speak from any platform—all on behalf of the "consumer interest" which he "represents."

Let us consider the implications of this authority. To do so, we must first inquire who are the new agency's constituents. They are called "consumers" as if there were a difference between a "consumer" and a "person." In fact, of course, there is none. The agency will ostensibly represent the interest of every man, woman and child in this nation.

This conclusion leads to the question of how the interest of the people will be determined in any given matter. There are no criteria in the bill for defining that interest, nor could there be. Definition of the national interest is the most difficult and most fundamental objective of government; and ultimate responsibility for its accomplishment is placed by the Constitution upon the elected Members of Congress and the President. I have severe reservations about the delegation of so broad and basic a role to one unelected official.

I hope that you will carefully consider the implications of this extraordinary authority. The administrator would be empowered to appear before executive and independent departments and agencies, before the courts, before committees of Congress, and before any individual or entity outside the government to express the national interest as he defines it. The political authority inherent in such an assignment is literally enormous.

More importantly, there is no effective check against abuse of that authority by the elected branches. The bill contains no provision for a term of office or for the circumstances under which the administrator may be removed. These factors indicate congressional intent that he be subject to removal at the discretion of the President and therefore that he would be within the President's control.

On the other hand, the agency is empowered to sue executive departments and agencies, implying that the administrator

would be independent from the President. Given that the power to sue executive departments is a keystone of the legislation, I assume that the administrator would not, in fact, be subject to control by the President.* This conclusion is buttressed by the ability of the administrator to intervene and sue in the context of independent agency activity. Were he subject to the control of the President, his actions before independent agencies might constitute improper executive interference. If the Agency for Consumer Protection were to function as it is conceived in the bill, the power of the administrator could not be checked by the President.

Neither could Congress nor the judiciary provide an effective balance against the activities of the agency, so long as it remained within its practically limitless statutory authority. Congress could theoretically abolish the agency or limit its appropriation, but in practice would probably not do so. As the designated representative of all consumer interests, the administrator would have a far greater opportunity to influence public opinion than most Members of Congress. I would expect the agency to make the argument that its mandate could not be carried out without substantially greater appropriations. Given the administrator's public platform and his designated status as the representative of all consumers, it is not unlikely that he would prevail. For these reasons, I am skeptical as well about the "sunset provision" contained in Section 23 of the bill.

I do not care to speculate that any person would use the new agency as a vehicle to distort the political process for personal gain or for any other reason. I need not do so to prove my point. Power would be vested in the administrator of the new agency that could be wrongfully manipulated. That alone is sufficient to justify laying the concept to rest once and for all. It is contrary to the most fundamental of our democratic principles to vest in one unelected person the authority to represent, legally and politically, the interests of all of the people.

I do not mean to concentrate on the negative. There are positive aspects to the bill, particularly its purpose, which is to make the processes of government more responsive to the needs of citizens. I applaud that goal, but cannot understand why the least desirable alternative to achieve it has been selected.

The creation of additional bureaucracy may have been more acceptable to the nation in the earlier years of this decade. It is apparent, however, that consumers now want less government for their "protection." The vote on this legislation has become increasingly negative to a point at which a shift of five votes in the House would have defeated it in the 94th Congress. Moreover, we have recently elected a new President who is pledged to halt the continued growth of government and to reorganize its existing functions along more efficient lines. I respectfully submit that he and the Congress should work together for the accomplishment of that goal, and not delegate the task to an unelected official with inordinate authority.

I regret that the scheduling of proceedings on H.R. 6118 was such that I was unable to appear personally to discuss my convictions on the bill in greater detail. If the proceedings are reopened, I would be pleased to do so. Furthermore, I stand willing to amplify the views expressed herein and to answer any questions that you may have.

In closing, I wish to make clear my interest and that of my firm in this legislation. We have, for several years, participated voluntarily with other members of the business community in an attempt to demonstrate why the consumer protection agency concept should be abandoned. We shall continue to do so. Our services in preparing for anticipated oral testimony before your Committee and the preparation of this letter will be compensated by the Business Roundtable, an organization of businessmen. Under the terms of our agreement with Business Roundtable, the views expressed herein are my own. The contents of this letter have not been reviewed or discussed with anyone outside our firm.

Sincerely yours,

LEON JAWORSKI.

IN OPPOSITION TO VIETNAM'S DEMANDS

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. GILMAN. Mr. Speaker, President Carter's Vietnam negotiators announced last week that the United States would not veto Vietnam's admission to the United Nations, and that progress had been made towards normalizing relations between the United States and the Socialist Republic of Vietnam. The Carter administration also indicated that following normalization of relations, the United States would lift its trade embargo of Vietnam.

As a member of the House Select Committee on Missing Persons in Southeast Asia, I spared no effort in a variety of fora to articulate my deep, abiding concern that the Vietnamese Government acknowledge, by way of a "sincere" accounting, our Nation's right to learn the fate of those members of our armed services listed as missing in action. The administration's announcement that it would not bar Hanoi from the United Nations and that it intends to effect a normalization of relations with Vietnam is incredible and astonishing. I am amazed at the naivete of the administration's perceptions of a complete accounting on our MIA's. It is inconceivable that the administration is ready to accede to extraordinary demands made by the Vietnamese in return for promises from Hanoi that they will intensify their efforts to provide information concerning Americans listed as missing in action in the Vietnam war.

Mr. Speaker, I will be introducing legislation tomorrow to underscore opposition to the substance of and direction which the administration's negotiations with Vietnam are taking. This concurrent resolution, to which Senate Concurrent Resolution 5, introduced by Senator ROBERT GRIFFIN of Michigan is a companion bill, would: First, continue to oppose membership in the United Nations of the Socialist Republic of Vietnam; and second, continue to deny diplomatic recognition to the Socialist Republic of Vietnam. These two provisions would guide our negotiations with the Vietnamese until such time that Vietnam provided us with a satisfactory accounting for those Americans still missing in action and unaccounted for in the territory under its control.

There can be no understating the exigency surrounding passage of this resolution which seeks to assure for the United States only the minimum justice due it according to transcendent humantarian precepts of equity. Mr. Speaker, I have in mind the obligation of the Vietnamese Government to provide us with a full and complete accounting of our MIA's.

Permit me to remind my colleagues of two unequivocal statements made in September 1976 by President Carter, then a Presidential candidate. On September 19, 1976, he assured the American people that he would "not normalize relations with the Vietnam Government" until he was "convinced that they have made a complete accounting for those who are missing in action." On September 30, 1976, Mr. Carter stated:

> We will account for the MIA/POW's before we re-establish any relationshps with Vietnam, and you can depend on that.

Upon assuming office, President Carter in March 1977, was quoted by the Washington Post as stating that he "would aggressively move to admit Vietnam to the United Nations and also to normalize relationships with them" if "we are convinced as a result of the negotiations and other actions on the part of the Vietnamese that they are acting in good faith."

Recent pronouncements by U.S. negotiators indicate that President Carter has been so "convinced." Mr. Speaker, I regret to say that I am not so easily convinced and assured by the recent Vietnamese declarations of "good faith" and "intentions" to provide us with a complete accounting of our servicemen missing in action. In past and current negotiations, the Vietnamese have evinced a marked concern for moving with considerable celerity in gaining admission to the United Nations, securing U.S. economic assistance, and in normalizing relations with the United States. Yet there is no firm, convincing evidence that they intend to act as expeditiously in providing us with more than but the exiguous amount of information that they have conveyed, concerning our missing servicemen.

In a March 27, 1977, essay appearing in the Wall Street Journal, Allan W. Cameron, the distinguished associate dean of the Fletcher School of Law and Diplomacy at Tufts University, urged that "We go slow in dealing with Vietnam." Dean Cameron maintains that:

> The Vietnamese have refused to provide information about U.S. Servicemen killed or missing in action. Rather, they ghoulishly propose to trade that information (and they have more than they admit) for aid, recognition, and acceptance.

Furthermore, concerning this information on our MIA's, Cameron asseverates:

> The U.S. should not beg, or buy that which should be given out of minimal human concern.

I concur unequivocally with Dean Cameron's well-reasoned conclusion that we "go slow" in dealing with Vietnam.

To those, for example, who urge that we attach no preconditions to our abstention from barring Vietnam's admission to the United Nations, I can only reply that our concern for a full accounting of our MIA's should not be categorized as a "precondition"; but equated instead with what should be considered but the most minimal of obligations incumbent upon the Vietnamese as dictated by long-standing principles of international decency.

We have been told further that U.S. antagonism toward Vietnam is "counterproductive"; that American vetoes of Vietnam's admission to the U.N. may create, what one reporter has described as "widespread sympathy for Hanoi." Mr. Speaker, in light of the spirit and the letter of the U.N. Charter, any such sympathy is egregious and undeniably misplaced.

The refusal of the Socialist Republic of Vietnam to cooperate in providing all pertinent information concerning our missing servicemen is a flagrant violation of those humanitarian principles embodied in the United Nations Charter. For example, Vietnam's intransigence directly conflicts with a U.N. General Assembly Resolution of 1974, adopted by a vote of 95 to 0, which calls upon parties to armed conflicts to provide just the type of information and assistance that the United States is seeking concerning its MIA's.

The Woodcock Commission, appointed by President Carter to visit Southeast Asia in March 1977 and to seek help from the Vietnamese in obtaining an accounting of missing Americans in that region, received only the remains of 12 servicemen (11 American and 1 Vietnamese) and a plethora of promises—contingent upon American concessions at the bargaining table—of future assistance in locating other MIA's.

Mr. Speaker, permit me to refer my colleagues to the remarks of Huang Hua, China's chief representative to the United Nations. Explaining China's veto in 1972 of the admission of Bangladesh to the U.N., Mr. Huang asserted,

> Empty promises are not enough. . . . Applicants for membership have to show their willingness to abide by the obligations contained in the [U.N.] Charter.

Vietnam's current, gross disregard for its moral responsibility for accounting for our MIA's lends little credence to the argument that its prospective embrasure of principles contained in the UN Charter will be any different than it is now. That is, there is little in the way of past or present evidence that once admitted to the UN, Vietnam will release all the information it now holds concerning our MIA's. If France's experience with Vietnam in securing information about French servicemen missing since hostilities of over 20 years ago is a harbinger of what awaits the United States, then we must recognize Vietnamese tactical intransigence for what it really is.

Mr. Speaker, last week on May 4, I expressed my deep-seated opposition to the administration's decision to accede to Vietnamese demands. I indicated that in the 18 months since I traveled to Hanoi with the House Select Committee on Missing in Action, and was assured of extensive Vietnamese efforts to provide information on our MIA's, we have seen little substantive Vietnamese accomplishment along these lines. My colleagues demonstrated their clear understanding of this situation by overwhelmingly approving, by a vote of 266 to 131, an amendment to the Foreign Relations Authorization Act fiscal year 1978, barring "any reparations, aid, or any other form of payment to the Socialist Republic of Vietnam." The Washington Post correctly reported passage of this amendment as "reflecting widespread congressional opposition to any U.S. aid to Vietnam."

As concerns Vietnam's reprehensible exploitation of the MIA issue, and Vietnam's admission to the UN, the Christian Science Monitor submitted the following well thought out and succinct scenario:

> If the U.S. does not veto its [Vietnam's] UN membership, it will be throwing away a bargaining card and Hanoi will then insist on using the issue in the bilateral talks, where it will seek to trade money for people.

Mr. Speaker, I urge my colleagues to support this important, timely measure. We must provide the administration with tangible evidence that Vietnam's admission to the UN and normalization of relations are not ineluctable in nature. I request that the full text of this resolution be inserted at this point in the RECORD.

The resolution follows:

H. CON. RES. —

> Concurrent resolution expressing the sense of the Congress that the United States should deny diplomatic recognition to the Socialist Republic of Vietnam, and oppose its membership in the United Nations, until such country makes a full accounting of Americans unaccounted for and missing in action in areas under its control
>
> Whereas approximately two thousand three hundred Americans remain missing or unaccounted for in Indochina, despite extensive efforts of the United States Government to secure an accounting;
>
> Whereas on numerous occasions representatives of the Socialist Republic of Vietnam have acknowledged that they possess additional information pertaining to American servicemen and civilians listed as missing in action in Indochina, and the existence of such information is confirmed by the United States intelligence agencies;
>
> Whereas the heinous refusal of the Socialist Republic of Vietnam to provide detailed information on the fate of these men has caused untold suffering for their relatives and friends;
>
> Whereas the refusal of the Socialist Republic of Vietnam to cooperate in this matter is a flagrant violation of humanitarian principles embodied in the Charter of the United Nations, and directly conflicts with the resolution adopted by the United Nations General Assembly on November 6, 1974, by a vote of ninety-five to zero, which called upon "parties to armed conflicts, regardless of their character or location, during and after the end of hostilities and in accordance with the Geneva Convention of 1949, to take such action as may be within their power to help locate and mark the graves of the dead, to facilitate the disinterment and the return of remains, if requested by their families, and to provide information about those who are missing in action"; and
>
> Whereas article 8(b) of the 1973 Paris Agreement on Ending the War and Restoring Peace in Vietnam provided that: "The parties shall help each other to get information about those military personnel and foreign civilians of the parties missing in action . . . and to take any such other measures as may be required to get information about those still considered missing in action": Now, therefore, be it
>
> *Resolved by the Senate (the House of Representatives concurring)*, That it is the sense of the Congress of the United States that, until such time as the Socialist Republic of Vietnam cooperates in securing a satisfactory accounting for those Americans missing in action and unaccounted for in the territory under its control, the United States should—
>
> (1) continue to oppose membership in the United Nations of the Socialist Republic of Vietnam; and
>
> (2) continue to deny diplomatic recognition to the Socialist Republic of Vietnam.

FIRST CONCURRENT RESOLUTION ON THE BUDGET—FISCAL YEAR 1978

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ASHBROOK. Mr. Speaker, on April 27, I voted against House Concurrent Resolution 195, the first concurrent resolution on the budget for fiscal year 1978. I did so because I believed the excessive spending levels proposed in that resolution were totally unacceptable. It would have authorized more than $466 billion in budget outlays and a 1 year deficit of over $68 billion.

When this legislation went down to a smashing defeat, the message should have been clear to everyone: We must reduce Federal spending and move toward balancing the budget. The Budget Committee, however, apparently thinks otherwise. After making only a few minor changes—plus one unjustifiable reduction in the defense category—the Budget Committee has thrown the resolution back onto the floor.

The new resolution recommends approximately $464 billion in budget outlays—over $50 billion more than proposed in the first budget resolution only 1 year ago. It offers a deficit of over $66 billion, almost $16 billion more than the budget resolution last year. This would push the overall public debt to $792 billion.

Further massive doses of deficit spending will add to the inflationary

pressures on our economy. After an extended down-turn in the rate of inflation, retail, and wholesale prices are again starting to skyrocket. Additional irresponsible Government spending could make the situation far worse.

According to nationally syndicated columnist George F. Will:

It is implausible to think that we can avoid another surge of inflation . . . The key figure is $138.8 billion. That is the sum the government will borrow this fiscal year and next to finance the budget deficit and the borrowing by the many agencies whose borrowing activities do not appear in the budget.

Such high levels of Federal borrowing will crowd private borrowers out of the market. This means higher interest rates. It also means that money for business expansions and house mortgages dries up.

As George F. Will goes on to state:

The administration seems to believe that all this public-sector borrowing can be done without detriment to private borrowing because demand for private loans has been slack. But the administration's stimulus program is one reason why there will be so much deficit and borrowing. And the purpose of that stimulus is to stimulate private sector activity, especially borrowing for job-creating investment.

In summary, the excessive Federal spending in House Concurrent Resolution 214 will add to inflation and dry up investment capital. It will damage rather than stimulate our economy, and it will help prevent the creation of meaningful jobs in the private sector.

Arthur Burns, Chairman of the Board of Governors of the Federal Reserve System, has described the deficits—inflation—recession chain of events which our Nation has fallen into. Speaking before the Budget Committee, Burns said the following:

The inflation that has plagued the American economy since the mid-1960's is a complex phenomenon, and it is by no means solely the product of budgetary practices. But there can be little doubt that the chronic reaching of the Federal Government for both financial and real resources has been a major contributory element in inflation—indeed, the dominant one in my judgement. The Federal Government was a party—rather than the counterweight it should have been—to the demand pressures that began building up in the mid-sixties and that culminated in the speculative distortions of the 1973–74 period. Inflation, by my assessment, not only sowed the seeds of the recession that ensued; it also is the basic explanation—precisely because it became so virulent—of why the recession that followed was so severe.

It is time that we brought a halt to the reckless deficit spending that has created and fueled our problems of inflation and unemployment. House Concurrent Resolution 214, like its predecessor, should have been rejected. That the majority party was able to work a deal with its members and reverse their votes comes as no surprise. The American people are the losers in this retreat of Democratic members who switched their votes.

WHY GOVERNMENT SHOULD STAY OUT OF STEEL PRICING

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ROONEY. Mr. Speaker, in light of the recent price adjustments announced by the steel industry, it seems appropriate to bring to the attention of my colleagues an article from the January 1977 issue of Nation's Business by Edward D. Bickford, former senior vice president of Bethlehem Steel Corp.

In the article, Mr. Bickford expresses grave concern with Government intervention in steel pricing when, he contends, "if market forces are left alone, they determine price levels that work to the benefit of both the industry and the overall national economy."

The events of the recent price increase situation offer evidence of voluntary efforts by this industry to check inflationary trends. I think my colleagues will agree, after reading this article, that Mr. Bickford's very thoughtful appraisal of pricing through politics merits our careful consideration.

Mr. Bickford's article follows:

WHY GOVERNMENT SHOULD STAY OUT OF STEEL PRICING

(By Edward D. Bickford)

Steelmaking is among the most competitive of all American industries.

There are more than 90 domestic companies. They include such well-known names as U.S. Steel, Bethlehem, National, Republic, Armco, Jones & Laughlin, Inland, Lykes-Youngstown, Wheeling-Pittsburgh, and Kaiser.

In addition, the industry must compete with imports from foreign producers that are either operated directly by home governments or enjoy subsidies and other governmental assistance.

Finally, there is vigorous competition from producers of other materials, particularly aluminum and plastic.

WIDESPREAD MISCONCEPTION

Despite these competitive forces within and without the industry, there is a widespread misconception that steel prices are somehow set by big domestic producers without regard to the laws of supply and demand.

Unfortunately, this misconception is held not only by many people in the media and academia, but also by some officials in the highest reaches of our federal government.

As a result, the government has intervened in steel pricing policies a number of times in recent years—from the historic clash between the industry and President Kennedy in 1962 to the Council on Wage and Price Stability. investigation of steel prices ordered last year after President Ford was disturbed by a modest increase which some steel companies had announced.

It is apparent that the Carter administration will likewise lean toward intervention in steel pricing. President-elect Carter and Vice President-elect Mondale have expressed disapproval of a recent six percent increase in sheet steel prices.

Such government interference, which also has included jawboning by Presidents Johnson and Nixon, is based on the theory that government officials with little or no experience in steelmaking are better qualified to determine price policy than individuals who have been in the business all their working lives.

The theory is dead wrong. If market forces are left alone, they determine price levels that work to the benefit of both the industry and the overall national economy. I have seen this proven repeatedly during my own long experience in the industry, which has included many years as a senior executive responsible for price policies at Bethlehem Steel.

A HINDRANCE, NOT A HELP

Let me offer one good example of what government incursions into the private sector can do.

The Arab oil embargo of 1973–74 produced a sudden demand for sharply increased coal production. Opening new mines or reopening old ones required installation of steel plates attached to mine ceilings and walls to prevent them from collapsing. The plates are held up with roof bolts, which Bethlehem makes.

At the time, we were losing money on these bolts because of price controls. But the coal industry was under pressure from the government to increase production, and we were under pressure from the coal industry to supply large quantities of bolts in a hurry. We agreed to expand production of the bolts if a price increase was approved. We applied for an increase and were backed by members of Congress from coal-producing states. Given the urgency of the situation and the backing we had, we did not anticipate problems.

We found to our dismay that the red tape involved was virtually insurmountable. The bolts were a relatively insignificant part of our steel production, but it was a case of the old story, "For want of a nail . . . the battle was lost."

After waiting six months for a decision from Washington, we had no choice but to go out of the mine roof bolt business. We were losing too much money. We told the government of our plans—there was no bluff involved. Then, finally, our application for a price increase was approved, and we not only continued but expanded production of roof bolts. The government involvement had done nothing but make the problem worse by delaying that expansion.

HOW STEEL IS PRICED

Government either cannot or will not accept the fact that free market forces not only make better decisions for society but make them faster.

This is particularly true in the case of steel.

Any price determination in our free economy has a basic formula: cost plus reasonable profit. This is not so in socialized industries abroad, where the profit motive is practically nonexistent. In such industries, prices will vary enormously in relation to market conditions—there will be substantial premiums in time of tight supply and suicidally low prices in time of excess supply. The primary motivation is employment at any cost. Sooner or later, the taxpayer has to underwrite the losses.

In the American steel industry, the method used in arriving at a mill product base price is fundamentally the same as the methods used in pricing any commodity where severe competition exists. The primary ingredients are:

1. Product cost.
2. Reasonable profit.
3. The market—specifically, demand and anticipated volume as well as location of that volume.
4. The identity and location of domestic competitive manufacturers and your analysis of their costs and capacities. You, of course, review the extent of imports from foreign

plants but, because of their pricing policies and government direction, you cannot always try to match their prices unless you are interested in ultimate bankruptcy.

5. The effect of competitive materials such as plastics and aluminum.

6. The reaction you expect from competitors in your industry and in industries offering substitutes for your product.

7. The reaction of the federal government.

8. Intuition, which is related to extensive experience.

A SCIENTIFIC ART

Let there be no misunderstanding—pricing is a scientific art and not the result of off-the-top-of-your-head decision-making.

Once a price has been established and you want either to raise or lower that price, you go through the same analytical exercises. Some of the above eight factors will weigh more heavily than others, depending on the problem and the circumstances.

It is obvious that the most important ingredient is your actual cost. In the steel industry, all major producers have similar contracts with the steelworkers union, and employment represents about 45 percent of total cost. The company that, over a period of time, has poured any available capital into modernization of its equipment—and thereby has confidence that its cost is at least as low as any of its competitors'—is in a very strong position when it comes to pricing decisions. Not to keep abreast of fast-changing technological developments could ultimately end up in strangulation.

The steel business of necessity is very complicated to any stranger. It is both labor-intensive and capital-intensive. It starts with minerals in the ground (ore, coal, and limestone) and ends with a wide variety of steel mill products tailor-made for many purposes.

THE PRICE CONTROL DISASTER

Experience in any endeavor from sports to politics is a major ingredient of success. Therefore, how can politicans and theorists with no experience whatsoever in steel take it upon themselves to make judgments of great impact on our industry and yet expect us to remain healthy? If, as they so frequently say, steel is of such great importance to our country's economy, how can they afford for us to be unhealthy? We need enormous amounts of capital, and to get the capital we must be free from government interference.

I can recall that in December, 1951, while in Washington working for the government, I got into a breakfast discussion with an associate and two lawyers from the Office of Price Control that lasted almost two hours. Steel labor negotiations were in process, and the lawyers contended that the steel industry could give labor an increase of 40 cents per hour and not have to raise the price of steel one cent. They were sincere in their belief, no matter how foolish that belief sounds. It is not untypical of bureaucratic thinking—bureaucrats don't have to meet payrolls or pay dividends.

National price and wage controls in a free enterprise system have never worked. It is like keeping the lid on a pressure cooker while the fire continues to burn underneath—at some point in time, the lid will blow off. Such has been our experience under controls in the years after World War II, the period after the Korean War, or in the early 1970's.

LOOK AT THE RECORD

Whenever prices of any product or service are controlled by political expediency, those who are the target might as well throw in the towel. Look at the bankrupt railroads and the predicaments of the airlines and the Postal Service.

And look at the record of the British Steel Corp., nationalized and operated by the British government. The company lost $528 million in the fiscal year ending in March, 1976. British Steel Corp. has an annual capacity to produce approximately 25 million net tons. Therefore, if the steel industry in the United States had the same relative experience, the loss would be approximately $3.4 billion. That is quite a bill for taxpayers to underwrite. When an industry is free-enterprise, it is not a burden, but a contributor to the tax bill.

In steel, the importance of volume is obvious both as to pricing and profits. It is my belief that had we not broken out of the last round of controls when we did, but were still regulated by the federal government, the steel industry in this country would by now be either nationalized or bankrupt. Furthermore, the industry would not be as modern as it is nor have the capacity the country needs.

Pricing by political expediency, whether through jawboning or law, is the end of free enterprise. Bureaucratic control just does not work that efficiently or progressively, and—worst of all—it lacks both initiative and competitiveness.

A REMINDER IN THE WEATHER

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. DORNAN. Mr. Speaker, Washington in the month of May usually conjures up images of warm days, girls in cotton dresses, picnics on the Capitol lawn and feeding the squirrels. But the last few days have turned that image inside-out. Temperatures have dipped to the 30's at night and have barely made it over 50° during the day. The chilly days have brought back memories of the near-Siberian winter from which we have just recovered. Where is the spring we all deserve after the frostbite of January and February?

It seems to be a cruel joke played by the Cosmic Deceiver.

There is, however, one possible outcome of this cold snap which would make it all worthwhile. That outcome would be the realization on the part of certain Members of this body that the spring is not going to last forever. There is going to be another winter: another winter of cold, heating bills, shortages of heating fuel, and an over-supply of Federal regulation of the energy industries.

During the past few winters, many of my colleagues have kept warm by talking about the energy shortage. Nothing has been done to increase production of the fuel needed to keep their constituents warm. It seems that debate on the issue of underproduction and cost disincentives winds down just about the time the dogwood bloom. If the weather is warm, the debate ends and the problem lies dormant until November and falling temperatures return.

But falling temperatures returned a little earlier than expected this year bringing with them a reminder that the Congress has done nothing to fill America's need for more fuel. There is a lot of talk about conservation but little about production. Conserving may save our resources but it does not keep the American public warm. But warm is what the public demands to be—and can be if this Congress and the administration act to increase production of the natural resources which lie beneath our country.

Unfortunately, the President's recent energy message is the same old line that has been echoing in this Chamber for many a winter. While it is commendable that the President has brought the American Public to the realization that there really is a short term energy crisis, many aspects of his program seem to demonstrate a basic misunderstanding of the causes and potential solutions to that crisis. The Carter package concentrates almost exclusively on the demand side of the equation, and in so doing may predestine serious economic consequences for our Nation.

Coping wtih the energy crisis will require more than conservation. There is no doubt that we must conserve. However, while conserving, we must also make it possible for the free enterprise system to function in a fashion which will encourage the development of additional supplies. We know that supplies of oil and natural gas have been particularly price elastic. That is to say, that when there were price incentives, supplies increased. When price incentives disappeared, supplies tended to dwindle.

Perhaps the best example of this is to be found in our recent experience with natural gas supplies. There is little doubt that the past winter's natural gas shortages were the result of 20 years of Government interference with the market. From the initial court decision in the Phillips case, commentators predicted the advent of shortages of supply. To anyone with the most rudimentary grasp of economics, such an occurrence was inevitable. The Federal Power Commission was pricing interstate gas at an unrealistically low level. This artificially low price encouraged overconsumption. At the same time, the price controls limited the incentives for exploration and development of new wells. Is it not obvious that such policies must necessarily lead to shortages? When you encourage consumption and discourage production, no other result is possible. Statistics on natural gas production bear this thesis out.

Due to price controls, additions to reserves in 1973 were less than one-third of the amount of gas consumed in that year. Nor was this an aberrant example. During the period between 1967 and 1973, total natural gas reserves dropped from a 15-year supply to a 10-year supply. In fact, by 1972 natural gas production had actually begun to decline in absolute terms.

While our supplies of natural gas were diminishing, numerous studies were being conducted which all indicated that supplies could be increased if only price controls were lifted. For example, studies by the Government Accounting Office and studies conducted with the MacAvoy and Pindyck Econometric Models clearly

demonstrated that the only way to produce sufficient natural gas supplies was to decontrol prices. Estimates have placed the potential increase in natural gas supplies resulting from decontrol at 12 trillion cubic feet. This is the equivalent to 750,000 barrels of precious oil each day. If that were imported oil, it could result in a savings to the consumer of as much as $3 billion in balance of trade payments during the first year. Further, consumers will suffer without decontol due to the additional costs for other fuels they must purchase to replace natural gas which is not being produced. A study by Zinder Associates indicates that this replacement cost could run as much as $8.2 billion annually.

And what does the Carter administration propose? More controls. It is not enough that the interstate market has been distorted through bureaucratic meddling, now they want to interfere with the intrastate market as well. There can be little doubt that the eventual result of such interference with the intrastate market as well. There can be little doubt that the eventual result of such interference will be further curtailment of supply.

Another manifestation of the Carter administration's neglect of supply considerations is evident in their policy toward nuclear development. We know that Great Britain, France, West Germany, and the Soviet Union are all proceeding apace with the development of the liquid metal fast breeder reactor. Whether the United States chooses to develop this potential energy source or not, there will be a day in the not too distant future when it becomes a very important part of the world's energy economy. The only question is whether or not the United States will have this source available. In buckling under to the assault of environmentalists' doomsday fantasies of terrorists lurking on every corner with atomic bombs in their pockets and of massive deaths resulting from plutonium poisoning, the President has ignored a large body of scientific evidence which indicates that management of nuclear wastes is both feasible and within the parameters of currently available technology. Further, discarding for the moment the breeder reactor, he should at least have taken notice of the recent findings of the Mitre Corp. study which indicates that the health and environmental hazards resulting from massive conversion to coal are at least the equal to those resulting from the proliferation of conventional light water reactors. To call for a go slow on development of these energy facilities simply does not make sense.

We must inject reason into the energy debate. Coping with this crisis requires consideration of the economics, as well as the environmental consequences of our energy policies. Granted, there may be those who would opt for starvation in a pristine environment, but the bulk of the American populace does not fall into that category. If only we will allow the market to function free of needless interference, our Nation will solve its dilemma and maintain its economic strength. However, if we ignore the economic consequences of our actions, we can look forward to economic dislocations of a magnitude as yet unexperienced.

LEGAL SERVICES CORPORATION NULLIFIES CONGRESSIONAL INTENT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. ASHBROOK. Mr. Speaker, during the 93d Congress legislation was adopted to establish an independent Legal Services Corporation. One of the most hotly debated issues was that of backup centers. These centers were actively involved in class-action suits and social change such as busing, welfare rights, and prison reform. Political agitation was their trademark rather than legal aid for the poor.

After lengthy debate, we adopted the Green amendment. The intent of this amendment was to prohibit the funding by grant or contract of all the activities of backup centers including the litigating activity.

Despite the clear meaning of the Green amendment, however, the Legal Services Corporation has continued to fund backup centers. And these centers have continued their social activism. Following is an article from Barron's that discusses how the Legal Services Corporation has nullified the intent of Congress on the matter of backup centers.

BAR SINISTER—PART II: HOW THE LEGAL SERVICES CORP. THWARTS THE WILL OF CONGRESS

(By Shirley Scheibla)

WASHINGTON.—When Congress created the Legal Services Corp. (LSC) in 1974, it "abolished" so-called back-up law centers because they led the push for class action suits and social change. Specializing in areas like welfare and housing, such bodies not only act on their own but also assist other local poverty law centers throughout the country. Yet today 13 of the original 17 are getting more LSC money than ever and still doing business at the same old doctrinaire stand.

Of the remaining four, the corporation has taken over the functions and some of the activist personnel. Indeed, it's spending more than twice as much on them as for the other 13. At least one of the four is getting more federal money than ever before, but now it comes from the Department of Health, Education & Welfare.

LSC is vigorously promoting legal services by other government agencies, notably VISTA and the Community Services Administration. (The latter succeeded the Office of Economic Opportunity.) One reason is that they can engage in activities for which the LSC Act prohibits corporation funding.

LAUNCHED COSTLY STUDY

As noted last week, Congress has been lavish in appropriating money for LSC, but to date has failed to scrutinize its activities. Ultimately, however, the lawmakers will have to take a hard look. As required by the LSC Act, the Corporation has launched a $1.9 million study to explore various ways and means of providing legal services for the poor. They include judicare, prepaid legal insurance, contracts with private law firms and vouchers. By July, it is slated to make recommendations to the President and Congress. The ultimate choice will be a major one.

After passage of the LSC Act in July 1974, President Ford took a year to nominate the members of the board. Then five of his initial choices ran into such virulent opposition that they bowed out. (They include former Representative Edith Green, once head of the Education Subcommittee of the House Education and Labor Committee, a Democrat and no conservative, but a critic of the Legal Services Program.) As a result, the 11-member board has no outspoken critics of the program. It has only two members, who by any stretch of the imagination, could be viewed as tolerably conservative: J. Melville Broughton Jr., a former prosecuting attorney for the city of Raleigh, N.C., and Marlow W. Cook, former Republican Senator from Kentucky.

As part of the act creating the Corporation, Congress approved the Green Amendment. When Representative Green introduced it, she said it outlawed the back-up centers. Right after a Senate-House conference agreed on the bill, Rep. Carl Perkins, manager of the Conference Report in the House, announced that the conference had accepted the Green Amendment "lock, stock and barrel." Congressman Albert Quie, manager of the bill on the Republican side, declared: "This bill cannot be interpreted to permit the Corporation to make any grant or contract for the purposes and programs carried out under the so-called back-up centers. . . . The language of the bill itself will not permit that interpretation."

CONGRESSIONAL INTEREST

Whenever controversy arises involving interpretation of a statute, the custom is to rely on the record prior to passage to determine Congressional intent. The remarks of Green, Perkins and Quie seem to establish that intent without question.

Nevertheless, LSC paid a Chicago attorney, Alexander Polikoff, $134,513 to do a study on back-up centers. Polikoff heads a public interest law firm called Business and Professional Men for the Public Interest. He argued that the LSC Act means that training and technical assistance, research and clearinghouse information must be handled by LSC itself and not by back-up centers. He then concluded that the back-up centers could engage in other activities. In a shorter study, done without charge, the Washington law firm of Hogan and Hartsen reached a similar conclusion.

Thomas Ehrlich, who heads of Corporation, asked Mrs. Green for comment. In February 1976, she wrote that the Hogan and Hartsen interpretation was wrong. She added: "It ignores the entire controversy over back-up centers; it ignores the legislative history; it ignores the Congressional intent."

Mrs. Green subsequently came to Washington to address LSC's board. She emphasized that the Congressional statements which LSC had cited to indicate intent were made after passage of the law. She specifically challenged reliance on statements by Representatives Shirley Chisholm (D., N.Y.) and William A. Steiger (R., Wis.), who, she said, were not even on the floor on July 16, 1974, during the debate on the LSC Act. Instead, according to Mrs. Green, their remarks were inserted after passage, but appeared as though they had been made on the floor prior to the vote.

Mrs. Green also told the directors about a remarkable occurrence a couple of days earlier, when the Senate voted on the same law. It convened at 1:50 p.m. and balloted at 2

p.m., leaving precisely 10 minutes for debate. But, according to the Congressional Record, the debate covered 30 pages of fine print and included remarks by 10 Senators. Evidently the lawmakers inserted their remarks after passage of the law to make it look as if they had been made beforehand.

The deceptive "debaters" included Senators James Abourezk (D., S.D.), Alan Cranston (D., Calif.), the late Philip A. Hart (D., Mich.), Harold E. Hughes (D., Iowa), Edward M. Kennedy (D., Mass.), Charles McC. Mathias (R., Md.), (now Vice President) Walter Mondale (D., Minn.), John C. Stennis (D., Miss.), John V. Tunney (D., Calif.) and Harrison A. Williams (D., N.J.). Nevertheless, Mrs. Green failed to persuade the majority of the directors.

CONTRACTS OUTSTANDING

The board also defeated a motion by members Rodolfo Montejano and Marshall J. Breger which would have allowed LSC to disapprove any receipt of funds from any source by back-up centers for activities inconsistent with the LSC Act. LSC now has contracts outstanding in the amount of $4,281,963 with 13 back-up centers. On or before July 1, it is expected to renew these for $4,315,326 more.

That accounts for all but four of the original 17 back-up centers. One of these, the National Clearinghouse for Legal Services, still publishes the Clearinghouse Review in Chicago with the same staff, but now it officially comes under LSC supervision.

LSC created the Office of Program Support, budgeted at $7.1 million to take over the activities of the other three. One of the Legal Services Training Program of Catholic University. According to the Polikoff study, the LSC grant for the Program was administered as part of the Law School budget. LSC's official biography of Executive Vice President E. Clinton Bamberger Jr. indicates that his last job before joining LSC was dean of the Law School at Catholic University.

Another is the Management Assistance Project of the National Legal Aid and Defender Association. Bamberger formerly headed the NLADA. So did Revius A. Ortique Jr., a member of LSC's board of directors.

DOING VERY WELL

The last of the quartet of back-up centers is doing very well indeed. William Fry, director of the National Paralegal Institute, told Barron's that it has obtained $388,000 in grants from the Department of Health, Education & Welfare. That's more than the $332,000 it enjoyed from LSC. Moreover, the Institute continues to work with LSC-funded law centers which have access to state money.

Now, according to Fry, the Institute is working with LSC in "a major presentation to the American Bar Association on paralegals." He says that a written report has been submitted to the ABA Committee on Legal Aid and Indigent Defendants and that in February the Institute and LSC will make a verbal presentation. Fry adds that the Institute is working closely with Catherine Day-Jermany, currently director of paralegal affairs at LSC and former director of training for the Institute.

Ehrlich already has established within LSC the Research Institute on Legal Assistance, with a budget of $250,000 for fiscal 1977. As its head, he named Alan Houseman, former director of the Michigan Legal Services Assistance Program, funded by OEO. In an article in Human Events, published on Dec. 8, 1973, Howard Phillips, former OEO director, called Houseman "a leader of the leftist National Lawyers Guild."

SOLICITING PROPOSALS

LSC is soliciting proposals from prospective fellows for LSC-funded studies in several areas which Houseman wants to explore. They include the effects on the poor of administrative and hearing processes, housing tribunals and small claims courts. What are the other 13 back-up centers doing? Schedule A of the contract for the Legal Action Support Project of the Bureau of Social Service Research Inc., which became effective last July 16, says that, among other things: "The Project will, on behalf of eligible clients, assist Legal Services Program personnel in their participation in administrative proceedings, including rule making, and in legislative proceedings."

In other words it plans to engage in lobbying. But it said it would do so only upon request of a government agency, legislative body, committee or a member thereof. Still, devoting approximately 20% of its total professional effort to "administrative and legislative representation," seems a far cry from the Congressional aim of obtaining legal services for poor people. The contract stipulated that only 5% of total professional effort would be devoted to "general client counseling and representation."

In its report to LSC for the quarter ended Oct. 15, the Project said it "prepared a report which demonstrated why many able-bodied persons remain unemployed for prolonged periods of time despite diligent efforts to find work." Despite a ban on LSC-funded research, the document was used to assist the Legal Aid Service Multonomah Bar Association of Portland Ore., an LSC grantee, in a class action seeking welfare for the able-bodied.

The Project also apparently did research to aid an LSC-funded law center, the Appalachian Research and Defense Fund of Kentucky. The Fund went before the Kentucky Public Services Commission to oppose a pending electric utility rate increase. The Project said it "reviewed the Kentucky Power Company's testimony and suggested to the (Fund) attorney specific lines of inquiry appropriate for future interrogatories. With reference to selected counties in the eastern portion of the state, we obtained data on social and economic characteristics of residents, prepared tabulations on mobile home families below the poverty line and furnished reference articles and bibliographies on electric utility rate structures."

In addition, two spokesmen for the Project participated last summer in the Consumer Advocate's Workshop on Electric Utility Rate Proceedings, sponsored by the National Consumer Information Center in Washington. The Center was founded by Howard University law students and is funded by Community Services Administration.

FOOD STAMP PROGRAM

As further evidence of social advocacy, rather than service to individual indigent clients, the Project said it is trying to document inadequate coverage for the food stamp program in order to help Alaska Legal Services (an LSC-funded law center), which "is contemplating a challenge to the Food Stamp Program's allegedly inadequate outreach effort in the state."

The Project argues that such activities are legal, provided they are "directly connected to requests from LSC-funded attorneys who seek our assistance in regard to their representations of specific eligible clients."

This stance squares with what Bamberger told Barron's: "Now back-up centers can only do work for clients; they have to have a client. . . .We can't provide high quality legal service without having specialists."

SCHOOL DESEGREGATION SUITS

The law says that no Corporation funds may be used for school desegregation suits. Yet in a recent report to LSC, the (back-up) Center for Law and Education made clear that it is participating in such cases. For instance, it said that Eric E. Van Loon and Robert Pressman of the Center, along with other attorneys, filed an appeal on Oct. 18, 1976, in a Boston school desegregation case which earlier led to a District Court placing South Boston High School in receivership.

Observing that the unit dated back to 1972, we asked Ehrlich what happens to cases which were pending at the time of passage of the LSC Act. He replied that he has written all law centers that if an LSC-funded attorney is in the midst of a case involving an activity prohibited by the Act, he is obliged to try to transfer it to competent counsel. "If he is not able to do so, then, under the standards of professional responsibility, he has to continue the case but not take any more like it," Ehrlich declared. What about appealing prohibited cases? "Responsibility to the client is the most important consideration of all, and that includes responsibility to appeal."

In a report to LSC dated Oct. 31, 1976, the National Housing Law Project (a backup center) said it has spent a significant amount of time coordinating more than 40 suits involving operating subsidies by the Department of Housing and Urban/Development (HUD). It said it was co-counsel with the (LSC-funded) Western Center on Law and Poverty in the Underwood case, in which the U.S. Supreme Court stayed a District Court order for HUD to pay operating subsidies. (It lost).

After noting its participation in several other lawsuits involving HUD, the Project reported that its director is vice president of the board of directors of the Housing Assistance Council, funded by HUD. It also said the Project prepared a background paper on redlining and disinvestment under contract to HUD's Office of Fair Housing and Equal Opportunity. We asked Robert Elliott, former HUD general counsel, if this constituted a conflict of interest. He said it might be poor judgment, but was not illegal.

The Native American Rights Fund/Indian Law Support Center is involved in the cases aimed at giving part of the country back to the Indians, discussed last week. In its latest quarterly report to LSC, it said it is helping South Dakota Legal Services (funded by LSC) to prosecute a case involving the rights of prisoners.

The Center also reported that it has helped four attorneys from the (LSC funded) Seattle Legal Services, which keeps them on two Indian reservations to serve as general counsel to the tribe. It didn't explain how a whole tribe qualified for such help.

NEW ECONOMIC THOUGHT

HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1977

Mr. BROYHILL. Mr. Speaker, yesterday's Wall Street Journal carried on its editorial page an article by the distinguished scholar, Mr. Irving Kristol, of the American Enterprise Institute.

This article takes note of a growing school of economic thought which is the theoretical basis behind the minority's efforts to unleash our Nation's productive capacity by means of a substantial reduction in individual income taxes.

My good friend and colleague, Congressman JACK KEMP, is recognized by Mr. Kristol for his efforts to bring this new school of economic thought to the public's attention.

I am placing this article in the RECORD so that my colleagues will have the op-

portunity to read this thought provoking editorial:

[From the Wall Street Journal, May 9, 1977]

TOWARD A "NEW" ECONOMICS?

(By Irving Kristol)

"We do not dance even yet to a new tune. But change is in the air. We hear but indistinctly what were once the clearest and most distinguishable voices which have ever instructed political mankind."

So wrote John Maynard Keynes in 1926, in a book called "The End of Laissez-Faire." He was pointing to the intellectual impotence of the prevailing economic orthodoxy, which seemed less and less capable of explaining what was happening to the economic universe, and quite incapable of providing a coherent set of economic policies which statesmen could look to with confidence. And, of course, he was predicting—with a prescience matched only by his self-assurance—the emergence of a new economics, what we today call Keynesian or neo-Keynesian economics, to replace the old.

It all came to pass as he foretold. During the next 50 years, Keynesianism established itself as the new economic orthodoxy Even conservative politicians eventually were to be heard saying cheerfully, "We are all Keynesians now."

But the number of politicians saying it has, in the past five years, dwindled remarkably. For the Keynesian orthodoxy itself is showing clear signs of sclerosis, even senility, and is well on the way to suffering the fate of its predecessor. It cannot explain the key economic phenomenon of our time, "stagflation," i.e., the coexistence of inflation and unemployment. And the "stimuli" it recommends mysteriously fail to stimulate, but only enfeeble.

In desperation, Keynesian economists are now beginning to recommend that we consider seriously the virtues of wage and price controls. Well, for such advice we don't need economists. Politicians have always been able to think up such "cures" for themselves.

THE "CLASSICAL" ECONOMICS

The "classical" economics which Keynes challenged really had no theory of economic policy. Its major contributions were in the area of microeconomics—specifically, the rational allocation of scarce resources—and its work in this area is of enduring validity. As for the economy as a whole, the "classical" tradition assumed that equilibrium at a high level of employment was a "natural" and potentially steady state. It could not convincingly explain recessions or depressions, and its advice to governments consisted of little more than keeping the budget in balance and letting things follow their natural course. Good advice, on the whole—but not for all seasons.

Keynes perceived this deficiency even before the Great Depression made it obvious to everyone, and he spent a decade developing a new theory to correct it. This involved the creation of "macroeconomics" as an independent field of economic theory, in which efforts were made to explain the general level of economic activity by establishing the "proper" relations of aggregate demand to other aggregates (e.g., GNP, national income, etc.).

At the heart of his own "general theory" was the proposition that a modern economy was naturally unstable, because it had an inherent tendency toward a deficiency in aggregate demand—or, to put it another way, once full employment is reached, people's propensity to save tended to outweigh their tendency to invest. The maintenance of high demand, therefore, became the central object of economic policy, regardless of its unbalancing effect on the budget.

And economic policy consisted of government's manipulation of fiscal and monetary affairs—"fine tuning," we have come to call it—to achieve a level of demand that would ensure full employment and prosperity.

That Keynes was a giant in the history of economic theory is beyond question. "Macroeconomics" is here to stay and will remain his permanent testament, as will governmental responsibility for the level of employment. But, with every passing year, his limitations have also become more apparent.

For instance, his extraordinarily cavalier attitude toward budget deficits—"deficits don't matter," as his leading disciple put it—may have soothed the consciences (and quickened the appetites) of politicians, but it never did make any obvious economic sense. Why should a nation's debt be a different economic species from a family's debt? The only visible difference is that a nation can pass on its indebtedness to future generations, while parents have no such right vis-a-vis their children. But does that make it any less real or burdensome? A "psychohistorian" might wonder whether the fact that Keynes himself was childless might have had something to do with shaping this attitude.

Similarly, a cultural historian might properly wonder to what degree the fact that Keynes was a charter member of the "Bloomsbury circle"—a group of talented upper-class aesthetes—had a bearing on his faith in government's ability to "manage" the economy. His masterwork, "The General Theory of Employment, Interest, and Money," reveals a frank disdain for the traditional bourgeois virtues (thrift, industry, diligence) and for the bourgeoisie as a class. There is also a strong implication that ordinary people are just too short-sighted to make capitalism work, and that they needed the likes of John Maynard Keynes to manage the system for them.

None of this would matter much if his policy prescriptions worked. But they don't. Financing those "unimportant" budgetary deficits turns out to cause inflation. And to the degree that the deficits give rise to heavier taxation, the economy stagnates. It also turns out that the effectiveness of governmental stimulus to the demand side of the economy, accompanied by governmental stifling of the supply side (through taxation), only works if everyone is under the spell of a "money illusion"—i.e., if they notice only the increased number of dollars in hand, and fail to observe that each dollar has lost some of its purchasing power. But the people are cleverer than Keynes thought. They do make the requisite observation; they demand that their purchasing power be maintained; and inflation swells from a ripple to a wave to an oceanic storm.

THE "MONETARIST" SCHOOL

In response to this crisis in the theory of economic policy, a "new" economics is beginning to emerge. Based on the critique of Keynesianism by the "monetarist" school, as further developed (in a rather heterodox way) in the work of such economists as Robert Mundell and Arthur Laffer, and as vigorously publicized by Jude Wanniski of The Wall Street Journal and Congressman Jack Kemp (R., N.Y.), it is still in an embryonic condition and the world has not yet taken much notice of it. To requote Keynes: "We do not dance even yet to a new tune. But change is in the air."

One uses the inverted commas around that term "new" because, in truth, much of the "new" economics is very old—as old as Adam Smith, say. Its focus is on economic growth, rather than on economic equilibrium or disequilibrium, and it sees such growth arising from a free response (e.g., investment, hard work, etc.) to the economic incentives of a free market.

It does retain the Keynesian macroeconomic apparatus for diagnostic purposes, but its inclination is "conservative" rather than "liberal"—i.e., it believes that only the private sector can bring us sustained economic growth, and that whatever tasks one might wish to assign to the public sector, economic growth cannot be one of them.

This "new" economics is sometimes described, rather cumbersomely, as "supply-side fiscal policy." (There is also an international monetary aspect which a critic has called, not inaccurately, "global monetarism"—but that is another story.) It arises in opposition to the Keynesian notion that an increase in demand, by itself, will increase supply and therefore accelerate economic growth. The "new" economics asserts that an increase in demand, where the natural incentives to economic growth are stifled, will result simply in inflation. It is only an increase in *productivity*, which converts latent into actual demand by bringing commodities (old and new) to market at prices people can afford, that generates economic growth.

At the moment, and under existing circumstances, the major emphasis by far of the "new" economics is on the need for a substantial, across-the-board cut in tax rates, because it is the high level of tax rates that is stifling incentives to growth. This has caused some concern and confusion among Republican Congressmen, and business executives too, who sense a continuation of the Keynesian unconcern with budget deficits. But the "new" economics is all in favor of balanced budgets—only it believes that, to achieve such a goal, temporary imbalances may be required. Its emphasis on tax-cutting flows from its conviction that this will, through economic growth, eventually lead to a balanced budget.

SUBSTANTIAL TAX CUT

Simply to reduce government expenditures, in a depressed economy, creates too many problems. (And a ruthless dismantling of the welfare state is, in any case, unthinkable.) It is only a substantial tax cut that will, in time, permit us to reduce the *relative* size of the public sector by an expansion of the private sector.

This is a highly simplified and much foreshortened version of a set of economic ideas that is beginning to reshape our thinking on economic policy. Its political appeal to conservatives is obvious (just as the political appeal of Keynesianism to liberals was obvious) and helps explain the recent willingness of congressional Republicans to vote in favor of a permanent tax cut despite the state of the budget. They were not "playing politics," as some critics claimed. They were acting on an economic theory which, if only dimly understood, was nevertheless persuasive. After all, as Congressman Kemp has pointed out, all that Republicans were urging is a tax cut similar to the Kennedy tax program of 1963—also made in the face of a deficit. And it worked: The deficit soon declined, employment went up.

It is hard to overestimate the importance of the fact that, for the first time in half a century, it is the economic philosophy of conservatives that is showing signs of intellectual vigor, while the economic philosophy of liberalism keeps tying itself into ever more elaborate knots. As some sage once observed: You can't beat a horse with no horse. Conservatives, who believe in limited government and a strong private sector, may be in the process of acquiring a horse.

U.N. AMBASSADOR ANDREW YOUNG

HON. LOUIS STOKES

IN THE HOUSE OF REPRESENTATIVES

OF OHIO

Monday, May 9, 1977

Mr. STOKES. Mr. Speaker, it is an honor for me to join with the members

of the Congressional Black Caucus today, to pay tribute to our distinguished colleague and friend, Andrew Young.

Mr. Speaker, the newly appointed Ambassador to the United Nations is truly the man of the hour. At the request of President Carter, he has willingly taken on the awesome responsibility of leading the U.S. delegation to this forum of international diplomacy.

As you well know, many of Andy's friends and colleagues urged him not to accept the Ambassadorial post. They sincerely felt that his value to the American people and, in particular, to black Americans, lay in his continuation of his congressional responsibilities. Mr. Speaker, we know that Andy weighed the issue carefully and courageously chose to cast his lot in the arena of international affairs.

I, for one, Mr. Speaker, am both heartened and encouraged by Andy's bold step. The United States is in dire need of a sensitive and intuitive negotiator who can see beyond the bureaucratic "status quo," and a statesman who is less concerned with the pomp and circumstance of his influential position and more concerned with getting the job done.

Each day, Congress makes legislative decisions that impact on the nations of the world. It is therefore essential that we know and implicitly trust the people who represent us on the international front. The rift between the developing and developed nations of the world is of enormous importance in the shifting axis of the international social and economic order. America's disregard and, at times, open contempt for Third World needs and priorities is in dire need of improvement. We can no longer remain an island of affluence in a sea of poverty and overwhelming human need.

Moreover, the conflict in Southeast Asia has been replaced with a burgeoning crisis on the African continent where the struggle for liberation and equality in Southern Africa has grave implications for East/West stability and world peace.

Mr. Speaker, into the midst of these and other conflicts, Ambassador Young has brought to play a refreshing brand of diplomacy, and incisive wit and a charismatic appeal which will serve him well in sensitive negotiations. Yet, Mr. Speaker, individuality is apparently not considered a virtue by the more conservative elements of our State Department or by the foreign policy "experts" in the news media. In the wake of Ambassador Young's appointment the vituperations from the media and rumor mongers has been virtually unprecedented. Mr. Speaker, never let it be said that the media strives for balanced coverage. For even our former U.N. representative, Daniel Patrick Moynihan, who received wide notoriety for his caustic comments on world leaders and Third World initiatives, was not the recipient of the vicious, supercilious attacks leveled against Ambassador Young.

Mr. Speaker, our former colleague has borne the brunt of these attacks admirably. But my colleagues and I cannot stand idly by and allow the Ambassador to stand alone before the purveyors of ill will. The time has come, Mr. Speaker, to serve notice on Ambassador Young's detractors. For each attack, there will be a concerted counteroffensive by my colleagues and I and the millions of American people who trust and support Andrew Young. I can assure you that they will never succeed in bringing this courageous American and statesman to his knees.

Mr. Speaker, I can also assure you that the caucus and the American people do not stand alone in our opinions. All over the developing world, political leaders and citizens have taken heart that Ambassador Young's appointment may finally signal U.S. policy concessions toward the nonalined nations. On the African Continent, he has immeasurably raised America's credibility. Some leaders have even expressed the opinion that Ambassador Young may outstrip former Secretary of State Kissinger at the negotiation table.

At this time, Mr. Speaker, I ask my distinguished colleagues in the House to join with the members of the Congressional Black Caucus in a show of support for Ambassador Andrew Young. Those of you who know the man, know of his impressive track record in past endeavors. Years ago, when Andy received the call to the ministry, he did not turn his back. When black people, torn by racial strife and injustice, called for his assistance in the civil rights movement, he gallantly committed his life to the task. When the people of Atlanta rose up and elected him as their Representative to the U.S. Congress, the first black Congressman from the postreconstruction South, he accepted with quiet zeal and proceeded to forge new legislative initiatives in the Nation's Capital. And, Mr. Speaker, when Jimmy Carter asked his friend to help him win the Presidency, the Georgia Congressman's persistent efforts and unswerving devotion afforded President Carter a stunning victory which will go down in the annals of political history.

Now Andy stands at the threshold of his greatest challenge. The political future of the entire world hangs at a precarious balance. We need a man with the courage, confidence, and guts to meet this weighty challenge. Mr. Speaker, as you can well see from our show of support on the floor of the House of Representatives today, we have no doubts that Ambassador Andrew Young is that man.

SENATE—*Wednesday, May 11, 1977*

(Legislative day of Monday, May 9, 1977)

The Senate met at 12 noon, on the expiration of the recess, and was called to order by Hon. GAYLORD NELSON, a Senator from the State of Wisconsin.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray:

O Lord of today and of every day, in whom we live and move and have our being, we pray for an endowment of Thy grace, not for 1 day but for a whole life of service. Deliver us from the pursuit of power or lust for luxury. Grant us grace and love to seek first Thy kingdom and that righteousness which exalts a nation. Judge us not by the quantity of our activities but by the quality of our living. And to Thee shall be all the glory and thanksgiving. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., May 11, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. GAYLORD NELSON, a Senator from the State of Wisconsin, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. NELSON thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, May 10, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

UNANIMOUS-CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, two measures on the Unanimous-Consent Calendar are ready for consideration. I ask unanimous consent that the Senate proceed to the consideration of Calendar Order Nos. 76 and, after that, 102.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ELIGIBILITY FOR AIRCRAFT REGISTRATION

The Senate proceeded to consider the bill (H.R. 735) to amend the Federal Aviation Act of 1958 relating to eligibility for aircraft registration, which had been reported from the Committee on Com-

merce, Science, and Transportation, with an amendment.

Mr. GOLDWATER. Will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

Mr. GOLDWATER. Mr. President, the only interest I have in this bill, and I shall certainly not object to it, is that it was offered by my son in the House of Representatives. It is not very often that a father in the Senate can be present to vote on a bill offered by his son. I have some reason to be proud of him on this, because it is a long-needed piece of legislation.

I thank the majority leader.

Mr. ROBERT C. BYRD. Mr. President, I congratulate both the father and the son. They are both entitled to congratulations.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The legislative clerk read as follows:

On page 2, line 1, following "United States," insert 'or a corporation lawfully organized and doing business under the laws of the United States or any State thereof".

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

UP AMENDMENT NO. 200

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. MAGNUSON, I submit an amendment which I understand has been agreed to.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. BYRD) on behalf of Mr. MAGNUSON, proposes unprinted amendment No. 200.

On page 2, line 3, insert after the word "thereof" the words "so long as such aircraft is based or primarily used in the United States" and strike the words "such aircraft".

Mr. ROBERT C. BYRD. Mr. President, this amendment is designed to clarify the Secretary of Transportation's powers to condition registration of an aircraft on reasonable inspection by FAA personnel in the United States. The FAA might otherwise have to send personnel abroad to inspect an aircraft registered in the United States to assure compliance with U.S. requirements. Testimony received by the Committee on Commerce, Science, and Transportation on the bill indicated that this would not pose a problem, since all those testifying desired to use business aircraft in the United States primarily.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time

The bill was read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–96), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE AND BRIEF DESCRIPTION

The purpose of H.R. 735, as reported, is to permit citizens of foreign countries who have been lawfully admitted for permanent residence in the United States, and corporations lawfully organized and doing business under the laws of the United States or any State thereof, to register aircraft in the United States.

BACKGROUND AND NEED

Under present law, persons not citizens of the United States cannot register aircraft in the United States. Section 501(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1401) makes it unlawful for any person to operate or navigate any aircraft eligible for registration if such aircraft is not registered by its owner, or to operate or navigate within the United States any aircraft not eligible for registration. Section 501(b) limits eligibility to (1) those aircraft owned by a citizen of the United States, (2) those aircraft not registered under the laws of any foreign country, and (3) those aircraft of the Federal Government, or of a State, Territory, or possession of the United States, or the District of Columbia, or of a political subdivision thereof. A "citizen of the United States" is defined as (1) an individual who is a citizen of the United States or one of its possessions, or (2) a partnership of which each member is such an individual, or (3) a corporation or association created under the laws of the United States or a State thereof of which the president and two-thirds or more of the board of directors and other managing officers thereof are such individuals and in which at least 75 percent of the voting interest is owned or controlled by persons who are citizens of the United States or one of its possessions.

These definitions currently require individual citizens of foreign countries who have been lawfully admitted for permanent residence in the United States and corporations owned or controlled by individuals or corporations of other countries to either lease aircraft from individuals or corporations eligible for registration or to own and operate an aircraft in the United States while maintaining its registry in a foreign country. Leasing increases the cost of aircraft use, and registration in a foreign country presents numerous problems, including maintaining the aircraft to foreign standards while it is based in the United States.

A foreign national can own and operate an aircraft within the United States provided it is registered in another country and provided that person complies with any permits, orders or regulations issued by the Civil Aeronautics Board pursuant to section 1108(b) of the Federal Aviation Act of 1958 (49 U.S.C. 1508(b)). This has not been a satisfactory solution for permanent residents of the United States or corporations not meeting the above described requirements who wish to base their aircraft here. This is either because the aircraft must be maintained in accordance with the airworthiness requirements of the country of registry, including periodic maintenance and inspection, or because the aircraft must be leased from an individual or corporation meeting the above described requirements at substantial additional cost. It is often difficult, if not impracticable, for a foreign national to contract with qualified mechanics and repair stations in the United States in order to meet the particular requirements of the country of registry. Furthermore, the leasing of aircraft imposes costs which appear to have no benefit to the United States and tend to discourage the acquisition of aircraft for personal or business use.

With respect to airman licensing there is no parallel problem. A foreign national can obtain a U.S. pilot license and a Federal Communications Commission permit to operate radio transmitters aboard aircraft. The anomaly of the present law is that a foreign national or company can legally fly a U.S. registered aircraft in the United States, but is prevented from owning an aircraft of U.S. registry. Furthermore, aircraft leasing offers all the same indicia of control over the aircraft as ownership, but at substantial additional cost.

EXPLANATION OF THE BILL

As reported, the bill would extend the eligibility to register aircraft in the United States to citizens of foreign countries who have been lawfully admitted for permanent residence in the United States, or to corporations lawfully organized and doing business under the laws of the United States or a State thereof, provided, as is the present case, the aircraft is not registered under the laws of any foreign country. If a foreign national loses his or her status as a resident alien, or if a corporate entity ceases to be subject to the laws of the State in which it is incorporated or ceases to lawfully conduct business operations in the United States, the aircraft would no longer be eligible for registration, thus subjecting the certificate of registration to suspension or revocation by the Secretary of Transportation pursuant to section 501(e) of the Federal Aviation Act of 1958 (49 U.S.C. 1401(e)).

COMMITTEE CONSIDERATION

H.R. 735 passed the House of Representatives on February 22, 1977. After considering comments filed with the Committee in response to an invitation to comment on the bill as passed by the House, the Committee, on April 5th, ordered the bill reported by voice vote with an amendment expanding eligibility for registration from individuals admitted for permanent residence to both such individuals and corporations lawfully organized and doing business under the laws of the United States.

ESTIMATED COSTS

The Committee estimates that implementation of H.R. 735, as reported, will result in no additional cost to the Federal Government. Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has submitted the following cost estimate to the Committee:

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., April 7, 1977.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, Science and Transportation, U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has reviewed H.R. 735, a bill to amend the Federal Aviation Act of 1958 relating to eligibility for aircraft registration.

Based on this review, it appears that no additional cost to the Government would be incurred as a result of enactment of this bill.

Sincerely,

ALICE M. RIVLIN,
Director.

REGULATORY IMPACT STATEMENT

Implementation of H.R. 735, as reported, will lessen Federal regulation to the extent that individuals admitted for permanent residence in the United States and corporations lawfully organized and doing business under the laws of the United States will be permitted to register aircraft in the United States. Under present law, such individuals and corporations must lease aircraft from eligible individuals or companies at additional cost, or register them under the laws of a foreign country and maintain them to the standards of that country even though the aircraft is based in the United States. This lessening of regulation will result in

cost savings to affected individuals and companies. The bill as reported will not affect the personal privacy of the individuals affected, nor should its implementation require additional paperwork.

COAL CONVERSION

The Senate proceeded to consider the bill (S. 1468) to amend the Energy Supply and Environmental Coordination Act of 1974.

Mr. JACKSON. Mr. President, the measure before us, S. 1468, is important to the future of Federal efforts to foster greater coal utilization. The measure would extend for 6 months the Federal coal conversion program under section 2 of the Energy Supply and Environmental Coordination Act of 1974.

Senate approval of this bill will permit the committee the time necessary for full consideration of proposals for broader coal conversion authorities currently pending before the committee. Evaluation of these proposals can proceed without disruption of the present coal conversion program.

The committee, through the efforts of the senior Senator from Colorado (Mr. HASKELL), chairman of the Subcommittee on Energy Production and Supply, is currently concluding hearings on coal conversion legislation. This extension will provide the committee with the additional time necessary to conclude these proceedings.

Mr. President, natural gas shortages last winter dramatized our need to conserve natural gas for higher priority uses than the generation of electricity or steam. Our country's dwindling resources of gaseous fuels must be conserved for residential and small commercial users. In addition, natural gas must be conserved for essential industrial feedstock and process uses for which there is no feasible substitute.

Similarly domestic petroleum supplies are becoming increasingly limited. Like natural gas they must be conserved in the long term for higher priority uses than the generation of electricity or steam. For example, our country's extensive transportation system relies on liquid fuels. Without adequate petroleum to meet the needs of transportation, our general economy will suffer.

However, limited natural gas and oil resources can be conserved by the substitution of coal, our country's most abundant energy resource, for oil and natural gas in the generation of electricity and steam. Moreover, this must be undertaken consistent with environmental policies for the protection of public health and welfare. To the extent that available technologies for the control of sulfur oxides and particulates are inadequate to meet these Federal minimum standards, there should be an expanded Federal demonstration program.

Mr. President, control technologies for sulfur oxides and particulates must be assured which are reliable, cost-effective and environmentally sound. Extensive experience exists in Japan with the control of sulfur oxides that has not been fully transferred to the United States. The last survey of these developments was in 1972 by a Federal interagency team. For this reason on May 4, 1977, I wrote the Administrator of the Environmental Protection Agency, Douglas M. Costle, requesting that an interagency task force be created to evaluate Japanese developments.

I ask unanimous consent that the text of the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON
ENERGY AND NATURAL RESOURCES,
Washington, D.C., May 4, 1977.

Hon. DOUGLAS M. COSTLE,
Administrator, Environmental Protection Agency, Washington, D.C.

DEAR MR. ADMINISTRATOR: If the United States is to be successful in the formulation and implementation of a comprehensive National Energy Policy then we must assure greater coal utilization consistent with environmental policies. Technologies for the control of sulfur oxides and particulates must be assured, which are reliable, cost-effective, and environmentally sound.

Extensive experience exists in Japan with the use of sulfur oxide control technologies. This letter, as we discussed, is to request that an interagency task force be created to evaluate the status in Japan of technologies for the control of sulfur oxides. The last such review was conducted in August, 1972, by the U.S. Government interagency team.

As you are aware, the Committee and the Congress are now considering legislation to foster greater coal utilization.

Your favorable consideration of early action on this request thus would be appreciated.

Sincerely,

HENRY M. JACKSON,
Chairman.

Mr. JACKSON. Mr. President, greater coal utilization consistent with environmental policies can be accomplished provided our country is willing to make the capital investment. Where the costs are excessive or where the environmental effects are unacceptable, then alternative energy strategies will be required which are acceptable. But the issue is not energy versus the environment, also involved are issues of national security, conservation of natural gas and oil, balance of payments, and full employment.

The principal legislative proposal before the committee is S. 977, the Coal Utilization Act of 1977, which I introduced on March 10, 1977. The Coal Utilization Act incorporates provisions from S. 273, as introduced by the Senator from West Virginia (Mr. RANDOLPH). This measure reflects the extensive deliberations during the 94th Congress before the Senate's national fuels and energy policy study.

The Coal Utilization Act would require electric utilities and industrial installations with the capability to use coal to obtain a permit to use natural gas or petroleum. This represents a reversal of the burden of proof for the present coal conversion program. In addition, S. 977 extends the mandatory character of Federal coal conversion programs to other existing electric powerplants and industrial installations.

The measure also draws on S. 257 to authorize loan guarantees and low-interest loans. These two economic incentives are available for the procurement of the air pollution control equipment needed by existing facilities in order to convert to coal.

Alternative economic incentives to effect coal conversion are proposed in the National Energy Act. While less extensive regulatory authority has been proposed by the administration, greater reliance on economic incentives is recommended.

In order to enable committee members to better understand this new proposal and how it compares to S. 977, additional testimony is scheduled for May 25 on coal conversion. The proposed extension contained in S. 1468 will permit the committee time for full consideration of the various proposed legislative measures pending before the committee.

The committee thus recommends that the bill pass.

COAL CONVERSION

Mr. HASKELL. Mr. President, the Subcommittee on Energy Production and Supply has completed 4 days of hearings on legislation to foster greater coal utilization consistent with environmental policies. Testimony has been received from Federal and State government officials, representatives of the affected public utility and industrial users, coal industry spokesmen, and environmentalists.

The principal bills before the subcommittee were S. 977, the Coal Utilization Act of 1977, as introduced by Senator JACKSON and cosponsored by Senators FORD, HUDDLESTON, HUMPHREY, and RANDOLPH; and S. 273, the Natural Gas and Petroleum Conservation and Coal Utilization Act of 1977, as introduced by Senator RANDOLPH and cosponsored by Senators HUMPHREY, HUDDLESTON, and JACKSON. Subsequent to these hearings we received the coal conversion proposals contained in President Carter's national energy plan.

Our record dramatizes the fact that as America's natural gas supplies dwindle, and petroleum becomes increasingly more expensive, greater coal utilization must play a significant role in the Nations' quest for energy self-sufficiency. For many years natural gas and petroleum have served as inexpensive, and seemingly inexhaustible supplies of energy. Natural gas shortages this winter and the oil embargo of 1973 have dramatized the need to conserve these valuable fuels for higher priority uses than the generation of electricity and steam.

Greater coal utilization must play a significant role in our country's quest for greater energy self-sufficiency. Energy conservation can significantly reduce the rate of growth in energy consumption and foster the more efficient use of our Nation's nonrenewable energy sources, such as natural gas and petroleum. Until renewable energy sources such as solar and geothermal energy are able to achieve the levels of supply that they promise for the future, greater coal utilization will remain the principal alternative other than nuclear power for the generation of electricity and steam. For this reason, it is essential that we assure, and indeed insist on, the environmentally acceptable production and utilization of coal.

Experience with the Energy Supply and Environmental Coordination Act has shown that, in many cases, significant consumer cost savings can be achieved through the conversion of existing facilities from petroleum to coal.

On March 21, the Administrator of the Federal Energy Administration, John O'Leary, outlined the present Federal coal conversion program and reviewed the extensive delays that are occurring between the issuance of coal conversion orders and the actual use of coal. Mr. O'Leary stated:

> . . . from the beginning of the current process until coal is actually burned, it could take from two to eight years. Nearly three years of operation with this program have led us to conclude that there are many problems . . .

In order to expedite implementation of this program the administration supported, in the words of Mr. O'Leary:

> The strengthening and expansion of current authorities and the establishment of clear guidelines and ground rules to all current and potential new users of oil and gas.

Administrator O'Leary also stated that the conversion concept must be harmonized with clean air legislation and strip-mining bills, but noted that technological advances are needed.

Representatives of the electric utility industry testified that substantial economic and technical problems must be overcome prior to conversion. They advocated trade-offs between industry and environmental interests, noting that proposed new, more stringent environmental restraints will seriously hinder any coal conversion program.

According to the Federal Energy Administration there are potential savings of $3.6 billion per year in operating costs by existing and new electric powerplants. The accompanying reductions in oil consumption would be 613 million barrels per year. In addition, natural gas consumption would be reduced by 115 billion cubic feet per year. The resultant demand for coal would be increased by approximately 163 million tons per year.

In the industrial sector, annual operating cost savings for existing and new installations potentially are $4.3 billion. The accompanying increase in coal demand would be about 199 million tons per year. The resultant oil savings would be 703 million barrels per year. The natural gas savings would be 355 billion cubic feet per year.

Achievement of these cost savings and reduced levels of oil and natural gas consumption will depend upon the ability of the affected installations to obtain adequate coal supplies. In addition the affected facilities must install the necessary equipment to meet applicable environmental requirements.

However, if coal conversion is to be a national policy then the costs of such a program should be shared evenly by all Americans. The President is right on target with his call for coal conversion. I do have some reservations about the tax mechanism the administration has proposed to bring about that change.

A system of taxation prior to, and rebates during, conversion would place a burden unfairly on certain utilities and their customers and on certain industries and their stockholders. Some utilities and industries will suffer more than others just be virtue of location. Others have only recently completed court-ordered conversion from coal to gas and oil, at tremendous cost, and will now be faced with going back to coal use.

I quickly concede that in a nation of 210 million people there is no such thing as a burden shared equally. But we can recognize inequity and do our best to overcome it. Making outright grants to those who must convert to coal, money from general revenues, will at least guarantee that the costs of coal conversion will be shared by all Americans.

Continuing its investigation the Subcommittee on Energy Production and Supply is scheduled May 25, to receive further testimony from Federal and State Government representatives. The hearings will concentrate on the coal conversion provisions contained in the National Energy Act compared to Coal Utilization Act.

I have invited James Schlesinger, White House Energy Adviser, and Douglas Costle, Administrator of the Environmental Protection Agency.

The committee is proceeding on coal conversion legislation with an accelerated schedule. This is possible because of the extensive legislative effort by Senator RANDOLPH during the 94th Congress. However, the energy and environmental issues being addressed are intricate. Because of their broad implication for our country it is imperative that their interrelationship be carefully examined.

For this reason the subcommittee recommends a 6-month extension of the authority of the Federal Energy Administration to issue coal conversion orders pursuant to section 2 of the Energy Supply and Environmental Coordination Act. The present authority expires on June 30, 1977.

Mr. President, this extension will provide the committee time for full consideration of relevant coal legislation currently pending before the committee.

The committee, in open public session on April 20, 1977, approved the measure by a unanimous vote of a quorum present. The committee recommends that the bill pass.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-123), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE MEASURE

The purpose of the legislation is to extend for 6 months from June 30, 1977, until December 31, 1977, the authority for the Federal Energy Administration to issue coal conversion orders pursuant to section 2 of the Energy Supply and Environmental Coordination Act of 1974, as amended.

BACKGROUND AND NEED

The present authority for coal conversion orders expires on June 30, 1977. This committee bill would extend until December 31, 1977 (for 6 months) the present authority in order to permit time for full consideration of relevant coal legislation currently pending before the committee, including a measure proposed by the executive branch. This extension would permit time for full consideration of these legislative proposals without disruption of the present coal conversion program.

LEGISLATIVE HISTORY

S. 977, the Coal Utilization Act of 1977, was introduced by Senator Jackson, Senator Ford, Senator Huddleston, Senator Humphrey, and Senator Randolph on March 10, 1977. Other legislative proposals affecting coal conversion are S. 273 and S. 272. In addition coal conversion provisions are contained in the National Energy Act, proposed by the administration. Hearings on these measures are currently in process.

During these hearings a 6-month extension of the present coal conversion program was recommended by the Federal Energy Administrator John O'Leary, in testimony on March 21, 1977. This committee bill being introduced, as reported unanimously by the committee on April 20, 1977, provides the requested extension.

COMMITTEE RECOMMENDATIONS

The Committee on Energy and Natural Resources, in open public session on April 20, 1977, by unanimous vote of a quorum present recommends that the Senate pass the committee bill described herein.

SECTION-BY-SECTION ANALYSIS

Section 1. The intent of the section is clear.

Section 2. The intent of the section is clear.

COST AND BUDGETARY CONSIDERATIONS

The Federal Energy Administration has already requested appropriations for fiscal year 1978 for this program as part of the appropriation request for general programs of the agency. In the committee's judgment an additional authorization and appropriation is not required at this time.

CONGRESSIONAL BUDGET OFFICE,
U.S. CONGRESS,
Washington, D.C., May 4, 1977.

Hon. HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Suite 3106, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has reviewed the Energy Supply and Environmental Coordination Extension Act of 1977, as reported by the Senate Committee on Energy and Natural Resources.

Based on this review, it appears that no additional cost to the Government would be incurred as a result of enactment of this bill.

Sincerely,

ALICE M. RIVLIN,
Director.

REGULATORY IMPACT EVALUATION

In compliance with paragraph 5 of rule XXIX of the Standing Rules of the Senate the committee makes the following evaluation of the regulatory impact which would be incurred in carrying out the committee bill.

The measure does not expand authorities contained in section 2 of the Energy Supply and Environmental Coordination Act. Additional paperwork beyond that required by existing law would not result from enactment. Rather the work done to date by the Federal Energy Administration would be preserved. Moreover, the need to update materials as a result of a temporary lapse in authority would be avoided.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Energy Supply and Environmental Coordination Extension Act of 1977".

SEC. 2. Section 2(f) of the Energy Supply and Environmental Coordination Act of 1974, as amended, is amended in paragraph (1) thereof, by striking out "June 30, 1977," and inserting in lieu thereof "December 31, 1977,".

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider, en bloc, the votes by which the bills were passed.

The ACTING PRESIDENT pro tempore. Without objection, the motion is in order. The question is on agreeing to the motion.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

APPOINTMENTS BY THE VICE PRESIDENT

The ACTING PRESIDENT pro tempore. The Chair, on behalf of the Vice President, appoints the Senator from New Jersey (Mr. WILLIAMS) and the Senator from New York (Mr. JAVITS) to the 63d Conference of the International Labor Organization, ILO, to be held in Geneva, Switzerland, June 1 through June 22, 1977.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

Mr. BAKER. Mr. President, I yield my time under the standing order to the distinguished Senator from Oklahoma (Mr. BARTLETT).

The ACTING PRESIDENT pro tempore. The Senator from Oklahoma is recognized.

THE PACIFIC ANALOGY TO THE DEFENSE DILEMMA OF WESTERN EUROPE

Mr. BARTLETT. Mr. President, on January 24, 1977, Senator SAM NUNN of Georgia and I reported to the Armed Services Committee on our recent tour of NATO facilities in Western Europe.

In brief, the report NATO and the new Soviet threat noted that the Soviet Union has attained strategic nuclear parity with the United States, has made substantial advances in their tactical nuclear capability, and has achieved conventional superiority. The report concluded that these and other military initiatives of the Soviet Union and its Warsaw Pact Allies have dramatically altered the military balance which has existed between Eastern Europe and the NATO alliance of the West, enabling the Warsaw Pact to launch an intensive blitzkreig attack with only a few days warning. This startling reduction in warning time from a few weeks to a few days forces NATO and the United States to restructure and strengthen our military forces.

While the NATO alliance is certainly unique in the many characteristics of its defense posture relative to the Warsaw Pact, there are certain aspects of the NATO defense dilemma which can and should be viewed in a global perspective. Foremost among these: First, the erosion of nuclear capability as a deterrent to nonnuclear aggression; and, second, the free world's reliance on diplomatic initiatives toward "détente" as an alternative to military preparedness.

Beyond Western Europe and NATO, these developments suggest the possibility of equally grave implications for another of the free world's most valued alliances—the alliance of mutual cooperation and security between the United States of America and Japan.

On January 19, 1960, the signing of this treaty signaled the completion of a remarkable transformation in the relations between the United States and Japan. A decade and a half before, competing interests in the Pacific region brought the United States and Japan together as mortal enemies. With the signing of the treaty of mutual cooperation and security between the United States of America and Japan, these nations joined together in an alliance of common interests in the Pacific, an alliance for peace and prosperity in this region of the world.

Recognizing that our world can change radically in so brief a period of time, surely we cannot ignore the changing events of the last decade and a half since the inception of this treaty.

Throughout the history of the security alliance that began to take form in the United States-Japan security treaty of 1951, Japan has relied upon the "nuclear umbrella" of the United States for shelter from the threat of nuclear aggression. Certainly from the cold war years through the late 1960's the nuclear superiority of the United States was looked upon as the final guarantor of peace worldwide. Our nuclear capability has been explicitly relied upon as a deterrent to aggression, nuclear and nonnuclear, in Western Europe. Because our American conventional forces were considered inadequate to defeat or deter a Soviet conventional attack on Japan, they served simply as a nuclear tripwire. Nonetheless, our nuclear superiority, gave rise to a casual, perhaps even dangerously inattentive attitude by both nations in regards to Japan's self-defense capability.

Now as we are beginning to learn in Western Europe, the sense of security derived from nuclear superiority may be unfounded, the strategies predicated upon nuclear superiority can be rendered obsolete by tactical nuclear and strategic nuclear parity and the conventional superiority of our adversaries. Without question it is in the best interests of both the United States and Japan and the stability of the Western Pacific for the United States to continue to provide for the nuclear defense of Japan.

However, we must place this singular aspect of our security alliance in the perspective of a world increasingly threatened by nonnuclear conflict. No longer can the nuclear umbrella excuse an indifferent attitude toward conventional defense preparedness.

While the military achievements of the Soviet Union and its Communist allies have to some degree eroded the credibility of free world security alliances, the United States own diplomatic initiatives of the early to mid-1970's have also undermined these alliances. Nowhere is this more clearly evident than in the U.S. relations toward Asia.

In the shadow of what was to be known as the "emerging structure of peace"—the improvement of relations with China, détente with the Soviet Union—our security alliance with Japan was further deemphasized.

In a recent paper, an official for policy planning at the U.S. Embassy in Tokyo, Martin Weinstein, characterized the United States-Japan alliance in the wake of these diplomatic pressures.

> The alliance continues in its present state largely as a consequence of inertia, the fortunate absence of outstanding strategic or economic issues, and the Japanese Government's belief that it has no choice but to tolerate an alliance in which it continues to treat the United States as indispensable even though the United States does not reciprocate this treatment on all issues. These are not the kind of ties that are likely to permit the alliance to perform vigorously or to withstand future stress.

Clearly the task before the United States and Japan is to reassess our defense alliance, not in the context of promises and false perceptions of the past, but in the reality of the world today—a world in which that "new structure of peace" has become increasingly elusive and threats of military conflict are clearly present to both Japan and the United States. It appears likely that Japan and the United States working cooperatively together will remain viable in the Western Pacific; separately each will fail.

Let us begin by examining the treaty provisions which sought to make this document viable in a changing world, in both good times and bad. Let us assess the extent to which the two partners in this alliance have fulfilled these commitments to date and the challenges we face in fulfilling them in the future.

The preamble to the treaty states that the two parties recognize "that they have the inherent right of individual or collective self-defense . . ." Article III states further that "the parties individually and in cooperation with each other, by means of continuous and effective self-help and mutual aid will maintain and develop, subject to their constitutional provisions, their capacities to resist armed attack."

Unfortunately, there has been a great reluctance in Japan to update its self-defense capabilities in response to changing conditions, even though it is clear that the negotiators of the 1960 treaty recognized that there exists in a sovereign state an inherent right and need to provide for its own defense.

Certainly the United States has contributed greatly to Japan's reluctance to create a strong defense both by assuming a major role in her defense and continuing to accept her minor role. Nevertheless, the first responsibility of every government is to protect its citizens and their rights in a hostile world.

For a variety of reasons, including some questions concerning U.S. policy on the subject, the Japanese have failed to follow this basic tenet as acknowledged in the preamble to the treaty which says that the two parties have "the inherent right of individual or collective self-defense as affirmed in the charter of the United Nations."

No doubt it has been reassuring for the second largest industrial nation of the free world—Japan—to have the largest such nation—the United States—extend its nuclear defense protection, provide a large share of its conventional defenses, and, in addition, commit herself to defend Japan if she is attacked.

For the last 17 years, many in Japan have been saying "nothing could be better"—and certainly there has been real logic to that conclusion. However, today, nothing could be worse for Japan and also the United States than to continue to neglect the need for a balanced mutual military contribution.

There may still exist considerable sentiment in Japan to be a neutral, independent, unarmed nation. Adm. Arleigh Burke of the U.S. Navy said in Tokyo in 1968—

> But those of us who have had military experience know a country cannot be at the same time both unarmed and neutral. If your wonderful country desires to play a neutral role, then it must be armed. This will take a lot of time and a lot of money.

We know too well that an absence of military capability does not insure against war but instead invites aggression. For a nation to remain purposely weak militarily, denying itself the ability to resist aggression, is neither a sign of wisdom nor self-control, but a sign of wishful thinking and outdated perceptions of the surrounding world.

As Admiral Burke has stated—

> National power may be measured by a nation's military power, economic power, and the moral fiber of the people. National power is the multiplication, not the addition of these fundamentals, if any one of them is weak then the national power is weak. If any one of them is zero, then the national power is zero.

Japan's economic power is surely beyond question. However, in terms of military strength and the will of its people to protect their national interests, Japan is incapable of guaranteeing its own security.

Japan's proposed defense budget for fiscal 1977 suggests that Japan either does not realize, or does not take seriously the disparity between its material contribution to defense and that of other free world nations. The Japanese Government's proposed national budget for fiscal 1977 shows an overall increase of 17.4 percent. But defense spending in fiscal 1977 will increase by only 11.8 percent, barely enough to stay ahead of inflation. Moreover, Japan's defense spending, as a percentage of the national budget, continues to decline from 6.2 percent last year to 5.9 percent this coming year—the lowest percentage of the national budget since the self-defense forces were established.

In suggesting that Japan consider a greater material commitment to defense, let us make clear that we are not advocating what some might term the "rearmament of Japan," but merely the pursuit of a credible, independently viable self-defense capability.

Japan may not be sufficiently aware that American public sentiment since the sixties has increasingly favored the withdrawal of American forces from the Far East. This prospect has recently been bolstered by President Carter's proposal for gradual troop withdrawals from South Korea.

Though this opinion is most frequently called neoisolationist, I believe it more reasonable to say that Americans have become opposed to bearing a disproportionately large share of the military, economic, social, and political burdens of the free world, with less than pro rata help from many friendly nations. Japan must realize that the will of the American people to provide for our own defense interests, and beyond that the defense interests of our allies, is also being severely tested.

Still there is more to Japan's problem than equity between friendly allies. Allies are necessary and helpful, but they cannot be used as a crutch—nor can they for the long pull, assume basic defense responsibilities of another nation, nor can they always control their own actons in a world increasingly threatened by the relentless expansion of Soviet offensive military might.

It is foolish for the United States to maintain, and naive for Japan to believe, that the United States can alone provide the conventional air, land, and sea firepower sufficient to serve as a deterrent to conventional aggression against Japan.

Particularly in regard to the reduced U.S. naval capability vis-a-vis the Soviets, serious questions are raised as to whether the United States can defend Japan in time and in the manner Japan may expect if a substantial effort is launched against Japan. The United States—regardless of its good intent, may not be able to prevent destruction or conquest of Japan without a lot more help by forces in being than Japan is now furnishing.

I believe the case for a more credible self-defense capability in Japan is made even more compelling by certain stipulations of our defense alliance, as stated in articles V and VI of our Treaty of Mutual Cooperation and Security.

Article V of the treaty states that "Each party recognizes that an armed attack against either party in the territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provision and processes." It is clear under this article of the treaty that the United States is committed to the defense of Japan if she is attacked.

Is it in the best interests of the United States to continue such an expensive and risky commitment to a very good friend unless that nation is willing to pull its fair share of the load? I think this is a very important question.

While article V of the treaty commits the United States to help defend Japan in the event of armed aggression against her, the reverse is not true. Japan is not committed to help defend against armed aggression the U.S. interests anywhere outside "the territories under the administration of Japan"—even in the Western Pacific.

If indeed such an armed attack against the United States were to occur, the security of Japan would certainly be in jeopardy.

Do the defense obligations of the present mutual security pact treaty with Japan provide the de facto mutual defense commitments that are in the best interests of the United States?

Article VI of the treaty provides that Japan grant to the United States the use of bases, facilities, and areas in Japan as a contribution to the security of Japan and also to maintain international peace and security in the Far East. However, such use is constrained by the requirement of prior consultation and—presumably—approval from Japanese officials.

Although the prior consultation and presumable approval provision is understandable from Japan's point of view, it is a potentially disabling condition for the United States. It is obviously not beneficial to this country, nor does it seem reasonable that Japan expects the United States to provide and support forces partly for Japan's protection and simultaneously dictate how those forces are to be supported and used outside of the "territories under the administration of Japan."

As we are seeing in Western Europe, advances in the overall military capability of our adversaries and the evolution of new military technology and new military strategies cannot be ignored, nor go unanswered if a credible deterrent to aggression is to be preserved.

The relationship between our allies and adversaries elsewhere in the world has been similarly altered by many of these same developments, including, as I mentioned earlier, the erosion of nuclear capability as a deterrent to nonnuclear aggression and our unjustified faith in diplomatic initiatives as an alternative to military preparedness.

In the case of Japan, unlike that of the NATO countries, a response to these changes in order to maintain a credible deterrent to aggression has not been restrained for economic reasons. To the contrary, adverse military and political developments have gone unanswered largely because of Japan's own perception of its defense treaty with the United States and blind acceptance of the status quo by the United States.

I believe the United States and Japan must now acknowledge the deficiencies of our mutual defense posture, and strive toward a posture which is relevant to the world of today and responsive to the evergrowing threat to our mutual security. For the United States, this will require our continued, unwavering dedication to the peace and prosperity of our valued and indispensable ally. The United States must be convinced that Japan's self-defense capability is sufficient to underpin our military commitment to Japan, and thus establish that

this commitment remains in the U.S. best interest.

For Japan, the task ahead must begin with a thorough and candid reassessment of its treaty obligations of self-help and self-defense as stated in the preamble and throughout the Treaty of Mutual Cooperation and Security. Japan must also reexamine the treaty with respect to article V and the special unreciprocal obligations for the defense of Japan by the United States, and article VI and the special restrictions placed upon the U.S. access to Japan's bases and facilities when in the pursuit of peace and security elsewhere in the Far East.

Japan must realize that these treaty provisions in particular, convenient as they may have been to Japan's interests, further underscore the obligation for individual, independent, self-defense initiatives, and for greater participation by Japan in the defense of other free world allies in its region of the world.

Mr. President, I yield the remainder of my time to the distinguished Senator from California.

Mr. HAYAKAWA subsequently said: Mr. President, I wish to associate myself with the remarks about the defense of Japan as stated by the distinguished Senator from Oklahoma.

(The following proceedings occurred during the presentation of Mr. BARTLETT'S preceding remarks:)

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. BARTLETT. Mr. President, it is my understanding that I have——

Mr. ROBERT C. BYRD. Mr. President, I have some time under the order.

The ACTING PRESIDENT pro tempore. The Senator has 3 minutes.

Mr. ROBERT C. BYRD. Mr. President, I yield my 3 minutes to the distinguished Senator from Oklahoma.

Mr. BARTLETT. It was my understanding, Mr. President, I had 15 minutes on my own.

The ACTING PRESIDENT pro tempore. The Senator has 15 minutes on his own following the Senator from California (Mr. HAYAKAWA).

Mr. BAKER. Mr. President, I see the Senator from California is on the floor. While he is here and the distinguished majority leader is on his feet, I wonder if the Senator from Oklahoma might finish his remarks, and I ask unanimous consent that the time of the Senator from Oklahoma might be consumed at this time.

Mr. ROBERT C. BYRD. Yes, without prejudice.

Mr. BAKER. Without prejudice to the rights of the Senator from California

The ACTING PRESIDENT pro tempore. That would just reverse the order.

Is there objection?

Without objection, it is so ordered.

Mr. BARTLETT. Mr. President, I would like these remarks to be at the end of my remarks. But I apologize to the Senator from California. It was my understanding that my order was the first order. That is why I proceeded. So I apologize to the distinguished Senator from California.

The ACTING PRESIDENT pro tempore. The Senator from Oklahoma has 17 minutes.

Mr. BARTLETT. I thank the respective Senators.

(This concludes the proceedings that occurred during the presentation of Mr. BARTLETT'S remarks.)

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Senator from California (Mr. HAYAKAWA) is recognized on his own order for 5 minutes, and the Senator has an additional 2 minutes.

GOLDEN ANNIVERSARY OF THE ACADEMY OF MOTION PICTURE ARTS AND SCIENCES

Mr. HAYAKAWA. Mr. President, I send to the desk a resolution and I ask unanimous consent that it be in order to proceed to its immediate consideration.

The ACTING PRESIDENT pro tempore. The clerk will state the resolution by title.

The legislative clerk read as follows:

Mr. HAYAKAWA for himsef and Mr. CRANSTON proposes a resolution (S. Res. 168) to honor the Academy of Motion Picture Arts and Sciences on its 50th Anniversary.

The ACTING PRESIDENT pro tempore. Is there objection to the immediate consideration of the resolution?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object—and I will not object—this matter was brought before the Senate yesterday by the distinguished Senator from California. At that time I had not secured clearance from Senator EASTLAND and Senator MCCLELLAN, the chairman of the Committee on the Judiciary and the chairman of the subcommittee, respectively, but I have that clearance now and, therefore, I have no objections.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to its immediate consideration.

The Senate proceeded to consider the resolution.

Mr. HAYAKAWA. Mr. President, on May 11, 1927, the Academy of Motion Picture Arts and Sciences was formed to guide the future of the very young industry of film making in the United States. Over these years the academy has done a superb job.

Very few Americans during these past 50 years have been untouched by the movies. Who has not heard of Hollywood—and "Oscar," her honorary mayor?

We thank the academy for encouraging that talent in all facets of filmmaking which has made the American motion picture industry the finest in the world.

The academy, by encouraging creativity and nurturing talent, has given us so many wonderful moments on the screen: A teenager named Judy Garland wistfully singing "Somewhere Over the Rainbow"; the dazzling grace of Fred Astaire; that hoofer turned tough guy, Jimmy Cagney; Gigi suddenly grown up; Bogart listening to "As Time Goes By"; Andy Hardy at the senior prom.

There are so many other moments that cameras capture the moment forever.

I wish to congratulate the Academy of Motion Picture Arts and Sciences on its golden anniversary by introducing into the RECORD at this point a proclamation noting its many fine achievements.

Mr. President, may I read the resolution?

The ACTING PRESIDENT pro tempore. The Senator may read the resolution.

Mr. HAYAKAWA. I thank the Chair.

S. RES. 168

To honor the Academy of Motion Picture Arts and Sciences on its fiftieth anniversary

Whereas, the Academy of Motion Picture Arts and Sciences was organized on May 11, 1927, to advance the art and science of motion pictures and to coordinate the creative leadership in the motion picture industry;

Whereas, the Academy of Motion Picture Arts and Sciences is the paramount film-related professional honorary organization in the world;

Whereas, the motion picture industry contributes to the cultural growth of the United States;

Whereas, the Oscar is the internationally recognized symbol of excellence in motion picture production;

Whereas, the motion picture industry encourages international good will through films; and

Whereas, the Academy of Motion Picture Arts and Sciences provides many services to the motion picture industry and the general public, including, the Margaret Herrick Library, a visiting artist program which arranges for motion picture professionals to lecture at campuses throughout the country, the Academy Players Directory and the Screen Achievement Records Bulletin, the annual student film awards, an internship program which allows film students to work with professional moviemakers, exhibits and film retrospectives, and the annual Oscar presentations which recognize achievement in the motion picture industry: Now, therefore, be it

Resolved, That on the fiftieth anniversary of the founding of the Academy of Motion Picture Arts and Sciences, May 11, 1977, the United States Senate congratulates the Academy for its past achievements, and sends its best wishes for the future.

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to the Academy of Motion Picture Arts and Sciences.

I thank the Chair.

Mr. CRANSTON. Mr. President, I am most pleased to join with my distinguished colleague from California (Mr. HAYAKAWA) as an original cosponsor of his resolution congratulating the Academy of Motion Picture Arts and Sciences on its 50th anniversary today.

The academy, founded on May 11, 1927, is best known to the American public for its annual awards of excellence in the motion picture arts and sciences—the internationally known Oscar awards.

Through its Oscar awards, the academy has encouraged the development of high standards in acting, directing and screenwriting. It also has given recognition to the technical arts and skills so vital to the making of a successful film. In doing so, the academy has been instrumental in fostering the growth of a permanent pool of technical skills in

film making, based largely in southern California.

A film can be shot anywhere in the world. But only Hollywood, Calif., possesses the wealth of technical competence to turn that raw footage into a viewable film for the enjoyment of audiences. The development of technical film making capability is a major accomplishment of the academy and is the reason why Hollywood remains the film capital of the world.

Therefore, Mr. President, in honoring the Academy of Motion Picture Arts and Sciences on its 50th anniversary today, we are honoring the many men and women of great professional skill and art who are, in fact, the film industry of the United States.

It has been a pleasure, Mr. President, to share with my colleague this opportunity to acknowledge the contributions of the academy to the art of film making in the United States. May it continue to flourish.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

The preamble was agreed to.

The resolution (S. Res. 168), together with its preamble, was agreed to.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business not to extend beyond 15 minutes, with statements limited therein to 5 minutes each.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Is there morning business?

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

At 12:06 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House disagrees to the amendments of the Senate to the bill (H.R. 5840) to amend the Export Administration Act of 1969 in order to extend the authorities of that act and improve the administration of export controls under that act, and to strengthen the anti-boycott provisions of that act; requests a conference with the Senate on the disagreeing votes of the two Houses thereon; and that Mr. ZABLOCKI, Mr. FASCELL, Mr. ROSENTHAL, Mr. HAMILTON, Mr. BINGHAM, Mr. RYAN, Mr. SOLARZ, Mr. BROOMFIELD, Mr. BUCHANAN, and Mr. WHALEN were appointed managers of the conference on the part of the House.

The House has passed the following bills in which it requests the concurrence of the Senate:

H.R. 2817. An act to provide for certain additions to the Tinicum National Environmental Center;

H.R. 6205. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Atlantic Tunas Convention Act of 1975; and

H.R. 6206. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Commercial Fisheries Research and Development Act of 1964.

The Speaker has appointed the following as members of the National Commission on Unemployment Compensation: Ms. OAKAR, on the part of the House; and Mr. Richard Crossier, Holden, Mass., and Mr. Edward Sullivan, Belmont, Mass., from private life.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following communications which were referred as indicated:

EC–1304. A letter from the Architect of the Capitol transmitting, pursuant to law, a report of all expenditures during the period October 1, 1976 through March 31, 1977, from moneys appropriated to the Architect of the Capitol (with an accompanying report); ordered to lie on the table and to be printed.

EC–1305. A letter from the Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a cumulative report on rescissions and deferrals for May 1977 (with an accompanying report); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Foreign Relations, Commerce, Science, and Transportation, Armed Services, Environment and Public Works, Energy and Natural Resources, Human Resources, the Judiciary, Agriculture, Nutrition, and Forestry, Finance, Governmental Affairs, Banking, Housing, and Urban Affairs, and the Select Committee on Small Busines, and ordered to be printed.

EC–1306. A letter from the Secretary of Agriculture transmitting a draft of proposed legislation to amend the National School Lunch Act and the Child Nutrition Act of 1966 to revise and extend the summer food service program for children, to revise the nonfood assistance program, and for other purposes (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC–1307. A letter from the Acting Assistant Secretary of Defense, Manpower, Reserve Affairs, and Logistics, transmitting, pursuant to law, the third annual report on the Defense Industrial Reserve for the calendar year 1976 (with an accompanying report); to the Committee on Armed Services.

EC–1308. A letter from the Acting Administrator of the National Aeronautics and Space Administration transmitting, pursuant to law, a report listing information with respect to contracts negotiated by NASA for the period July 1, 1976 through December 31, 1976 (with an accompanying report); to the Committee on Commerce, Science, and Transportation.

EC–1309. A letter from the Secretary of Transportation transmitting a draft of proposed legislation to formalize common international safety requirements for the approval, examination, and inspection of containers, within the jurisdiction of the United States and used in international transport, to maintain a high level of safety of human life, to facilitate international container transport, and for other purposes (with accompanying papers); to the Committee on Commerce, Science, and Transportation.

EC–1310. A letter from the Chairman of the United States International Trade Commission transmitting a draft of proposed legislation to provide authorization of appropriations for the United States International Trade Commission for fiscal year 1979 (with accompanying papers); to the Committee on Finance.

EC–1311. A letter from the Chairman of the U.S. Consumer Product Safety Commission transmitting, pursuant to law, a report on a proposed new system of records, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

EC–1312. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Delays in Setting Workplace Standards for Cancer-Causing and Other Dangerous Substances" (HRD–77–71) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1313. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Domestic Resettlement of Indochinese Refugees—Struggle for Self-Reliance" (HRD–77–35) (with an accompanying report); to the Committee on Governmental Affairs.

EC–1314. A letter from the Secretary of Labor transmitting, pursuant to law, the annual report summarizing the progress made in fiscal year 1976 by the Department of Labor and its affiliated State employment service agencies in providing employment and job training counseling and placement services for eligible veterans (with an accompanying report); to the Committee on Veterans Affairs.

EC–1315. A letter from the Chairman of the Foreign Claims Settlement Commission of the United States transmitting, pursuant to law, the annual report of the activities of the Commission for the period beginning January 1, 1976, and ending December 31, 1976 (with an accompanying report).

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that an annual report from the Foreign Claims Settlement Commission of the United States be referred jointly to the Committees on Foreign Relations and Energy and Natural Resources.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PETITIONS

The ACTING PRESIDENT pro tempore laid before the Senate the following petitions which were referred as indicated:

POM–173. House Resolution No. 377 adopted by the House of Representatives of the State of Hawaii and House Concurrent Resolution No. 56 adopted by the Legislature of the State of Hawaii requesting the U.S. Congress to enact legislation to compensate or to make reparation to Hawaiians for damages suffered by them at the time of annexation; to the Committee on Energy and Natural Resources:

"HOUSE RESOLUTION NO. 377

"Whereas, by the Great Mahele of 1848, all the lands in the Hawaiian Kingdom were divided and distributed to wit: One-third (⅓) for the public called "Public Lands"; One-third (⅓) for the King for his use, designated as "Crown Lands"; and One-third (⅓) to the Chiefs; and

"Whereas, prior to the reign of Kamehameha V the Crown Lands were considered to be the private domain of the King, and he could sell, mortgage or otherwise deal with

such land as his private property without any limitation; and

"Whereas, during his reign, King Kamehameha V declared Crown Lands to be inalienable, and it appears that it was so regarded and thereafter, King Lunalilo, King Kalakaua and Queen Liliuokalani were deemed to have been only entitled to use of the income from the Crown Lands; and

"Whereas, upon the abdication of the throne by Queen Liliuokalani, the Crown Lands were deemed to be part of the public land of the Hawaiian Republic; and upon the annexation of Hawaii by the United States of America, crown lands thereby became part of Public Lands of the United States of America; and

"Whereas, it appears that person or persons who were or should be entitled to the Crown Lands were deprived of their property or property rights in the Crown Lands; and

"Whereas, Aborigine or Native Hawaiians were deprived of certain property or property rights upon the annexation of these islands by the United States of America; now, therefore,

"Be it resolved by the House of Representatives of the Ninth Legislature, State of Hawaii, Regular Session of 1977, that the Congress of the United States of America be respectfully requested to enact legislation to compensate the family or families who would be considered to be the highest among the chiefs and would have been considered the presumptive heirs to the throne and the Hawaiian Kingdom for the Crown Lands so taken and damages suffered, and the aborigine or Native Hawaiians for damages suffered by them at the time of the Annexation of the Hawaiian Islands to the United States of America; and

"Be it further resolved that the Congress of the United States of America be respectfully requested to amend Senate Joint Resolution No. 4 entitled, "Hawaiian Aboriginal Claims Settlement Study" now pending, by specifically including therein all Crown Land claims and authorizing direct grants of payment as compensation for settlement of Crown Land claims; and

"Be it further resolved that duly certified copies of this Resolution be transmitted to the President of the United States of America; the Vice-President of the United States of America; the President Pro-temp of the Senate of the Congress of the United States of America; the Speaker of the House of Representatives of the Congress of the United States of America; to the Chairman of the Interior and Insular Affairs Committee of the Senate of the Congress of the United States of America; to the Chairman of the Interior and Insular Affairs Committee of the House of Representatives of the Congress of the United States of America; to the Honorable Daniel K. Inouye, and Honorable Spark M. Matsunaga, senators from the State of Hawaii and to Honorable Daniel K. Akaka and Honorable Cecil Heftel, representatives from the State of Hawaii of its United States of America."

"HOUSE CONCURRENT RESOLUTION

"Whereas, by the Great Mahele of 1848, all the lands in the Hawaiian Kingdom were divided and distributed to wit: One-third (⅓) for the public called "Public Lands"; One-third (⅓) for the King for his use, designated as "Crown Lands"; and One-third (⅓) to the Chiefs; and

"Whereas, prior to the reign of Kamehameha V the Crown Lands were considered to be the private domain of the King, and he could sell, mortgage or otherwise deal with such land as his private property without any limitation; and

"Whereas, during his reign, King Kamehameha V declared Crown Lands to be inalienable, and it appears that it was so regarded and thereafter, King Lunalilo, King Kalakaua and Queen Liliuokalani were deemed to have been only entitled to use of the income from the Crown Lands; and

"Whereas, upon the abdication of the throne by Queen Liliuokalani, the Crown Lands were deemed to be part of the public land of the Hawaiian Republic; and upon the annexation of Hawaii by the United States of America, crown lands thereby became part Public Lands of the United States of America; and

"Whereas, it appears that person or persons who were or should be entitled to the Crown Lands were deprived of their property or property rights in the Crown Lands; and

"And, whereas, Aborigine or Native Hawaiians were deprived of certain property or property rights upon the annexation of these islands by the United States of America; now, therefore,

"Be it resolved by the House of Representatives of the Ninth Legislature, State of Hawaii at the Regular Session of 1977, the Senate concurring that the Congress of the United States of America be respectfully requested to enact legislation to compensate the Aborigine or Native Hawaiians for damages suffered by them at the time of the Annexation of the Hawaiian Islands to the United States of America; and

"Be it further resolved that the Congress of the United States of America be respectfully requested to amend Senate Joint Resolution No. 4 entitled, "Hawaiian Aboriginal Claims Settlement Study" now pending, by specifically including therein all Crown Land claims and authorizing direct grants of payment as compensation for settlement of Crown Land claims; and

"Be it further resolved that duly certified copies of this Concurrent Resolution be transmitted to the President of the United States of America; the Vice-President of the United States of America; the President Protemp of the Senate of the Congress of the United States of America; the Speaker of the House of Representatives of the Congress of the United States of America; to the Chairman of the Interior and Insular Affairs Committee of the Senate of the Congress of the United States of America; to the Chairman of the Interior and Insular Affairs Committee of the House of Representatives of the Congress of the United States of America; to the Honorable Daniel K. Inouye, and Honorable Spark M. Matsunaga, senators from the State of Hawaii and to Honorable Daniel K. Akaka and Honorable Cecil Heftel, representatives from the State of Hawaii of its United States of America."

POM–174. Senate Resolution No. 109 adopted by the Senate of the State of Hawaii requesting the Congress of the United States and the President of the United States to implement the recommendations of the National Conference of State Legislatures relating to the AFDC Quality Control Program; to the Committee on Finance:

"SENATE RESOLUTION No. 109

"Whereas, in August, 1975, the Department of Health, Education, and Welfare issued regulations which provided for reductions in federal payments for administrative errors in excess of certain tolerance levels established in the regulations; and

"Whereas, these tolerance levels are three per cent for payments to ineligible recipients and five per cent for overpayments to eligible recipients; and

"Whereas, an 'overpayment' is defined as any payment in excess of $5 of the amount that should have been paid; and

"Whereas, however, while a five per cent tolerance level for underpayments was also established, no sanctions were mandated; and

"Whereas, beginning with the July–September 1975 quarter, the Department of Health, Education, and Welfare (DHEW) began reducing federal Aid to Families with Dependent Children (AFDC) payments to states in excess of the tolerance levels; and

"Whereas, in response, several states filed suit against DHEW claiming that no statutory basis exists for the imposition of these penalties, that the three and five per cent tolerance levels were not selected on the basis of any empirical data and are unreasonably low, and that the regulations by-pass procedures established by the Social Security Act for reducing AFDC matching funds; and

"Whereas, on May 14, 1976, a United States District Court in Washington, D.C., declared DHEW's regulations to be arbitrary and capricious and enjoined the Department from enforcing the regulations; and

"Whereas, the declaratory judgment in favor of the states flowed from the judge's conviction that the DHEW provided no evidence that the three and five per cent tolerance levels were reasonable; and

"Whereas, the judgment, however, did not declare that the disallowance of federal financial participation based on ineligibility because of payment levels is inconsistent with DHEW's regulatory authority; and

"Whereas, based upon careful review of the facts related to the court ruling, the Intergovernmental Relations Committee of the National Conference of State Legislatures has presented the following recommendations to the Congress of the United States and to the Administration as follows: (1) there should be a nationwide quality control system developed as a management tool which will allow elected officials, program managers, and the public to reliably and validly know the accuracy of both eligibility and payment systems at regularly recurring intervals; (2) the basic principles of this nationwide quality control system should be applied not only to AFDC but to SSI, Medical Assistance, and the Food Stamp program as well; (3) in reporting and categorizing errors, the quality control system should: (A) differentiate between procedural errors (those which if corrected, would not have altered payment levels) and payment errors, (B) differentiate between those errors which are the result of failing to meet a specific federal mandate and those which result from failing to meet optional requirements imposed by the state, (C) differentiate between agency and client errors in all categories, (D) report all categories of errors both as a per cent of cases and as a per cent of payments; (4) additional administrative standards should not be mandated by the federal government without prior consultation with states and localities and until there is clear evidence of their cost effectiveness; (5) no national performance levels should be established at this time; instead, all states should be required to develop periodic corrective action plans, acceptable to DHEW and geared to the individual conditions of each state including the state's specific targets for error reduction; and (6) sanctions, if necessary, should be applied only through the existing compliance procedure and only in those instances where a state refuses to propose an acceptable corrective action plan or fails to appropriately implement the actions in the agreed-upon plan; and

"Whereas, the Senate of the State of Hawaii concurs with and indorses the recommendations submitted by the Intergovernmental Relations Committee of the National Conference of State Legislatures; now, therefore,

"Be it resolved by the Senate of the Ninth Legislature of the State of Hawaii, Regular Session of 1977, that it urges the Congress of the United States and the President of the United States to accept the recommendations presented by the Intergovernmental Relations Committee of the National Conference of State Legislatures and direct the necessary actions for implementation of the recommendations without delay; and

"Be it further resolved that certified copies of this Resolution be transmitted to the President of the United States, the President of the United States Senate, the Speaker of the United States House of Representatives, the Majority Leader of the United States Senate, the Majority Leader of the United States House of Representatives, and to each member of Hawaii's delegation to the United States Congress."

POM–175. Senate Resolution No. 77 adopted by the Senate of the State of Hawaii requesting the President of the United States to take action to protect the domestic sugar industry; to the Committee on Finance:

"SENATE RESOLUTION NO. 77

"Whereas, the sugar program of the United States, first established by the Jones-Costigan Act of 1934, had a three-fold purpose: (1) to protect the welfare of those engaged in producing and processing domestic crops, (2) to provide consumers with ample sugar supplies at reasonable prices, and (3) to maintain a sound and healthy sugar industry in the United States; and

"Whereas, during the 40 years of its existence, the United States Sugar Act has effectively achieved its major goals and in particular the objective of stabilization of prices to the satisfaction of all concerned; and

"Whereas, in December of 1974, Congress allowed the Sugar Act to expire, and this precipitated, and was a major contributor to, the current critical situation of the sugar industry; and

"Whereas, the United States market is the dumping ground for surplus world sugar and is being sold by foreign governments at less than what it is being sold in their own countries; and

"Whereas, the Sugar Act insured Hawaii's sugar industry with a reasonable rate of return in a guaranteed market; thus protecting sugar industry from competition with cheaply produced, government subsidized foreign sugar; and

"Whereas, the demise of the Sugar Act in cheaply produced, government subsidized placing stability in the market place; and

"Whereas, the Nation's 22 sugar-producing states are sustaining severe and potentially crippling losses at the present price levels for sugar; and

"Whereas, at present, nearly all sugar producers in the country are losing money on every ton of sugar produced, a situation which cannot long be tolerated if this country is to retain a viable domestic sugar industry; and

"Whereas, the diminution of the United States sugar-producing industry will mean increased dependence upon imported foreign sugar and the concomitant likelihood of high prices as a result of reduced competition in the market place; and

"Whereas, Hawaii's sugar industry was the third largest contributor to the State's economy; and

"Whereas, Governor Ariyoshi of Hawaii in his testimony to the United States International Trade Commission projected the following unemployment rates for the outer island counties if sugar were to cease operation: Hawaii—38.7%; Maui—37.6%; and Kauai—55.2%; and

"Whereas, such conditions must be avoided; and

"Whereas, here in Hawaii, our Nation's 50th State, the sugar industry, since its first commercial planting in 1835 has provided the economic foundation for the growth and expansion of our islands' economy; and

"Whereas, both industry and government in Hawaii have made extraordinary efforts to develop other industries including agricultural crops of various kinds, especially in those areas where there have been recent shutdowns of sugar plantations only to come to the grim realization that there is nothing else that can be produced in Hawaii that can provide even a significant fraction of the economic worth which sugar represents; now, therefore,

"Be it resolved by the Senate of the Ninth Legislature of the State of Hawaii, Regular Session of 1977, that it respectfully urges the President of the United States to take such remedial action as he may deem appropriate to alleviate the present serious situation of the sugar producers in the State of Hawaii."

POM–176. A resolution adopted by the Association of Trial Lawyers of America-Puerto Rico Chapter supporting and endorsing unconditionally the 1977 Omnibus Bill; to the Committee on the Judiciary.

POM–177. A concurrent resolution adopted by the General Assembly of the State of South Carolina memorializing Congress to reject any efforts to subordinate the Veterans Administration Health Care Program to the Department of Health, Education, and Welfare or any other Federal agency and to reject any efforts to diminish the integrity of the programs administered by the Veterans Administration; to the Committee on Veterans Affairs:

"CONCURRENT RESOLUTION 177

"Whereas, there is a continual debate concerning national health insurance; and

"Whereas, some social planners and others have suggested using the one hundred seventy-one hospitals, two hundred seventeen outpatient clinics, eighty-six nursing homes and sixteen domiciliaries of the Veterans Administration's health care system as a nucleus for a national health care program; and

"Whereas, Veterans Administration medical care programs and facilities are designed specifically for the needs of veterans, particularly those with service-connected or service-related injuries; and

"Whereas, the veterans of our nation have valiantly earned special hospitalization privileges and rights contained in Title 38 of the United States Code; and

"Whereas, these privileges and rights now appear to be in jeopardy unless such takeover is vigorously opposed. Now, therefore,

"Be it resolved by the House of Representatives, the Senate concurring:

"That the members of the General Assembly of South Carolina hereby memorialize the Congress of the United States to reject any legislative, administrative or any other effort to subordinate Veterans Administration health care programs to the Department of Health, Education and Welfare or any other agency and to reject any legislative, administrative or any other effort to dismember, dismantle or diminish in any way the integrity and independence of the Veterans Administration system.

"Be it further resolved copies of this resolution be forwarded to the President of the United States, to the Clerks of the United States Senate and House of Representatives and to each member of Congress from South Carolina."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs:

Without amendment:

S. 853. A bill to extend the Defense Production Act of 1950, as amended (Rept. No. 95–131).

By Mr. MUSKIE, from the Committee on the Budget:

Without amendment:

S. Res. 165. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1279 (Rept. No. 95–132).

S. Res. 163. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 11, a bill to provide for the appointment of additional district court judges, and for other purposes (Rept. No. 95–133).

By Mr. ROBERT C. BYRD (for Mr. METCALF), from the Committee on Energy and Natural Resources:

Without amendment:

S. Res. 169. An original resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 7. Referred to the Committee on the Budget.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. RIBICOFF, from the Committee on Governmental Affairs:

Manuel D. Plotkin, of Illinois, to be Director of the Census.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 2817. An act to provide for certain additions to the Tinicum National Environmental Center; to the Committee on Environment and Public Works.

H.R. 6205. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Atlantic Tunas Convention Act of 1975; to the Committee on Commerce, Science, and Transportation.

H.R. 6206. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Commercial Fisheries Research and Development Act of 1964; to the Committee on Commerce, Science, and Transportation.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. NELSON:

S. 1483. A bill to amend the Federal Trade Commission Act (15 U.S.C. 45) to prohibit the ownership or control of soft drink bottling or canning establishments by national manufacturers of soft drink syrups or concentrates under certain circumstances; to the Committee on the Judiciary.

By Mr. PROXMIRE:

S. 1484. A bill for the relief of Michael Bruce Holland; to the Committee on the Judiciary.

By Mr. BARTLETT (for himself and Mr. BELLMON):

S. 1485. A bill to amend the Internal Revenue Code of 1954 to exempt certain organizations from private foundation status; to the Committee on Finance.

By Mr. BELLMON:

S. 1486. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for services furnished by physician extenders, nurse practitioners, and clinical staff of community mental health centers; to the Committee on Finance.

By Mr. BELLMON (for himself and Mr. ANDERSON):

S. 1487. A bill to eliminate racketeering in the sale and distribution of cigarettes, and for other purposes; to the Committee on the Judiciary.

By Mr. TOWER:

S. 1488. A bill to provide for monitoring of soil moisture in drought-prone areas, to provide information thereon and accelerate financial and technical assistance to lessen impact of drought on farming and ranching operations; and

S. 1489. A bill to amend the Soil Conservation and Domestic Allotment Act to prevent soil erosion during a drought emergency; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. CHILES (for himself, and Mr. PERCY, and Mr. HEINZ):

S. 1490. A bill to authorize the Administrator of General Services to enter into multiyear leases through use of the automatic data processing fund without obligating the total anticipated payments to be made under such leases; to the Committee on Governmental Affairs.

By Mr. PERCY (for himself, Mr. CHILES, and Mr. HEINZ):

S. 1491. A bill to authorize procurement of janitorial, protective, trash removal, and similar services for periods not exceeding four years; to the Committee on Governmental Affairs.

By Mr. MAGNUSON (for himself and Mr. LONG) (by request):

S. 1492. A bill to amend the Mineral Leasing Act of 1920 and the Interstate Commerce Act, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HART:

S. 1493. A bill to amend the Public Works and Economic Development Act to establish a comprehensive program to provide financial and technical assistance to States, local governments, and Indian tribes to manage impacts caused by energy development, and for other purposes; jointly, by unanimous consent, to the Committee on Environment and Public Works and the Committee on Governmental Affairs.

By Mr. PELL:

S. 1494. A bill to secure the rights of blind persons; to the Committee on the Judiciary.

By Mr. PACKWOOD (for himself, Mr. BELLMON, Mr. CASE, Mr. CHAFEE, Mr. DOMENICI, Mr. DURKIN, Mr. GRAVEL, Mr. HART, Mr. HATHAWAY, Mr. JAVITS, Mr. LEAHY, Mr. PELL, Mr. RIBICOFF, Mr. SARBANES, Mr. STAFFORD, Mr. STEVENSON, and Mr. THURMOND):

S. 1495. A bill to authorize the Secretary of Transportation to make grants for the construction of bikeways; to the Committee on Environment and Public Works.

By Mr. EASTLAND (for himself, Mr. THURMOND, and Mr. STEVENS):

S. 1496. A bill to amend title 18, United States Code, to make a crime the willful destruction or interference with the Trans-Alaska Pipeline System; to the Committee on the Judiciary.

By Mr. WILLIAMS:

S. 1497. A bill to incorporate the United States Coastal Cadets; to the Committee on the Judiciary.

S. 1498. A bill to prohibit the sale of children in interstate and foreign commerce; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

S. 1499. A bill to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation; to the Committee on the Judiciary.

By Mr. DECONCINI:

S.J. Res. 52. A joint resolution authorizing and requesting the President to issue a proclamation designating the second week of March of each year as "National Children's Week"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. NELSON:

S. 1483. A bill to amend the Federal Trade Commission Act (15 U.S.C. 45) to prohibit the ownership or control of soft drink bottling or canning establishments by national manufacturers of soft drink sirups or concentrates under certain circumstances; to the Committee on the Judiciary.

SOFT DRINK ANTI-MONOPOLY ACT

Mr. NELSON. Mr. President, I introduce for appropriate reference the Soft Drink Anti-Monopoly Act. This proposed legislation is designed to end the alarming trend toward ownership of soft drink bottling plants by manufacturers of national-brand soft drink sirups, and to restore balanced and responsible competition to this major American industry.

The bill would amend the Federal Trade Commission Act by adding a provision to prohibit manufacturers of soft drink sirups or concentrates sold nationwide from licensing or otherwise permitting companies in which they have an ownership interest, or themselves, to bottle, can, distribute, or sell the finished soft drinks made from those sirups or concentrates. Six months after the bill became law, national sirup manufacturers would have to present to the Federal Trade Commission—FTC—a plan showing how they would divest their captive-plant interests.

The process of separation would have to be completed by January 1, 1979. A national manufacturer would be able to obtain an exemption from the requirements of this proposed law only if it could make a convincing showing to the FTC that a particular captive bottling or canning plant was licensed only because no independent bottler or canner was available to take the license in the areas served by the captive plant. The showing would have to be made anew every 5 years; otherwise, the exemption would expire. A $10,000-a-day fine would provide the "teeth" for this proposal.

The major national manufacturers of the soft drink sirups would be covered by this bill, that is, those which produce their own sirups or concentrates and whose total sales and intracompany transfers of soft drink sirups or concentrates amount to more than $30 million annually. Thus, regional and smaller sirup and bottling companies, which cater to limited areas and which lack the market power of the highly integrated national manufacturers of sirups and concentrates, would be exempt from the requirements of the legislation.

It is the premise of this proposed legislation that communities and consumers are better served by large numbers of independent soft drink bottling companies than by a limited number of captive bottling plants. It is the aim of the legislation to free virtually all plants licensed to bottle national brand soft drinks from ownership by their licensors. It is my hope not only that the recent rapid decline in the number of small bottling companies would thereby be slowed and perhaps even reversed, but also that a responsible competitive climate within the soft drink bottling industry would be restored.

Locally owned soft drink bottling plants have long been an important class of small business enterprise in America. In the 1950's there were about 7,000 such plants and most of them were owned by independent business people and predominantly local investors, not by the national sirup manufacturers. The number now is under 2,300.

Today the trend is for the national manufacturers to dominate large markets and squeeze out small businesses there. For example, Pepsico, Inc., currently bottles and distributes to about one-quarter of the U.S. population through its wholly owned bottling plants. The Coca-Cola Co.'s captive plants serve about 14 percent of the U.S. population.

Presently over 50 sirup companies, about 35 of which operate nationwide, license almost 2,300 bottling plants. About 2,000 of these plants are small businesses employing fewer than 100 persons.

The bottling plants distribute soft drink products through supermarkets, other stores and vending machines around the country. This business is marked by intense competition and the selling of more than 150 brands of beverages.

The advantages of the captive bottling plant are well known. It does not necessarily have to show a regular profit in its own operation, if that operation is increasing sirup sales of the parent sufficiently to make overall company profits attractive. Also, the captive bottler has the advantage of its parent's deep purse, which it is not reluctant to use. Both of these facts account for the conditions which lead to unfair and predatory competitive practices by the bottling plants owned by the sirup manufacturers.

In public investigations conducted in Wisconsin by our State department of agriculture, it has been found that national sirup companies engage in such specific unfair practices as selling below cost, offering discriminatory discounts to large-volume accounts, and providing expensive promotional aids—such as refrigeraters or coolers—to secure special accounts or shelf space in stores. These expensive predatory activities help the national sirup companies to dominate the market and to drive the small independent bottler out of business. To help reduce these abuses, the State of Wisconsin recently adopted regulatory controls on unfair trade practices in this industry. While these regulations certainly improved the climate of competiton in Wisconsin, they are by no means the ultimate solution nor do they offer any help for bottlers in other parts of the Nation.

The loss of independent bottlers means that fewer brands of beverages are available to consumers, that prices have a tendency to rise without adequate market restraints, and barriers are erected to distribution of new beverages. In short, while the national sirup companies

and large supermarket chains benefit from the vertical integration of the soft drink industry and the resulting predatory pricing activity and other unfair trade practices, the consumer rarely sees the long-range benefits. Instead, consumers ultimately foot the bill for below-cost selling and expensive promotional aids.

The threat of extinction for the small bottling concerns provides the background for this legislation. In recent months, an increasing number of smaller and regional soft drink bottlers have become convinced that the vertical integration of the national sirup manufacturers lies at the root of the industry's ills. That growing perception provides a solid political foundation for this proposed legislation.

Until now, another facet of the problem has been getting the attention in Congress and industry circles alike. Because of the intensity of interbrand competition, it has been the practice in the industry for many years to avoid intrabrand competition through exclusive licensing. That is, a sirup manufacturer licenses one and only one bottler to serve specified customer classes in specified geographic areas. That practice is currently under challenge in a group of companion cases brought by the Federal Trade Commission against the eight largest sirup manufacturers and some of their licensees.

Proposed legislation which would expressly authorize exclusive territorial licensing in the soft drink industry—and thereby moot the pending FTC cases—was offered in both the 93d and 94th Congresses but failed of enactment.

The bill introduced today takes a different approach to improving the competitive climate in the soft drink industry, by attacking the root problem. That problem is vertical integration. While this bill could stand alone, it also could be added to and complement the exclusive territory legislation. In that connection, it is interesting to note that in at least one of the pending FTC cases, an agreement was reached between counsel for the independent bottler intervenors and counsel for the respondent sirup manufacturer—the Coca-Cola Co.—to link divestiture of captive bottling plants to the ending of exclusive territories, should the FTC staff position on the illegality of exclusive territories ultimately prevail.

Certainly in the wide open interbrand and intrabrand competition that would follow the elimination of territorial exclusivity for licensed soft drink brands, the vertically integrated large bottling plant would have an even more pronounced advantage than in the present situation. In fact, if exclusive territories were to be held illegal, even more small bottlers than now would face direct competition with national manufacturers. These small, locally owned firms could be forced out of business if caught in the crossfire of unbridled competition between rival captive plants.

Despite individual State initiatives in limiting trade abuses, such as the new rules in Wisconsin, vertical integration of this industry must be recognized as a national problem. Thus, prompt Federal legislative action is essential if there is to be a halt in the decline of the independent bottling company and fair competition. With these concerns in mind, divestiture of bottling and canning operations by national syrup manufacturers is seen as the best means of restoring competitive balance to the bottling industry, saving the small bottling business and providing consumers with the long-term fruits of effective competition.

If Congress fails to act to protect the independent bottler, hundreds more family enterprises throughout the Nation will fall victim to the oligopolistic practices of the national syrup manufacturers. If that occurs, consumers may find that the now familiar wide variety of beverages is no longer available in their neighborhoods and that prices for popular beverages would be subject to the unchecked whim of the national syrup manufacturers. Clearly, prompt legislative relief is necessary.

For that reason, I hope that the Soft Drink Anti-Monopoly Act receives prompt and careful consideration.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point exhibit 1, containing specific information about the most important national syrup manufacturers and their captive bottling operations. I also ask to have printed in the RECORD exhibit 2, a stipulation entered into by the Coca-Cola Co. In this document, Coca-Cola states a willingness to accept vertical divestiture along with a mandated end of exclusive territorial licensing, should that be ordered, as long as other national syrup manufacturers are similarly treated. Finally, I ask unanimous consent to have printed in the RECORD, following the stipulation, the text of the bill.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1483

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5(a) of the Federal Trade Commission Act (15 U.S.C. 45) is amended by insertion of a new subsection (3) as follows:

"(3)(A). After the effective date of this subsection, it shall be unlawful for any national manufacturer of soft drink syrup to license or otherwise permit any company in which it has any direct or indirect ownership interest, or itself, to bottle or can beverages made from its soft drink syrup or to distribute or sell such beverages, except as provided herein.

"(B). Within six months after the date of enactment of this subsection, each national manufacturer of soft drink syrup shall present to the Federal Trade Commission a plan for divestiture of its interest in any soft drink bottling or canning or distribution establishment; *provided, however,* that upon a convincing showing made to the Federal Trade Commission that no other bottling, canning or distribution establishment is available to bottle or can beverages made from its soft drink syrup or to distribute or sell such beverages in a given locality, then the national manufacturer of a soft drink syrup may be authorized by the Federal Trade Commission to license or otherwise permit any company in which it has a direct or indirect ownership interest, or itself, to bottle or can beverages made from its soft drink syrup, or to distribute or to sell its finished soft drink products for a period not to exceed five years, at which time a renewal of said license or other arrangement may be issued only after the Federal Trade Commission reviews an updated convincing showing and grants a renewal of the authorization.

"(C). Violation of this subsection shall result in a fine of not more than $10,000 for each day that the unlawful license or other arrangement is in effect or said direct or indirect ownership interest is retained.

"(D). For purposes of this subsection, a 'national manufacturer of a soft drink syrup' shall be defined as a person (1) who produces or authorizes the production of one or more types of syrups or concentrated substances which after further processing are designed for consumption by the public as a non-alcoholic, carbonated beverage; and (2) whose gross sales and intra-company transfers of soft drink syrups or concentrated substances throughout the United States exceed $30,000,000 annually.

"(E). The effective date of paragraphs (A), (C), (D), and (E) of this subsection (3) shall be January 1, 1979. The effective date of paragraphs (B) and (F) shall be the date of enactment.

"(F). This subsecton may be cited as the 'Soft Drink Anti-Monopoly Act'."

EXHIBIT 1

CAPTIVE BOTTLING PLANTS

The following statistics appeared in the record before the Federal Trade Commission in Docket No. 8855, one of the most complete compendiums of information regarding the soft drink industry. An initial decision by Administrative Law Judge Joseph P. Dufresne was filed on October 3, 1975.

1. According to Judge Dufresne, the Coca-Cola Company in 1971 had eight bottling subsidiaries which operated 27 bottling plants, serving 14 percent of the United States population. The bottling subsidiaries of Coca-Cola include:

The Coca-Cola Company of New England (serving Boston, Braintree, Worcester, Lynn, Fall River, Massachusetts and Providence, Rhode Island).

The Coca-Cola Bottling Company of Baltimore.

The Coca-Cola Bottling Company of Ohio (serving Columbus, Toledo and Sandusky)

The Coca-Cola Bottling Company of Michigan (serving Grand Rapids, Flint, Lansing and Traverse City).

The Coca-Cola Bottling Company of Wisconsin (serving Milwaukee, Green Bay and Oshkosh).

The Coca-Cola Bottling Company of Illinois (serving Chicago and Gary, Indiana).

The Coca-Cola Bottling Company of California (serving San Francisco, Oakland and San Jose).

The Pacific Coca-Cola Bottling Company (serving Seattle-Tacoma, Washington and Portland, Oregon).

At the same time the Coca Cola Company operated canning facilities in Nashua, New Park, Georgia; Columbus, Ohio; near Chicago, Illinois; and San Leandro (San Francisco), California. In 1974, 42 percent of the canning volume of Coca-Cola products was produced by these subsidiaries.

2. In 1971, Pepsico, Inc., had 25 bottling and canning plants which served one-quarter of the United States population and included, among other areas, the following:

Boston, Massachusetts.
New London, Connecticut.
Dallas-Houston, Texas.
Los Angeles, California.
Las Vegas, Nevada.
Milwaukee, Wisconsin.
New York, New York.
Jersey City, New Jersey.
Orlando, Florida.

Philadelphia-Pittsburgh, Pennsylvania.
Detroit, Michigan.
Providence, Rhode Island.
Phoenix, Arizona.
Chattanooga, Tennessee.
Puerto Rico.
St. Louis, Missouri (since sold).

3. According to other pleadings in the docket, the Royal Crown Cola Company manufactures and sells soft drinks in the following markets:

Columbus, LaGrange and Thomaston, Georgia.
Birmingham, Montgomery, Alexander City and Opelika, Alabama.
Florida.
Hot Springs and Marianna, Arkansas.
Honolulu, Hawaii.
Chicago, Kankakee and Springfield, Illinois.
Richmond, Virginia.
Como, Mississippi.
St. Louis, Missouri.
Greeneville, North Carolina.
Memphis, Tennessee.

Royal Crown recently announced acquisition of new captive plants to serve San Antonio, Houston and Dallas, Texas.

In 1976 alone, Dr. Pepper Co., Inc., announced plans to acquire the Dr. Pepper Bottling Co. of Southern California (which serves an area of 11 million people) and Houston's Union Bottling Works, Inc., (serving 2 million people in southwest Texas) and to build plants in the Dallas-Fort Worth, Texas area.

EXHIBIT 2

STIPULATION No. 10

It is hereby stipulated and agreed by and among counsel for each and every respondent, and counsel for each and every undersigned intervenor that:

In the event that an order should be entered in this proceeding ordering the respondents to cease and desist from limiting, allocating, or restricting the territories in which independently-owned bottlers licensed by respondents may sell carbonated, flavored soft drinks, none of the respondents or undersigned intervenors objects to the inclusion in that order of (1) a requirement that The Coca-Cola Company divest itself of all the soft drink bottling and canning facilities now operated by any of its presently wholly-owned subsidiaries, or terminate the operation of said plants, and (2) an injunction against The Coca-Cola Company, its affiliates and subsidiaries, enjoining them against engaging, directly or indirectly, in the bottling, canning, or distributing of carbonated, flavored soft drinks in the United States for a period of ten years[1] after the date of divestiture of the last plant to be divested by The Coca-Cola Company or the date on which The Coca-Cola Company is no longer operating any of said plants *provided* that (1) the other seven manufacturers of nationally branded soft drink syrups against whom the Commission now has complaints pending and their subsidiaries and affiliates are required by the Federal Trade Commission, in Docket Nos. 8853, 8854, 8856, 8857, 8858, 8859 and 8877, to divest and do divest all their bottling and canning facilities and are similarly restricted in their bottling, canning and distributing operations and (2) adequate and reliable quantities of Coca-Cola in cans will be readily and economically available to all bottlers of Coca-Cola immediately after the divestiture by The Coca-Cola Company of its canning plants.

The Coca-Cola Company objects to any action by the Commission that would have the effect of preventing or hindering The Coca-Cola Company from engaging in the bottling, canning or distributing of carbonated, flavored soft drinks in the United States unless the other said seven manufacturers of nationally branded soft drink syrups are similarly restricted from engaging in those businesses.

---

[1] The undersigned intervenors reserve their right to urge the Commission that a longer injunction is necessary and appropriate.

By Mr. BARTLETT (for himself and Mr. BELLMON):

S. 1485. A bill to amend the Internal Revenue Code of 1954 to exempt certain organizations from private foundation status; to the Committee on Finance.

Mr. BARTLETT. Mr. President, I introduce a bill to amend the Internal Revenue Code of 1954 to exempt certain charitable organizations from classification as a private foundation. This bill is a counterpart of S. 3342, which I introduced in the 94th Congress.

Under existing law, a charitable organization is presumed to be a private foundation unless it is excepted from such classification under the definitions of "public charities" found in section 509 of the code. In the ordinary case, an organization supported by its endowment, and not public contributions, is a private foundation unless its purposes and activities cause it to be characterized as a church, hospital, school, medical research organization, or a support organization for any of the foregoing types of public charities. Churches, schools, and similar institutions are classified by law as public charities and not private foundations, even though they may receive no contributions from the public.

If an organization is carrying on proper charitable activities and is operated, supervised, or controlled by or in connection with a public charity, or a social welfare organization described in section 501(c)(4) of the code, or a labor or similar organization described in section 501(c)(5) of the code, or a business league or similar organization described in section 501(c)(6) of the code, it is also excluded from private foundation classification regardless of its sources of support. As I understand it, the exception from foundation classification for these support organizations is justified by the public nature of the parent or controlling organization and the closeness of the relationship between the parent organization and the charitable organization. The parent organizations in control have been presumed to be responsive to the public interest so the controlled or supporting organization enjoys the same presumption in law as to its inherent public nature.

Since the publication of Rev. Rul. 55–495, C.B. 1955–2, 259, the Internal Revenue Service has recognized that under appropriate circumstances, a fraternal society may be exempt from Federal income tax as a "social welfare" organization described in section 501(c)(4). This ruling was issued to allow exemption under section 501(c)(4) because the organization described therein was performing fraternal, charitable, and benevolent activities which, when carried on both for the members of the society and for the public, met the standards prescribed by appropriate income tax regulations. Ordinarily, fraternal societies are exempt from Federal income tax under section 501(c)(8) or section 501(c)(10) of the code where, among other things, they operate under the lodge system. In Rev. Rul. 55–495, the fraternal society did not operate under the lodge system and accordingly could not be exempt under section 501(c)(8). Granting exempt status under section 501(c)(4) for the fraternal benefit society in question assisted the organization, because it was performing sufficient social welfare activities to preserve its income tax exemption. It has been a recognized principle of tax law that, depending upon relevant facts and circumstances, a not-for-profit benevolent organization may be described in more than one of the subsections of section 501(c) and the overlapping exempt status provided several grounds for exemption if there was a question under any one particular section of 501(c). It has generally been thought that these provisions are not mutually exclusive unless there was a clear congressional intention to set forth certain conditions as to one classification of exempt organizations which would not be treated as applicable for another set of exempt organizations.

For example, the largest range of overlap can be found with respect to section 501(c)(3) organizations. The income tax regulations under section 501(c)(3) hold that if a section 501(c)(3) organization engages in substantial lobbying activities, it will remain exempt from Federal income tax as an organization described in section 501(c)(4); the penalty in that situation is not loss of income tax exemption, but loss of deductible status for contributions for Federal income, estate, and gift taxes.

In 1975, the Internal Revenue Service issued Rev. Rul. 75–199, C.B. 1975–1, 160, and revoked Rev. Rul. 55–495, but for reasons not relevant here. The revocation action, however, created numerous questions about the status of fraternal societies which did not provide the insurance benefits described in Rev. Rul. 75–199. Many of these section 501(c)(4) fraternal societies have controlled charitable organizations and the revocation of Rev. Rul. 55–495 leaves the status of these controlled charitable organizations under the private foundation rules in question.

I recognize that under certain circumstances a fraternal benefit society, because of its lack of a true community interest and social welfare activities, could not be considered as a social welfare organization. For example, if a small fraternal benefit society simply operated as a mutual insurance company, the insurance of which was available only to the limited membership, then it is highly doubtful, consistent with the reasoning of Rev. Rul. 75–199, that such organization could qualify for social welfare status. However, where it operated under the lodge system, it could qualify for exempt status under section 501(c)(8).

In my opinion, it is wrong to differentiate between charities controlled

by fraternal benefit societies, whether described in section 501(c)(8) or section 501(c)(4), and charities controlled by labor unions and trade associations. Neither type of controlled organizations should be subject to the private foundation rules contained in chapter 42 of the Internal Revenue Code. The reason is that the public's interest in protecting the administration and properties of such charities does not require that those taxes be applied because the organizations in control are themselves sufficiently public to protect and preserve the assets of the charity from any untoward intrusion. The abuses presented to the Congress in 1969 in the family foundation area have never been found in these types of publicly supervised and publicly controlled charities. Fraternal charities often provide direct services to the public such as orphanages, old age homes, or scholarship plans. The Congress found, in 1969, that the discretionary, grant-making foundation, controlled by a family, often was subject to undue influence by family members who saw the foundation as their own instrument for the perpetuation of family wealth. My bill would clearly establish, without regard to the published rulings of the Internal Revenue Service, the right of fraternal charities to be excluded from the foundation excise taxes. By so doing, our Federal tax laws would not discriminate against fraternal charities in the manner they seem to do today.

In the 93d Congress, the Treasury Department, in a letter signed by the Assistant Secretary for Tax Policy, supported enactment of basically the same bill we introduce today. Oral and written testimony was received during the general tax reform hearings of 1973 by the Committee on Ways and Means of the House of Representatives. Additional statements were taken in support of the bill before the Subcommittee on Foundations of the Committee on Finance. This bill would be of tremendous assistance to a number of masonic charities organized throughout the United States, including masonic charities located in Louisiana and Oklahoma. In particular, the Oklahoma masons, because of the Sand Springs Home, Sand Springs, Okla., support enactment of this provision, because the Sand Springs Home's charitable activities are impeded by the morass of the private foundation rules. The Sand Springs Home is an orphanage and widows' colony created in 1908, whose original endowment continues to provide the support for the conduct of its charities. The orphanage accepts appointees from the Oklahoma District Court and files accountings with the district court on the assets and/or income of the children in its care. Masons from the Grand Lodge of the Masons of Oklahoma, a fraternal society, exercise effective controls over the Sand Springs Home, because only masons who are selected by the masonic grand master may sit on the board of trustees of the Sand Springs Home. A majority of the Sand Springs Home Board of Trustees are former grand masters of the Oklahoma Masonic Lodge and all the trustees are members of the Oklahoma Grand Lodge.

I urge my colleagues in the Senate to give this bill favorable consideration in this Congress to clarify the status of all masonic and fraternal charities, including Sand Springs Home.

By Mr. BELLMON:

S. 1486. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for services furnished by physician extenders, nurse practitioners, and clinical staff of community mental health centers; to the Committee on Finance.

Mr. BELLMON. Mr. President, I am introducing a bill today which can have a great impact on the rising cost of medical services and at the same time expand health care to all Americans. This bill amends title XVIII of the Social Security Act to authorize the Social Security Administration to make payments under the supplementary medical insurance program for services furnished by physician's assistants, nurse practitioners, and clinical staff of community mental health centers.

In recent years, Congress has actively promoted the training and deployment of physician's assistants and nurse practitioners as a means of improving both the quality and accessibility of medical care. The Comprehensive Health Manpower Training Act of 1970 allowed for the development of 42 physician's assistant training programs whose graduates would assist physicians by providing routine medical and health care services in underserved areas. The Health Professions Educational Assistance Act of 1976 authorized continuation of Federal support for physician's assistant programs.

The physician's assistant concept has been successful in addressing three major issues confronting the Nation's health care system:

First. A reduction in cost.

Second. An improvement in accessibility.

Third. The delivery of high quality health care.

Sixty percent of physician's assistants are in communities of less than 50,000 population. For example, in Oklahoma 62 percent of program graduates are in communities of less than 25,000.

Significant numbers of physician's assistants are working in inner-city areas.

The cost of training a physician's assistant is less than 25 percent of the cost required to produce a physician. A physician's assistant can provide 2.6 years of equivalent services before a physician, who simultaneously began his medical education, can begin practice.

Authorities have shown very significant reductions in hospitalizations through the use of ambulatory care clinics staffed by physician's assistants.

The value of physician's assistants in bringing health care services to our citizens has been proven beyond doubt. Yet, under present law, these vital services do not qualify for reimbursement under the supplementary medical insurance program.

Mr. President, there are many areas in this country which will not support a licensed physician. This bill provides incentives for relocation of physician's assistants and nurse practitioners into health scarcity areas.

Many physicians will not employ these highly trained individuals, although there are many benefits to be gained, for the simple reason that their services are not reimbursable.

It is my strong conviction that physician's assistants and nurse practitioners are the answer to many of America's health problems. The current policy of nonreimbursement has had a negative impact on health care delivery in this Nation, especially in areas of greatest need.

Mr. President, I hope the provisions of this bill will be enacted into law, thereby providing a cost-effective, practical method of meeting many of our country's health needs.

By Mr. BELLMON (for himself and Mr. ANDERSON):

S. 1487. A bill to eliminate racketeering in the sale and distribution of cigarettes, and for other purposes; to the Committee on the Judiciary.

Mr. BELLMON. Mr. President, today I am introducing legislation for myself and the Senator from Minnesota (Mr. ANDERSON), which is intended to help eliminate racketeering in the sale and distribution of cigarettes. If enacted, this legislation would sharply expand the Federal role in the fight against cigarette bootlegging which has become a major source of income to organized crime. The annual profits realized by organized crime through cigarette bootlegging are depriving the States of much-needed revenue which would otherwise be collected through the various cigarette tax laws applicable to each State. Consequently, Mr. President, this legislation is twofold in nature; it will facilitate a crackdown on organized crime in its efforts at cigarette bootlegging thereby allowing the States to recover their rightful revenue from the sale of cigarettes.

Mr. President, there is such widespread traffic of cigarettes moving through interstate commerce that the States are not adequately able to stop the movement or sale of such cigarettes in violation of their tax laws through the exercise of their police power. Figures released by the Multi-State Tax Commission in a press release of May 5, 1977, indicate that States are losing in the neighborhood of $330 million per year through the racketeering of cigarettes. The interstate nature of cigarette smuggling places individual States at too great a disadvantage to handle these problems effectively. Further, Mr. President, there is a very clear relationship between the flow of cigarettes into interstate commerce to be sold in violation of State laws and the rise of racketeering in the United States. Organized crime has realized tremendous annual profits from the sale of such cigarettes in violation of State laws and there is considerable evidence that these profits have been channeled into other illicit and illegal activities. This week's edition of Time maga-

zine, May 16, 1977, estimates that organized crime receives net revenues of $800 million annually from cigarette bootlegging. This is a huge sum of money Mr. President, which is being generated contrary to the tax laws of the States. If there is to be an effective law enforcement effort against cigarette smuggling, there must be an expanded Federal role in the fight against cigarette bootlegging, particularly in view of the interstate nature of the crime. This legislation is addressed to that very need. I am convinced that if enacted, this bill will provide a timely solution to a serious organized crime problem as well as providing relief to many cities and States.

As contained in this legislation, Mr. President, the term "contraband cigarettes" means a quantity in excess of 20,000 cigarettes which bear no evidence of the payment of applicable State cigarette taxes in the State where they are found. Accordingly this legislation would make it unlawful to ship, transport, receive, or possess contraband cigarettes. In addition, it would be unlawful to knowingly make any false statement or representation with respect to the information required by this legislation to be kept in the records of a cigarette dealer. It is this section of the act, recordkeeping and reporting, that will prove to be the most beneficial tool for law enforcement officials in tracing contraband cigarettes.

Pursuant to this legislation, the Secretary of the Treasury is authorized to promulgate regulations which will require each dealer to maintain records of shipment, receipt, sale, or other disposition of cigarettes. This legislation would further require that dealers make records available for inspection at all reasonable time, as well as submitting to the Secretary reports and information with respect to such records and the contents thereof as shall be prescribed. Additionally, Mr. President, the Secretary would be authorized to enter during business hours the premises—including places of storage—of any dealer in cigarettes for the purpose of inspecting or examining any, first, records or documents required to be kept by the dealer, and second, any cigarettes kept or stored by the dealer at such premises.

Mr. President, if the above stated provisions of this legislation are not complied with, a person would be sentenced to pay a fine of not more than $10,000, or to be imprisoned for not more than 2 years, or both. This penalty would serve as a deterrent to many who would consider dealing in contraband cigarettes.

Finally, Mr. President, I should point out that this legislation is not intended to affect the concurrent jurisdiction of a State to enact and enforce State cigarette tax laws, to provide for the confiscation of cigarettes and other property seized in violation of such laws, or to provide penalties for the violation of such laws. It is very clearly stated in the legislation that nothing in this bill is to be construed to limit the powers of the State enacting such laws. This legislation is simply intended to assist the States in the elimination of cigarette smuggling.

Mr. President, the cover story of this week's Time magazine proclaims, "The Mafia, Big, Bad and Booming." One area of commerce in which organized crime is booming is that of cigarette bootlegging. Congress must act to eliminate this illegal activity. The legislation I am introducing today would provide a means for preventing cigarette tax evasion through illegal interstate transportation of cigarettes as well as combating organized crime elements engaged in such activities.

In conclusion, Mr. President, I would like to point out that this legislation is supported by the National Association of Tax Administrators, the National Tobacco Tax Association, the Advisory Commission on Intergovernmental Relations, and officials of the National Association of Tobacco Distributors. I am hopeful this body will be equally supportive of this legislation so that we might begin the task of combating cigarette bootlegging.

Mr. President, I ask unanimous consent that the bill and a copy of the article from Time magazine be printed in the RECORD.

There being no objection, the bill and article were ordered to be printed in the RECORD, as follows:

S. 1487

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

STATEMENT OF FINDINGS AND PURPOSE

SECTION 1. (a) The Congress finds that—

(1) there is a widespread traffic in cigarettes moving in or otherwise affecting interstate or foreign commerce, and that the States are not adequately able to stop the movement into and sale of such cigarettes in violation of their tax laws through the exercise of their police power;

(2) there is a causal relationship between the flow of cigarettes into interstate commerce to be sold in violation of State laws and the rise of racketeering in the United States;

(3) organized crime has realized hundreds of millions of dollars annually in profits from the sale of such cigarettes in violation of State laws, and has channeled such profits into other illicit activities;

(4) a sharply expanded Federal role in the fight against cigarette smuggling is essential if there is to be an effective law enforcement effort against cigarette smuggling, since the interstate nature of the crime places individual States at too great a disadvantage to handle these problems effectively;

(5) certain records maintained by dealers in cigarettes will have a high degree of usefulness in criminal, tax, and regulatory investigations.

(b) It is the purpose of this Act to provide a timely solution to a serious organized crime problem and to help provide relief to many cities and States.

SEC. 2. Title 18, United States Code, is amended by inserting immediately after chapter 59 thereof the following new chapter:

Chapter 60.—CIGARETTE TRAFFIC

"Sec.
"1285. Definitions.
"1286. Unlawful acts.
"1287. Recordkeeping and Reporting.
"1288. Penalties.
"1289. Effect on State law.
"1290. Enforcement and Regulations.

"§ 1285. Definitions

"As used in this chapter—

"(a) the term 'cigarette' means—

"(1) any roll of tobacco wrapped in paper or in any substance not containing tobacco, and

"(2) any roll of tobacco wrapped in any substance containing tobacco which, because of its appearance, the type of tobacco used in the filler, or its packaging and labeling, is likely to be offered to, or purchased by, consumers as a cigarette described in paragraph (1).

"(b) the term 'contraband cigarettes' means a quantity in excess of twenty thousand cigarettes, bearing no evidence of the payment of applicable State cigarette taxes in the State where they are found, and which are in the possession of any person other than

(1) a person holding a permit issued pursuant to chapter 52 of title 26, United States Code, as a manufacturer of tobacco products or as an export warehouse proprietor, or a person operating a customs bonded warehouse pursuant to 19 U.S.C. §§ 1311 or 1555, or an agent of such person; (2) a common or contract carrier: *Provided, however,* That the cigarettes are designated as such on the bill of lading or freight bill; (3) a person licensed or otherwise authorized by the State where the cigarettes are found to deal in cigarettes and to account for and pay applicable cigarette taxes imposed by such State; or (4) an officer, employee, or other agent of the United States, or its departments and wholly owned instrumentalities, or of any State or any department, agency, or political subdivision thereof, having possession of cigarettes in connection with the performance of his official duties.

"(C) the term 'common or contract carrier' means a carrier holding a certificate of convenience or necessity or equivalent operating authority from a regulatory agency of the United States or of any State or the District of Columbia.

"(D) the term 'State' means any State, or the District of Columbia, which requires a stamp, impression, or other indication to be placed on packages or other containers of cigarettes to evidence payment of cigarette taxes.

"(E) the term 'dealer' means any person who sells or distributes in any manner any quantity of cigarettes in excess of 20,000 in a single transaction.

"(F) the term 'Secretary' means the Secretary of the Treasury or his delegate.

"(G) the term 'person' means any individual, corporation, company, association, firm, partnership, society, or joint stock company.

"§ 1286. Unlawful acts.

"(A) It shall be unlawful to ship, transport, receive, or possess contraband cigarettes.

"(B) It shall be unlawful to knowingly make any false statement or representation with respect to the information required by this chapter to be kept in the records of a dealer.

"§ 1287. Recordkeeping and Reporting.

"Each dealer shall maintain such records of shipment, receipt, sale, or other disposition of cigarettes at such place, for such period, and in such form as the Secretary may by regulations prescribe. Dealers shall make such records available for inspection at all reasonable times, and shall submit to the Secretary such reports and information with respect to such records and the contents thereof as he shall by regulations prescribe. The Secretary may enter during business hours the premises (including places of storage) of any dealer in cigarettes for the purpose of inspecting or examinng (1) any records or documents required to be kept by the dealer, and (2) any cigarettes kept or stored by the dealer at such premises.

"§ 1288. Penalties.

"(a) Whoever violates any provision of this chapter or regulations promulgated thereunder shall be sentenced to pay a fine of not more than $10,000, or to be imprisoned for not more than two years, or both.

"(b) Any contraband cigarettes involved

in any violation of the provisions of this chapter shall be subject to seizure and forfeiture, and all provisions of the Internal Revenue Code of 1954 relating to the seizure, forfeiture, and disposition of firearms, as defined in section 5845(a) of that Code, shall, so far as applicable, extend to seizures and forfeitures under the provisions of this chapter.

"§ 1289. Effect on State law.

"Nothing in this chapter shall be construed to affect the concurrent jurisdiction of a State to enact and enforce State cigarette tax laws, to provide for the confiscation of cigarettes and other property seized in violation of such laws, and to provide penalties for the violation of such laws.

"§ 1290. Enforcement and regulations.

"The Secretary shall enforce the provisions of this chapter and may prescribe such rules and regulations as he deems reasonable necessary to carry out the provisions of this chapter."

SEC. 3. (a) Except as provided in subsection (b), the provisions of chapter 60 of title 18, United States Code, shall take effect on the first day of the first month which begins more than 120 days after enactment.

(b) The following sections of chapter 60 title 18, United States Code, shall take effect on the date of enactment of this Act: Sections 1285, 1286(a), 1288, 1289, and 1290.

SEC. 4. The title analysis of title 18, United States Code, is amended by inserting immediately below the item relating to chapter 59 the following:

"60. Cigarette Traffic..... 1285."

SEC. 5. (a) Section 1(b) of the Act of August 9, 1939, c. 618, 53 Stat. 1291, as amended by (1) striking out "or" at the end of paragraph 2, (2) striking out the period at the end of paragraph 3 and inserting in lieu thereof "; or", and (3) adding after paragraph 3 the following new paragraph 4 to read as follows:

"(4) Any cigarettes, with respect to which there has been committed any violation of any provision of chapter 60 of title 18 or any regulation issued pursuant thereto."

(b) Section 7 of the Act of August 9, 1939, c. 618, 53 Stat. 1291, as amended (49 U.S.C. § 787), is amended by (1) striking out "and" at the end of subsection (e), (2) striking out the period at the end of subsection (f) and inserting in lieu thereof "; and, (3) adding after subsection (f) the following new subsection (g) to read as follows:

"(g) The term 'cigarettes' means 'contraband cigarettes' as now or hereafter defined in section 1285(b) of title 18."

THE MAFIA BIG, BAD, AND BOOMING

New Orleans Mafia Boss Carlos Marcello has doubled his force of bodyguards and shipped his family to a safe haven out of state. New York Don Aniello Dellacroce confuses his enemies by sometimes having a look-alike impersonate him in public. James ("the Weasel") Fratianno, a high-level mobster in San Francisco, rarely goes anywhere without two hulking companions. Other Mafia chieftains start their cars by remote control just in case bombs are wired to the ignitions.

Fear has always been a palpable part of life at the top in the Mafia, an almost feudal society in which men rise by murder and treachery and can never feel secure. But these are days of even greater tension than usual. The crime organization is going through one of its most crucial internal struggles since Prohibition, when the fight for control led to the bloody Castellammarese War (named for the Sicilian town of Castellammare del Golfo, birthplace of many of the leading thugs). Only when the smoke cleared from that battle and a nationwide commission of Mafia dons was set up to coordinate criminal operations did the closed brotherhood, which was imported by Sicilian immigrants in the 1860s, begin dominating the American underworld.

The present turmoil is centered in New York City, where ex-Mafia Executioner Dellacroce is struggling with Drug King Carmine Galante over leadership of the city's five crime clans. Mafiosi from coast to coast will look on the winner as the don with the most "respect," the *capo di tutti capi* (translation: boss of bosses); in a word, the Godfather. The loser may wind up dead.

The unrest within the Mafia—and the effect this has on all levels of organized crime—reaches far beyond the sidewalks and back alleys of New York. In Chicago, young toughs who are fighting over lucrative jobs in the organization have produced the worst intramural bloodbath since Al Capone seized control in the 1920s. The toll since December 1973: 21 dead. Observes Peter Vaira, chief of the Justice Department's anti-Mafia strike force in the city: "The younger faction wants more power and a bigger piece of the action. There will be more killings." At the same time, mobsters from New York and Chicago are invading California, shouldering aside the state's aging dons and grabbing a large share of the West's lucrative rackets.

Two developments have caused the underworld upheaval:

(1) The death last fall of New York Don Carlos Gambino, who as *capo di tutti capi* had brought a measure of peace to the nation's Mafia families through guile, diplomacy and strong-arm discipline. His elborate funeral marked the end of an era, for he was the last of the graybeard Godfathers who dominated the Mafia in the 1950s and 1960s. The others are either in their graves or living in expensive Sunbelt retirement homes in Florida, Arizona and Palm Springs, Calif.

(2) A revolt by vicious young mobsters outside of New York against many of the remaining Mob elders, who had been spooked by repeated federal investigations from the 1950s until the early 1970s. For fear of letting in undercover agents, the old dons "closed the books" in 1965—that is, they stopped admitting new members. To keep a low public profile, they put the brakes on their men. To evade police wiretaps, they operated furtively from phone booths. Things got so bad that a boss would rather leave his bodyguards at home than go out without a pocketful of change for the phone. The dons also began exchanging messages by courier, which sometimes slowed decision making so much that routine matters—like minor jurisdictional disputes between families—could take a month to settle. Hunkering down with hoards amounting to millions of dollars, the old dons could afford to advise Young Turks to wait for their share of the wealth. "Be patient. Your time will come," the late Chicago Mob boss Sam ("Momo") Giancana used to tell Anthony Spilotro, an ambitious associate.

For the Mafia, and indeed for all organized crime, that time may well be right now. Business has seldom been better. As during Prohibition, big-time criminals profit by providing goods and services that are either downright illicit or, where legal, are handled by people who are highly vulnerable to underworld pressures. The Mafia now dominates the manufacture and distribution of pornographic books, magazines and movies, a business that has doubled in a decade to $2.2 billion a year. It has become heavily involved in bootleg cigarettes and coffee. Most of the Mob's mainstay businesses are doing better than ever: gambling, loan-sharking, narcotics, hijacking, extortion and labor racketeering. No one outside the tight-knit Mafia organization knows the full extent of its operations, but estimates culled from a variety of law enforcement agencies suggest that the Mafia takes in at least $48 billion in annual gross revenues and nets an incredible $25 billion or so in untaxed profits. By contrast, Exxon, the largest industrial corporation in the U.S., reported sales of $51.6 billion and net profits of $2.6 billion in 1976.

The criminals plow lots of their profits back into their rackets or, even more ominously, into a wide range of legitimate businesses that affect Americans' lives from cradle (diaper services) to grave (funeral parlors). Increasing amounts of Mob money are pouring into real estate, construction companies, liquor stores, meat-packing companies, trucking firms, hotels, bars, restaurants, laundries and vending machines. Indeed, no facet of U.S. commercial life is safe from Mafia infiltration in the form of investment offers—often handled through lawyers or front men, of course. Justice Department officials believe that the Mafia may own as many as 10,000 legitimate firms, which generate annual profits estimated at $12 billion.

In addition to the sums that Americans pay directly for the mobsters' wares, there are substantial hidden charges. Chicago authorities estimate that because of Mob operations, the average citizen pays an additional 2¢ on the dollar for also everything he purchases on the legal market—the passed-along business costs of extra theft insurance, additional security forces and outright extortion.

Organized crime flourishes in part because of a peculiar moral obtuseness—or anger at taxhappy authorities—on the part of many Americans. Extraordinary numbers of otherwise honest people see little harm in patronizing discount cigarette vendors and neighborhood bookmakers, in buying "hot" merchandise at bargain prices, even in using the expensive and illegal services of loan sharks. The cut-rate cigarettes are a way of beating the state out of its own very substantial tax cut; the bookie is merely a private entrepreneur trying to survive in competition with state-run betting operations; the loan shark's 20%-a-week bite seems almost reasonable to a businessman who must raise cash fast but cannot qualify for a loan at a bank. Abetting this ethical blind spot are the romanticized accounts of the Mafia in novels and movies. Says Stephen Schiller, executive director of the Chicago crime commission: "The public doesn't realize how bad these people are. The Mob makes for good talk. We have made these bums folk heroes." Adds Ralph Salerno, formerly the New York City police department's leading Mafia expert: "America has come over to them. We've accepted the Godfather syndrome." In addition, dramatic changes in American moral attitudes—the new sexual permissiveness, relaxed concern over marijuana and cocaine, and the drive to legalize gambling—create an ever-increasing appetite for organized crime's services. On almost any given day, newspaper headlines attest graphically to the size and variety of that appetite. Last week, for example, two organized crime figures and seven associates were indicted in Detroit on charges of luring rich businessmen to sex and gambling parties and then extorting large sums of money from them—in one case, more than $200,000. In Manhattan that same night, police raided a luxurious casino near Rockefeller Center, equipped with crystal chandeliers, thick red carpets and six blackjack tables that were being used by more than 80 well-heeled customers.

Organized criminals react like any big businessmen: when they see customer potential they go after it. The potential is reflected to some extent in the statistics for legal gambling. In the last decade, gross wagering revenues have tripled in Nevada's casinos, to nearly $1.2 billion. Americans in 44 states last year legally gambled $18.5 billion—in lotteries and on horse and dog races; ten years earlier, when only 32 states allowed gambling, the total was about $6 billion.

While law enforcement officials know the identity of the major mobsters and the na-

ture of their crimes, turning up enough hard evidence to put them in prison is often impossible. The Mafia's reputation for vengeance frightens may victims, witnesses and potential informers into not cooperating with authorities. To make matters even easier for the Mob, the growing public concern over street violence has prompted city and state police to concentrate less of their limited resources on organized crime. Federal strike forces, made up of investigators from several Government law enforcement agencies, were established as front-line squads in the fight against big-time criminals in 18 cities. But after ten years of efforts and the expenditure of $800 million, a General Accounting Office study concluded in March that "organized crime is still flourishing." Most of the strike forces are now being disbanded. Because of abuses, the Government has also lost two of its best weapons: virtually unrestrained bugging and wiretapping, which once provided 80% of the information about Mob activities, and easy access to hoodlums' tax returns.

For all of its impact on American life, the Mafia is a remarkably small organization As reckoned by the FBI, the Mafia numbers about 5,000 "made men," or members. All are of Italian ancestry, most with roots in Sicily. Of course, the nationwide number of mobsters involved in organized crime is far higher and knows no ethnic limits. Rednecks dominate the Georgia underworld. Blacks and Hispanics run most of the rackets in their neighborhoods. Jews, Greeks, Chinese and Irish Americans all help swell the totals.

Then why does the Mafia attract so much attention? Many Italian Americans complain that the notoriety is excessive, and damaging to millions of law-abiding citizens; to assuage their sensibilities, the Justice Department has stopped referring to the Mafia by name. No matter what the organization is called, it dominates much of American crime. Many nonmember gangsters are allied to it, usually kicking back a share of their take to the dons; some criminologists estimate that at least 50,000 hoods can be considered confederates of the Mafia. The Mafia is by far the best organized criminal group in the U.S. and the only one with a national structure: 26 families—five of them in New York City*—of from 20 to 1,000 "button men," or soldiers.

The familiar Mafia lore that has become commonplace knowledge through movies and fiction is essentially true. All the made men are bound by a loyalty oath of blood and fire. They are divided into *regimes,* or squads, under the command of *caporegimes,* or lieutenants, who in turn take their orders from the clan's dons. Years ago, the don was both a prince of crime and social arbiter among Italians in his territory. But the breakup of the old Italian neighborhoods has stripped away his social functions—and any romanticism that might have surrounded him. Today he is no more than a hoodlum who has reached the top by outwitting, frightening, maiming or killing his rivals. Says Schiller: "We are dealing here with brutality and inhumanity beyond belief."

The Mafia is overseen nationally—but loosely—by the Commission, a dozen or so dons who usually, but not always, defer to the dominant boss in New York because he controls the most men and rackets. He may not get his hand kissed as often as Marlon Brando and Al Pacino did in the *Godfather* films, but he is first among equals. Since Gambino's death, two New York dons have been competing for his crown as *capo di tutti capi.* They are:

Chunky, balding Carmine Galante, 67, who has spent nearly half his life in prison for bootlegging, gambling, narcotics trafficking, extortion, assault and homicide. Known to associates as "Lillo" and "the Cigar," he has an unrivaled reputation for ruthlessness. During his latest term in prison, 15 years at Lewisburg federal penitentiary, even the guards feared him. Says a Mafia defector: "If you don't jump when he says to, there's no second chance." Comparing Galante with Gambino, New York Mafia Expert Salerno says: "If someone got out of line, Gambino would say, 'Lean on him a little,' and then six months later, 'Lean on him again.' Galante would say, 'Hit him.' "

After being paroled in 1974, Galante took over control of the Mafia family once run by Joseph ("Joe Bananas") Bonanno, who retired to Tucson, Ariz., in 1964. At first, Interim Boss Philip Rastelli was unwilling to step aside. Gunmen killed his stepson, James Fernandes, on a Brooklyn street. Rastelli got the message. Since becoming boss, Galante has pushed his underlings deeper into drug importing and distribution, long one of the family's most profitable enterprises. He has begun re-establishing the family's Southeast Asian connection, broken by federal narcotics agents six years ago. One sign of his success is the white Asian heroin that has begun reaching New York to compete with the more common Mexican brown.

Graying, grandfatherly Aniello Dellacroce (translation: "little lamb of the Cross"), who has spent only six of his 62 years in prison for attempted burglary, assault and tax evasion. He was long Gambino's underboss and chief peacemaker. As befits an ex-assassin for Albert Anastasia's Murder, Inc., Dellacroce settled disputes between rival clans by a direct method: having troublemakers eradicated. He took over the Gambino family soon after his release from prison last December after serving 4½ years for tax evasion and contempt of court.

Fond of disguises, Dellacroce sometimes dons a priest's cassock and goes about as Father O'Neill (a play on his often mispronounced first name). Father O'Neill will commiserate with policemen on the beat about their hard lot. Dellacroce enjoys tormenting the authorities. Once he arranged to have the bodies of two murder victims dumped in the parking lot of a Manhattan police station. When he and his bodyguards discovered two policemen tapping his phone, they forced the wiretappers, at gunpoint, to chew and swallow some of their tapes. When Dellacroce learned that his line was again being tapped, he ordered his men to make false comments on the phone about "the mayor's end" and "the greedy chief." The eavesdroppers soon disconnected the tap.

Dellacroce makes his money from loansharking and gambling. He is now moving his aides and muscle into Atlantic City, where legal casino gambling is expected to be the salvation of the moribund resort and possibly the source of a bonanza for the Mob. By legalizing casino gambling in Atlantic City, New Jersey has given New York and Pennsylvania a strong incentive to follow suit—a situation the Mob relishes.

In Atlantic City, Gambino family members are scouting hotels that are up for sale and have invested in some bars and pizza parlors. U.S. Attorney Jonathan Goldstein expects increased Mob involvement in Atlantic City service industries: linen supply, liquor distribution and the like. The Gambino men are pushing aside local gangsters who work for Angelo Bruno, Philadelphia's ailing and unimposing Mafia don. Had Bruno been stronger, the invasion might not have occurred. To mollify Bruno, the New Yorkers are willing to toss his people some Atlantic City scraps—services like garbage hauling, vending machines and pest control.

When the Godfather contest was joined after Gambino's death, Galante and Dellacroce adopted sharply contrasting tactics. Galante roams the country openly, accompanied by bodyguards and sometimes by his attractive daughter Nina, 21. A few weeks ago, two federal agents lost him at New York's Kennedy Airport. As the agents frantically scanned the crowd, one of them nudged his companion and whispered: "Wow! Get a load of that chick!" The other agent recognized Nina, and they were soon on Galante's trail again. Agents have followed Galante to Disneyland and to Hawaii. He stays so visible that, in a flurry of stories two months ago, New York newspapers concluded that he had already become the new *capo di tutti capi* (Time, March 7).

It was a hasty anointment, one that failed to reckon with the cunning of Dellacroce. In contrast to Galante, he dropped out of sight. But he recruited one or more look-alike stand-ins to appear publicly in his place. He will have a double either check in at a New York hospital, to create the impression that he is sick, or relax outside the Dellacroce vacation home on Key Largo, thus setting off rumors that he has retired. The real Dellacroce, meanwhile, is running things from his discreet haunts in Lower Manhattan and Brooklyn.

Time has learned that the Galante-Dellacroce conflict is ranging from Manhattan to Canada. The first casualties were two Galante spies discovered among Dellacroce's followers. The Little Lamb acted quickly to get rid of the black sheep; their bodies have not been found. Next, Dellacroce sent gunmen to Harlem to shoot a number of heroin dealers—then spread the word that Galante had ordered the hits. Dellacroce's goal was to disrupt Galante's connections with black Narcotics King Leroy ("Nicky") Barnes. Federal agents arrested Barnes on March 16, confiscating $1 million worth of heroin (he was released on $300,000 bail, which he raised by pledging $1.25 million worth of property that he owns in Pontiac, Mich.)

The evening that Barnes was arrested, Dellacroce Confidant Guido ("Dolls") DeCurtis was shot to death on Manhattan's East 28th Street in full view of passersby and a policeman. The officer arrested a suspect, Canadian Joseph Djaija, 26. Some law enforcement officials believe DeCurtis was killed because of a private quarrel over gambling rights in the Astoria section of Queens. But Dellacroce was suspicious and sent henchmen to Montreal, an important link in Galante's narcotics network. The avengers pushed around several Galante associates but found no proof that he had ordered DeCurtis' murder.

Besides gunfire, Dellacroce has loosed a propaganda fusillade against his rival. He complains to associates that the splashy publicity given to Galante's trips and narcotics deals draws too much attention to the Mafia and thus is bad for business. Eventually, he is expected to argue before the Commission that Galante is a troublemaker who cannot do business quietly and is therefore unqualified for Mafia leadership.

Galante may have an edge in the quarrel, partly because of his forceful personality. Says New York Police Lieutenant Remo Franceschini: "He has people supporting him right across the U.S. Dellacroce is a little provincial. His base has always been Little Italy, and I don't think he has the will or the intellect to control a large group of men."

Some mobsters have tried to win Galante's favor by turning over their businesses to him at distress-sale prices. In one deal, he scooped up the betting and loan-shark rackets in Pennsylvania Station, which net at least $500,000 a year. Other mobsters, including some nominally under Dellacroce, sold Ga-

*New York's families are still named for the men who ran them in the 1950s and '60s, though all are either dead or retired. The clans and their current leaders: Bonanno family (headed by Carmine Galante), Colombo family (Thomas DiBella), Gambino family (Aniello Dellacroce), Genovese family (Frank Tieri) and Lucchese family (Anthony Corallo).

lante a number of Manhattan sweatshops in which black and Hispanic women, many working at less than $3 an hour (the union scale is $4.81), stitch garments that are sold in legitimate clothing stores across the country. Authorities estimate the take from one of Galante's new shops at $100,000 a year.

Should Galante and Dellacroce destroy each other, waiting in the wings is Anthony ("Tony Ducks") Corallo, 64, who earned his nickname by beating almost every rap against him, including grand larceny, possession of narcotics and bribery of public officials. Imprisoned for extortion on one of the few occasions when he failed to duck the prosecutors, Corallo lost control of his family to one Andimo Pappadio. He regained it last September by arranging—with Galante's help—for Pappadio's murder.

A remote candidate to become New York's crime czar is Galante's former boss, Joseph Bonanno. His age (71) works against his ambitions. So did the murder in February of Frank ("Bomp") Bompensiero, who was Bonano's chief ally on the West Coast—and an FBI informer. Bomp was one of the 20 people who have been executed over the past two years by professional hit men armed with silencer-equipped .22-cal. pistols (TIME, April 18).

A different sort of generational struggle is going on in Chicago, where the 250-member Mob, known as the Outfit, is still nominally in the hands of Anthony ("Big Tuna") Accardo, 71. He spends most of his time at his $126,000 condominium in Palm Springs, leaving day-to-day operations in the hands of Underboss Joseph Aiuppa, 69, nicknamed "Doves" because he once slaughtered hundreds of the birds while hunting in Kansas. But Aiuppa's grip is shaky—some authorities say he has no executive ability—and eager young thugs are on the warpath against the old guard. So far, they have not gone after Accardo or Aiuppa but have settled for promotion by gunfire to the Outfit's middle and upper echelons.

A few of the war's 21 victims over the past 3½ years have been police informants and potential prosecution witnesses. But most have been mobsters. Among those killed were Sam Giancana, who abdicated as the Outfit's leader in 1965, and Richard Cain, an ex-cop who served as a top aide to Giancana. The latest to die was top Triggerman Charles (Chuck) Nicoleti, 62, an Accardo protégé. He caught three .38-cal. slugs in the head on March 29 while sitting in his blue Oldsmobile sedan outside the Golden Horns Restaurant in suburban Northlake. For good measure, the assassins fire-bombed his car.

Among the Chicago Mob's rising stars is James ("Turk") Torello, 46, a native of Cicero, Al Capone's old base. According to the FBI, Torello did so well as an executioner for Giancana that he was given several West Side bookmaking rings in the early 1960s. Moving swiftly into other neighborhoods, Torello now supervises all of the Outfit's gambling operations. He lives modestly in Cicero with his wife "Doodles"

Torello revels in the sadistic side of his work. An FBI wiretap once recorded him plotting in Miami to murder a Chicago union boss by taking him out to sea in a powerboat, slitting his throat, chopping up his body and feeding the pieces to the sharks. The FBI intervened. Another FBI wiretap overheard Torello telling how he had hung William Jackson, a 350-lb. loan shark, on a meat hook and tortured him with an electric prod. "He was on that thing for three days before he croaked," Torello said excitedly. "He was floppin' around on that hook. We tossed water on him to give the prod a better charge, and he's screamin' . . ."

Despite the bloodletting in Chicago, the Outfit has been rapidly expanding its Western operations. Although free-lance Mafiosi and other big-time criminals have operated in California since the heyday of Bugsy Siegel in the 1940s, the only important criminal clan was Jack Dragna's family in Los Angeles. When Dragna's nephew Louis turned down a chance to become boss in 1974—he was promptly dubbed "the Reluctant Prince"—the Outfit and New York's Gambino clan made an extraordinary agreement to exploit the West together. Frank Bompensiero, *consigliere* (chief adviser) of the fading Dragna family, outlined the arrangement to the FBI before he was executed.

The Chicago and New York gangsters gave the task of enforcing the West Coast realignment to an intimidating trio of very mean thugs: Chicagoan Tony Spilotro, Brooklyn-born Mike Rizzitello and San Francisco's James Fratianno. "Animals," an FBI agent calls them. "Those guys are dangerous enough when the Mob keeps them in check. But when their keepers unsnap the leash, a lot of people are going to get hurt."

Fratianno, 62, is believed by police to have made up to 16 hits as the Mob's West Coast executioner. When the Gambino and Chicago mobsters decided in 1975 to move into the West, they tapped Fratianno as their point man. With their blessing, he recruited Rizzitello, now 50, a handsome stickup artist who migrated to Los Angeles in the early 1960s because he wanted an easy racket and the respect that he had never got from the hoodlums back home. Both were a long time coming, but now he is rising quickly in influence and power. Says a West Coast lawman: "Rizzitello sounds like he is the boss and running things."

Rizzitello helped the Mafia take over 80% of the $100 million-a-year Los Angeles pornography business. His approach is not sophisticated. In January, for example, he extracted $20,000 from a porno film company simply by proclaiming: "Los Angeles is our town. You can't operate here unless we're in." He has ranged north to San Francisco, working with Teamsters on shakedowns of employers. But Rizzitello may soon be taken off the streets for up to three years. He is scheduled to be sentenced May 23 for a penny-ante crime—fraudulently collecting $21,780 on a false insurance claim that his business-supply firm had been burglarized.

Spilotro, 38, learned his trade at the knee of Felix Alderisio, lord high executioner of the Chicago Mob in the 1950s and 1960s. Spilotro has been tried for killing an informer with an ice pick (he was acquitted) and suspected by the FBI of eliminating Mafia foes with bombs and bullets. He went to Las Vegas about five years ago and by 1975 was overseeing the Outfit's operations in the city. Stocky and short (5 ft. 4 in.), he came on as a swaggering, street-wise punk. Introduced to a federal agent one day at the Las Vegas airport, Spilotro looked him coldly in the eye, stuck out his forefinger and moved his thumb up and down like the hammer of a gun.

Nevada authorities are investigating Spilotro for his alleged involvement in skimming* millions from the slot machines of the Stardust casino. FBI agents meanwhile are investigating Detroit gansters who, working through fronts, are said to own 24% of the Aladdin Casino and virtually to control its operation. A court affidavit disclosing the probe was the first official word of Mob holdings in a Las Vegas casino since Nevada authorities supposedly ran them out of town about ten years ago.

Spilotro, who operates from his modest, $55,000 stucco house, also watches over the Chicago Mob's investments in Las Vegas casinos and controls loansharking, narcotics and prostitution along the Strip. Says a Justice Department official: "Spilotro has become the most powerful man in Las Vegas, next to Moe Dalitz [a legendary mobster on the Strip]. Spilotro takes a cut of all illegal activities of any consequence." He spends much of his time traveling by private jet on Mob business in California, where he has helped Fratianno and Rizzitello guide new Mob investments in narcotics trafficking, bookmaking, loan-sharking and extortion from legitimate businessmen as well as from illegal Mexican immigrants who work in garment-manufacturing firms owned by the mobsters. The Eastern and Midwestern hoodlums have run into stiff competition from entrenched indigenous gangs in at least one field—narcotics. This is still largely in the hands of the so-called Mexican Mafia, the *Nuestra Familia*, the Black Guerrilla Army and other independents.

Despite the dangers of life in the Mafia, Mob recruiters find no shortage of eager applicants. To replenish the ranks, depleted during the years of intense federal pressure, Mafia clans across the country reopened their membership books in 1975. Since then scores of new soldiers have signed up. Among them were a number of "greenies," immigrant gunmen from Sicily.

What motivates someone to enlist? A Mafia defector summed it up for Time: "Money, power, recognition and respect." Most grew up in slums, where the neighborhood's most visibly successful men were connected with the Mob. Says Chicago Police Commander William Hanhardt: "The man with the big money and a fancy car is a man of prestige. It's something to aim for." There are practical benefits to membership: protection from competition, easy access to skilled lawyers and, if a Mafioso is jailed, financial support for his family.

A new soldier starts at the bottom, breaking in as a senior thug's driver, bodyguard or shylock debt collector. He earns about $20,000 a year, in the form of cash from his boss, a salary from a phantom job in a Mob-infiltrated business or a share in the proceeds of a racket. If his superior approves, the new man can start some minor enterprise of his own—loan-sharking, bookmaking, labor racketeering. If he demonstrates a taste for violence, business acumen and organizational skill, he will rise rapidly.

For some hoodlums, the ultimate goal is to become a boss and enjoy the feudal respect and tribute paid all dons by their soldiers. Says Manhattan District Attorney Robert Morgenthau: "Power is as important to these people as money."

An ironic fact of life in the Mafia is that its mobsters always have money problems. For one thing, the tidal wave of cash from the rackets, mostly in small bills, is difficult to handle. The Gambino family solves this by paying friendly bank employees to exchange small bills for big ones that can be transported easily in satchel-size bundles.

Last month New York's Chemical Bank was fined $225,000 and fired 25 employees after pleading guilty to a charge of failing to report $8.5 million in hundreds of all-cash transactions. But a felony count specifically charging the bank with laundering $1 million in illicit funds was dropped.

If wealthy mobsters live like millionaires, Internal Revenue Service agents can ask discomfiting questions. Some Mafiosi have large sums in secret bank accounts overseas, most notably in Switzerland and Liechtenstein, as nest eggs in case they ever have to flee abroad. Other mobsters keep their escape money in bank safe-deposit boxes or hiding places called "traps." Anthony ("Fat Tony") Salerno, a gambler and loan shark who was indicted last week on charges of running a $10 million-a-year numbers of operation in Manhattan, used to keep more than $1 million in small bills packed in shoe boxes stacked from floor to ceiling in a closet of his apartment on West End Avenue.

Successful Mafia men have several gambits for laundering enough cash to live exceedingly well by most Americans' standards, if

*Which means siphoning off funds to avoid paying taxes on them.

not like the jet-set multimillionaires that their net worth would enable them to be. Some pass money to very cooperative bankers, who lend it back. Others own legal businesses with large cash flows—bars, pizza parlors, restaurants, jukebox companies or vending-machine firms. No matter how poorly the business may do, its books show huge profits because the mobsters is pumping in the rackets money, thereby converting it into cash that can be spent openly. Other Mafiosi have no-show jobs, with either their own firms or companies run by businessmen who owe them favors; they are paid large salaries with money that originally came from rackets. The Mafia defector interviewed by Time drew a $50,000 salary from a travel business in 1968 and $30,000 from his share of a legitimate finance company, enabling him to have an $80,000 house, two Lincoln Continentals for himself and a Ford for his wife, horses for his children and the use of a $112,000 yacht owned by his firm.

His life-style was typical; so, too was the rigid insulation of his family from his life in the rackets. At home, a Mafioso cultivates the image of a solid, churchgoing, charity-supporting citizen. On the job, he keeps up a flashy front by wineing and dining associates at expensive restaurants and resorts. Nearly every important Mob figure sports a well-kept mistress at gangster affairs. The dichotomy of Mafia life was nowhere seen better than a flashy Manhattan restaurant where mobsters used to entertain their wives and children on Sunday afternoons and return in the evening with their girl friends.

For all their washday efforts, top Mafiosi can never launder more than a fraction of their illegal earnings. Thus a valued member of each clan is the "money mover," who specializes in finding ways of putting Mob money to work. Loan-sharking is a favorite because of its quick and huge returns. California officials estimate that Chicago mobsters have invested $50 million in Palm Springs bars, restaurants, hotels and real estate. As the Mafia defector said: "Money layin' around in your pocket don't do nothin' but get wrinkles."

Some mobster money ends up in the pockets of the high-priced lawyers who keep them out of jail. Carlo Gambino's cousin Joseph Gambino, 47, entered the U.S. illegally in 1957, was ordered deported to Italy in 1967 and has used ten years of legal maneuvers to keep from returning to his homeland. Last week he was charged with extortion and strong-arm tactics in an attempt to take over most of the private trash-collection business in The Bronx.

Although several notorious gangsters are being prosecuted, pressure on organized crime has eased considerably in the past few years because of disarray among federal law enforcement agencies, notably the FBI, IRS and Drug Enforcement Administration. They are still suffering from the backlash against the civil rights violations committed by some overzealous agents in the 1960s and early 1970s. In addition, the FBI has not yet settled down from the inevitable turmoil that followed the death of Director J. Edgar Hoover in 1972; its parent, the Justice Department, has been disoriented by a revolving door at the top: five chiefs since 1972.

During those years, an attempt at a broad-scale attack on organized crime by the federal strike forces broke down because of internal rivalries. Says William Aronwald, former leader of the strike force in New York: "Cooperation among agencies is the exception rather than the rule." But without joint efforts by law enforcement agencies at all levels of government, Aronwald and other investigators fear, organized crime can never be attacked successfully. He adds: "You've got to be ballsy. You've got to be aggressive. You can't wait until they come to you." A successful assault will probably require:

Concentrating more money and manpower on fighting the Mob. According to a study by G. Robert Blakely, director of the Cornell Institute on Organized Crime, all levels of government employ only 400 lawyers who specialize in organized crime. Says he: "The Mafia now has more lawyers than we have."

Permitting easier bugging and wiretapping of known members of organized crime. The courts now require investigators to demonstrate that a specific crime has probably been committed. If the eavesdropping does not turn up enough evidence and the suspects are not promptly indicted, they must be informed about the bugs or taps.

Enacting stronger legislation. The Carter Administrator last week moved in this direction by proposing laws that would prohibit the laundering of Mob money, tighten loan-sharking statutes and provide stiff prison sentences for operating racketeering syndicates. The proposals, however, do not solve the central problem: the very difficulty of proving charges of money-washing, loan-sharking and running illegal rackets.

Giving convicted racketeers longer prison sentences. The GAO study found that over a four-year period, 52% of the sentences imposed on organized criminals by federal courts involved fines but no imprisonment and only 20% were for jail terms of two years or more. One reason: many judges feel that the mobsters' crimes, except the killings of each other, are nonviolent and thus less serious than, say, mugging. When jailed, mobsters are generally model prisoners and, with their high-priced legal help, win paroles more easily than the average convict.

Above all, there must be an end to Americans' tolerance for any kind of organized crime. Romantic notion about the dons and winking acceptance of their goods and services create an atmosphere that helps the Mob to flourish. Without a profound shift in public attitudes, even the most aggressive law enforcement drive against the Mafia and organized crime has scant chance of permanently cutting into their activities, let alone putting them out of business.

THE GODMOTHERS

They live quietly in the exclusive suburbs of River Forest and the Hamptons. There may be a ranch house in Palm Springs or a Miami condominium as well. They can afford the best of everything, but they have almost nowhere to go, few pleasant ways to pass the time. Their husbands are often away on business, or in jail, or calling on their mistresses. The wives are isolated not only by bodyguards but also by ignorance of the details of their husbands' business activities. The men's workday deeds are not discussed at dinner.

Today most Mafia wives are native Americans, but their marriages reflect the old-country values of silence and obedience. Family bonds have weakened, but neither the generation gap nor the suburban Diaspora has dissolved them. Fathers may bankroll their sons in a legitimate business or pay their way through medical school. "But if the sons don't have the brains," says an investigator, "they are given work in the Mob. The sons don't become plumbers or factory workers. That wouldn't look right." Many of the daughters go to college, but only a few seek careers, most marry early.

The Mafia's code limits social activities. " 'Made' guys [Mafiosi] don't like their wives to mingle with the wives of other 'made' guys," says a former Mob lieutenant, "because they might reveal something about each other. The only thing wives go to is wakes, weddings and funerals."

Detroit *News* Reporter Shelley Eichenhorn interviewed for Time the wives of three middle- to high-level Mafiosi. Her report:

These women live suspended in contradictions, tree-lined Grosse Pointe streets and prison cells, handmade lace and machine guns, family portraits and FBI mug shots. They disbelieve the ugly headlines about their men, and they bristle at the stereotype of themselves as provincial peasant wives who never leave the nursery or their knees.

"They're not vulgar or bold-acting," says one Grosse Pointer. 'They are mother and grandmother types—and good ones. Take Mrs. Anthony Giacalone [wife of a top Mafia figure in Detroit's ruling family], she's a quiet, lovely lady. Why, she even contributed $20 to the March of Dimes."

Mafia wives rarely unburden themselves to friends, and sometimes not even to their parish priests. Says a Grosse Pointe priest: "One woman's husband is in prison. She doesn't want to be asked how he is. The subject is never introduced. Her man is away; she misses the father of her children."

When Mass is over, one top-ranking Mafia wife returns home where a plaque proclaims her Madonna of the Kitchen. A housekeeper is here today only because the wife is ill. She makes a point of saying that she cares for her own house. It is a matter of pride. "We live a quiet life. It is not our intention to be noticed," she says. "I'm happiest sometimes when they leave my name off the list of charity contributors."

Sundays, her family gathers in the living room. There are shelves of family pictures, and a wall plaque reads: God Bless Our Family. Five children and three grandchildren say grace. The head chair is for their father; he is in prison.

Across the city in a gracious colonial home, another Mafia wife speaks with pride of her husband, a graduate of a prestigious university who served honorably in the Army. A recent family portrait hangs above the fireplace. Her husband is not in the picture; he is serving a five-year term.

"The worst thing I had to face was the day my husband went to prison," says the wife, a pleasant, stylish blonde. "For him, the worst day came when his kids were kicked out of a private Grosse Pointe club.

"I'm so sick of the Italian image of the uneducated housewife. The women I know give their time to charities and hospitals. They don't get in the papers. They don't do it for that. I feel for the Watergate wives. I admire them for standing by their husbands. I uphold that.

"They have taken my husband out of my home for no reason. Others are murderers. and they walk the streets."

Most of the wives are totally untouched by the violence that pervades their husbands' lives. Not Jeanne Randazzo. Her husband Frank and two other men were shot to death last summer in the basement of the Randazzos' modest home on the east side of Detroit. The gunman, a government informer named Ernie Kanakis, was acquitted on the ground of self-defense; he told a jury that the others had tried to kill him with ice picks.

"Life is nothing," says Jeannie. "Life is a vaporous smoke. On the night Frank was killed, he said, 'Don't cook, we'll go out to dinner.' He took a shower like he always did, and we went to dinner with my son and daughter. After dinner, about 8:45 p.m., Frank said he had to see someone who was buying our '74 Cadillac. He said to wait for him at the Golden Coach Restaurant. When he didn't come back by 10 p.m., my son said, 'If I know Dad, he fell asleep in front of the TV set.'

"So we went home. I couldn't get in my own house because of the police and the neighbors. The bodies were still in the basement. I had to move in with my mother for three days while the police cleaned up."

In the Randazzo parlor, red and white checkered bows brighten dried-flower arrangements left over from Frank Randazzo's funeral. "We were married 37 years," says Mrs. Randazzo, wiping tears from behind black-rimmed glasses. "Before you know it, it's goodbye."

By Mr. TOWER:

S. 1488. A bill to provide for monitoring of soil moisture in drought-prone areas, to provide information thereon and accelerate financial and technical assistance to lessen impact of drought on farming and ranching operations; and

S. 1489. A bill to amend the Soil Conservation and Domestic Allotment Act to prevent soil erosion during a drought emergency; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. TOWER. Mr. President, I am introducing today two bills which will both help to prevent the worst consequences of drought in the United States and remedy those which cannot be planned for or prevented.

It is essential that the Department of Agriculture be able to better predict drought occurrence and warn farmers and ranchers of its imminence. Although the rudimentary machinery is in place within USDA, the program does not work satisfactorily, as we can all attest from our recent experience in the West.

My bill would correct this deficiency by directing the Secretary of Agriculture, through the Soil Conservation Service, to monitor soil moisture, rural water supplies, and other drought-related indices in drought-prone areas to provide information for making decisions about early actions which can be taken by both Government and landowners to minimize the adverse effects of drought.

This bill would also accelerate the soil conservation program by helping farmers to implement those measures which lessen the potential and the impact of drought. Without such measures, we are in jeopardy in this country of losing our present ability to feed and clothe the Nation.

The second bill, Mr. President, would authorize assistance on a matching basis for weather modification measures, when these remedial efforts are needed and desired by local conservation districts. The bill does not authorize the Federal Government to undertake such weather modification work on its own or without the request of local soil conservation districts. The power to plan or implement these efforts to modify weather patterns and precipitation will remain at the local level.

Mr. President, I think this last provision is very important. Weather modification to relieve drought areas remains a controversial alternative. It is still as much an art as it is a science, and the decision to implement such procedures is one which is appropriately a local initiative.

It is also important, however, that the Department of Agriculture expend appropriate efforts to assist those farmers and ranchers in an area to take these steps, should they be deemed desirable. My bill, if enacted, would provide up to 80 percent of the cost of weather modification work, with the remaining share paid by the conservation district or combination of districts that request assistance.

The cost of both bills is relatively low. In the case of the weather modification assistance bill, $5 million is authorized for each fiscal year through September 30, 1980.

Mr. President, drought is a long-term disaster, a gradual depletion of resources which saps the vigor of the Nation's agricultural sector. By helping to prevent, to plan for, or end drought-related disasters, we can in some measure insure continued vitality of the farm sector. I know each of my colleagues is concerned with that goal, and I would hope they would view these two bills as viable steps in that direction.

Mr. President, I ask unanimous consent that the two bills I have introduced today to alleviate drought disaster be printed in the RECORD.

There being no objection, the bills were ordered to be printed in the RECORD, as follows:

S. 1488

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Drought Disaster Warning and Assistance Act of 1977".

SEC. 2. The Secretary of Agriculture, through the Soil Conservation Service, is directed under existing authorities to monitor soil moisture, rural water supplies, and other drought-related indicators in drought-prone areas in order to provide information for making decisions about early actions which can be taken by Federal, State, and local governments and landowners or land users to minimize the effects of drought.

SEC. 3. The Secretary is further directed to accelerate financial and technical assistance to farmers and ranchers and to develop and help implement those additional conservation techniques or measures that will lessen the impact of a drought on their operations, thus assuring a continued supply of food and fiber for the Nation.

SEC. 4. Such measures on irrigated lands shall include but not be limited to irrigation system change or reorganization, land leveling, ditch lining or piping, water flow control structures, and water re-use systems; provided that such measures are planned and implemented to provide improved water quality including salinity control; further technical assistance will include information on the capability of soils to produce food and fiber under drought conditions while maintaining a soil conservation program to reduce wind and water erosion; further assistance will be accelerated to local organizations in cooperation with states or other Federal agencies to develop water resources plans which would lessen the effects of recurring droughts.

SEC. 5. There is authorized to be appropriated such sums as are required to carry out the provisions of this Act.

S. 1489

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Drought Emergency Relief Act of 1977".

SEC. 2. The Soil Conservation and Domestic Allotment Act is amended by including therein the following:

"(a) DEFINITIONS—As used in this amendment—

"(1) 'Drought' shall mean that which exists whenever the Secretary of Agriculture (hereafter referred to as the Secretary), pursuant to the request of the Governor of a State, declares that severe economic loss is imminent unless an adequate amount of precipitation occurs in the affected area in time to prevent or lessen said economic loss.

"(2) 'District' shall mean a conservation district as constituted under State law in accordance with the provisions of section 8(b) of the Soil Conservation and Domestic Allotment Act having for its prime purposes the conservation of soil, water, and related resources.

"(3) 'Weather modification' shall mean any activity performed with the intention of producing artificial changes in the composition, behavior, or dynamics of the atmosphere.

"(4) 'State' shall include the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, and any territory or insular possession of the United States.

"(5) The term 'Governor' means the chief executive of any State.

"(b) (1) Pursuant to the request of a Governor, the Secretary is hereby authorized to declare a state of drought to exist in those areas designated by the Governor in the Governor's request to the Secretary.

"(2) Whenever a drought is declared as in section 2(b) (1) within a district or combination of districts, the officials of the district or combination of districts may make application to the Secretary for financial assistance for weather modification purposes.

"(3) Upon such a request from a district or combination of districts, as in section 2(b) (2) the Secretary, through the Soil Conservation Service, shall make financial assistance available to the district or combination of districts for the purpose of assisting and initiating weather modification measures recommended by the district designed to alleviate the drought condition. The total amount of such financial assistance provided by the Secretary to meet a drought shall equal 80 per centum of the total cost of the weather modification program during that period of implementing such drought alleviation or prevention program.

"(c) The remaining portion (20 per centum) of the cost of the weather modification described in section 2(b) (3), shall be borne by the district or combination of districts in which a drought has been declared, such money being raised by the district or combination of districts as the officials of the district or combination of districts may prescribe within the limits of the State laws which initiated the district.

"(d) Funds shall be made available by the Secretary to a district or combination of districts when the district or combination of districts are declared to be in a state of drought as defined in section 2(a) (1) and after the district or combination of districts have raised the required local funding as prescribed in section 2(c)."

SEC. 3. (a) The Secretary is hereby authorized to transfer and utilize for the purpose of section 2(b) (3) any funds included in the Agricultural and Related Agencies Appropriations Act for fiscal year 1977. This transfer and utilization of funds shall not exceed $5,000,000 for the fiscal year ending September 30, 1977, these funds to remain available until expended.

(b) The funds transferred and utilized in section 3(a) may be replaced at the request of the Secretary in a future supplemental appropriation.

SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this amendment, not to exceed $5,000,000 for the fiscal year ending September 30, 1978, and $5,000,000 for the fiscal year ending September 30, 1979, and $5,000,000 for the fiscal year ending September 30, 1980, all funds to remain available until expended.

By Mr. CHILES (for himself, Mr. PERCY, and Mr. HEINZ):

S. 1490. A bill to authorize the Administrator of General Services to enter into multiyear leases through use of the automatic data processing fund without obligating the total anticipated payments

to be made under such leases; to the Committee on Governmental Affairs.

Mr. CHILES. Mr. President, today I join with Senator PERCY and Senator HEINZ in introducing a bill to save up to $150 million a year in Federal leasing of automatic data processing equipment.

As an amendment to section 111 of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 759), this new subsection (H) authorizes the Administrator of General Services to enter into multiyear leases through the use of the automatic data processing fund without obligating the total anticipated payments to be made under such leases.

In each of the last two Congresses, the Senate passed bills identical to this one, but in each instance, Congress adjourned before the House could take action. This time around, both Senator PERCY and I are looking forward to working with Senator HEINZ to enact this legislation into law.

In this period of economic stress, it is our obligation to initiate and encourage efficient and conscientious spending in our Federal agencies. Wasteful spending practices are today outrageous. This bill is one part of a broad campaign to overhaul the Government's antiquated system for spending $70 billion a year in the purchase of goods and services.

This legislation was recommended by the Commission on Government Procurement and supported by the General Acounting Office in a report entitled "Multiyear Leasing and Governmentwide Purchase of Automatic Data Processing Equipment and Results in Significant Savings"—B–115369—of May 7, 1974. As GAO concluded in that report:

Almost all of the $390 million that the government spent to rent ADP equipment in fiscal year 1969 was for short-term rentals . . . generally the most costly acquisition method.

Furthermore, GAO discovered:

Since many agencies do not seek competition before renewing leases under schedule contracts, there is no assurance that the Government is leasing a major part of its ADP equipment at the lowest possible cost.

Most manufacturers and suppliers offer discounts under multiyear leases. Since most Government leased ADP equipment is for 3 or more years, GAO concluded that the rental of the equipment under multiyear leasing would be the most efficient use of the limited funds available for such equipment.

It is essential that competitive proposals be solicited for initial lease, purchase, or renewal of ADP equipment as well as software, maintenance, related equipment, supplies and services. Competition should not be limited to manufacturers, but should include the proposals of third-party sources and nonmanufacturing businesses.

Presently, GSA has authority to enter into multiyear leases, payment of which comes from a revolving fund established by section 111(c) of the Property Act. But under 31 U.S.C. 665(a):

No officer or employee of the United States shall make or authorize an expenditure—in excess of the amount available therein.

Accordingly, the amount payable for the entire period of the multiyear lease must not be obligated from the fund at the time of contracting. However, as GAO recommended, this legislation would authorize GSA to enter into lease agreements without immediately obligating the total anticipated payment, but rather than cash balances of the ADP fund be maintained in such amounts as is necessary for cash disbursements of payments.

In an August 20, 1973, letter to the President of the Senate, Arthur Sampson, Administrator of GSA, stated:

A GAO comparison of multiyear versus short-term rental rate for 1,066 systems in the government's inventory of June 1969 indicated possible savings of $70 million under 3-year leases and $155 million under 5-year leases.

I ask unanimous consent that the bill and some pertinent descriptive material be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1490

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 111 of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 759) is amended by adding at the end thereof the following:

"(h) Notwithstanding any other provision of law, the Administrator is authorized to enter into multiyear contracts under this section financed through the fund and may incur or authorize obligations in excess of the amount available in the fund, except that (1) the amount of unfunded obligations incurred during any fiscal year shall not exceed the amount specified in an appropriation Act for that fiscal year, (2) the cash balances of the fund shall be maintained in such amounts as are necessary at any time for cash disbursements to be made from the fund, and (3) the term for the performance of any such contract shall not exceed ten years.

"(i) As used in this section, automatic data processing equipment also includes, but is not limited to, hardware, software, maintenance, related equipment and supplies, and related services."

EXCERPTS FROM REPORT

PURPOSE

This bill amends section 111 of the Federal Property and Administrative Services Act of 1949, 79 Stat. 1127, as amended (40 U.S.C. 759) by adding two new subsections (h) and (i). These subsections would permit the Administrator of the General Services Administration (GSA) to enter into multiyear leases (not to exceed ten years) of automatic data processing (ADP) equipment at amounts in excess of what is available in the fund, provided the amount of unfunded obligations authorized is not needed and the balances of the fund are maintained in such amounts as are necessary at any time for cash disbursements to be made therefrom. Thus, the United States Government, the world's largest user of ADP equipment, would be able to take advantage of multiyear lease savings that are available to any private business. The bill also clarifies that the authority to enter into multiyear leases of automatic data processing equipment extends to collateral maintenance, software and other kinds of supplies and services that normally flow with ADP equipment acquisition.

NEED FOR THE LEGISLATION

The Government is expending $35 to $75 million more for installed computer equipment under short-term leases than it would under firm-term multiyear leases. Millions of dollars of additional savings are possible through the use of multiyear contracting for new equipment and maintenance services associated with long-term leases. S. 2785 would permit the Government to obtain better terms, more effective competition and, in short, operate in the marketplace in a manner comparable to commercial lessees of automatic data processing equipment.

Presently, GSA has multiyear leasing authority for acquisition of automatic data processing equipment through the ADP Fund. However, since, under 31 U.S.C. 665(a), "No officer or employee of the United States shall make or authorize an expenditure—in excess of the amount available therein;" the amount payable for the entire period of the multiyear lease must be obligated from the fund at the time of contracting. This provision severely limits the use of the ADP Fund for multiyear leasing; therefore, GSA and other Federal agencies are generally forced to enter into short-term leases, or long-term leases with termination rights. Both of these types of leases are considerably more expensive than firm-term multiyear leases.

* * * * *

ANALYSIS OF THE BILL

The bill amends section 111 of the Federal Property and Administrative Services Act of 1949 by adding two subsections.

Subsection (h) would enable GSA to enter into multiyear leases at amounts in excess of what is available in the ADP Fund. Restrictions are placed on this authority to enable Congress to maintain visibility and control over the Fund. An additional provision limits the terms for performance of multiyear leases placed under the authority of this subsection to ten years.

Following is a further elaboration on each of the above three elements of subsection (h):

Firm-term multiyear leases

GSA's authority to execute firm-term multiyear leases for automatic data processing equipment is severely restricted because governing laws require obligation of the total cost for the entire period of the lease at the time of contracting. These laws provide, in part, that:

"No officer or employee of the United States shall make or authorize an expenditure from or create or authorize an obligation under any appropriation or fund in excess of the amount available therein; nor shall any such officer or employee involve the Government in any contract or other obligation, for the payment of money for any purpose, in advance of appropriations made for such purpose unless such contract or obligation is authorized by law. (31 U.S.C. 665(a)).

"No contract or purchase on behalf of the United States shall be made, unless the same is authorized by law or is under an appropriation adequate to its fulfillment," . . . (41 U.S.C. 11)

Subsection (h) would remove this restriction, thereby permitting GSA to use firm-term multiyear leases rather than short-term rentals of one year or less.

During the hearings on S. 2785 the Computer and Business Equipment Manufacturers Association (CBEMA) representative cautioned that if the Government applies the authority of this bill in such a manner as to conflict with normal commercial operations, then countercosts would arise which would offset the advantages of true multiyear leasing. He pointed out that in return for payment of a lesser sum over a specific number of years, the ADP vendor expects a long-term commitment of cash flow which

can be discounted by a bank or used as collateral for a loan. The Committee took the position that the objective of the bill is to gain for the Government the same benefits that are available to the private sector from multiyear contracts. Accordingly, the Committee desires the Government's use of multiyear contracting to be consistent with normal commercial practice. The Committee expects GSA to use a multiyear contract that is, in fact, a marketplace mechanism.

Another point that arose during the hearings was whether the multiyear contracting authority should be extended to user agencies. CBEMA suggested that S. 2785 is unnecessarily restrictive in limiting multiyear leasing to GSA's ADP Fund. After a thorough evaluation of this suggestion, the Committee determined that the CBEMA objective of maximizing use of the multiyear authority could best be accomplished within the framework of Public Law 89-306 that established GSA as the focal point for ADP management within the executive branch.

The approach adopted in S. 2785 of establishing the ADP Fund as the single source of funding for multiyear ADP contracts has a number of advantages:

GSA can consider the useful life of ADP equipment to the Government as a whole. Individual agencies, either from annual appropriations or from revolving funds, would only be able to commit funds for their individual needs.

The provision in the bill that, "the amount of unfunded obligations incurred during any fiscal year shall not exceed the amount specified in an appropriation Act for that fiscal year," assures congressional control over these expenditures. Broadening the bill to authorize other agencies, through annual appropriations or revolving funds, to contract on a multiyear basis would diffuse accountability to such a point that Congress could lose a great measure of fiscal control.

By funding all firm-term multiyear contracts through the ADP Fund (including those procurements delegated to other agencies), single payment discounts from vendors of 2 to 4 percent annually are expected.

One source of ADP funding to interface with the market and its supporting financial institutions would enhance the Government's bargaining position for the acquisition of ADP equipment.

The concept in S. 2785 of the ADP Fund serving as the single source of funding for multiyear ADP contracts is entirely consistent with the responsibilities assigned to GSA by Public Law 89-306. Senate Report 89-938, pertaining to this law, discussed the need for the Fund and GSA's operation of the Fund in these terms:

The Fund would afford an effective means of attaining economic acquisition of Government ADP equipment.

Were all ADP purchase and lease money in "one pocket," the Government would be in a stronger bargaining position in dealing with the manufacturers.

But the most compelling need for the revolving fund is in establishing the single puchaser concept in Government ADP acquisition.

Essentially, all Federal agencies would lease equipment from the GSA revolving fund.

By proper use of the authority conveyed in the Brooks bill, as amended by S. 2785, all of the above advantages can be realized, while maximizing use of the multiyear contracting authority. It will also be possible to use selectively, the capabilities for ADP procurement that exist within the user agencies. The procedure to be employed by GSA in implementing S. 2785, is explained in the Agency's letter of April 5, 1974. It should be noted that in recent years GSA has delegated approximately 81 percent of the ADP procurements to user agencies (in terms of dollar value).

Under the GSA procedure, when a procurement delegation is made to an agency to enter into a firm-term multiyear lease without full obligation of funds, the authority to cite and obligate the ADP Fund will also be delegated. The Fund then would underwrite the contract and make payments to the vendor, and the user agency would reimburse the Fund from annual appropriations.

To insure that there is no legal impediment to GSA delegating an agency authority to cite and obligate the Fund, the General Accounting Office was asked for an opinion. GAO confirmed that there is no prohibition against this practice, as long as GSA maintains adequate overall supervision of Federal agencies procurement of ADP equipment and provided the amount of unfunded obligations authorized is not exceeded and that there is sufficient balance in the ADP Fund to make required cash disbursements.

ADP fund

Use of the Fund, as prescribed by S. 2785, is consistent with the principles of congressional visibility and control as set forth in the Senate's budget reform legislation (S. 1541, as amended). The provisions in the bill that (1) the amount of unfunded obligations incurred during any fiscal year shall not exceed the amount specified in an appropriation Act for that fiscal year, and (2) the cash balances of the Fund shall be maintained in such amounts as are necessary at any time nor cash disbursements to be made from the Fund, will enable Congress to exercise control over the amounts that may be obligated for ADP leasing. These restrictions conform to the requirements established in Public Law 89-306 for operation of the ADP Fund.

Contract term

The limitation of ten years on the term for the performance of a multiyear lease provides an essential control but permits flexibility in the negotiation of multiyear leases. One reason for selecting ten years is that the current life of ADP systems is eight to ten years. Another reason is that it corresponds to GSA's contracting authority in the telecommunications area. The fact that multiyear contracts may cover up to ten years does not alter the requirement that multiyear leases are to be justified on a case-by-case basis as the most cost-effective method of acquiring needed ADP equipment.

Subsection (i) was included in the bill to make it clear that the authority in subsection (h) applies to more than leases for hardware. Software development, related equipment, maintenance, supplies, and services may also be procured by firm-term multiyear contracts. The description of automatic data processing equipment in subsection (i) is compatible with the General Accounting Office interpretation of automatic data processing equipment as it is used in the Brooks bill.

Mr. PERCY. Mr. President, along with Mr. CHILES and Mr. HEINZ I am introducing legislation to amend section 111 of the Federal Property and Administrative Services Act of 1949, 79 Stat. 1127, as amended (40 U.S.C. 759). This legislation would permit the Administrator of the General Services Administration to enter into multiyear leases of automatic data processing equipment through the use of the automatic data processing fund, provided cash balances of the fund are maintained in such amounts as are necessary at any time for cash disbursements to be made therefrom.

This bill was originally recommended by the General Accounting Office in a report to the Congress entitled "Multiyear Leasing and Government-Wide Purchasing of Automatic Data Processing Equipment Should Result in Significant Savings." In this report, released April 30, 1971, GAO states that—

> The rental of equipment under multiyear leases, as an alternative to short-term rentals, has become essential if the Government is to make maximum use of its limited funds for acquiring ADP equipment.

As a result of this report and my own study of the subject, I introduced S. 2785 on December 6, 1973. This bill passed the Senate on September 19, 1974, but no action was taken in the House.

The bill which Senators CHILES and HEINZ are introducing with me today is identical to that bill, and to S. 1260, which Senator CHILES introduced during the 94th Congress. S. 1260 also passed the Senate, but never reached a vote in the House.

I appeared as a witness last year in hearings on S. 1260, and I told the Subcommittee on Federal Spending Practices that "for us in Government to assume that we only live year to year and thereby cannot commit ourselves in such a way to take into account the economies that are available to us is perfectly ridiculous." The United States is the world's largest user of ADP equipment, yet it is currently unable to take advantage of multiyear lease savings that are available to any private user. Each year which passes without this bill becoming law costs the American taxpayer significant amounts of money which could be used for more constructive purposes.

The General Services Administration estimates that the passage of this legislation could result in savings of $150 million over the next 5 years, and up to $50 million annually thereafter. Over the past 2 years, Senator CHILES has led a commendable effort to increase efficiency in Government by overhauling antiquated Federal spending practices. I firmly believe that this legislation takes an important step in that direction.

Section 111 of the Federal Property Act, which this bill would amend, authorizes and directs the Administrator of GSA to:

> Coordinate and provide for the economic and efficient purchase, leasing and maintenance of automatic data processing equipment by Federal agencies.

In my opinion, which is shared and substantiated by GAO and GSA, this bill truly does make such leasing of ADP equipment "economic and efficient." Accordingly, I urge its expeditious adoption.

By Mr. PERCY (for himself, Mr. CHILES, and Mr. HEINZ):

S. 1491. A bill to authorize procurement of janitorial, protective, trash re-

moval, and similar services for periods not exceeding 4 years; to the Committee on Governmental Affairs.

Mr. PERCY. Mr. President, I am today introducing legislation along with Mr. CHILES and Mr. HEINZ which would authorize procurement of janitorial, protective, trash removal, and similar services for periods not exceeding 5 years.

This legislation is similar to S. 3635, which was introduced last year by Senator CHILES, Senator WEICKER, and myself, and it is consistent with other legislation I have sponsored to allow for significant cost savings by providing for longer term contracting authority. By initiating such multiyear contracts, both administrative expenses and actual costs can be reduced.

Currently, GSA has 390 janitorial services contracts in 440 buildings. These 440 buildings represent 17 percent of the Government-owned and GSA-leased buildings. However, since these buildings average over 125,000 square feet of space, they represent over 34 percent of all GSA-managed space. Additionally, there are approximately 2,000 trash removal and similar contracts in an estimated 2,200 buildings, or 85 percent of the Government-owned and GSA-leased-operated buildings. All of these contracts are currently limited to a maximum length of 1 year, necessiating higher contract costs as well as yearly costs associated with annual bid invitations, advertising, bid evaluation, and contract awards.

GSA has submitted anticipated savings of $1.5 million annually on 3-year contracts and $1.63 million annually on 4-year contracts. Since this legislation authorizes contracts of up to 5 years, it is estimated that annual savings will be in excess of both these figures. Furthermore, successful experience resulting from this legislation can ultimately lead to further savings by extending contract authority in other areas.

I commend this legislation to the attention of my colleagues, and I hope that we will move quickly toward its adoption.

Mr. HEINZ. Mr. President, I am proud to join with Senators PERCY and CHILES in introducing two bills to make the procurement of services by the Federal Government more efficient and less costly.

The introduction of these two bills shows our continuing commitment to and interest in reforming Federal spending practices. Even though these two bills cover only narrow areas of Federal spending, I believe that they are important for two reasons. First, significant savings will accrue to the Government. And, second, these two bills will demonstrate the sizeable potential for cutting down on Federal spending.

Presently, there is a 1-year limitation on contracts for the procurement of janitorial, protective, trash removal, and similar services. One of our bills would authorize multiyear contracts for these services, so long as such contracts did not exceed 5 years. This longer contracting period would allow for greater economy and efficiency in the servicing of federally owned and leased properties.

The advantage of permitting multiyear contracting for janitorial, protective, trash and similar services is that administrative costs can be significantly reduced. Administrative costs are greatly reduced because there is no yearly bidding, advertising, and evaluating of bids. Instead of incurring these expenses each year, it would not be necessary to repeat the expensive contract-awarding costs as frequently.

Additionally, productivity would be increased as a result of this legislation. Each year after a contract is awarded, there is a lag in productivity while the contractor begins to build and recruit the necessary labor force necessary to perform the contract. With our bill this problem would not occur each year as it does today.

The potential savings for the Federal Government if this legislation is enacted are quite significant. The General Services Administration alone contracts for janitorial, protective, trash removal, and similar services at an annual cost of $70 million. The Office of Federal Procurement Policy estimates that a $12 to $14 million savings could be anticipated annually.

Our second bill would amend section 111 of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 759). Enactment of this legislation would authorize the Administrator of General Services to enter into multiyear leases for periods not exceeding 10 years for the procurement of automatic data processing equipment.

This proposed legislation would also promote greater economic and efficient spending by the Federal Government. This bill could save the Federal Government up to $150 million in leasing of automatic data processing equipment.

This legislation was recommended by the Commission on Government Procurement and supported by the General Accounting Office. In a report entitled "Multiyear Leasing and Government-wide Purchase of Automatic Data Processing Equipment and Results in Significant Savings"—B–115369, May 7, 1974—the General Accounting Office concluded:

> Almost all of the $390 million that the government spent to rent ADP equipment in fiscal year 1969 was for short-term rentals . . . generally the most costly acquisition method.

In a 1971 report the General Accounting Office reported that the Federal Government is the world's largest user of automatic data processing equipment, and yet it is unable to take advantage of multiyear savings that are available to any private business. The Federal Government is losing millions of dollars in savings because of the technical way the laws are written, and this bill would correct that problem.

Presently, GSA has multiyear leasing authority for acquisition of automatic data processing equipment through the automatic data processing fund. However, since, under 31 United States Code 665(a), "No officer or employee of the United States shall make or authorize an expenditure—in excess of the amount available therein;" the amount payable for the entire period of the multiyear lease must be obligated from the fund at the time of contracting. This provision severely limits the use of the automatic data processing fund for multiyear leasing. Therefore, Federal agencies are generally forced to enter into short-term leases, or long-term leases with termination rights. Both of these leases are more expensive than firm-term multi-year leases.

Enactment of this legislation would make it possible for the Federal Government to begin to enjoy millions of dollars of savings that have been available to private business for years by enabling GSA to enter into multiyear leases at amounts in excess of what is available in the automatic data processing fund. This bill would permit the Federal Government to benefit from better terms and to operate in the marketplace in a manner comparable to private businesses purchasing automatic data processing equipment.

Mr. CHILES. Mr. President, today, I join with my distinguished colleagues, the senior Senator from Illinois and the junior Senator from Pennsylvania, in introducing a bill to authorize the procurement of janitorial, protective, trash removal and similar services for periods not to exceed 5 years.

I am introducing this legislation to show our continuing commitment to reform Federal spending practices and to carry forward the work of the Commission on Government Procurement.

The enactment of Public Law 93–400, which created the Office of Federal Procurement Policy in 1974, was the necessary first step to reform the Federal acquisition system.

The Federal Acquisition Act, a bill I introduced last month, represents another sweeping reform of Federal contracting. By consolidating the present jumble of procurement statutes into a modern, streamlined law which emphasizes innovation and competition, the Federal Acquisition Act promises to save billions of taxpayer dollars and eliminate mountains of paperwork.

I feel it is appropriate, however, to place this more narrow piece of legislation before the Senate to demonstrate the vast potential for economizing on Federal spending—up to $14 million a year in this case of janitorial services alone.

Under present law, there is a 1-year limitation on contracts for such services. This legislation would allow for greater economy and efficiency in the operation of federally owned and leased properties by authorizing contracts for these and similar services to extend for periods not to exceed 5 years.

Many administrative expenses could be reduced by using multiyear contracting: the costs incurred in yearly bid invitations, advertising, bid evaluations, and contract awards would be eliminated.

Productivity would be enhanced as a result of this proposed legislation. At the

beginning of a contract period, there is a need to recruit a labor force and to establish an effective organization, which often results in less productivity initially. With a multiyear contract, however, this problem would not reoccur at the beginning of each year. In like manner, individual contractors could attract more responsible employees who would be better able to serve the Federal Government. Further, the longer contract period would generate savings by allowing for amortization of costs over a longer term which in turn would result in lower bid prices to the Federal Government. The General Services Administration alone contracts for these services at an annual cost of $70 million. If the proposed legislation were enacted, the OFPP estimates a $12 to $14 million savings could be anticipated annually. By enacting this legislation, we in Congress can demonstrate our continuing determination to make Federal spending practices more efficient and to save the tax dollars of our citizens.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1491

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. That subsection 201(a) of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 481), is amended by adding after the word "years" in paragraph (3) the words "and that contracts for janitorial, protective, trash removal, and similar services in federally owned and leased properties may be made for periods not exceeding five years: *Provided,* That the wage rates and fringe benefits applicable to contracts for such janitorial, protective, trash removal, and similar services shall be subject to revision annually in accordance with regulations and procedures of the Department of Labor; and".

SEC. 2. That section 2306 of title 10 of the United States Code, as amended, is further amended by adding the following subsection (h) at the end thereof:

"(h) The head of an agency may enter into contracts for janitorial, protective, trash removal, and similar services in federally owned and leased properties for periods not exceeding four years: *Provided,* That the wage rates and fringe benefits applicable to contracts for such janitorial, protective, trash removal, and similar services shall be subject to revision annually in accordance with regulations and procedures of the Department of Labor.".

By Mr. MAGNUSON (for himself and Mr. LONG) (by request):

S. 1492. A bill to amend the Mineral Leasing Act of 1920 and the Interstate Commerce Act, and for other purposes; to the Committee on Commerce, Science, and Transportation.

Mr. MAGNUSON. Mr. President, there has been a great deal of discussion in recent years over the proper Federal regulatory and funding role in the field of transportation. No subject has raised this issue more clearly than the construction of coal slurry pipelines. Those advocating the construction of coal slurry pipelines, allege that they would provide substantial public benefits, primarily in the form of lower transportation costs for coal. On the other hand, those who favor moving coal by other modes of transportation point out the possible secondary impact of slurry pipelines on the rest of our transportation system, and also point out the many difficult environmental problems—particularly the use of scarce water—that surround the coal slurry pipeline issue.

As most of my colleagues are aware, the railroads and water carriers currently transport over 90 percent of the coal moved in this country. The railroads are particularly distressed at the prospect of losing what may be their first opportunity to substantially increase traffic in many years, and have refused permission to cross their rights-of-way to those interested in constructing slurry pipeline systems. A method needs to be created by the Government to resolve these controversies in a fair and equitable manner in order to assure that the public receives the benefits of new innovations in transportation and at the same time is protected against piecemeal considerations of major transportation initiatives which do not take into account the possible effects of coal slurry pipelines on other modes of transport. This is a complex question involving considerations of energy used in transportation and other effects on the transportation system as well. Additionally, there needs to be a way to assure coal slurry pipeline operators that they may construct pipeline systems without regard to the wishes of railroads over whose rights-of-way they may need to cross once it is determined that the construction of such a system is in the public interest.

I am introducing legislation today in order to provide a means for resolving these disputes in a manner that will assure fair consideration of all the interests involved in the implementation of any slurry pipeline proposal that is determined to be in the public interest. It is far too late for any of us here in the Senate to believe that we can make major transportation funding or regulatory decisions in a vacuum. Major transportation decisions with respect to one mode of transportation inevitably effect other modes. In order to produce a transportation system that best serves the public interest, we need to comprehensively consider these complex questions in a wholistic manner.

Mr. President, I ask unanimous consent that the text of the Coal Transportation Act of 1977 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1492

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Coal Transportation Act of 1977".

FINDINGS

SEC. 2. The Congress finds and declares the following:

(1) The increased use of domestic coal to create electrical and other forms of energy would promote the national interest through the conservation of oil and natural gas resources.

(2) The use of domestic coal resources may, in special situations, be facilitated by the construction of pipelines to transport coal from the mine to the consumer.

(3) Coal pipelines are single purpose, high volume facilities, the development of which may be detrimental to common carrier services provided by other modes of transportation for all classes of traffic. Coal pipelines may also adversely affect the present abilities of other carriers to make coal deliveries to destinations throughout the country. For these reasons, the national interest in conserving oil and gas through increased use of coal may be impaired by coal pipeline construction unless appropriate regulation is provided. Accordingly, all coal pipelines operating in interstate commerce should be subject to the requirements of part I of the Interstate Commerce Act, whether or not they meet common law standards of common carriage.

(4) Consistent with usual carrier practice, the entitlement of coal pipelines to acquire rights-of-way should be determined under State law. Neither the designation of coal pipelines as common carriers nor the certification of an operation by the Interstate Commerce Commission shall be construed to constitute a finding or evidence that such coal pipelines are impressed with the public interest or that they are otherwise entitled to exercise any condemnation authority.

(5) Right-of-way conflicts between coal pipelines and railroads and other common carriers subject to Federal regulation should be resolved only by Federal regulatory authority, consistent with the purposes of this Act, but only after (A) certification to operate as provided under the Interstate Commerce Act, as amended by this Act, and (B) acquisition of all required rights-of-way over private and public lands.

RIGHTS-OF-WAY ON FEDERAL LANDS

SEC. 3. Subsection 28(a) of the Mineral Leasing Act of February 25, 1920, as amended by the Act of November 16, 1973 (87 Stat. 567), is further amended by inserting the word "coal" between "natural gas," and "synthetic".

APPLICABILITY OF INTERSTATE COMMERCE ACT; DEFINITION

SEC. 4. (a) Section 1(1)(b) of the Interstate Commerce Act (49 U.S.C. 1(1)(b)) is amended by inserting ", and coal," immediately after "oil".

(b) Section 1(3)(a) of the Interstate Commerce Act (49 U.S.C. 1(3)(a)) is amended by adding at the end thereof the following new sentence: "The term 'common carrier by coal pipeline' as used in this part means any pipeline carrier of coal which is in interstate commerce, whether or not such carrier would have been considered a common carrier under the common law.".

PARITY IN RATE-MAKING PROCEDURES

SEC. 5. (a) Section 1(5)(a) of the Interstate Commerce Act (49 U.S.C. 1(5)(a)) is amended by inserting immediately after the first sentence thereof the following new sentence: "Charges for the transportation of coal which are based in whole or in part on a long-term commitment of all or a portion of a shipper's traffic are presumptively unlawful when employed by any common carrier by coal pipeline unless such charges have been finally approved by the Commission for use by common carriers by railroad.".

(b) The last sentence of section 1(5)(a) of the Interstate Commerce Act (49 U.S.C. 1(5)(a)) is amended by striking out "provisions" and inserting in lieu thereof "first sentence".

PROHIBITION ON TRANSPORTATION OF CERTAIN COAL

SEC. 6. Section 1(8) of the Interstate Commerce Act (49 U.S.C. 1(8)) is amended by inserting "(a)" immediately after "(8)" and by adding at the end thereof the following new subdivision:

"(b) After the date of enactment of the Coal Transportation Act of 1977, it shall be unlawful for any common carrier by coal pipeline subject to this part to transport from any State, Territory, or the District of Columbia, to any other State, Territory, or the District of Columbia, or to any foreign country, any coal mined, or produced by it or under its authority, or which it may own in whole or in part, or in which it may have any interest, direct or indirect."

FEEDER AND DISTRIBUTION LINES

SEC. 7. Section 1(9) of the Interstate Commerce Act is amended by inserting "(a)" immediately after "(9)" and by adding at the end thereof the following new subdivision:

"(b) Any common carrier by coal pipeline subject to this part, upon application of any party tendering interstate traffic for transportation, shall construct, maintain, and operate upon reasonable terms a feeder or distribution line constructed to connect with its coal pipeline, where such connection is reasonably practicable and can be put in with safety and will furnish sufficient business to justify its construction and maintenance. Such feeder or distribution line, at the option of the party applying therefor, shall include any facilities necessary for the delivery of coal to such party in a form and condition suitable for use as fuel without further processing or treatment. If any such common carrier by coal pipeline fails to install and operate any such feeder or distribution line upon application in writing by any party, such party may submit a complaint to the Commission in accordance with section 13 of this part. The Commission—

"(i) shall hear and investigate such complaint;

"(ii) shall make a determination with respect to the safety and practicability of such feeder or distribution line and the justification and reasonable compensation for such line; and

"(iii) may issue an order, in accordance with section 15 of this part, directing such common carrier to comply with the provisions of this section in accordance with such order.

Such order shall be enforced as hereinafter provided for the enforcement of all other orders by the Commission, other than orders for the payment of money.".

CERTIFICATION

SEC. 8. (a) The first sentence of section 1(18)(a) of the Interstate Commerce Act (49 U.S.C. 1(18)(a)) is amended to read as follows: "No common carrier by railroad or common carrier by coal pipeline subject to this part shall—

"(i) undertake the extension of any of its lines of railroad or the construction of any additional line of railroad, or the construction or extension of any coal pipeline;

"(ii) acquire or operate any such extension or any such new or additional line of railroad or coal pipeline;

"(iii) engage in transportation over, or by means of, any such new, extended, or additional line of railroad or coal pipeline,

unless such new, extension, or additional line of railroad or coal pipeline is described in and covered by a certificate which is issued by the Commission and which declares that the present or future public convenience and necessity require the construction and operation of such new, extended or additional line of railroad or coal pipeline."

(b) The last sentence of section 1(18)(a) of the Interstate Commerce Act (49 U.S.C. 1(18)(a)) is amended by striking out "extended" in subclause (A) thereof and inserting in lieu thereof "new, extended,".

EXTENSION OF LINES

SEC. 9. The first sentence of section 1(18)(c) of the Interstate Commerce Act (49 U.S.C. 1(18)(c)) is amended—

(1) by striking out "carrier by railroad" and inserting in lieu thereof "common carrier by railroad or common carrier by coal pipeline"; or

(2) by inserting "or its coal pipelines" immediately after "of railroad".

ABANDONMENT

SEC. 10. Section 1 of the Interstate Commerce Act is amended by adding at the end thereof the following new paragraph:

"(19(a) No common carrier by coal pipeline subject to this part shall abandon all or any portion of an existing pipeline, or the operation thereof, unless such abandonment is described in and covered by a certificate which is issued by the Commission and which declares that the present or future public convenience and necessity require or permit such abandonment.

"(b) The application for and issuance of any certificate of abandonment under this paragraph shall be in accordance with such rules and regulations with respect to form and content of an application, hearings, and other matters as the Commission may from time to time prescribe. The provisions of this part shall apply to all proceedings with respect to any such certificate.

"(c) Whenever a common carrier by coal pipeline submits to the Commission an application for a certificate of abandonment under this paragraph, such carrier shall attach to such application an affidavit certifying that notice of such application has been—

"(i) sent by certified mail to the chief executive officer of each State which would be directly affected by the proposed abandonment;

"(ii) published for three consecutive weeks in a newspaper of general circulation in each county in which all or any portion of the coal pipeline proposed to be abandoned is located; and

"(iii) mailed, to the extent practicable, to all shippers who have made significant use (as determined by the Commission in its discretion) of such coal pipeline during the 12-month period immediately preceding the submission of such application.

"(d) The notice required under subdivision (c) of this paragraph shall include—

"(i) an accurate and understandable summary of the common carrier's application for a certificate of abandonment, together with the reasons therefor; and

"(ii) a statement indicating that each interested person is entitled to recommend to the Commission that it approve, disapprove, or take any other specified action with respect to such application.

"(e) Upon receipt of an application for a certificate of abandonment under this paragraph, the Commission may—

"(i) issue such certificate as requested in such application;

"(ii) refuse to issue such certificate,

"(iii) issue such certificate for a portion or portions of a line of coal pipeline described in the application; or

"(iv) issue such certificate for partial exercise only of the right or privilege of abandonment. The Commission may attach to the issuance of such certificate such terms and conditions as in its judgment the public convenience and necessity may require.

"(f) After the issuance of a certificate to a common carrier by coal pipeline under this paragraph, such common carrier may, without securing approval other than such certificate, comply with the terms and conditions contained in, or attached to the issuance of, such certificate, and proceed with the abandonment covered by such certificate.

"(g) Any abandonment which is contrary to any provision of this paragraph may be enjoined by an appropriate district court of the United States in a civil action commenced and maintained by the United States, the Commission, the attorney general or the transportation regulatory agency of any affected State or area, or any party in interest. Such district court may impose a civil penalty of not to exceed $5,000 on any person who knowingly authorizes, consents to, or permits any violation of this section.".

SECURITIES OF CARRIERS

SEC. 11. Section 20a(1) of the Interstate Commerce Act (49 U.S.C. 20a(1)) is amended by inserting immediately before the period at the end thereof the following: "or a common carrier by coal pipeline which is subject to this part, or any corporation organized for the purpose of engaging in transportation by coal pipeline subject to this part".

CROSSING OF LANDS AND RIGHTS-OF-WAY OF OTHER CARRIERS

SEC. 12. The Interstate Commerce Act (49 U.S.C. 1 et seq.) is amended by redesignating section 29 thereof as section 30 and by inserting immediately after section 28 the following new section:

"SEC. 29. (a) Whenever any common carrier by coal pipeline which holds a current and valid certificate of public convenience and necessity issued under section 1(18) of this part cannot acquire by negotiation the right to construct, operate, and maintain its coal pipeline under or across the lands or right-of-way of any other carrier subject to this Act, it may petition the Commission for an order directing such other carrier to grant the required easement.

"(b) The Commission may issue an order directing a carrier to grant an easement to a petitioning common carrier by coal pipeline if, after consultation with the Administrator of the Federal Energy Administration, the Administrator of the Environmental Protection Agency, and other appropriate Federal, State, and local officials, the Commission finds that granting such easement—

"(1) is in the national interest;

"(2) is consistent with the national transportation policy, as set forth in this Act; and

"(3) is consistent with Federal, State, and local laws relating to the protection of the environment.

"(c) In making the findings required by subsection (b) of this section with respect to a proposed easement, the Commission shall consider and make independent findings with respect to the extent to which the granting of such easement—

"(1) would help meet national needs for coal utilization without impairing transportation on a nationwide basis, considering, among other matters, alternate routes or means of transportation of coal and the relative cost of such alternative routes or means;

"(2) would expedite the transportation of coal by the petitioning common carrier by coal pipeline;

"(3) would involve disruption to the environment, as compared with disruption from other routes or modes of transportation or other methods of utilization of the coal resources involved; and

"(4) considers the balance between the energy needs of the area to be benefited by the coal pipeline and the water requirements and other impacts on the area from which the coal is to be transported.

The finding of the Commission as to whether a proposed easement is in the national interest shall be based on the record as a whole, taking into consideration each of the criteria set forth in this subsection.

"(d) The Commission shall have exclusive jurisdiction to hear and consider evidence with respect to the granting of easements under this section. A certificate of public convenience and necessity held by the petitioning common carrier by coal pipeline shall be presumptive evidence of the need for the facility but not as to the necessity for any particular crossing.

"(e) When the Commission has entered an order requiring the grant of a crossing right, the entitlement of the grantor to damages from the common carrier by coal pipeline and the extent of such damages shall be heard and determined in the district court of the United States for the district in which such proposed crossing is located. Damage awards shall include any loss of net earning capacity of the owner, lessee, or licensee of the property to be crossed foreseeably resulting from the employment of the certificate and the crossing authority held by such common carrier.".

TRANSFERS, MERGERS, AND ACQUISITIONS

SEC. 13. (a) The Interstate Commerce Act (49 U.S.C. 1 et seq.) is amended by inserting immediately after section 5b the following new section

"COAL PIPELINE TRANSFER, MERGER, AND ACQUISITION TRANSACTIONS

"SEC. 5c. (a) Any common carrier by coal pipeline subject to this part shall, prior to—

"(1) transferring any coal pipeline or other property to any person;

"(2) consolidating or merging its properties with the properties of another common carrier by coal pipeline;

"(3) purchasing, leasing, or contracting to operate any properties of another common carrier by coal pipeline; or

"(4) acquiring control of another common carrier by coal pipeline through ownership of its stock or otherwise,

submit an application to the Commission requesting the approval and authorization of the Commission, pursuant to subsection (b) of this section, to carry out such transaction. No such common carrier shall enter into any transaction described in the preceding sentence in the absence of such approval and authorization. For purposes of this subsection, the term 'control' has the meaning given such term under section 1(3)(b) of this part.

"(b) Upon receipt of an application setting forth a proposed transaction pursuant to subsection (a) of this section, the Commission shall determine, after an opportunity for an agency hearing on the record, whether such transaction is consistent with the public interest. If the Commission determines that, subject to such terms and conditions and such modifications as it finds just and reasonable, such transaction is consistent with the public interest, the Commission shall enter an order approving and authorizing such transaction, upon such terms and conditions and with such modifications.

"(c) In making its determination with respect to a proposed transaction under subsection (b) of this section, the Commission shall give weight to the following considerations, among others:

"(1) The effect of the proposed transaction upon adequate transportation service to the public.

"(2) The effect upon the public interest of the inclusion, or failure to include, other coal pipelines located in the area involved in the proposed transaction.

"(3) The total fixed charges resulting from the proposed transaction.

"(4) The interests of the common carrier employees affected.".

(b) Section 1(3)(B) of the Interstate Commerce Act (49 U.S.C. 1(3)(b)) is amended by striking out "section 5," and inserting in lieu thereof "section 1(8)(b), 5, 5c,".

REGULATION OF COMMON CARRIERS OF COAL BY PIPELINE

SEC. 14. The Interstate Commerce Act (49 U.S.C. 1 et seq.) is amended by redesignating section 30, as redesignated by this Act, as section 33, and by inserting immediately after section 29, as added by this Act, the following new sections:

"ANTITRUST REVIEW OF CERTIFICATION

"SEC. 30. (a) The Commission shall not issue any certificate of public convenience and necessity to a common carrier by coal pipeline under section 1(18) of this part unless it has received the advice of the Attorney General of the United States and the Federal Trade Commission that such action would not adversely affect competition, restrain trade, further monopolization, or otherwise create or maintain a situation in contravention of the antitrust laws. The actual or prospective employment of any contract commonly referred to as a through-put contract or a take or pay contract, or any other tariff or ratemaking procedure which may not lawfully be employed by other modes of coal transportation, shall be presumed to affect competition adversely and unlawfully. The execution or initiation by a common carrier by coal pipeline of any such contract, tariff, or procedure following the issuance of a certificate of public convenience and necessity to such common carrier shall require revocation of such certificate upon complaint of the Attorney General or an affected party to the district court of the United States for any district in which such common carrier is authorized to do business.

"(2) Nothing in this section shall be construed to bar the Attorney General or the Federal Trade Commission from challenging any anticompetitive situation involved in the operation of a coal pipeline.

"(3) Nothing contained in this section shall be construed to impair, amend, broaden, or modify any of the antitrust laws.

"(c) As used in this section, the term 'antitrust laws' includes—

"(1) the Act entitled 'An Act to protect trade and commerce against unlawful restraints and monopolies', approved July 2, 1890 (15 U.S.C. 1 et seq.);

"(2) the Act entitled 'An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes', approved October 15, 1914 (15 U.S.C. 12 et seq.);

"(3) the Federal Trade Commission Act (15 U.S.C. 41 et seq.);

"(4) sections 73 and 74 of the Act entitled 'An Act to reduce taxation, to provide revenue for the Government, and for other purposes', approved August 27, 1894 (15 U.S.C. 8 and 9); and

"(5) the Act of June 19, 1936, chapter 502 (15 U.S.C. 13, 13a, 13b, and 21a).

"ENFORCEMENT, PENALTIES, AND JUDICIAL REVIEW

"SEC. 31. (a) At the request of the Commission, the Attorney General may institute a civil action in the district court of the United States for the district in which the affected operation is located, for a restraining order, injunction, or other appropriate remedy to enforce any provision of section 1(8)(b), section 1(18), or section 5c of this part, or any regulation or order issued under the authority of any such section.

"(b) If any common carrier by coal pipeline fails to comply with any provision of section 1(8)(b), section 1(18), or section 5c of this part, or any regulation or order issued under the authority of any such section, after notice of such failure and expiration of any period allowed for corrective action, such common carrier shall be liable for a civil penalty of not more than $5,000 for each day of the continuance of such failure. The Commission may assess and collect any such penalty.

"(c) Any person who knowingly and willfully violates any provision of section 1(8)(b), section 1(18), or section 5c of this part, or any regulation or order issued under the authority of any such section, or makes any false statement, representation, or certification in any application, record, plan, or other document filed or required to be maintained under any such section shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than six months, or both.

"(d) Whenever a common carrier by coal pipeline violates any provision of section 1(8)(b), section 1(18), or section 5c of this part, or any regulation or order issued under the authority of any such section, any director, officer, or agent of such common carrier who authorized, ordered, or carried out such violation shall be subject to the same fine or imprisonment as provided for in subsection (c) of this section.

"(c) In any case involving a violation of section 5c of this Act, the Commission may—

"(1) order all parties to any merger or consolidation entered into in violation of such section 5c to take such steps as may be necessary to dissolve such merger or consolidation;

"(2) order any person acquiring any property, or any ownership interest in any property, in violation of such section 5c to divest itself of such property or ownership interest; and

"(3) issue such other orders as may be necessary to dissolve or set aside any transaction entered into in violation of such section 5c.

"(f) Petitions for judicial review shall be filed in the court of appeals of the United States for the circuit in which the coal pipeline originates.

"UNDERGROUND CONSTRUCTION OF COAL PIPELINES

"SEC. 32. All coal pipelines subject to this Act shall, to the maximum extent practicable, consistent with environmental protection, safety, and good engineering and technological practices, be located underground."

PIPELINE SAFETY

SEC. 15. The Secretary of Transportation shall, not later than 120 days after the date of enactment of this Act, prescribe such regulations as may be necessary and appropriate to apply the provisions of the Natural Gas Pipeline Safety Act of 1968 to coal pipeline facilities and the transportation of coal by pipeline. Such regulations shall include provisions—

(1) for subjecting coal pipeline facilities and the transportation of coal pipeline to the minimum Federal safety standards established pursuant to section 3 of such Act; or

(2) in appropriate cases, for applying the State certification and agreements procedure set forth in section 5 of such Act to such facilities and transportation.

CONSTRUCTION OF LAW

SEC. 16. Nothing in this Act shall be construed—

(1) as affecting in any way any existing law governing appropriation, use, or diversion of water, or any Federal, State, or private right to water;

(2) as expanding or diminishing Federal or State jurisdiction, responsibility, or interest in water resources development or control;

(3) as displacing, superseding, limiting, or modifying any interstate compact or the jurisdiction or responsibility of any legally established joint or common agency of two or more States or two or more States and the Federal Government;

(4) as superseding, modifying, or repealing, except as specifically set forth in this Act, existing laws applicable to the various Federal agencies which are authorized to develop

or participate in the development of water resources or to exercise licensing or regulatory functions in relation to water resources; or

(5) as granting a right to the use of water to a coal pipeline holding a certificate of convenience and necessity issued pursuant to section 1(18) of the Interstate Commerce Act, or as superseding State laws or regulations governing the acquisition and administration of water rights so as to excuse the holder of such a certification from complying with State law in acquiring a right-of-way to any water necessary for its coal pipeline project; nor shall any water right derived from Federal law, including but not limited to a reserved water right, be utilized as a source of water for a coal pipeline project without the consent of Congress.

By Mr. HART:

S. 1493. A bill to amend the Public Works and Economic Development Act to establish a comprehensive program to provide financial and technical assistance to States, local governments, and Indian tribes to manage impacts caused by energy development, and for other purposes; jointly, by unanimous consent, to the Committee on Environment and Public Works and the Committee on Governmental Affairs.

Mr. HART. Mr. President, today I am reintroducing the Inland Energy Development Impact Assistance Act, a bill which will establish a comprehensive program to provide both technical and financial assistance to States, local governments, and Indian tribes as they attempt to manage and control the adverse effect of energy development activities.

The unwanted side effects of mineral and energy production in this country—massive increases in demand for social services, public facilities and housing, environmental degradation, and less tangible effects such as uncontrollable increases in the incidence of crime and mental health problems—have plagued affected "boom" communities throughout this Nation's history. With our present need to increase domestic energy production, this problem can only get worse.

A good example of these adverse impacts can be found in Craig, Colo., which, until a few years ago, was a stable argricultural community. Today, Craig is a burgeoning boomtown. Its population has increased over 200 percent in the last 7 years, and the energy development, originally seen as an immense economic opportunity, now threatens the town's social, economic, and environmental foundations.

Presently, any community like Craig, faced with the threat of rapid growth as a result of energy development activity, has no place to go for help. The town's officials must spend months, even years, wandering through the maze of Federal agencies to find assistance. What they inevitably find is a handful of miscellaneous programs which may offer limited assistance—perhaps for housing, law enforcement, or sewage needs—but which are not geared to the special needs of an energy boomtown. The result is that the community goes to battle for its existence armed only with a few programs provided by agencies which have little or no knowledge of what the problems really are.

But, energy impacts are not solely a Colorado or a western problem. They can and will occur anywhere energy development swiftly overtakes a community. A single project—whether mining, processing, or transportation—can, almost overnight, bring thousands of new residents into a community. Thousands more may be involved with secondary services and industries, and the end result is often that the community's population may double or triple in such a short period of time that the necessary services and facilities cannot expand quickly enough to meet the demand. The result is chaos.

But, Mr. President, there is nothing inevitable about this situation. Even in light of the administration's intention to accelerate U.S. energy production, the historical pattern of social disruption need not necessarily accompany development. What is desperately needed is planning, financial, and technical assistance to set up a schedule for orderly development and to provide the community the preliminary financing necessary to expand its services before the crisis occurs and until the development activity starts to generate local revenues.

Legislation was signed into law last year to provide this sort of assistance to coastal States. The Inland Energy Development Impact Assistance Act, which I am reintroducing today, takes the second logical step by providing this assistance to those States—a large majority—not covered by the Coastal Zone Management Act, as amended last year.

There are those who will ask why it is the responsibility of the Federal Government to help solve the boomtown problem. There are several answers.

First, while the problems are local in nature, and actions to solve the problems must be taken by the affected communities, only the Federal Government has the capability to marshal and make available the technical and financial resources necessary for this task.

Second, and more specifically, much of the energy development now anticipated to occur in this country will occur either on Federal lands, or as a result of Federal encouragement and incentives, ranging from loan guarantees to research and demonstration grants. Recently the President proposed an effort to expand U.S. energy production, and pointed out that there are no acceptable alternatives to such a course of action. I agree with him, but to the extent that the Federal Government is able to influence development decisions, local communities will lose control over their own future. For this reason, it is imperative that the Federal Government take on the additional responsibility to provide technical assistance and loans to help impacted communities meet financial demands which occur long before the development activity starts to pay its own way.

Mr. President, the Inland Energy Development Impact Assistance Act will form the Federal-State-local partnership which is crucial to finding local solutions to the boomtown problem by:

First. Requiring the Secretary of Commerce to coordinate all existing applicable Federal assistance programs;

Second. Insuring that all Federal agencies responsible for energy production inform the Department of Commerce of any potential development activities well in advance of the actual development, to allow for local preparation;

Third. Making planning grants available to any affected State so that an accurate assessment of future needs can be made, and methods to meet those needs developed;

Fourth. Making Federal loans and loan guarantees available to those areas whose financial resources are not great enough to successfully expand public services or implement growth management plans; and

Five. Making emergency grants to those communities already experiencing an impact crisis due to unplanned energy development and uncontrolled growth.

In summary, this bill falls upon all levels of Government to do what each does best to solve the energy impact problem. The responsibility for planning and day-to-day management of the situation is left where it belongs—at the State and local level. It is here that hard decisions on the type of growth to be permitted must be made. Once that decision is made, however, the Federal Government should help provide both the technical help necessary for achieving local goals, and the front-end financing for the orderly development of community services and facilities.

Mr. President, the Western States, and particularly Colorado, have made significant progress towards finding a solution to the boomtown problem. Detailed studies have been undertaken, and plans made for the future. What remains is for the Federal Government to take on its share of the responsibility, as is proposed in the "Inland Energy Development Impact Assistance Act."

I ask unanimous consent that a letter from Gov. Thomas Judge of Montana, chairman of the Western Governors' Regional Energy Policy Office, to Dr James Schlesinger, an article from the March edition of Planning magazine entitled "Here's What Should Be Done About the Energy-Boom Towns" and the text of the "Inland Energy Development Impact Assistance Act," be printed in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 1493

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Inland Energy Development Impact Assistance Act of 1977."

SEC. 2. The Public Works and Economic Development Act of 1965 is amended by adding the following new title:

"INLAND ENERGY DEVELOPMENT IMPACT ASSISTANCE ACT OF 1977

"FINDINGS AND PURPOSES

"SEC. 1101. (a) The Congress finds that—

"(1) In order to achieve the national goal of greater energy self-sufficiency through a balanced program of increased domestic energy production, conservation of energy, and greater reliance on renewable energy resources, the Nation's energy resources must be developed in a manner consistent with

environmental protection and the preservation of the quality of life through sound policies of land use, fiscal planning, and growth management.

"(2) Since a substantial portion of the Nation's domestic energy resources will be developed on Federal land or as a result of Federal incentives or policies encouraging such development for the national benefit, and since the communities in the affected areas will be called upon to provide the full range of municipal facilities and services for the incoming population several years prior to the availability of revenues from new economic activity, it is appropriate for the Federal Government to assist State and local governments and Indian tribes by assuring timely front-end financing and sufficient funds for planning and growth management.

"(3) Such assistance should allow maximum flexibility and discretion to State and local governments and Indian tribes to respond to specific local needs but should also encourage growth management policies which conserve agricultural land, water, recreational, and wildlife resources, minimize energy use and increase reliance on renewable energy resources in new development and public facilities, protect the quality of life and the natural environment, minimize inflation through sound fiscal planning, and provide for diversified State, regional, and local economies.

"(4) Such assistance should include technical assistance to State and local governments and Indian tribes where needed, and should also strengthen and develop the capability at the State and local level for long-term production, measurement, analysis, and growth management.

"(5) Such an assistance program should facilitate the development of the capability at the Federal level to forecast and analyze long-term energy development, growth, and the factors which increase or mitigate socioeconomic impacts of growth; and clearly identify the comparative total project cost of alternative energy sources, including their environmental and socioeconomic costs.

"(6) In order to avoid duplication of effort, jurisdictional conflicts, and proliferation of bureaucracy, the program should consolidate all Federal efforts to assist State and local governments and Indian tribes to manage energy-related growth and Federal efforts to forecast and analyze energy-related growth within one Federal agency.

"(7) Any Federal agency responsible for approving an application for energy development activity located on Federal lands, utilizing Federal incentives, or developed under a grant from the Federal government should be assured that means exist to adequately plan for and provide the necessary new public facilities and services prior to the approval of such application.

"(b) The purpose of this Act is to establish a comprehensive energy development impact assistance program in the Department of Commerce to provide grants, loans, loan guarantees, and technical assistance to assist States and local governments and Indian tribes in the sound management of growth and other energy-related impacts, consistent with the policies of environmental protection, preservation of the quality in life, conservation of energy and other natural resources, greater reliance on renewable energy resources, and sound fiscal management as expressed herein.

"DEFINITIONS

"SEC. 1102. As used in this Act, the term—

"(1) "Energy resources" means anv natural resource which occurs (A) in lands in which the mineral interest therein is held in trust by the United States for the benefit of an Indian tribe, or (B) in lands in which the United States owns the energy resources in its entirety, or (C) developed as a result of Federal incentives including but not limited to, tax incentives, loan guarantees, or Federal contracts for research and demonstration or for energy supply and such term includes, but is not limited to, coal, oil and gas, oil shale, coal gasification and liquefaction, tar sands, biomass and other synthetic fuel sources, uranium, solar, geothermal steam, and associated geothermal resources as defined in the Geothermal Steam Act of 1970 (30 U.S.C. 1101(c)), and other renewable energy resources, but such term does not include resources which occur in the Outer Continental Shelf Lands Act (43 U.S.C. 1131 (a)).

"(2) "Energy development activity" means any activity, equipment, or facility which is or will be used primarily in the development, production, conversion, storage, processing, or transportation, of any energy resource. Such term includes, but is not limited to (A) electric generating plants; (B) petroleum refineries and associated facilities; (C) gasification plants; (D) facilities used for the transportation, conversion, treatment, transfer, or storage of liquefied natural gas; (E) uranium enrichment or nuclear fuel processing facilities; (F) oil and gas facilities, including assembly plants, storage depots, tank farms, crew and supply bases, and refining complexes; (G) pipelines and transmission facilities; and (H) terminals which are associated with any of the foregoing. Such terms does not include coastal energy activities as defined in the Coastal Zone Management Act of 1972.

"(3) "Additional direct employment" means the net increase in employment by firms conducting development, extractive, or onsite processing activities related to energy resources; and by firms offering specialized services to other firms conducting such activities.

"(4) "Public facilities and public services" means facilities or services which are financed, in whole or in part, by any State or political subdivision thereof, including, but not limited to, highways and secondary roads, parking, mass transit, parks and recreational facilities, governmental administration, fire and police protection, water supply, waste collection and treatment (including drainage), schools and education, and hospitals and health care. Such term may also include any other facility or service so financed which the Secretary finds is necessary to support increased population.

"(5) "Fund" means the Inland Energy Impact Fund established by section 1114 of this Act.

"(6) "Secretary" means the Secretary of the Department of Commerce.

"(7) "State" means any of the several States of the United States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, and any other territory or possession of the United States.

"(8) "Governor" means the chief executive officer of a State.

"(9) "Indian tribe" means an Indian tribe as defined in section 4 of Public Law 93-638 with the exception of Alaska Native villages.

"(10) "Chairman" means the chairman of an Indian tribe or tribal council or the chief executive of an Indian tribe.

"(11) "Local government" means any political subdivision of a State, or any special entity created by a State or a political subdivision which (in whole or in part) is located in, or has authority over the impacted area and which (A) has authority to levy taxes, or to establish and collect user fees, or (B) provides any public facility or public service which is financed in whole or in part by taxes or user fees. The term includes, but is not limited to any town, township, parish, borough, village, or other general purpose political subdivision of the State or any special unit or district of the foregoing of the State.

"(12) "State agency" means the public corporate body authorized under State law to provide or assist in the provision of public facilities.

"(13) "Technical assistance" means associated expertise relating to, but, not limited to, finances, legal matters, public facilities, land use, wildlife management, environmental protection, growth management, Government administration required to assist State and local government and Indian tribes in the preparation of the growth management plan and, any other expertise the Secretary finds will aid in the management of energy related growth.

"(14) "Impact crises" means those adverse conditions to be determined by the Secretary which have already been caused by rapid population growth associated with on-going energy development and which require the provision of additional necessary public facilities and services.

"(15) "Impact region" means the geographical boundaries within which energy development activity is planned to take place as designated by the Governor or chairman and approved by the Secretary. In those cases in which the proposed development and impact or population growth are anticipated to be located in different political jurisdictions within a State, the impact region shall be drawn to include both the energy development and area of impact. Impacted areas may be designated according to the discretion of the Governor or chairman provided that they do not overlap.

"(16) "Growth management plan" means that plan described in section 1104(b).

"(17) "Growth monitoring system" means that system required by section 1104(b)(5).

"INLAND ENERGY IMPACT PROGRAM

"SEC. 1103. (a) There is hereby established in the Department of Commerce an Inland Energy Development Impact Program (hereinafter referred to in this Act as the "program"). The Secretary shall administer and coordinate the program. Such program shall provide financial and technical assistance to meet the needs of impacted States, local governments, and Indian tribes resulting from energy development activities. Such assistance shall be in the form of:

"(1) technical assistance;

"(2) grants to the States and Indian tribes for developing a growth management plan and a growth monitoring plan as set forth in section 1104 of this Act;

"(3) loans and loan guarantees to States, Indian tribes, and local governments, for the provision and operation of new public facilities and services which may be required as a result of energy development activities, as set forth in section 1105 of this Act; and

"(4) grants to States, Indian tribes, and local governments experiencing an impact crisis as set forth in section 1106 of this Act,

"(b) In administering the program, the Secretary shall establish appropriate working arrangements with the chief executive officers of the several States, and agency heads of Federal agencies, including, but not limited to, the Department of Agriculture, the Environmental Protection Agency, the Federal Energy Administration, the Energy Research and Development Administration, the Department of the Interior, the Department of Housing and Urban Development, the Department of Labor, and the Department of the Treasury, to coordinate, expedite, and improve the availability of programs and services which can provide assistance to States, local governments, and Indian tribes impacted by growth associated with energy development activities, and shall report to Congress and the President within 120 days of the enactment of this Act the procedures

to be used to establish and continue such working arrangements.

"(c) Within six months of the date of enactment of this Act, the Secretary shall develop procedures which:

"(1) require any Federal agency receiving an application for approval of an energy development activity (A) located on Federal lands, (B) utilizing Federal incentives, or (C) developed under a grant from the Federal Government, to inform the Secretary not later than one month after the receipt of such application;

"(2) notify and inform the Governor of the affected State and the chairman of the affected Indian tribe not later than one month after receiving notification of the proposed development of the financial and technical assistance available under the provisions of this Act for mitigating the impacts caused by energy development activity; and

"(3) allow the Governor or the chairman, after receiving such notification from the Secretary to request planning grants for preparation of a growth management plan. Any such request shall be accompanied by a brief analysis of the anticipated social, economic, and environmental impacts of the proposed development activity, and such other information as the Secretary may deem necessary to determine the amount of planning assistance to be provided. Such planning grants shall be made to a Governor or chairman as soon as practicable, but not later than the time of the Federal approval of any use of Federal land, Federal incentive for development, or contract or grant for the development of energy resources, or not less than one year prior to the commencement of the construction of any major facility associated with the energy development activity, whichever is earlier.

"(d) To the extent that Federal funds are available under, or pursuant to, any other law with respect to providing for public facilities and services—

"(1) the Secretary shall administer this Act on the basis that financial assistance provided by this program shall be in addition to and not in lieu of any Federal funds which any State, Indian tribe, or unit of local government may obtain under any other law; and

"(2) the Secretary shall provide under this Act such services as may be necessary to assist States, Indian tribes, and units of local government in applying for assistance, under or pursuant to other laws, to meet impacts caused by energy development activities.

"PLANNING GRANTS

"SEC. 1104. (a) The Secretary shall provide grants from the Fund to the States and Indian tribes for up to 100 per centum of the cost of planning, growth management, regional coordination between and among different political subdivisions impacted by energy development, interagency coordination, technical assistance, and other governmental activities necessary for the preparation of a growth management plan. Grants shall not exceed $500,000 for any one designated impact region.

"(b) The growth management plan shall include, but not be limited to, the following:

"(1) a regional plan specifying the impact region as designated by the Governor or chairman where energy development activity is anticipated, the associated need for new or expanded public facilities and public services, the affected State agencies and political jurisdictions, and the means to be utilized in directing growth, including but not limited to zoning, land use ordinances, or similar administrative measures;

"(2) a fiscal management plan which formulates the means by which financial obligations are expected to be met, including the specific measures to be taken to assure that the costs of providing impact assistance are reflected in the costs of developing those energy resources;

"(3) plans for engineering feasibility studies, design studies for major new and additional public facilities and estimated costs, and estimated demand for and costs of expected additional public services;

"(4) an environmental plan identifying anticipated damage to the natural environment to result from the development of energy resources, including but not limited to soil erosion, water salinity, air pollution, water pollution, destruction of wildlife habitat, and planned mitigation measures;

"(5) a growth monitoring system to monitor energy-related growth and associated costs and to project anticipated growth in the impact region, on a continuing basis; and

"(6) a schedule of implementation which outlines when growth management policies are to be implemented relative to the schedule of energy development activities.

"(c) The growth management plan shall be revised biennially to reflect differences between anticipated and actual growth and needs.

"LOAN AND LOAN GUARANTEES

"SEC. 1105. (a) The Secretary shall provide financial assistance in the form of loans or loan guarantees from the Fund to States and Indian tribes for the provisions and operation of needed public facilities and public services not later than one month after the submission to the Secretary of a completed growth management plan prepared and adopted by the State, local government, or Indian tribe. If the Secretary deems the growth management plan to be incomplete, the Governor or chairman of an Indian tribe must be so notified as soon as practicable, but not later than one month following the receipt of the plan.

"(b) Such financial assistance shall be provided based on a formula established by regulations which the Secretary shall promulgate and, from time to time, revise, after consultation with the Governors, chairmen, units of local governments, and affected Federal agencies. The formula shall include, but not be limted to, the following factors:

"(1) the total population growth within the State or Indian reservation, or unit of local government projected to result from additional direct employment in development, extraction, or processing of energy resources;

"(2) a standardized unit cost of providing public facilities eligible under this Act, as determined by the Secretary;

"(3) regional differences in the costs of construction;

"(4) a factor relating the need for additional public facilities and services to the rate of population growth occurring in the impact area and caused by the activities in the development, extraction, or processing of energy resources;

"(5) the need for temporary facilities resulting from the extent to which the size of the temporary construction force for energy development activity exceeds the anticipated permanent work force;

"(6) the additional costs of a new community in those areas in which there are no existing communities suitably located, in order to protect the environment or quality of life in the area or conserve land or water;

"(7) a factor related to the annual increase in the cost of construction; and

"(8) other funds for planning or development assistance available to each applicant under State or Federal law.

"(c) The Secretary is authorized to increase an allotment for any State or Indian tribe under this section as may be required by the modification of the growth management plan.

"EMERGENCY GRANTS

"SEC. 1106. (a) The Secretary shall provide under the program emergency financial and technical assistance to States, local governments, or Indian tribes experiencing an impact crises resulting from energy development initiated within a five year period preceding the date of enactment of this Act. At the request of a Governor or chairman, the Secretary may provide a unit of local government with emergency financial and associated technical assistance for managing current adverse social, economic, or environmental impacts caused by energy development activities, except that such assistance shall—

"(1) be in accordance with sound growth management processes promoted by this Act;

"(2) shall be provided as part of a more comprehensive growth management process to be initiated as soon as practicable after the receipt of initial assistance; and

"(3) shall only be provided until the local government can comply with the provisions for the development of a growth management plan set forth in section 1104 of this Act or for eighteen months after the assistance is first received, whichever is earlier.

"(b) The Secretary shall administer loans, loan guarantees, and grants of the same type as otherwise provided in this Act for the purpose of providing emergency financial assistance to States, local governments, and Indian tribes experiencing an impact crisis, except that, upon finding that credit is otherwise unavailable on reasonable terms and there is no reasonable assurance of repayment, the Secretary is authorized to provide grants of up to 100 per centum of the costs of emergency financial assistance.

"USE OF IMPACT ASSISTANCE

"SEC. 1107. (a) The Governor of a State or chairman of an Indian tribe receiving an allotment of financial assistance under this Act shall determine the jurisdictions that will receive such assistance. The Governor may designate the State, a State agency, or any unit of local government to receive assistance directly from the Fund. If the State or State agency receives such assistance from the Fund, such assistance may be used in any combination of direct expenditures by the State or State agency, and grants, loans, and loan guarantees from the State or State agency to units of local government. Any allotted assistance not drawn upon within three years of its allotment shall revert to the Fund, except that the Secretary may extend the period of availability if he determines that delays in the exploitation of energy resources warrant such an extension. No State or State agency shall retain more than 5 per centum of the allotted assistance for its own purposes.

"(b) The Secretary is authorized to provide from the Fund to States, units of local government, and Indian tribes additional grants of up to 50 per centum to be utilized for public facilities and public services which significantly contribute to the national goals of greater energy conservation, enhanced utilization of renewable energy resources, and the preservation of natural resources. The Secretary shall devise criteria for awarding these grants. Such criteria shall include, but not be limited to improved energy conservation and the use of solar energy in public buildings, the acquisition of open space, parks or recreational areas, and the acquisition of wildlife sanctuaries: *Provided*, That the purchase or construction of such facilities is integrated into the growth management plan.

"(c) Notwithstanding any other provision of law, financial assistance under this Act may be used to provide the non-Federal share of the aggregate cost of any project or program otherwise funded by the Federal Government which requires a non-Federal share for such project or program; except that, such project or program provides planning or public facilities otherwise eligible for assistance under this Act.

"(d) The Governor of any State receiving

assistance from the Fund or any State in which units of local government are receiving such assistance and the chairman of any Indian tribe receiving such assistance shall certify each year that the proceeds are being used for the provision of public facilities consistent with the adoption of the growth management plan required.

"(e) The allotment of Federal impact assistance for the provision of public facilities shall be calculated as part of the process for planning and preparation of the growth management plan and shall be recalculated at the time of approval of any subsequent revisions of such plan, except that such energy development activities must have received any other Federal, State, and local review or approval which is required by Federal, State, or local law or regulations and which are determined by the Secretary to be essential to the timely conduct of such activities.

"NON-FEDERAL ENERGY RESOURCES

"SEC. 1108. Development of resources which do not qualify under the definitions in section 3 may be eligible for the assistance provided under this Act at the request of the Governor or chairman: *Provided*, That the energy development activity meets requirements for non-Federal participation to be developed by the Secretary based on the amount of activity and the impact on the State unit of local government, or Indian tribe. In order to qualify for assistance under this Act, all energy development activities must comply with Federal regulations governing mining of energy resources on Federal lands and, where more stringent, applicable State laws.

"LOAN TERMS

"SEC. 1109. (a) No loan or loan guarantee made under this Act shall be extended unless the Secretary finds that credit is not otherwise available on reasonable terms and that there is reasonable assurance of repayment. No guarantee shall be extended without the approval of the Secretary of the Treasury.

"(b) Loans made from the Fund shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration current market yields on municipal bonds but not less than (1) a rate determined by the Secretary of the Treasury taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans, adjusted to the nearest one-eighth of 1 per centum, plus (2) an allowance adequate in the judgment of the Secretary of the Treasury to cover administrative costs and probable losses under the program, except that amounts forgiven under subsection (g) of this section shall not be taken into account in determining such an allowance.

"(c) Loans shall not be guaranteed if they bear interest or other charges that the Secretary of the Treasury determines to be excessive, taking into account the range of rates for similar loans and the risks assumed by the United States. The Secretary of the Treasury shall charge and collect fees in amounts sufficient in his judgment to cover administrative costs and probable losses on guaranteed loans.

"(d) The interest paid on any obligation which is guaranteed under this Act, and received by the purchaser thereof (or the purchaser's successor in interest), shall be included in gross income for the purpose of chapter 1 of the Internal Revenue Code of 1954, as amended; but the Secretary may pay out of the Fund not more than such portion of the interest on such obligations as exceeds the amount of interest that would be due at the rate determined for direct loans in subsection (b).

"(e) Loans made or guaranteed shall be repaid as determined by the Secretary: *Provided*, That the amortization period shall not exceed twenty years.

"(f) In the event the borrower is unable to pay principal and interest when due, the Secretary is authorized to:

"(1) Modify appropriately the terms and conditions of such loan or guarantee;

"(2) refinance such loan;

"(3) make a supplemental loan to such State, Indian tribe, or local government, the proceeds of which shall be applied to the payment of principal and interest due under such loan or guarantee; or

"(4) make a grant to such state, Indian tribe, or local government, the proceeds of which shall be applied to the payment of principal and interest due under such loan or guarantee.

"(g) If the Secretary has taken action under paragraph (f) and finds that further action under paragraph (f) will not enable such State, Indian tribe, or local government to meet, within a reasonable time, its obligations under such loan or guarantee, the Secretary is authorized to forgive part or all of the principal of, and interest on, any loan made from the Fund or to pay part or all the outstanding principal of, and interest on, any obligation guaranteed by the Fund: *Provided*, That the Secretary receives adequate assurances that the borrower has made every reasonable effort, including increasing its tax effort, to meet its obligations under the provisions of this Act: *Provided further*, That the Secretary determines that the forgiveness of any obligation would be an appropriate recognition of any current and reasonably foreseeable future inability of the borrower to repay.

"(h) In connection with any loan made or guaranteed under this Act, the Secretary may require the State, Indian tribe, or unit of local government to provide such security as he deems appropriate. The Secretary may take such steps as he deems necessary to levy upon any collateral against which the United States has a security interest pursuant to this section to enforce any claim and obtain full satisfaction therefor the United States may have against the State, Indian tribe, or unit of local government pursuant to this Act.

"ACCOUNTING

"SEC. 1110. Recipients of financial assistance under this Act shall keep such records as the Secretary shall prescribe by regulation, including records which fully disclose the disposition of the proceeds of such assistance, the total cost of the provision of public facilities for which such assistance was used and such other records as the Secretary may require to facilitate an effective audit. The Secretary and the Comptroller General of the United States or their duly authorized representatives shall have access, for the purposes of audit, to such records.

"NONDISCRIMINATION

"SEC. 1111. No person in the United States shall on the grounds of race, color, religion, national origin, or sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity funded in whole or in part with funds made available under this Act.

"ENFORCEMENT

"SEC. 1112. Whenever the Secretary determines that a State, Indian tribe, or unit of local government which is a recipient of assistance from the Fund has failed to comply with the requirements of this Act or an applicable regulation, he shall notify the Governor of such State, chairman of such Indian tribe, or chief executive of such unit of local government of the noncompliance and shall request the Governor, chairman, or chief executive officer to secure compliance. If within a reasonable period the Governor, chairman, or chief executive officer fails or refuses to secure compliance, the Secretary is authorized to: (1) withdraw all or part of any outstanding allotments of financial assistance under this Act to the State or Indian tribe, (2) withhold all or part of any additional allotments of assistance under this Act that would otherwise be made, and (3) request the Attorney General to bring a civil action in a United States district court for such relief as may be appropriate, including but not limited to an action to recover the amount of assistance furnished under this Act which was not expended in accordance with this Act, or for mandatory or injunctive relief. Notwithstanding any other provision of law, Acts making appropriations may provide for the withholding of any payments from the United States to the State, Indian tribe, or unit of local government which may be or may become due pursuant to any law and offset the amount of such withheld payments against any claim the Secretary may have against the State, Indian tribe, or unit of local government pursuant to this Act.

"RESIDUAL REFUNDS

"SEC. 1113. Before approving any grants, loans, or loan guarantees under the provisions of this Act, the Secretary shall require the State, Indian tribe, or local government to provide adequate assurance of its ability to return to the United States any amounts which are not expended in accord with the purposes and requirements of this Act.

"FUND

"SEC. 1114. (a) There is hereby created within the Treasury an Inland Energy Impact Fund which shall be available to the Secretary without fiscal year limitation as a revolving fund for the purpose of this Act. The total of any expenses, grants, loans made, or loans guaranteed from the Fund in any fiscal year shall not exceed limitations specified in appropriation Acts, except that renewals of loans or extensions or maturities, or other refinancing of existing loans made or guaranteed under this Act (other than increases in principal amounts) shall not count as additional loans under these limitations.

"(b)(1) All amounts received by the Secretary as interest payments or repayment of principal on loans, fees, and any other moneys, property, or assets derived from operations, in connection with this Act shall be deposited in the Fund.

"(2) All grants, loans, expenses, including reimbursements to other Government accounts, and repayments pursuant to operations of the Secretary under this Act shall be paid from the Fund. If at any time the Secretary determines that moneys in the Fund exceed the present and any reasonably prospective future requirements of the Fund, such excess shall be transferred to the general fund of the Treasury. All moneys in the Fund on October 1, 1988, and all amounts subsequently received under this Act shall be deposited in the general fund of the Treasury.

"AUTHORIZATION

"SEC. 1115. There are authorized to be appropriated:

"(1) such sums, not to exceed $25,000,000 for each of the fiscal years ending September 30, 1978, and September 30, 1979, as may be necessary for emergency financial assistance under section 1106 of this Act, and

"(2) to the fund to remain available until September 30, 1988, such sums as may be necessary to the operation of this Act, not to exceed $1,000,000,000.

"INTERSTATE AND INTRASTATE COORDINATION

"SEC. 1116. (a) States are encouraged to give high priority (1) to coordinate impact planning, policies, and programs in contiguous interstate regions; (2) to developing and implementing unified impact policies in such regions including the sharing of new

public revenues derived from energy development for the management and mitigation of impact and the standardization of growth regulations; and (3) to develop and implement methods of intrastate coordination among different political subdivisions within a State for the purpose of sharing new public revenues from energy development and standardizing growth policies and regulations. The Secretary is authorized to make annual grants to the States of up to 90 per centum of the cost of such coordination, study, planning, and implementation for the first year and 50 per centum for each year thereafter.

"(b) The consent of the Congress is hereby given to two or more States to negotiate and enter into agreements or compacts, not in conflict with any law or treaty of the United States, for (1) developing and administering coordinated impact planning, policies, and programs, and (2) establishing such agencies, joint or otherwise, as the States may deem desirable for making effective such agreements and compacts. Such agreements or compacts shall be binding and obligatory upon any State or party thereto if ratified by Congress.

"(c) Each executive instrumentality which is established by an interstate agreement or compact pursuant to this section is encouraged to establish a Federal-State consultation procedure for the identification, examination, and cooperative resolution of mutual problems with respect to energy development. The Secretary, the Secretary of the Interior, the Chairman of the Council on Environmental Quality, and the Administrator of the Environmental Protection Agency, the Administrator of the Federal Energy Administration, the Administrator of the Energy Research and Development Administration, or their designated representatives, are authorized and directed to participate ex officio on behalf of the Federal Government, whenever any such Federal-State consultation is requested by such an instrumentality.

"(d) Prior to establishment of an interstate agreement or compact pursuant to this section, the Secretary is authorized to make grants to a multistate instrumentality or to a group of States for the purpose of creating temporary ad hoc planning and coordinating entities to—

"(1) coordinate impact planning, policies, and programs in contiguous interstate areas;

"(2) study, plan, and/or implement unified impact policies in such interstate areas; and

"(3) provide a vehicle for communication with Federal officials with regard to Federal activities affecting the coastal zone of such interstate areas.

The amount of such grants shall not exceed 90 per centum of the cost of creating and maintaining such an entity for one year. The Federal officials specified in subsection (c) of this section, or their designated representatives, are authorized and directed to participate ex officio on behalf of the Federal Government, upon the request of the parties to such ad hoc planning and coordinating entities. This subsection shall expire at the close of the five-year period beginning on the effective date of this section.

"LABOR STANDARDS

"SEC. 1117. All laborers and mechanics employed by contractors or subcontractors in the performance of construction work financed in whole or in part with funds received under this Act shall be paid wages or rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a-276a-5). The Secretary of Labor shall have, with respect to labor standards, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 13, 1934, as amended (48 Stat. 948; 40 U.S.C. 276(c)).

"REGULATIONS

"SEC. 1118. The Secretary is authorized to promulgate rules and regulations as he determines are necessary to carry out this Act.

"ADMINISTRATION

"SEC. 1119. The provisions of this Act shall be administered by the Secretary or his delegate without the employment of additional officers or employees of the Federal Government."

STATE OF MONTANA,
OFFICE OF THE GOVERNOR,
Helena, April 13, 1977.

Dr. JAMES R. SCHLESINGER,
Assistant to the President,
The White House,
Washington, D.C.

DEAR DR. SCHLESINGER: As Chairman of the Western Governors' Regional Energy Policy Office, I write to express several fundamental concerns we have concerning negative social and economic impacts on our citizens of energy resource development in the West. We believe that mitigation of these impacts will enhance development of these resources. We believe:

(1) Any decision to develop site-specific federal energy resources should incorporate consideration of the costs of the full range of the social and economic consequences as a part of the decision.

(2) Any federal decision to proceed with development of site-specific federal energy resources should trigger a simultaneous action to implement solutions to social and economic negative impacts. Such solutions should be timely, provided in a manner recognizing the demographic, institutional, and legal differences between states and should allow for the concurrence of the governor of each affected state as to the adequacy of such determination.

(3) All unusual costs of the negative social and economic impacts should be passed on to the ultimate consumer of the energy resources. Costs considered unusual are those creating a financial burden to local government that would require an increase in local general taxing levels over and above the highest taxing level in any of the previous five years immediately prior to the onset of such energy activities.

(4) Federal financial grants should be provided to local governments impacted by such activities to pay for community public facilities and services that can be identified as additional costs necessitated because of the activity and which cannot be passed on to the ultimate consumer of the energy resource. Such federal assistance would be provided only with the concurrence of the governor of each affected state.

(5) Congressional designation of a single federal lead agency as the primary point of contact by the state and local governments is necessary to assure coordination of the numerous federal domestic assistance programs provided by several federal departments and agencies.

Governors Castro of Arizona, Lamm of Colorado, Exon of Nebraska, Apodaca of New Mexico, Kneip of South Dakota, and Matheson of Utah join me in expressing these views.

Best regards.

Sincerely,

THOMAS L. JUDGE,
Chairman, Western Governors' Regional Energy Policy Office.

HERE'S WHAT SHOULD BE DONE ABOUT THE ENERGY-BOOM TOWNS

(By Lawrence O. Houstoun, Jr.)

No aspect of the confused energy development situation of the past four years rivals the problems of the communities and areas that are economically, fiscally, and environmentally impacted by energy booms. A recent Bureau of Mines study indicates that 200 noncoastal counties in the 22 states west of the Mississippi are currently impacted or will be within 10 years by power plant construction, coal and uranium mining, and other energy development activities. While no comparable data are available, it would be a good guess that there are another 50 to 75 such counties in the eastern half of the country. This article suggests certain measures that all levels of government should consider in dealing with this immensely complex problem of managing growth in areas where the county population growth rate may exceed 20 percent annually.

The people of Kemmerer, Wyoming, have firsthand experience with the problem of boom-town development. Kemmerer's roads and sidewalks had deteriorated even before the boom came. Its water system leaks. Its sewage treatment plant has long malfunctioned. Kemmerer's voluntary governing body now finds it can't keep the town's road equipment in repair or meet many other obligations because it can't pay wages competitive with the strip-mining and housing construction industries. Nor can it afford to hire a town manager, even a part-time one. Kemmerer is assumed to be fully empowered to deal with local problems. But as a practical matter, no one in Kemmerer knows how to do the paperwork necessary to get federal aid or to be able to participate in the Bureau of Land Management's environmental assessment process, which can serve as an early warning of impending coal-based booms.

Kemmerer's response to the boom has been to annex whatever outlying subdivisions are built, without the faintest idea as to whether annexation will help or hurt its tax situation or service capability now or in the future.

So, while everyone in Kemmerer is aware of the problem of too-rapid growth, no one has been able to do much about it. And this situation is being duplicated across the West, wherever strip mining or other energy-related activity has been introduced.

But I believe that some things can be done to help towns like Kemmerer. Help can come from four levels of government: local, areawide (regional), state, and federal. The most important of these is the state.

State responsibility and authority to act in boom areas are both great and essential. Because the state retains control over the authority and limitations of local governments, it can make available new, boom-related taxes, require or authorize cooperation among local governments, and determine what issues must be taken into consideration in the course of local decision making. Montana, for example, requires local governments to consider the fiscal implications of all new ordinances.

Moreover, many states regulate and therefore can influence the timing and location of power plants and mineral extraction industries. In the West, water supply regulation is a complex and vital growth-shaping tool that has yet to be applied systematically to population forecasting and growth management in energy-boom areas. In addition, the states have, after some 20 years of federal 701 comprehensive planning grants, fairly strong analytical capacity in their statewide planning units, a resource that can not only guide state investments but also help shape strong regional growth policies and planning processes.

The specific—and extraordinary—arrangements to be applied to growth management in boom areas will depend primarily on state leadership. In many instances, state staff may be needed to design an areawide plan-

ning organization (APO) appropriate to the geographic, economic, and political scale of the boom.

A special effort also should be made to develop citizen awareness of the multijurisdictional implications of the impending boom. Taxpayers in one county might benefit from increased tax revenues caused by the boom, for example; but certain municipalities and school districts may be faced with increased service burdens at the same time. The possible types of assistance available from state, federal, and private sources and the realities of the terms and timing of such assistance should be discussed in public forums, along with the contribution that planning and impact analysis can make in mitigating the boom and managing and balancing the growth.

The temptation immediately to throw money at boom problems should be avoided. State (and federal) officials need to recognize that ill-conceived investment in the kinds of infrastructure that ultimately will be required—roads, water and sewer systems, schools—often induce growth themselves. To minimize both the immediate adverse impacts and the long-term costs, state (and federal) aid for growth-related infrastructure development should be coordinated with areawide growth policies. The initial state and federal investments, therefore, should be in those areas—planning and management assistance—that will improve government's capability to produce such policies.

The urgency of the boom phenomenon is such as to warrant two small limitations on local autonomy. The first is that all municipalities, counties, and special districts (including school districts) should be required to participate in areawide planning and to support, financially a single, unified areawide planning organization.

Second, these jurisdictions should be required to submit to the APO all plans produced under state enabling legislation, applications for state and federal aid, annual budgets, and proposed changes in zoning and building codes for review and comment as to their conformity with areawide growth management policies.

State law establishing areawide planning organizations should specify that APOs will produce growth policies and growth management objectives that are usable by the participating jurisdictions as well as impact analyses—including consideration of costs, revenues, bonding positions, and service levels—of alternative growth policies.

All development-related planning conducted by state or substate planning districts—such as those for transportation, water and air quality, solid waste disposal, open space, housing, and economic development—should by law be based on these common growth policies.

The often irrational distribution of tax revenues and public expenditures related to the energy boom may require enactment of joint powers legislation to permit the pooling of tax ratables. A state tax on mineral extraction or power plant licensing may be distributed to affected local governments. Unfortunately, such aid is often too late in coming.

State permit systems should be used as a tool to support the state's overall growth management objectives.

Because the most disruptive community problems result from short-term, labor-intensive construction work, prudent state policy would require that housing and related amenities be provided by responsible companies to accommodate the construction work force and their families.

State governments should maintain an awareness—through the environmental assessment process and other devices—of the probable location, scale, timing, and nature of prospective booms. Having the state serve as the eyes and ears for affected communities can result in a year or two of lead time for planning.

Those are some suggestions for the states. What can be done at the area-wide level?

Boom impacts almost never can be contained within a single local jurisdiction. Spillovers are the rule, not the exception. In boom areas, where private development proceeds at a rate that overwhelms government's ability to keep pace, locally centered and functionally autonomous planning invites fiscal disaster, roaring inflation, and social costs ranging from increased crime and marital stress to higher energy costs and the backlash of voters.

If the state government assures the proper organizational arrangements and authority, the APO role can be strong. The most common objection to a significant role for APO's is the reluctance of local officials to accept any limitation on their authority. Developing an appropriate structure for local government representation is an essential early step. In boom areas, an effort should be made to include special-purpose districts as well as general governments in the APO. Fostering a sense of regional identity and recognition of common problems is an equally important early step.

The APO should be in a position to influence federal assistance and guide federal actions, serving as the federal A–95 clearinghouse and as the planning entity for all the relevant federal aid programs like solid waste and water quality management. The APO also must be able to produce areawide growth policies and keep them up to date.

One of the most important tasks for APOs is fiscal impact analysis. Fiscal impact analysis permits the calculation of costs, revenues, tax rates, and other fiscal consequences of a project on the budgets of local governments. It can be a valuable tool in minimizing risks of "development roulette." It can, for example, help decision makers determine each jurisdiction's potential for absorbing growth. It also can help local officials determine the location, timing, and type of residential and commercial developments so as to provide the greatest assurance that each will pay its way in terms of given service levels.

Finally, fiscal impact analysis can be useful in determining the most favorable form and location of development from the consumers' point of view. The wage levels available to pay housing, transportation, and tax costs are among the most reliable of all data in energy-boom areas. Developments can therefore be better planned so as to minimize some of the built-in costs associated with new projects.

The third type of jurisdiction involved in regulating booms is the local government itself. Local governments, however small and frail they may seem in the face of new and massive economic forces, remain the principal mechanism for controlling the boom.

Because local responsibilities are not different in kind in boom and non-boom areas, less attention will be devoted to them here. Suffice it to say that the imbalance between limited local capacity and the massive and areawide character of energy booms is such that all other levels of government must alter their methods substantially in order to enable local governments to cope.

Finally, we come to the federal role. Thus far, the federal response to the western boom problem has been segmented. In part, it includes the amended Mineral Leasing Act, which provides some additional financial assistance to states for community needs. But no governmentwide policies affecting energy-boom areas have been put into effect, although there is considerable potential for improving the way in which the various federal agencies do or do not relate to these problems.

One of these is the federal environmental impact statement. This whole process can provide an early warning that a boom is pending. Greater involvement of state, areawide, and local officials in the EIS process and more specific notification to governors and local officials of the probable eventualities are two ways the federal government could accelerate and improve care and local response.

Useful boom-related studies also have been done by Wyoming and other states using the dwindling federal comprehensive planning assistance (701) funds. Although Mineral Leasing Act amendments now authorize the use of leasing royalties for planning, no special point has been made of this change and little is expected. Nor is it clear that APOs are eligible to receive Mineral Leasing Act funds for planning or that any state would allocate funds to them.

Community development block grants may be used for local planning, but this presupposes that these small communities can prepare an application and meet statutory tests unrelated to boom problems and that the federal government will choose to fund them. Planning funds are needed in advance of the boom, and it is in the federal interest to assure their availability.

Federal funds theoretically are available for capital grants from the flexible block grants and EPA water quality improvement programs. But these often are not available for thinly populated, rapid-growth areas with little sophistication in grantsmanship. Federal financial aid for infrastructure should be conditioned on adequate planning and should be made available before the boom hits. HUD has agreed to make Wyoming the block grant applicant on behalf of its small towns. In all probability, however, priority use of existing federal programs will not prove adequate, suggesting the need for additional legislation to assure front-end planning and capital grants.

Another problem is that town managers and planners rarely are available to teach elected and appointed officials the intricacies of growth management, suggesting the need for a substantial investment in the special governmental know-how so urgently needed in boom areas.

These, then, are among the actions I would recommend that government at several levels should be taking to control the adverse effects of energy-related development in the West. For those seeking one-shot nostrums like a new federal financial assistance program, this list of responsibilities must seem distressingly complex. We won't solve the boomtown problem with more money alone. Pouring in federal or state aid sometimes can prove as mischievous as it is remedial, occasionally requiring higher levels of investment to compensate for a problem caused in part by the growth stimulated by the previous financial injection.

But it is possible to distinguish between wise and foolish development decisions, especially if responsible public officials and concerned citizens take the necessary actions to plan for more rational growth. Perhaps then we can avoid situations like that in Kemmerer and other western boom towns.

Mr. HART. Mr. President, I ask unanimous consent that the bill I have introduced be referred to both the Committee on Environment and Public Works and the Committee on Governmental Affairs, jointly.

Mr. President, this request meets with the approval of both the chairmen and ranking members of the Governmental

Affairs Committee and the Environment and Public Works Committee, as well as the leadership on both sides of the aisle.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

By Mr. PELL:

S. 1494. A bill to secure the rights of blind persons; to the Committee on the Judiciary.

Mr. PELL. Mr. President, today I am introducing legislation to assure to our Nation's blind and visually handicapped individuals the full civil rights which are necessary for them to pursue independent and productive lives and careers. It is a sad fact that blind Americans still suffer from discrimination in the areas of transportation, housing, and public accommodations, and that these discriminatory practices can severely limit the independence of a blind or visually handicapped individual, in some cases posing more of a handicap than the blindness itself.

This legislation was first proposed to me by a distinguished Rhode Island activist for human rights, the late Albert Piccolo, whose poignant letter so clearly stated the facts of life with which so many blind persons have to contend:

This legislation would undoubtedly prevent the frustration, disappointment, and discouragement which quite frequently is the result of our efforts to obtain employment, to secure adequate housing, to gain admission to colleges and technical schools, and to use the various means of transportation and public accommodations. These cherished privileges which are taken for granted by most citizens, if denied to us, can cause unnecessary hardship, a lack of opportunity, and an inability to travel freely and independently.

With the passing of Mr. Piccolo, this endeavor has been championed by a distinguished Rhode Island optometrist who is now himself blind, Dr. Hayvis Woolf, whose concern on behalf of this bill has been deep and steady.

This legislation would simply guarantee visually handicapped individuals an equal right with everybody else to use these services. Without access to routine transportation services, without access to hotels and to equal housing opportunities, and without access to restaurants or business establishments, even the most talented sighted person would suffer in the world of business and commerce. To have a visual handicap and then to be subjected to these forms of discrimination, is to be faced with the most pernicious impediments against personal success.

This legislation also calls upon the President to proclaim a "National White Cane Safety Day" each year to bring pedestrian safety to the public's attention.

I am hopeful that in this year of the White House Conference on Handicapped Individuals, all of us will be more aware of the importance of removing every barrier to the self-realizations of each handicapped person, and that this legislation will be fully considered by the Senate in that light and perspective.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1494

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Bill of Rights of the Blind Act".

POLICY FINDINGS

SEC. 2. The Congress hereby finds and declares that the denial to blind persons of equal access to places or facilities of public accommodation and transportation, to business establishments, and to housing has the effect of impairing the interstate commerce of the United States, both by obstructing the free flow of goods and persons and by preventing blind persons from achieving their maximum potential independence and productivity. To remedy this inequitable and unproductive condition, it is the policy and purpose of this Act to utilize the full authority of the United States Government to secure the civil rights of blind persons from unfair discrimination in accommodations, transportation, business, and housing.

PROHIBITIONS

SEC. 3. (a) No common carrier by air, rail, water, or motor vehicle, or other mode of public transportation, engaged in or affecting interstate or foreign commerce, shall refuse to accept as a passenger any person because of such person's blindness, or because of such person's use of a dog guide or other guidance instrumentality, nor shall any such blind person be required to pay an additional or special fee for the transport of such dog guide or other guidance instrumentality.

(b) No owner or operator of any place of public accommodation, as defined by section 201(b) of the Civil Rights Act of 1964 (42 U.S.C. 2000a(b)), or of any public facility or building covered by title III of such Act, or of any facility or building belonging to the United States or its territories, or the District of Columbia, shall refuse to admit or serve any person because of such person's blindness, or because of such person's use of a dog guide or other guidance instrumentality, nor shall any such blind person be required to pay an additional or special fee for the admission of such dog guide or other guidance instrumentality to such place of public accommodation or to such public facility or building.

(c) No owner or operator of any housing facility or accommodation subject to the provisions of title VIII of the Act of April 11, 1968 (82 Stat. 81; 42 U.S.C. 3601 et seq.), shall refuse to admit any person, as a tenant or otherwise, because of such person's blindness, or because of such person's use of a dog guide or other guidance instrumentality, nor shall any such blind person be required to pay an additional or specal fee, other than a security deposit for damages, for the admission of such dog guide or other guidance instrumentality.

(d) In addition, no person shall engage in any subterfuge, device, or covert strategy for the purpose of achieving indirectly any of the forms of discrimination prohibited by subsections (a), (b), and (c).

WHITE CANE SAFETY DAY

SEC. 4. The President of the United States shall take suitable notice of October 15 as White Cane Safety Day. He shall issue a proclamation in which—

(1) he comments upon the significance of the white cane;

(2) he calls upon the citizens of the Nation to observe the provisions of the white cane law and to take precautions necessary to the safety of the disabled;

(3) he reminds the citizens of the Nation of the policies with respect to the disabled herein declared and urges the citizens to cooperate in giving effect to them;

(4) he emphasizes the need of the citizens to be aware of the presence of disabled persons in the community and to keep safe and functional for the disabled the streets, highways, sidewalks, walkways, public buildings, public facilities, other public places, places of public accommodation, amusement, and resort, and other places to which the public is invited, and to offer assistance to disabled persons upon appropriate occasions.

SANCTIONS

SEC. 5. (a) Any person, firm, corporation, or association who shall violate the provisions of this Act shall be liable to the blind person or persons involved for damages caused thereby, for punitive damages not to exceed $10,000, for each violation, and for reasonable attorneys' fees and other costs of litigation. In determining the extent to which punitive damages shall be imposed the court shall consider the extent to which the offense is part of an ongoing, repeated, or intentional practice, the extent to which such blind person is thereby deprived of the opportunity to lead a full and productive life, the number of persons adversely affected, and such other factors as the court may deem relevant.

(b) Suits for damages or other legal, equitable, or declaratory relief may be maintained in the appropriate United States district court without regard to the amount in controversy or to the diversity of citizenship of the parties. No such action shall be brought later than three years after the date of occurrence of the violation.

(c) Nothing in this Act shall be construed to supersede the laws of any State or territory, or of the District of Columbia. No person shall recover under this Act for harms resulting from actions or conduct which constitute violations of this Act, if recovery has been had under the laws of any State or territory, or of the District of Columbia, relating to discrimination on the basis of blindness, for the same actions or conduct.

(d) It shall be a defense to a claim under this Act that—

(1) the claimant, at the time he sought entry, access, or service, did not have his guide dog or other guidance instrumentality under reasonable control; or

(2) that the claimant was disorderly, abusive, intoxicated, or was excluded from entry, access, or service for other good and substantial reasons not in conflict with the policies and purposes of this Act.

DEFINITIONS

SEC. 6. As used in this Act, the term—

(1) "blind person" means a person whose central visual acuity does not exceed 20/200 in the better eye, with corrective lenses, as measured by the Snellen test, or a central visual acuity greater than 20/200 but with a limitation in the field of vision such that the widest diameter of the visual field subtends an angle not greater than twenty degrees;

(2) "dog guide" means a dog which is fitted with a special harness or collar suitable as an aid to the mobility of a blind person, which has been specifically and adequately trained to serve blind persons, and which is in use by a blind person as an aid to his personal travel, movement, or safety; and

(3) "other guidance instrumentality" means an animal or device specifically and adequately trained or designed for use by blind persons as an aid to personal travel, movement, or safety.

By Mr. PACKWOOD (for himself, Mr. BELLMON, Mr. CASE, Mr. CHAFEE, Mr. DOMENICI, Mr. DURKIN, Mr. GRAVEL, Mr. HART, Mr. HATHAWAY, Mr. JAVITS, Mr. LEAHY, Mr. PELL, Mr. RIBICOFF, Mr. SARBANES, Mr. STAFFORD, Mr. STEVENSON, and Mr. THURMOND):

S. 1495. A bill to authorize the Secretary of Transportation to make grants for the construction of bikeways; to the Committee on Environment and Public Works.

THE BIKEWAY TRANSPORTATION ACT OF 1977

Mr. PACKWOOD. Mr. President, last year, Congress appropriated approximately $51 for each car, truck, and bus in the United States for the improvement of our Nation's highways. We spend $7 billion annually on these machines which pollute the air, clog our streets, and have been the primary reason for the energy crisis and our dependence on foreign nations for fuel.

On the other hand, we provided for the expenditure of an amount equivalent to only 12½ cents per bicycle to encourage their use. One would think the Congress is trying to encourage the use of automobiles and discourage the use of bicycles. We will spend in 1978 as much on the reconstruction of the highway between Key West and Key Largo, Fla., as we did last year on bicycle paths and other bike facilities in the entire Nation.

Bicycles create no pollution. They use no energy. They improve the fitness of the cyclist. They reduce rush hour traffic. They are enjoyable to ride. At no time in our past has there been a more appropriate time to encourage the use of bicycles. This is the era of urban bicycle use and Congress needs to provide some leadership in its encouragement.

After we were able to appropriate $6 million last year for bikeway demonstration projects nearly 500 applications for money came in from all 50 States. This figure should have an impact on every Senator. It means that an average State had 10 bikeway projects that it wanted funded. We were only able to provide money for 41 projects, so each State still has an average of 9 projects that local governments feel are deserving bikeway construction or improvements.

Today I propose that we spend $45 million, or 55 cents per bicycle, on an expanded version of this demonstration project. This money should develop bikeways for both commuting and recreational uses. It should emphasize safety. Bikeways need to be built for transportation purposes because bikes are no longer just the toys of children. The clear increase in bicycle use and ownership has been in the 18 to 45 age category. If you look at bicycle racks near any significant urban employment center you will note that they are usually crowded beyond capacity.

Under my proposal, the money would come from two sources. Half would be appropriated from the highway trust fund and the other half would be appropriated from the U.S. Treasury. In the past, an amount of money in the trust fund has been made available for use by State and local governments for bikeways, but there has never been a guarantee that the money would be so used. The $45 million I propose would be used for bikeways only. In order to insure the commitment of any project by the local government, the Federal Government will contribute 80 percent of the funding for any one project. The rest must be provided by the State or local government.

If we appropriate this $45 million it would still only provide for the construction of roughly one-third of the bikeway projects applied for last year. We would still only be funding the best possible projects. And, of course, the best ideas for bikeways are just now being developed. These ideas include converting abandoned railroad tracks and stations to bikeways and stop-off centers, using towpaths next to old transportation canals, or the rights-of-way of irrigation and drainage canals. San Marco, Calif., needs money to provide tricycles to a senior citizen community center. Other communities are putting bikeways adjacent to urban streams. We now have a coast-to-coast bikeway from Astoria, Oreg., to Washington, D.C. Even urban buses are developing the means to quickly hookup and detach bicycles at specified stops. Washington's Metro subway hopes to provide extensive bicycle lockup facilities at several of its stations.

These and other creative proposals can be funded by the passage of this relatively modest expenditure of money. I ask that each Senator investigate the projects proposed in his State and that he support this plan to encourage an alternative transportation system.

I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1495

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Bikeway Transportation Act of 1977".

SEC. 2. For the purpose of this Act, the term—

(1) "Secretary" means the Secretary of Transportation;

(2) "bikeway" means a bicycle lane or path, a bicycle traffic control device, a shelter or a parking or a support facility to serve bicycles and persons using bicycles;

(3) "urban territory" means an area so designated by the Bureau of the Census within boundaries to be fixed by responsible State and local officials in cooperation with each other, subject to approval by the Secretary. Such boundaries shall, as a minimum, encompass the area of each urban territory within a State as designated by the Bureau of the Census; and

(4) "State" means any of the fifty States, the District of Columbia, or Puerto Rico.

SEC. 3. (a) The Secretary is authorized to make grants to States and to municipalities wholly or partly within urban territories for projects for the construction of bikeways. Such bikeways shall be for commuting and for recreational purposes. Such bikeways shall be located in urban territories or shall connect such areas with other urban territories or national, State or local parks, seashores or recreational areas.

(b) The Federal share of any project for the construction of a bikeway shall be 80 per centum of the total cost of such project. The remaining 20 per centum of such cost shall be paid by the grantee.

(c) No grant shall be made under authority of this Act unless such bikeway project is in accordance with a continuing comprehensive transportation planning process carried on cooperatively by States and local communities in accordance with section 134 of title 23, of the United States Code.

(d) The Secretary shall establish by regulation, construction standards for bikeway projects for which grants are authorized by this Act, and shall establish by regulation such other requirements as may be necessary to carry out this Act.

SEC. 4. Grants made under this Act shall be in addition to, and not in lieu of, any sums available for bicycle projects under section 217 of title 23, United States Code.

SEC. 5. There is authorized to be appropriated to the Secretary to carry out this Act, $22,500,000 per fiscal year out of the Highway Trust Fund, and $22,500,000 per fiscal year out of any other money in the Treasury not otherwise appropriated.

By Mr. WILLIAMS:

S. 1497. A bill to incorporate the U.S. Coastal Cadets; to the Committee on the Judiciary.

Mr. WILLIAMS. Mr. President, I am pleased to introduce a measure which is designed to provide a Federal charter to a most deserving organization, the U.S. Coastal Cadets. I have worked closely with officials of this organization and know of their dedication to the young people they lead and represent, and of their determination to make their program a model of highest esteem for the cadets.

The U.S. Coastal Cadets was established in 1969, and incorporated in the State of New Jersey in 1970. It is a nonprofit, educational organization designed to provide youngsters, both boys and girls, with a working knowledge of subjects related to the maritime services. There are approximately 2,000 young people around the country presently involved in the program, with participation rapidly growing and expanding.

The USCC has three different fields of study which a cadet may choose to follow. They are the naval sea, naval aviation, and marine detachments. Each of these fields is designed to give a cadet a well-rounded program. Since its establishment, the USCC has sent youngsters to the naval firefighting school and has aided boaters and participated in rescue efforts in and around the water, particularly the waters of New Jersey and New York.

The U.S. Coastal Cadets has training units operating in Monmouth, Middlesex, Union, Hudson, and Bergen Counties in the State of New Jersey. It also has units formed and operating in the States of California, Missouri, New York, Florida, Texas, Pennsylvania, and the New England States. I have been contacted by leaders of the organizations in those States, urging expeditious consideration of this legislation.

Mr. President, the U.S. Coastal Cadets is in the midst of an extensive expansion program in New Jersey and throughout the country. Because of this rapid

growth, officials of the program are in need of educational materials and training equipment in order that they may continue to provide the cadets with proper training. A congressional charter would make this commendable organization eligible for the Federal surplus equipment they are anxious to acquire.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1497

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That John Vidnanski, Jr., Perth Amboy, New Jersey; Lloyd Pennell, Rahway, New Jersey; Matthew S. Piekarski, Perth Amboy, New Jersey; William J. O'Neill, Carteret, New Jersey; Joseph Russo, Winfield, New Jersey; and their successors, are hereby created and declared to be a body corporate by the name of the "United States Coastal Cadets", a nonprofit corporation, (hereafter in this Act referred to as the "corporation") and by such name shall be known and have perpetual succession and the powers and limitations contained in this Act.

SEC. 2. The persons named in the first section of this Act are authorized to complete the organization of the corporation by the selection of officers and employees, the adoption of a constitution and bylaws, not inconsistent with this Act, and the doing of such other acts as may be necessary for such purpose.

SEC. 3. The object and purposes of the corporation shall be to uphold and defend the Constitution of the United States, to set up basic training units in the State of New Jersey and the other 49 States in the United States of America, and to educate and encourage boys and girls beginning at the age of 12 years to develop interests and engage in seamanship and to further the common interest of its members in related areas.

SEC. 4. The corporation shall have the power—

(1) to hold, sell, assign, transfer, mortgage, pledge or otherwise dispose of real estate;

(2) to contract and be contracted with, borrow money and issue notes and mortgages;

(3) to sue and be sued, complain and defend in any court of competent jurisdiction;

(4) to adopt, alter, and use a corporate seal;

(5) to take and hold gifts, legacies, and devices which will further the corporate purposes;

(6) to adopt, amend, and alter a constitution and bylaws, not inconsistent with the laws of the United States or any State in which the corporation is to operate, for the management of its property and the regulation of its affairs;

(7) to charge and collect membership dues, subscription fees, and receive contributions or grants of money or property to be devoted to the carrying out of its purposes;

(8) to establish, regulate, and maintain offices for the conduct of the affairs of the corporation;

(9) to publish a magazine or other publications;

(10) to adopt emblems and badges; and

(11) to do any and all lawful acts and things necessary or desirable in carrying out the objects and purposes of the corporation.

SEC. 5. Eligibility for membership in the corporation and the rights, privileges, and designation of classes of members shall be as set forth in the constitution and bylaws of the corporation.

SEC. 6. (a) The principal office of the corporation shall be located in Elizabeth, New Jersey, or in such other place as may be determined by the corporation; but the activities of the corporation shall not be confined to that place, but may be conducted through the various States, District of Columbia, and territories and possessions of the United States.

(b) The corporation shall maintain at all times in the District of Columbia a designated agent authorized to accept service of process for the corporation. Service upon, or notice mailed to the business address of, such agent, shall be deemed notice to or service upon the corporation.

SEC. 7. The corporation and its regional districts and local branches shall have the sole and exclusive right to use in carrying out its purposes the name "United States Coastal Cadets". Nothing in this section shall be construed to interfere or conflict with established or vested rights.

SEC. 8. (a) No part of the income or assets of the corporation shall inure to any of its members or officers as such, or be distributed to them during the life of the corporation or upon its dissolution or final liquidation. Nothing in this subsection, however, shall be construed to prevent the payment of compensation to officers of the corporation or reimbursement for actual necessary expenses in amounts approved by the board of directors of the corporation.

(b) The corporation shall not make loans or advances to its members, officers, directors, or employees. Any director who votes for or assents to the making of such a loan or advance and any officer who participates in the making of such a loan or advance, shall be jointly and severally liable to the coporation for the amount of such loan until the repayment thereof.

SEC. 9. The corporation shall be liable for the acts of its officers and agents when acting within the scope of their authority.

SEC. 10. The corporation shall keep correct and complete books and records of account and shall keep minutes of the proceedings of its national convention and board of directors. All books and records of the corporation may be inspected by any member, or his agent or attorney, for any proper purpose, at any reasonable time.

SEC. 11. The first section of the Act entitled "An Act to provide for audit of accounts of private corporations established under Federal law", approved August 30, 1964 (36 U.S.C. 1101) is amended by adding at the end thereof the following:

"(50) United States Coastal Cadets.".

SEC. 12. Upon dissolution or final liquidation of the corporation, after discharge or satisfaction of all outstanding obligations and liabilities, the remaining assets of the corporation may be distributed in accordance with the determination of the board of directors and in compliance with this Act and all other Federal and State laws applicable thereto.

SEC. 13. The corporation shall have no power to issue any shares of stock or to declare or pay any dividends.

SEC. 14. The corporation and its officers and directors as such shall not contribute to or otherwise support or assist any political party or candidate for public office.

SEC. 15. The corporation may acquire the assets of the United States Coastal Cadets, a corporation organized under the laws of the State of New Jersey, upon discharging or satisfactorily providing for the payment and discharge of all of the liability of such corporation organized under the laws of such State and upon complying with all laws of the State of New Jersey applicable thereto.

SEC. 16. The right to alter, amend or repeal this Act is expressly reserved to the Congress.

By Mr. WILLIAMS:

S. 1498. A bill to prohibit the sale of children in interstate and foreign commerce; to the Committee on the Judiciary.

ADOPTION PROTECTION ACT OF 1977

Mr. WILLIAMS. Mr. President, I am today introducing legislation that would amend title 18 of the United States Code for the purpose of prohibiting the sale of adoptable children in interstate and foreign commerce.

The thought of selling children is completely abhorrent. What I find even more shocking and objectionable, however, is that this practice has developed into a flourishing enterprise that reaches into every area of the United States, and which has, in recent years, become international in scope. It is this interstate and international aspect of the problem which makes Federal action necessary.

The black market of baby selling exists primarily for the benefit of a small but active number of individuals, including unscrupulous unlicensed adoption brokers who are willing to exploit the emotions and uncertainties of their clients. Unwed mothers, confused and uninformed, are cajoled and misled into giving up their newly born children for sale. The misfortunes, fears, hopes, and frustrations of couples who have been unable to adopt children through legitimate adoption agencies are played upon until the couple, in desperation, is willing to pay almost any price for aid in securing a child. The greatest and most tragic victim is the child sold. The broker involved in this sort of transaction is seldom concerned with the qualifications of the prospective parents for adopting a child. More importantly, the broker rarely provides a reliable and complete medical history from the mother, possibly concealing serious diseases which could cause permanent harm if not treated promptly. The motive of those involved in the black market is not humanitarian concern for the natural mother and prospective parents. The motive is one of personal profit.

The methods employed in obtaining a baby for sale fit into a recurring pattern. A pregnant woman, usually an unwed teen, is contacted by an adoption broker or referred to him by contacts in abortion clinics and private medical practices. She is offered the concealment of her pregnancy and a promise for a good home for her child. In the last 3 months of her pregnancy she is brought to a city on the east coast. She is provided with food, shelter, and an allowance, often allowing her to live in a degree of luxury she has never before encountered. All expenses connected with the delivery are paid by the "baby broker." After the birth a surrender agreement is signed and the child is transferred to the previously selected parents. If the mother should attempt to extricate herself from the arrangement, she is threatened with the prospect of reimbursing the broker for all the expenses incurred over the past few months. This type of pressure almost invariably results in the surrender of the child.

For his role in providing the prospective parents with a child the broker receives what is referred to as a finder fee. This fee, varying in amount, has been known to range as high as $40,000. As in most commodity markets, and we must remember that these children are indeed being treated as commodities, the price is determined by the economic forces of supply and demand. I cannot imagine a clearer and more concise indictment of the immorality of the tragic practice of selling children than this. We are not dealing with the sale of goods and services in this black market; we are dealing with the sale of human life and the future course that life will take. We are witnessing the sale of an individual's identity. We must not allow it to continue.

I believe that Federal action in this matter is warranted and urgently needed. The regular transporting of women and babies between States and across national boundaries makes this black market sale an interstate crime. Agencies of individual States are not capable of conducting the necessary investigations into the majority of cases involving other States and countries. It has been pointed out that in cases involving the importation of women from foreign countries to give up their babies, the State Department, Immigration, and others may hesitate to commit their resources because there has been no violation of existing Federal law. Lack of Federal action in the past has contributed greatly to the freedom of those engaging in the sale of children to continue and expand their activity in this area. The legislation that I am introducing today is intended to provide the needed Federal action which until now has been nonexistent.

The thrust of this proposal is to prohibit the adoption of any child through arrangements that have not been made through licensed agencies and individuals, but rather have been accomplished by the use of barter and coercion.

Mr. President, these newly born infants are defenseless in this matter which will decide the direction their lives will take. They are the future, and must be protected. We must protect them.

I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1498

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Adoption Protection Act of 1977".

SEC. 2. Title 18 of the United States Code is amended by inserting immediately after chapter 119 the following:

"Chapter 120.—PLACEMENT OF CHILDREN FOR PERMANENT CARE OR ADOPTION IN INTERSTATE COMMERCE

"Sec.
"2521. Definitions.
"2522. Placing or causing the placement of a child for compensation.

"§ 2521. Definitions.

"As used in this chapter the term—

"(1) 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States;

"(2) 'child' means any individual who has not attained the age of 16 at the time such child is placed for permanent care or adoption; and

"(3) 'permanent care' means that a child is receiving a majority of his support for a period of not less than one year by any person who is not a parent, grandparent, sibling, aunt, uncle, guardian or a person authorized by law to provide such support or to place children for adoption.

"§ 2522. Placing or causing the placement of a child for compensation.

"(a) Except as provided in subsections (c) and (d) any person who, directly or indirectly, knowingly solicits, provides, or receives anything of monetary value or the promise of anything of monetary value for seeking or causing to place, placing, or arranging to place any child for permanent care or adoption shall be fined not more than $15,000 or imprisoned not more than 10 years, or both.

"(b) The provisions of subsection (a) shall apply in cases in which the child (including the 'in utero' child) is transported in interstate or foreign commerce.

"(c) The provisions of subsection (a) shall not apply to any person who is the parent, guardian, or person seeking to adopt or provide permanent care for a child, or a person authorized by law to place children for adoption if the monetary value solicited or received is—

"(1) not unreasonable (as determined by a court of competent jurisdiction), and

"(2) solicited or received solely for services provided in connection with the placement or adoption.

"(d) The provisions of subsection (a) shall not apply to any person who provides legal services which are solely in connection with the preparation and execution of documents relating to the placement or adoption if the monetary value solicited or received is not unreasonable (as determined by a court of competent jurisdiction).".

SEC. 3. The tables of chapters for part 1 of title 18 of the United States Code and for such title are each amended by inserting immediately after item 119 the following new item:

"120. Placement of Children for Permanent Care or Adoption in Interstate Commerce-------- 2521".

By Mr. MATSUNAGA:

S. 1499. A bill to amend the Child Abuse Prevention and Treatment Act to prohibit the sexual exploitation of children and the transportation and dissemination of photographs or films depicting such exploitation; to the Committee on the Judiciary.

Mr. MATSUNAGA. Mr. President, I am today introducing an amended version of the Child Exploitation Prevention Act. This bill, like S. 1040 introduced earlier by the distinguished Senator from Delaware (Mr. ROTH), would impose criminal penalties on those who photograph, or permit to be photographed, children under 16 years of age, performing or simulating certain proscribed sexual acts. Also subject to criminal penalties would be those who transport and disseminate pornographic material involving children through interstate or foreign commerce. My bill is identical to S. 1040, except for the penalties imposed. I am proposing that the fines for permitting and actually photographing on one hand, and for transporting and disseminating materials on the other, be equalized and that in both cases the minimum-maximum sentences be not less than 1 year and not more than 5 years.

I proposed equalized fines because the person who permits the child to engage in sexual activity or who actually photographs the child is no more an exploiter than the person who transports or sells pornographic materials utilizing children. The production of child pornography is a single transaction—from the adult—in some cases the parent—who permits a child to be photographed, to the dealer who by stocking the material for sale encourages such photography. In fact, it is in the porno market that the profits are made and our laws should punish equally all those who seek to exploit children in any manner.

The use of children in pornographic literature has grown from the greed of porno peddlers to have an edge on the competition—a purely economic motivation. Nothing will reduce the number of sex entrepreneurs faster than the possibility of criminal prosecution, along with conviction made almost certain by the specific language of the statute and the attendant publicity. In fact, a recent article in the Philadelphia Inquirer reported that a child-porno distributor withdrew a widely known child magazine from distribution "because of the public controversy" and his fear of getting involved. The proposed criminal statute will bring this perverse activity even more into the public eye. Child exploiters are out to make money. The threat of a felony conviction should be enough to force many of these exploiters out of the child-porno business. And for those offenders who decide to risk it, a year in prison, or a $5,000 fine, or both, plus an inexpungible criminal record will serve as just punishment.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1499

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Child Exploitation Prevention Act".

SEC. 2. The Child Abuse Prevention and Treatment Act (Public Law 93-247, 88 Stat. 4) is amended by inserting at the end thereof the following new sections:

"SEXUAL EXPLOITATION OF CHILDREN

"SEC. 8. SEXUAL ABUSE OF CHILDREN.—(a) Any individual who causes or knowingly permits a child to engage in a prohibited sexual act or in the simulation of such an act shall be punished as provided under subsection (c) if such individual knows, has reason to know, or intends—

"(1) that such act may be photographed or filmed; and

"(2) that any photograph or film depicting such act may be transported, shipped, or mailed through interstate commerce or foreign commerce or may affect interstate commerce or foreign commerce.

"(b) Any individual who photographs or films a child engaging in a prohibited sexual act or in the simulation of such an act shall be punished as provided under subsection (c)

if such individual knows, has reason to know, or intends that any photograph or film made by such individual depicting such act may be transported, shipped, or mailed through interstate commerce or foreign commerce or may affect interstate commerce or foreign commerce.

"(c) Any individual who violates subsection (a) or (b) shall be fined not less than $5,000 nor more than $25,000 or imprisoned not less than one year nor more than five years, or both.

"TRANSPORTATION AND DISSEMINATION OF CERTAIN PHOTOGRAPHS AND FILMS

"SEC. 9. (a) Any individual who—

"(1) knowingly transports, ships, or mails through, or in such a manner as to affect, interstate commerce or foreign commerce any photograph or film depicting a child engaging in a prohibited sexual act or in the simulation of such an act; or

"(2) receives for the purpose of selling or sells any photograph or film which has been transported, shipped, or mailed through, or in such a manner as to affect interstate commerce or foreign commerce, and which depicts a child engaging in prohibited sexual act or in the simulation of such an act, shall be punished as provided under subsection (b).

"(b) Any individual who violates subsection (a) shall be fined not less than $5,000 nor more than $25,000 or imprisoned not less than one year nor more than five years, or both.

"DEFINITIONS

"SEC. 10. For purposes of this chapter:

"(1) The term 'child' means any individual who has not attained age sixteen.

"(2) The term 'prohibited sexual act' means—

"(A) sexual intercourse;
"(B) anal intercourse;
"(C) masturbation;
"(D) bestiality;
"(E) sadism;
"(F) masochism;
"(G) fellatio;
"(H) cunnilingus;
"(I) any other sexual activity; or
"(J) nudity; if such nudity is to be depicted for the purpose of sexual stimulation or gratification of any individual who may view such depiction.".

By Mr. DECONCINI:

S.J. Res. 52. A joint resolution authorizing and requesting the President to issue a proclamation designating the second week of March of each year as "National Children's Week"; to the Committee on the Judiciary.

NATIONAL CHILDREN'S WEEK

Mr. DECONCINI. Mr. President, we celebrate and honor many activities and persons during the year. The joint resolution I am introducing asks the President to designate the second week in March as "National Children's Week."

Children are our most precious national resource. They are for us as individuals an expression of love and a commitment to the future. This is a time, unfortunately, when family values seem to be on the decline; and a time when families themselves lack the stability of past generations.

No resolution passed by the Congress can change these things. But the Congress can overtly demonstrate its commitment to the family and to children. It can recognize, as we do as individuals, that children represent joy and love. It can also recognize that children are central to the family and that the family is the basis for any stable society.

I ask unanimous consent, Mr. President, to have the text of my resolution printed in the RECORD, and I urge my colleagues to join with me in reaffirming the importance of children and family life.

The beautiful words embodied in the resolution were written by a constituent from Tempe, Ariz., Marian Lancaster.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 52

Whereas the children of our nation represent the hope and promise for the future of the United States;

Whereas children provide joy and inspiration to all people and contribute to the beauty and meaning of life; and

Whereas the love and affection given to children helps individuals to love others: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating the second week of March of each year as "National Children's Week" and calling upon the people of the United States and interested groups and organizations to observe such week with appropriate ceremonies and activities.

ADDITIONAL COSPONSORS

S. 263

At the request of Mr. MAGNUSON, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 263, to provide for interim regulatory reform as to certain independent agencies.

S. 717

At the request of Mr. WILLIAMS, the Senator from Ohio (Mr. METZENBAUM) was added as a cosponsor of S. 717, the Federal Mine Safety and Health Amendments Act of 1977.

S. 818

At the request of Mr. WILLIAMS, the Senator from Texas (Mr. BENTSEN) was added as a cosponsor of S. 818, to end the use of the Steel-jaw, leg-hold trap.

S. 926

At the request of Mr. CLARK, the Senator from Hawaii (Mr. MATSUNAGA) has been added as a cosponsor of S. 926, to provide for the public financing of primary and general elections for the U.S. Senate.

S. 1014

At the request of Mr. DOMENICI, the Senator from Montana (Mr. MELCHER), and the Senator from South Carolina (Mr. THURMOND) were added as cosponsors of S. 1014, a bill to amend the Internal Revenue Code of 1954 to provide a tax credit or deduction to individuals who maintain within their homes a dependent aged 65 or older.

S. 1313

At the request of Mr. PROXMIRE, the Senator from Ohio (Mr. METZENBAUM) was added as a cosponsor of S. 1313, a bill relating to certain cost overruns.

S. 1320

At the request of Mr. STONE, the Senator from Kentucky (Mr. FORD), the Senator from Montana (Mr. METCALF), and the Senator from North Carolina (Mr. HELMS) were added as cosponsors of S. 1320, a bill to amend the Federal Election Campaign Act of 1971 with respect to the filing of reports with State officers.

SENATE RESOLUTION 169—ORIGINAL RESOLUTION REPORTED RELATING TO THE CONSIDERATION OF S. 7

(Referred to the Committee on the Budget.)

Mr. ROBERT C. BYRD. Mr. President, at the request of Mr. METCALF, and on behalf of the Committee on Energy and Natural Resources, I report an original resolution with respect to the consideration of S. 7.

The ACTING PRESIDENT pro tempore. The resolution will be received and printed; and, without objection, will be printed in the RECORD at this point.

The resolution is as follows:

S. RES. 169

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 7, a bill to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface mining operations, and the acquisition and reclamation of abandoned mines and for other purposes. Such waiver is necessary to allow for authorization of FY 1977 funds for use by the Secretary of the Interior to assist State regulatory agencies to improve their enforcement capabilities in line with the requirements of the interim implementation program established in the Act.

SENATE CONCURRENT RESOLUTION 23—SUBMISSION OF A CONCURRENT RESOLUTION PROPOSING WORLD CONFERENCE ON ENERGY AND CRITICAL MATERIAL RESOURCES

(Referred to the Committee on Foreign Relations.)

Mr. WILLIAMS (for himself, Mr. HUMPHREY, and Mr. PELL) submitted the following concurrent resolution:

S. CON. RES. 23

Whereas the United States is becoming increasingly dependent upon foreign energy and material resources for its economic survival which presents increasing challenges to overall United States national security and domestic economic interests;

Whereas many other nations have been seriously affected by the recent disruptions of the world energy trading system, and by the awareness that the material resources of this planet are not only limited, but are approaching dangerously low levels of reserves in many instances;

Whereas growing energy demands have resulted in increasing reliance on nuclear power throughout the world with concurrent proliferation of nuclear materials and equipment which pose environmental risks and increase the likelihood of nuclear weapons development by nations that do not now have nuclear weapons;

Whereas the United States long run energy and resource security should include efforts to protect the United States from violent disruptions in the international trading system and to develop international agreements which would improve the relia-

bility of that trading system and international strategies and activities which can insure adequate sources of energy and vital material resources at reasonable prices;

Whereas the cost of research and development for increased supplies of energy and critical material resources may be reduced significantly by establishing cooperative international research, development, and conservation mechanisms and by intensifying efforts to discover and develop abundant and economical alternative sources of supply;

Whereas, professional, trade, labor, consumer, manufacturing, research, environmental, educational and other non-governmental organizations, institutions, and individuals have valuable expertise which has the potential to assist in resolving the energy and critical material resource problems now facing our nation and the world;

Whereas, there has yet to be any effective global conference held to formulate international agreements to resolve the multitude of problems in the energy and critical material resource fields and to develop international planning mechanisms, institutions and systems to deal with these issues of vital interest throughout the world. Now, therefore, be it

Resolved by the Senate (The House of Representatives concurring), That the President of the United States is requested to take such action as may be necessary to propose a World Conference on Energy and Critical Material Resources in order to provide an opportunity for all nations to consider international energy and critical material resource problems, to provide for maximum involvement by non-governmental participants, and to establish ongoing international systems to coordinate, evaluate, recommend and implement various energy and critical material resource alternatives and policy options. Such proposal should include—

(1) recommendations for conducting, prior to the conference, a series of workshops for both government and non-government participants for the purpose of considering:

(a) the environmental and economic cost and benefits of current levels of and projections for energy and critical material resource consumption;

(b) the problems facing the international community as a result of the proliferation of nuclear weapons development capabilities;

(c) methods of assuring equitable access to the world's energy and material resources by all nations of the world;

(d) the policy options available for developing these resources; and

(e) the adequacy of current and proposed international cooperative efforts in the field of energy and critical material resources;

(2) the recommendation that the Conference have as its objective the adoption and implementation of comprehensive international agreements to enhance the effectiveness of existing international systems, arrangements and institutions and, where necessary, to develop new international systems, arrangements and institutions, for the purpose of;

(a) providing a clearinghouse for the collection of energy and critical resource information;

(b) strengthening safeguards against proliferation of nuclear weapons capabilities;

(c) creating a center for the analysis of international energy and critical material resource planning and policy, and;

(d) establishing and coordinating energy and critical material resources research and development programs.

Mr. WILLIAMS. Mr. President, today I am submitting a resolution calling on our Government to propose a World Conference on Energy and Critical Material Resources.

Today our Nation faces an ever-growing threat. It is a threat to our national security, our standard of living, and our ability to improve the quality of life for our citizens. It has not dissipated now that predawn trips to gasoline lines are seemingly distant memories. The grim reality is that this threat becomes more ominous every day, as the United States becomes increasingly dependent upon foreign sources for its energy and other critical material needs.

In regard to national energy security, most energy experts agree that we are in a far more precarious position today than we were at the time of the oil embargo in 1973. Today, after a major energy crisis and the proposals of Project Independence, we find that our imports of all petroleum products have increased to over 50 percent of the total supply in recent months.

It is particularly disconcerting that OPEC-enforced increases in crude oil prices have had far-reaching and disruptive impact on our own economic stability. The 1973–74 embargo and the ensuing higher prices resulted in a loss of about 500,000 jobs and approximately $20 billion in our gross national product. The fourfold increase in OPEC oil prices had a tremendous inflationary impact upon our economy. There was an outflow of about $34 billion in 1976 to pay for imported oil, or $160 for each American, 11 times that in 1972. Three years after the supposed end of the crisis the American people continue to face the economic burdens it caused. Even more ominous is the recognition that due to our increased dependence on energy imports, another interruption of our energy supply would be far more disruptive to our economy than the disruption of 1973–74.

It is equally alarming to see that during this critical period domestic oil production has reached its lowest level in 10 years. The average production rate in 1973 of crude oil and condensate was 9.2 million barrels per day. The current level is reportedly only 8.1 million barrels per day. This reduction will significantly offset the anticipated relief to be brought by the estimated 1.2 million barrels a day we hope will be provided by the Alaskan pipeline upon completion this year. Even the possible realization of an additional 2 million barrels a day from the development of the Outer Continental Shelf will not be sufficient to guarantee independence from foreign oil sources in the near future. It is rapidly becoming evident that as long as our Nation has a high dependency upon petroleum to meet its energy demands, it will also be forced to rely upon oil imports and be a major participant in the international energy trading system.

DOMESTIC ISSUES AND INITIATIVES FOR ENERGY SUFFICIENCY

Two important policies that the United States has attempted to implement as a result of the energy crisis are the development of alternate energy resources and a commitment to increased energy conservation. Both are clearly necessary, but the progress toward reducing dependence on foreign energy sources has been very disappointing.

The potential for energy conservation in the United States is very clear. In 1960, the U.S. annual consumption of energy was 247 million Btu's per capita. By 1973, a peak consumption rate of 359 million Btu's per capita had been reached. This was followed by a period of short term conservation, necessitated by the energy being coupled with our domestic recession, and leading to a temporary decline in consumption. In 1975, per capita energy consumption was down to 335 million Btu's. Last year, however, saw a 1.8 percent growth in energy consumed—344 million Btu's per capita. It has been projected that by the end of 1977 we will hit the previous peak of 359 million Btu's. I might also add that our current consumption rate is more than double that of other large industrial nations.

Our Nation consumes about 33 percent of the world's energy supply. Our large consumption and its relationship to our productive capacity clearly indicate some of the difficulties the United States will face in its pursuit of energy sufficiency. Much of this consumption of energy is unnecessary, and often wasteful. The new administration and Congress have the opportunity, perhaps here as nowhere else, to provide positive leadership to the American people in creating a national energy conservation ethic. By creating an energy conservation ethic, we can both reduce our current energy consumption and provide for an orderly assessment of the direction of our energy development program. This would begin a process of thoughtfully weighing our energy options and accurately evaluating how realistic and hazardous the current pursuit of energy sources actually is. As a first step, forceful conservation policies can insure that the enormous rate of additional consumption will decrease in a manner that will not seriously affect our economic stability. However, conservation alone will not be adequate to provide for our future energy needs.

Concurrently, the development of alternate and additional energy resources must be continued and expanded, with constant surveillance of their environmental and economical impact. Coal, the most frequently cited alternative, lies in reserves that could reportedly meet energy needs for several hundreds years at the current rate of consumption. Although the development of our coal resources is critically important, the unfortunate technical facts regarding its use suggest that it also cannot completely solve our future energy problems. The processes of coal extraction and conversion are highly expensive, and their possible adverse effects on the environment could be tremendously costly to society in the long run.

We must also realize that the coal reserves may not last as long as has been forecast. The President's Council on Environmental Quality has estimated that only 30 percent of the coal we extract actually reaches the final user. The rest is exhausted in processing, transportation, conversion to electricity, and electrical leakage. As final demand increases, the quantity of coal exhausted in meeting that demand will also rise. Available coal reserves will be more rapidly depleted, and the problem of finding other sources will still be unsolved. A growth rate of energy consumption of only 7 percent annually would mean doubling energy use every 10 years. This would quickly shorten the time that coal could meet our national energy needs.

The possibility of increasing our Nation's nuclear energy dependency has also been presented as a solution to the problem of energy self-sufficiency. However, it appears that even if all necessary safeguards are implemented, and the critical environmental and safety issues are finally resolved, nuclear energy will not be a panacea. The Symposium on the Exploration of Uranium Ore Deposits held in Vienna in April 1976, found that expected nuclear power production until the end of this century will require an estimated 4 million short tons of uranium. To meet this demand, discoveries of new uranium deposits will have to rise from the current average of 80,000 short tons per year to about 300,000 short tons per year by 1990, and to almost double that in the following decade. At best nuclear power could supply half of our electricity by 2000, which would represent about one-fourth of our total national energy input.

Our own domestic reserves of uranium are limited in supply. While the element itself is relatively common in some parts of the Earth's crust, future availability of processed uranium for commercial use will depend heavily on its price, currently over $40 a pound and increasing. If the United States irrevocably commits itself to nuclear energy, we may be required because of the rising worldwide demand for energy to accept some dependency on foreign supply at increased prices.

Other potential sources of energy are now being investigated; among them are nuclear fusion, solar and wind energy, biological energy conversion, and development and use of geothermal resources. The costs of such research will be high, but it is clear that they are necessary. In addition, the capital investment for these technologies will remain very expensive. However, without an adequate energy supply that the alternatives could provide, the United States will find itself confronted with a serious threat to its economic base, and the imposition of severe hardships on the lives of its citizens.

THE THREAT OF NUCLEAR PROLIFERATION

Another critical nuclear energy problem has arisen because of the significant increase in the export of nuclear materials and technology throughout the world. At the present time Iran, South Korea, Brazil, Argentina, and several other developing nations are in the process of investing several billions of dollars in nuclear development. The number of nations which export is growing and competition to sell nuclear technology is increasing. In addition, as more facilities for the full nuclear cycle are being exported, commercial competition will reduce the ability of any individual exporting nation to impose safety and accountability standards on purchasers, and at the same time, the potential of importing nations to produce nuclear weapons will increase rapidly.

The dangers inherent in nuclear proliferation were prominently demonstrated by India's nuclear detonation in 1974. Since the Indian detonation several other nations have been seeking to purchase full fuel cycle facilities in addition to reactors. Either fuel reprocessing plants or uranium enrichment plants are needed by many of these nations to develop the high grade materials which can be used in nuclear weapons.

The nuclear exporting nations have realized that cooperation is essential to limit the spread of nuclear weapons options to several more nations. This widespread realization led to the United States initiating the 1975 London meetings of the major nuclear exporting countries which resulted in an agreement that International Atomic Energy Agency—IAEA—safeguards would be applied to all future export transactions. The problem with the safeguards system, as with any international commitment, is that the restraints on abuses are purely political commitments. It is entirely conceivable that nations with nuclear technology could renounce the safeguards agreement and develop nuclear weapons.

In improving upon the existing limited consensus to inhibit the spread of nuclear weapons, a wide range of national interests must be considered. Then, the limited consensus on safeguards must be expanded to include controls on the export of nuclear fuel facilities themselves.

A World Conference on Energy and Critical Material Resources must place special emphasis on the critical issue of nuclear proliferation. The national economic interests of nuclear suppliers and users must be addressed realistically. There is only a little time left to accommodate the suppliers' and purchasers' common economic interests in a manner that effectively protects against the likelihood of nuclear weapons development spreading throughout the world.

U.S. COMMODITY DEPENDENCE

One significant aspect of the energy shortage has been the increased recognition that this planet offers a finite supply of material resources, which are being consumed at ever-growing rates. As the most advanced industrial nation, the United States depends upon these commodity supplies to a greater extent than any other nation in the world. The ability to meet its material resource demands is of crucial importance to continuing the Nation's economic expansion and sustaining our customary standard of living. Again, as in the case of energy, the prospects for complete self-sufficiency are increasingly bleak.

The United States currently depends upon imports for more than half of our supply of six basic raw materials; bauxite, chromium, manganese, tin, tungsten, and zinc. Although in some cases unlikely, embargoes or unilateral increases in the prices of these commodities would have the devastating effects upon our domestic economy similar to those that accompanied the recent OPEC-enforced measures. There seems to be a growing tendency to price resources in relation to the social aspirations of the exporting nation rather than in relation to the cost of production. The possibility of a series of individual commodity cartels being formed is an alarming one, and it would be in the best interests of the United States to adopt policies that would discourage their realization. The most desirable means of accomplishing this would be through a process of international cooperation, rather than a system of intensified national competition.

The problems of material commodities will soon reach crisis level if forecasted population and consumption trends are correct. Conservative estimates put global population at nearly 15 billion within the next century. Such growth will undoubtedly place enormous strains on many nations, and on the ability of those nations to provide their citizens with the necessities of life. Continuous population growth will require increased economic growth for the mere preservation of present standards of living to avoid the threats of internal disorder and political upheaval. This increased economic growth will be dependent upon the availability of resource reserves in an open trading system. Numerous studies have shown that many of these reserves are at critically low levels, and that increased depletion will exhaust resources even sooner. Therefore, it is of paramount importance for the United States to undertake coherent and coordinated steps to provide for its future resource needs. The need for domestic and international initiatives by this Nation is imperative if we are to avoid future disruptions. The international arrangements designed to cope with price instability, shortages, and structural problems must reflect the importing nations' interests in access to supplies and a predictable investment environment, as well as the exporting nations' interests in access to markets and stability in export earnings.

THE INTERNATIONAL NATURE OF ENERGY AND MATERIAL RESOURCE REQUIREMENTS

The United States is not alone; its future access to external supplies of fuel and resources depends upon the plight of many other nations around the world. The disruptions of the international energy marketing system have actually had more severe economic, social, and political impacts on many other countries. Indeed, much of the current international economic instability may be traced directly to the imposition of the oil embargo and subsequent crude oil price increases. As a result, developed and developing nations alike have launched desperate searches for the energy and resource security that is necessary for economic growth. In the process, they have also begun to realize that as a rule independent economic growth is not feasi-

ble. A new awareness is emerging from the realities of interdependence, that national interests can often be advanced most effectively by meeting common challenges through a cooperative effort. We have already seen this awareness manifest itself in international cooperative efforts in the areas of environment, food, population, and trade.

The limited energy and resource reserves are scattered unevenly throughout the globe, often to be found within the boundaries of nations lacking the capital and technological ability necessary for their development. Prudence demands that we formulate an international strategy for long-range decisions on responsible resource development and distribution. During the course of this process, we must consider the particular situations of the nations of the developing world, where a great deal of the Earth's raw materials are to be found. The developed nations, through their technology and capital, can make contributions which expand the availability of resource supplies and reduce the opportunity for cartel activities.

It is clear that the overwhelming majority of the imminent problems of energy and critical commodities are interrelated and international in scope. It is also alarming that there has not been a comprehensive discussion of these issues in a truly worldwide forum. This is the reason I am introducing this resolution calling for a World Conference on Energy and Critical Material Resources.

The unique opportunities available to the United States as a result of international cooperation in this critical area are obvious. The costs of energy and material resource research and development will be fantastically high; a decision on the part of the United States and other affected nations to bear the burden of these costs independently could lead to exorbitant budget burdens, duplication of effort, and needless waste. For example, it is estimated that if we were to rely on coal gasification to meet the projected shortages of natural gas by 1985, the capital cost alone would be $200 billion. A joint effort in developing technological innovations would reduce the U.S. share of the initial costs, yet allow our Nation to share with other nations the many advantages advanced technology could provide. The costs of technology development and the benefits it can produce make joint efforts a very attractive approach. In any event, even if we do "go it alone," the likely result would be that the U.S. research costs would eventually subsidize programs for other countries who will add to our technology.

Other important aspects of global cooperation in the energy and resource fields are the long-range benefits that such an effort would provide the United States. The formulation of a mutually beneficial strategy for international research, development, and allocation could result in the energy and commodity security which is so vitally important to continued economic growth.

Furthermore, international cooperation could result in a reasonable stabilization of energy and commodity price levels. Arbitrary and politically motivated price increases would be discouraged by the increased number of suppliers and availability of vital resources and by the firm international resolve to seek new sources of supply. One isolated price increase would not necessarily lead to a series of increases in other resource areas and the tendency toward imbalances in the international trading system, and strife in the world's economies would be greatly inhibited.

Finally, a better stabilization of prices coupled with the development of alternate energy sources, could have a positive effect on the United States' export market. Improving the developed and developing nations' domestic sources of energy could alleviate the burdens of the huge deficits in their balance of payments caused by importation of foreign oil and allow them to spend more on the technology which we are in the best position to provide.

There have been modest international initiatives taken in the areas of energy and resource development since the energy crisis in 1974. Unfortunately, however, those measures that have been undertaken were either inadequate or too restrictive to provide the needed cooperation and coordination.

INTERNATIONAL CONFERENCES AND PROGRAMS

The United Nations has long been involved in energy and commodity research and development. At least five international agencies have substantial programs underway in these fields. These include: the International Atomic Energy Agency—IAEA; the U.N. Educational, Scientific, and Cultural Organization—UNESCO; the U.N. Environmental Program—UNEP; the U.N. Conference on Trade and Development—UNCTAD; and the World Meteorological Organization—WMO. Present international activity regarding energy and commodity problems is diverse, but it is also lacking central coordination. Its system has failed to provide a global focal point for energy and critical resource studies, planning, evaluation, and establishment of priorities. This lack of direction has prevented the formulation and implementation of the overall multilateral strategy needed to combat the problems we face.

Other attempts have been made at joint cooperation, but they, too, have been inadequate because of their structures and composition and uncertain objectives. Bilateral and regional agreements have been made which exclude major sectors of the international community, and which are limited in scope. For example, the European Economic Community has agreed to seek closer ties with the Arab nations. These new ties will seek to include the exchange of oil for technology and capital goods. However, they do not reduce the EEC's dependence on foreign oil imports, or aid significantly in the development of alternate sources.

There have been a number of international meetings dealing with energy and resource problems since 1974; all have suffered from major shortcomings which have seriously affected their long-term effectiveness. The Sixth Special Session of the United Nations met in April 1974, to consider the problems of population, food, poverty, arms, energy, and the world monetary system. The Third World nations at the session expressed their desire to discuss the energy situation and its relationship with the problems of raw materials, development, and monetary reform. However, no followup was made on the issues presented.

The Washington Energy Conference of February 1974 was called by the United States for the purpose of forming an oil consumer organization to confront and counteract OPEC. Other nations in attendance preferred a more conciliatory approach; therefore no such organization was created. This Conference did, however, lead to the creation in November 1974 of the International Energy Agency—IEA—under the auspices of the Organization for Economic Cooperation and Development—OECD. The limited membership of the IEA makes it inappropriate as a global forum since it is primarily a United States-European organization without representation from the developing states of the Communist-bloc nations. These nations must be included if an effective global effort is to be launched. The centrally planned economies comprising the Council of Mutual Economic Assistance—COMECON—for example, account for 20 percent of total world output of energy production. In the last 4 years, trade between the OPEC and COMECON nations has increased fourfold. Continued economic interaction between these nations will require more encompassing agreements on energy and resource planning.

Another attempt at an international cooperative effort was made in Paris during April 1975. Representatives of the oil-producing nations and the Third World met with representatives of the developed nations to discuss the formation of a permanent international organization dealing with energy and other related matters. That Conference quickly broke down; partly because of U.S. insistence that the discussions be limited to energy. The United States later changed its position on that limitation, resulting in the Conference on International Economic Cooperation—CIEC—held in December 1975. This unique conference has brought together 27 nations, representing the three crucial elements in global economic planning: the Industrial Developed Nations of the OECD; the newly rich oil producing nations of OPEC; and the developing nations of Africa, Asia, and Latin America.

Although stalled as a result of our Presidential elections, the CIEC negotiations have been moving for over a year now, and they may very well set the pace for much of our future international economic policy. The Conference has divided into four subgroups dealing with raw materials, development, international financing, and energy. I believe that a World Conference such as I propose would complement the work of the energy and raw materials commissions of the CIEC, and provide a valuable impetus to that entire conference.

One of the problems with the CIEC meetings is that it offers limited representation for the developing states, and no representation at all for the COMECON nations, thereby clouding its global nature and perhaps limiting the potential application of its results.

In light of the history of inadequate efforts I believe it is imperative for the United States to propose a World Conference on Energy and Critical Material Resources that would deal with these problems in a truly international forum. The expressed intent and purpose of this Conference should not only be the collective consideration of energy and material resource problems of common concern, but to actually set in motion the agreements necessary to solve these problems, and to provide for the equitable, and judicious use of the available resources on this planet. The Conference should not be seen as merely an international airing of official positions; it should serve as a foundation for ongoing mechanisms to develop and distribute the precious resources of our world.

While dealing with immediate problems such as resource shortages and price increases, the Conference must also concern itself with long-range needs and planning. In the process of this planning it should strengthen international systems for the research and development of energy and critical resources. There should be included among the functions of this system a clearinghouse for energy and resource information; a center for analysis of international policy and planning; an office of research and development and conservation of resource and energy sources and alternatives. The United States should also propose a series of multilateral workshops preceding the Conference to provide the Conference participants with sufficient prior understanding to provide the foundation for agreements to be adopted at the Conference. Topics for these workshops would include: the international environmental and economic costs and benefits of nuclear power development; the location and characteristics of renewable and nonrenewable energy and critical material sources, and the policy options involved in developing them; the ongoing mechanisms which will be required to implement the policy decisions made by the Conference.

EFFECTIVENESS OF INTERNATIONAL ORGANIZATIONS

In advocating an international strategy with ongoing international institutions to implement it, I am very concerned about the recent Senate study that pointed out the serious problems the United States now faces in participating in international organizations. The increasing use of international forums for political actions have severely reduced their effectiveness in several instances. A leading cause of the challenges being presented to the United States is the low priority our foreign policy has accorded international organizations in the past. The failure of a sustained American diplomatic effort to insure the effectiveness of international organizations has encouraged some nations to believe that they can take any political actions with no consequences. With a vigorous diplomatic effort, the United States can counter the excesses of nations which would abuse the purposes of the international organizations to which we belong. Such an effort is long overdue.

Involvement in these organizations does provide the United States with the opportunity to resolve the important problems that exist in an interdependent world. The World Conference on Energy and Critical Material Resources would be an ideal forum to begin a dedicated and imaginative foreign policy effort to improve the effectiveness of these institutions. It is in the long-range interests of the United States and the other nations which participate to be sure that international organizations are pursuing their legitimate objectives efficiently.

PRIVATE ORGANIZATIONAL PARTICIPATION

An important part of any World Energy and Critical Resources Conference should be the participation of the individuals and private organizations concerned with this area. At each of the past major international conferences, there has been organized a parallel conference for nongovernmental organizations or "NGO's" from around the world. These NGO conferences, often called forums, provide a nonofficial meeting ground for some of the world's most respected academic and citizen leaders to discuss the issues at hand.

An example of the kind of nongovernmental talent available is that which exists in the U.S. National Committee, World Energy Conference. The USNC was organized over 50 years ago, and today it includes representatives of industry, technical societies, educational institutions, and the general public. This organization provides a valuable forum for those interested in energy policy, energy technology, and energy use in the United States and throughout the world. Through relationships with other national committees of 72 nations, this organization has close contact with those involved in energy issues around the globe.

I would envision a NGO forum, meeting alongside the World Conference, which would include, in addition to major academic leaders, leaders from labor, civic, environmental, foreign affairs, consumer, and business groups from many countries. I am convinced that such a NGO forum would lead the way for the conference to come to grips with the energy problems we are all facing. Further, it would be of great assistance in promoting a consensus on the recommendations made within the nations that participate.

CONCLUSION

Every nation is concerned about protecting its own national security and economic well-being. One of the greatest threats to the national and economic security is in the possible disintegration of international order. Power politics and wasteful duplications of effort must be supplanted by effective international mechanisms of rational decisionmaking and an equitable distribution of the burdens and benefits of meeting these challenges now facing us. Political leaders throughout the world are under enormous pressure to promise short-term domestic benefits and try to place the costs on other nations, on future generations, and on the environment. The Earth, the air, the seas, and posterity have no political representation. But our failure to act wisely now will increase the likelihood of catastrophic impacts on this planet and our society in the future.

A coordinated international program to solve these common global problems is infinitely preferable to sporadic, uneconomical and self-defeating efforts on a national level. Our faith in our Nation and in our ability to cooperate in areas of mutual need makes it imperative that we take the initiative to promote the survival with dignity of human beings on this planet.

AMENDMENTS SUBMITTED FOR PRINTING

APPOINTMENT OF ADDITIONAL JUDGES—S. 11

AMENDMENT NO. 268

(Ordered to be printed and to lie on the table.)

Mr. HUMPHREY (for himself and Mr. ANDERSON) submitted an amendment intended to be proposed by them jointly to the bill (S. 11) to provide for the appointment of additional district court judges, and for other purposes.

CLEAN AIR ACT AMENDMENTS OF 1977—S. 252

AMENDMENT NO. 269

(Ordered to be printed and to lie on the table.)

Mr. CANNON. Mr. President, on behalf of myself and my distinguished colleague, Senator LAXALT, I submit an amendment which we intend to propose to S. 252, the Clean Air Act amendments, and I ask unanimous consent that the text of the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 269

Insert after line 1, p. 10.

Provided, That existing nonferrous smelters which have no continuous sulfur emission controls may be authorized on a case by case basis to employ enforceable intermittent emission reduction strategies for not more than two periods not to exceed five years each to avoid cessation of smelter operations.

NOTICES OF HEARINGS

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. PROXMIRE. Mr. President, I wish to announce that the Committee on Banking, Housing and Urban Affairs will hold hearings on S. 71, S. 73, S. 895, and S. 1433. These bills would increase the supervisory powers available to the financial regulatory agencies, proscribe interlocking directors among financial institutions, increase the authority of the FDIC over State insured nonmember banks in limited circumstances, and proscribe revolving door employment practices at the financial regulatory agencies. The hearings will be held on Tuesday, May 24 and Wednesday, May 25 at 10 a.m. in room 5300, Dirksen Senate Office Building.

INVESTMENT OF PUBLIC MONEYS BY THE SECRETARY OF THE TREASURY

Mr. PROXMIRE. Mr. President, I wish to announce that the Committee on Banking, Housing, and Urban Affairs will hold a hearing on H.R. 5675, a bill to authorize the Secretary of the Treas-

ury to invest public moneys, and for other purposes.

The hearing will be held on Monday, June 6, 1977. It will begin at 10 a.m., room 5302, Dirksen Senate Office Building.

Anyone who wishes further information regarding this hearing should contact Elinor Bachrach, room 5300, Dirksen Senate Office Building, 202–224–7391.

TREATIES

Mr. SPARKMAN. Mr. President, on April 28 I announced that hearings had been scheduled on a number of treaties by the Committee on Foreign Relations.

At the request of the administration, we have made three changes in that schedule: First, the hearings on the Vienna Convention on the Law of Treaties, Ex. L. 92–1, will be held on July 12 rather than June 7. Second, hearings on the transit pipeline treaty with Canada and the protocol of amendment to the Rio Treaty, Ex. F, 95–1 and Ex. J, 94–1, respectively, will be held on June 7 rather than July 12. Third, hearings on the three human rights covenants, which had been scheduled for June 21 and 22, have been postponed to an as yet undetermined date.

In addition, the committee has scheduled hearings on five tax treaties on July 19 and 20. These treaties are the Convention with Israel, Ex. C, 94–2; the Convention with Egypt, Ex. D, 94–2; the Convention with the United Kingdom, Ex. K, 94–2; the Convention with the Republic of Korea, Ex. P, 94–2; the Protocol to the 1975 Income Tax Convention with the United Kingdom, Ex. Q, 94–2; and the Convention with the Republic of the Philippines, Ex. C, 95–1.

Any person who wishes to testify on any of these treaties should notify the chief clerk of the committee, Abner Kendrick.

ADMINISTRATION OF THE NATIONAL PARK SYSTEM

Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a public hearing before the Parks and Recreation Subcommittee of the Senate Energy and Natural Resources Committee.

The hearing is scheduled for June 8, 1977, beginning at 10 a.m., in room 3110 of the Dirksen Senate Office Building. Testimony is invited regarding S. 975, a bill to improve the administration of the national park system.

For further information regarding the hearings you may wish to contact Mr. Thomas Williams of the subcommittee staff on extension 47145. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Parks and Recreation Subcommittee, room 3106 Dirksen Senate Office Building, Washington, D.C. 20510.

NOMINATION OF ADRIAN PAUL WINKEL TO BE HIGH COMMISSIONER OF THE TRUST TERRITORY OF THE PACIFIC ISLANDS

Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a public hearing before the Committee on Energy and Natural Resources on the nomination of Adrian Paul Winkel to be High Commissioner of the Trust Territory of the Pacific Islands.

The hearing is scheduled for May 16, beginning at 10 a.m. in room 3110, Dirksen Senate Office Building.

For further information regarding the hearing you may wish to contact Mr. James P. Beirne of the committee staff on extension 224–9894. Those wishing to testify or who wish to submit a written statement for the hearing record should write to the Committee on Energy and Natural Resources, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

ADDITIONAL STATEMENTS

THE EFFECTIVENESS OF FOOD STAMPS FOR THE ELDERLY

Mr. MELCHER. Mr. President, on April 18 and 19, I chaired hearings of the Special Committee on Aging on "The Effectiveness of Food Stamps for the Elderly." We heard witnesses from the Department of Agriculture, National Aging Organizations, elderly consumers of stamps, interest groups, and Members of the Senate present their views on what we could do to help the elderly participate in the food stamp program.

The fact clearly demonstrated is that the elderly simply do not participate in the food stamp program to the degree that should be expected. We learned that of the 17.3 million food stamp participants only about 6 percent are elderly and we wanted to know why that was so. One of the reasons that was repeated time and again was that the program was just too complicated. All the redtape discouraged the elderly from applying. Related to the redtape problem is the fact that elderly people applying for food stamps had to go to other offices to apply for other service programs. That obviously involved travel that can be particularly hard on older people. And, we also found that more than 40 percent of elderly participants are certified eligible for stamps for less than 9 months at a stretch.

To come to grips with these most-often-mentioned problems, Senator CHURCH and I introduced a bill, S. 1272. That bill basically does three things. First, it eliminates the purchase price of food stamps. With the elderly trying to get along on such tight budgets it was our view, a view shared by the White House, that whatever we could do to help keep extra cash in the pockets of the elderly would be to their benefit.

Eliminating the purchase price would work like this: people now eligible for $50 worth of food stamps might have to pay $38 to get them. Under the new arrangement, people could hang on to that $38 and instead would receive $12 worth of food stamps. I am very pleased that this provision for all food stamp participants was agreed to by the Senate Agriculture Committee and is now included in the food stamp reform proposals that will be coming to the floor shortly.

Our bill also had two other provisions. For one thing, it would allow households with one or more elderly people, but no wage earners, to be certified for 1 year without returning to the welfare office. As a member of the Agriculture Committee, I offered that provision as an amendment to the President's food stamp proposals, and the committee accepted it. We do not see any good reason for shuttling the elderly in and out of the food stamp office for recertification when one certification a year can help ease the burdens they now have to endure in order to participate in the program.

One other feature of the bill Senator CHURCH and I introduced makes it possible for SSI and social security beneficiaries to apply for food stamps at the social security office. We wanted that provision to be made a required feature of the Food Stamp Act. The Agriculture Committee approved the idea, but did not make it mandatory. We are very hopeful, however, that a good testing of this proposal will show that it is workable, sensible, and worthy of becoming a permanent part of the food stamp program.

The Aging Committee's hearings on food stamps have clearly paid some dividends. But those hearings revealed another problem. They showed that the rural elderly very often just are not aware of the existence of the food stamp program. I am sorry to say that despite the expert witnesses who appeared before the committee, a good solution to this problem of outreach did not materialize. But, I believe it is so serious a problem that I offered, and the Senate Agriculture Committee accepted, an amendment to provide for test projects to discover better ways to tell more elderly people in rural areas about the food stamp program, how it can help them, and what people have to do in order to qualify.

The bill that will come to the floor will include these and other provisions to make food stamps a more effective program for the elderly. We have eliminated itemized deductions and replaced them with a standard deduction. We have provided a way to deal with rising fuel costs by providing another deduction of up to $75 for shelter costs. Moreover, we have made it clear that the dependent care deduction in the bill will apply to dependents regardless of age.

The Aging Committee hearings on food stamps played a major role in promoting amendments aimed at improving the food stamp program for the elderly. I am pleased we were able to accomplish what we have and I know that Senator CHURCH and my other colleagues on the committee will continue to be alert to suggestions to make food stamps a more fair and effective resource to the elderly of this country.

SPEAKER O'NEILL: MAN OF DECISION

Mr. PERCY. Mr. President, THOMAS "TIP" O'NEILL, Speaker of the House of Representatives, is proving to be one of the strongest and most outspoken Speakers in the Nation's history.

The Speaker is a man of decision. He has shown this characteristic most recently in response to the energy crisis

as the House has started the job of considering President Carter's energy proposals.

TIP O'NEILL's endorsement of the Alliance To Save Energy—a private, nonprofit, nonpartisan organization founded earlier this year by Senator HUMPHREY and me—exemplifies his ability to take the lead in responding to the Nation's needs. He serves as honorary chairman of the organization's board of advisers as does the Honorable JOHN RHODES; I appreciate their support and look forward to their assistance.

The Speaker has taken an active part in recruiting House Members to endorse the goals of the alliance and join in the task of implementing a grassroots effort to conserve energy. We are grateful for their support.

Sunday's edition of the Chicago Tribune magazine, May 8, 1977, featured an excellent profile of Speaker O'NEILL titled "When 'TIP' O'NEILL Talks, People Listen," by the very able journalist Harry Kelly of the Tribune's Washington bureau.

I ask unanimous consent that the article on the Speaker and the list of House Members supporting the alliance be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WHEN "TIP" O'NEILL TALKS, PEOPLE LISTEN

(By Harry Kelly)

Thomas "Tip" O'Neill, speaker of the U.S. House of Representatives, comes through his office door with the majestic waddle of a boss bear. He is the kind of old-fashioned politician who goes to wakes and talks to the women in the supermarket, drinks at the VFW, and knows the names of the sons as well as the grandfathers. He has a comfortable manner that suggests cigars, good whisky, laughter and Irish songs, and poker games and back-room deals. He came up the long way in a tough racket. He is one of the boys and looks it.

O'Neill knows, too, that he is a standout in a crowd. There is a true story that gets better with the telling about how O'Neill was hailed by a young, good-looking man at an airport. The young man said, "Hey, Tip O." When he got only a blank stare in reply, the young man said, "Obviously you don't recognize me."

Tip replied: "I'm sorry, but don't feel bad. Everybody knows me. . . . I weigh 280 pounds. I have a bulbous nose, cabbage ears, unruly hair. . . . What's your name?"

"Robert Redford," the young man replied.

On this day, O'Neill is already half an hour behind schedule. His meeting with the Democratic whips, his lieutenants, ran long. The telephones are ringing off their hooks on his secretaries' desks. In 45 minutes he must work in an interview, another meeting, and his daily news conference before greeting the president of Mexico. A female correspondent from Boston Public Television is following him around taking down every word. Old pals are waiting for "just one minute" of the Speaker's time. And O'Neill is as cool as a glacier. He takes one step at a time.

At 64, when most men are waiting for the gold watch, Tip O'Neill has, as speaker of the House, a job that some practical politicians believe is the second most powerful in Washington.

His friends—and they are many—tell a story about O'Neill and a banker. It goes a long way toward defining what kind of politician he is, with that old pol's mixture of compassion and toughness and lovely Irish blackmail.

One day a banker from O'Neill's hometown of Cambridge dropped in on him. He wanted his photograph taken with the next speaker of the House. That kind of picture always looks nice next to the stuffed marlin, to show friendship with power.

During the chitchat, O'Neill asked the banker, "How is Mary McHugh?"

The banker paused. "I don't think I know any Mary McHugh. Should I?"

"She spent most of her life working in your bank," replied O'Neill. "But the last time I saw her she was afraid she was going to get fired because of her age."

"Well," the banker acknowledged, "we are having quite a turnover."

Now O'Neill sits in his office, listening to the telling of the story by someone else. He fills the chair. He overflows it, like a fifth of Jack Daniels being poured into a teacup. He looks at you with pale blue eyes under a thatch of white hair. His eyes are neutral, with a touch of an old pol's suspicion. But the eyes begin to warm as he recalls the incident.

"That's a true story," he says, sounding mildly surprised, as if he didn't think anyone else knew. He takes up the telling himself. He has a deep, gruff voice. It is a street voice, full of Boston and Cambridge. But without the Kennedy prep-school accents. As writer Jimmy Breslin observed, O'Neill comes from a part of Cambridge where people don't go to Harvard.

The bank Mary (not her real name) had worked in was being taken over by a new operation and, says O'Neill, "Mary wasn't their style." But she was liked, "had a sympathetic heart," and "knew everybody's mortgage in North Cambridge."

So, O'Neill continued, "I just said to him (the banker), 'Lookit, all Mary and I have to do is walk down the street. She's 64, and you're going to let her go. And that new bank across the street,' I said, 'if they were to hire her, you know we could have a run on your bank like you never saw.' He just smiled and got the massage." Mary stayed.

O'Neill has been called, without spite, "the ultimate Boston Irish politician." In many ways, he is the ultimate big city politician, the second generation of those who came from the wrong side of the tracks or the back of the yards, bustling and dealing, to run the politics of cities such as Boston, Chicago, New York, and Philadelphia.

In the shorthand of a headline, he was once described as the bridge between "the last hurrah and the new breed."

But there's still a lot of hurrah in Tip.

"Thank God for the New England Brick Company—they brought all the O'Neills to Boston during the potato famine," O'Neill likes to say.

Four brothers—Michael, Patrick, William, and John—came over from the old country to work at the company's Cambridge yards in 1843. "I always say I'm grateful my grandfather (Patrick) didn't miss the boat that brought him over to the New England Brick Yards."

Martin Nolan of the Boston Globe, a Tip O'Neill specialist, wrote: "His boyhood in Cambridge was lived in a particular Irish shell of resentment against the outside world, especially against Yankees and especially against Republicans."

In those days, the Yankees, the Wasps were the "haves," and the Irish were the "have nots," and for those hanging around "Berry's Corner," life centered on sports, politics, and the Catholic Church. One who used to be a "corner guy" with Tip recalled, "My mother always thought he'd be a bishop in the church."

Tip's father was political. He was on the city council. Later he was sewer and water commissioner with control of 1,700 jobs. At 16, Tip was ringing doorbells for Al Smith. He saw the first Catholic nominated for the presidency defeated largely because of his religion.

When he was 21, a senior at Boston College, O'Neill ran for the city council and lost by 150 votes. He learned a lesson from a neighbor, Mrs. O'Brien. "She came up to me on the street and said 'Tip. I'm going to vote for you even though you never asked me to.'

"I said, 'Mrs. O'Brien, I've been shoveling your walk and mowing your grass ever since I can remember. I didn't think I had to ask you to vote for me.'

" 'Tip,' she told me, 'I always like to be asked just like everybody else.' "

Having learned not to take anyone for granted, he got in the insurance business, was elected to the Massachusetts legislature in 1936, and became its first Democratic speaker in 1948. "When I became speaker of the House in Massachusetts, I dumped all those rebellious Democrats who had been playing footsie with the Republicans," said O'Neill. "I knew who they were and I let them know and I bounced them off those committees."

And that raises the issue of O'Neill's legendary and ferocious partisanship. Rep. John J. Rhodes, the House Republican leader, wrote in his book about Congress: "Thomas P. O'Neill, Jr. is one of the most affable men I know. He is great fun to be around at a social occasion. He is also the most partisan man I have known—so partisan that for him the word Republican is a red flag waved beneath the nose of a feisty bull."

President Carter found that out, too, when he made a couple of Republican appointments. The speaker was "upset."

"Tip is a Democrat with a capital D as well as a small d," says an admirer. "He believes a change of power means a housecleaning. Get them out! What's a change with the same old people? He doesn't understand Democrats hiring Republicans. I don't either. He's old-fashioned in that way.

"Oh, I'm a partisan Democrat, make no mistake about that," says O'Neill. "You know, the Republicans take over and automatically the new broom sweeps clean. Everybody goes out the window. But when the Democrats take over, they become very sympathetic of heart. . . .

"I feel as though we ought to follow the same, the exact same policy that the Republicans have followed. I was the first Democratic speaker ever to be elected in Massachusetts, and when Chris Herter (a Republican who later became secretary of state) was speaker of the House, the things that he did."

His eyebrows rise, and his voice takes on an edge of outrage, like a maiden describing a scene in an X-rated movie. "I can remember he gave the Democratic caucus an hour to discuss a resolution and get back on the floor," recalls O'Neill. "And when we weren't back by 2 o'clock he just banged the gavel and they put the resolution through. That was their style."

John F. Kennedy was elected from O'Neill's district, and so was Boston's "Boss" Mayor James Curley, who served time in prison for wartime contract frauds. "Curley used to come and sit around my office when he was old and had no place to go," O'Neill once reminisced to a reporter.

But O'Neill got the back of Curley's hand in 1948 when he stood up for a group of young mavericks who wanted to challenge Curley's slate for the national convention. The story was that Curley sent money over to buy off the mutiny. But O'Neill said no one would touch it. That angered Curley. He told O'Neill, who was on his slate, "I'm going to take your name off and I'm going to run a Chinaman and beat your ass off."

Curley ran a man from Chinatown. O'Neill didn't get to the convention.

Some people say politicians as sharp as O'Neill are born, not made, just as basketball players are born to be 7 feet tall with twinkletoes. In any event, they are not made in heaven.

Luck and the vulnerability of politicians had a hand in O'Neill's success. He could

have stood in line forever and never got further than the Massachusetts legislature. But O'Neill, with a foot in both the new era and the old, also helped himself.

When John Kennedy was elected to the Senate in 1952, O'Neill was elected to take his place in the House. Sam Rayburn of Texas, the last of the really strong speakers, was speaker then. Gaunt, pale John McCormack of Boston was leader, or No. 2. He took his fellow Irishman, O'Neill, under his wing. When Rayburn left, everyone moved up a chair. Still, with McCormack as speaker, Carl Albert as leader, and Hale Boggs of Louisiana as whip, O'Neill looked as if he would spend the rest of his life on the Rules Committee.

Then the House entered the period of visible corruption. John McCormack's assistant, Martin Sweig and friend, lobbyist Nathan Voloshen, were indicted for using the speaker's office to win favors for Voloshen's clients. Both went to prison. McCormack retired. Everyone moved up a chair again. O'Neill backed Boggs in the contest for the leader's job, and Boggs chose O'Neill as whip.

Boggs, handsome and articulate, seemed certain to be speaker. Although a federal grand jury in Maryland looked into his affairs, and he charged he was being wiretapped by the FBI, nothing came of it. But he was presumed dead when a small plane he was flying in disappeared in a flight over the Alaska coast. Everyone moved up again. O'Neill was leader, No. 2, next in succession.

Carl Albert had been a Rhodes scholar who looked, it was said, like a "sad Teddy Bear." He was not as successful a speaker as some had hoped. But then times were changing. It was harder to be a good speaker. And there were the scandals.

Albert had an assistant, Sook Nai Park Thomson (known as Suzi) who had come to Washington from South Korea. She was known for throwing parties for congressmen. She was sometimes escorted by South Korean diplomats identified as intelligence officials.

Last year it was disclosed that Suzi Thomson had had an affair with Rep. Robert Leggett (D., Cal.), a member of the Armed Services Committee. Leggett was reported to be under investigation to learn if he had received bribes from the Koreans to influence his support. Leggett said he had not.

Then Liz Ray became an overnight sensation. She charged that Rep. Wayne Hays (D., Ohio), a power in Congress, had her on the payroll just to provide sex. Two other secretaries made similar charges against congressmen.

There were a lot of stories about "Sex in Washington," Capitol Hill "Yes Girls," and "The House Is Not a Home." It was not much fun being speaker. At 68, Carl Albert decided to retire, saying, "There are other things I want to do while I am young enough to do them."

By now O'Neill was in an almost unchallengeable position. He had been campaigning for the speakership for five years. He had campaigned across the country for Democratic congressional candidates. From lobbyists, special interest groups, and unions he collected a $140,000 political war chest that he called the Thomas P. O'Neill Jr. Congress Fund. He used it to make contributions to 182 Democrats running for office. There is no better way to win friends. Nor is there anything illegal about it.

O'Neill may be a caricature of the old political operator with his shamble, his caution, his map-of-Ireland face, his cigar, and his back-slapping affability. But he was the first of the House Democratic leaders to abandon the position of Lyndon Johnson on the Viet Nam War. He was the first, too, to call for Nixon's resignation.

His children, his two daughters and three sons, helped him change his mind on the war. And O'Neill, as Jimmy Breslin reported in "How the Good Guys Finally Won," was the first of the Democratic leaders to smell impeachment, to gauge how much trouble Richard Nixon was really in.

Breslin tells how O'Neill worked on Rep. Dan Rostenkowski (D., Chicago), a friend who usually went to dinner with O'Neill once or twice a week at Duke Zeibert's or Paul Young's. Rostenkowski wasn't crazy about impeachment.

Breslin reported an O'Neill-Rostenkowski encounter this way: " 'Danny, old pal, did you see this poll yet?' Tip O'Neill said.

" 'What poll?' Rostenkowski grumbled. He despises polls, but he is supposed to ask about a poll because he is in politics.

" 'It shows that we could pick up as many as 80 seats the way it's going now,' O'Neill said.

" 'Whew.'

" 'And it shows here that there is no way for a congressman in an urban district to win an election against anybody if he doesn't vote for impeachment.'

" 'Where does it show that?'

" 'Here, look. Only 7 percent of the Democrats will vote for a congressman who is against impeachment. That means a Republican could beat a Democrat in a city if the Republican is for impeachment and the Democrat is against it. Can you imagine that? Say, that's right. You represent a city, don't you, Danny?' "

"Tip O'Neill has very sensitive antennae," says a congressional aide. "He's quick at picking up vibrations. Maybe because of his district. He has the universities, Harvard, the working-class Irish and Italians, some of the suburbs, and Beacon Hill and the Back Bay. One hell of a cross section. When Tip finds out the way the troops are heading, he hurries like hell to get out in front of them."

O'Neill is expected, at least by his friends, to be more assertive than McCormack or Albert were. And O'Neill intends to be. "I think the speaker of the House should be like the Massachusetts speaker, all powerful," says O'Neill. "He should appoint committee chairmen and remove them from power if they stray from the party line. He should be answerable only to the caucus, which can remove him at any time. And I'd throw the seniority system out on its ear."

But things are different from when Sam Rayburn was speaker. Rayburn used to say, "If you want to get along, go along." Mr. Sam made his power felt through the committee chairmen, and the committee chairmen ran the House like the barons ran England. Now the committee chairmen have lost much of their power. If one gets too autocratic, the other members will gang up and strip him of his job. The speaker may be more powerful than ever, if he wants to be. But he still can't operate the way Mr. Sam did, O'Neill says.

"The ball game is completely different," says O'Neill. "Mainly the ethics of politics. Sam Rayburn would call up the head of Internal Revenue and say, 'I want you up here at 3 o'clock this afternoon.' And then he'd say, 'Joe so and so, who is a leading Democrat in such and such a community, he's having Internal Revenue problems.' And he'd say, 'You know, just let me say this to you: It's been pending for a couple of years and, like little drops of rain, the Chinese theory, it's starting to wear him down. Now either bring this civil or you can bring it criminal, and if its been around for a couple of years, I can't see why it should be brought criminal. Now I want action on this by 5 o'clock tonight.'

"Or he'd call up the Army Engineers and he'd say, "Tip O'Neill's running for re-election and you've got an overall general fund, and I want the Alewife Brook drained and I want it cleaned and I want a barge up there within 48 hours and get it there!' "—O'Neill's voice had hardened, and you could almost see Mr. Sam's mean, Texas eyes—"and they'd do it."

"Today," adds O'Neill, "I wouldn't call the Internal Revenue for myself. You can't push department heads around."

He did, however, call the former secretary of housing and urban development, Carla Hills, on behalf of a big Democratic contributor, James P. Wilmot. O'Neill asked Hills to hurry up on a decision on $2.2 million in rent subsidies Wilmot wanted. O'Neill said he would have done the same for any businessman.

"I think I have a right and an obligation when a substantial businessman comes and says an inequity is being done, to call the department head and ask that it be looked into," O'Neill told a reporter at the time. "I don't pressure people. I open the door."

O'Neill likes to play cards and golf. But anyone with half an eye can see he eats, sleeps, and drinks politics, at least for five days a week. Until recently, O'Neill stayed in Washington during the week and commuted home to see his wife, Mildred, his high-school sweetheart. Millie didn't like Washington very much. She thought it was a bit formal. "Mom's a tough woman with all kinds of love," said her son, Thomas III, 31, Massachusetts' lieutenant governor. "She literally brought us up."

But now the kids are grown up. In addition to Thomas, there are Rosemary, 33, a State Department information officer; Susan, 29, an organizer for the National Association of Government Employees; Christopher, 27, a lawyer; and Michael, 24, a stockbroker.

Now that Millie is joining Tip in a condominium in nearby Bethesda, Md., Washington's own Odd Couple is breaking up. It was a partnership that had a longer run than Tony Randall and Jack Klugman, TV's Felix and Oscar. For 24 years, since they arrived as freshman Democrats from Massachusetts, O'Neill and Rep. Edward P. Boland shared a three-room apartment in Washington.

"He was meticulous . . . neat as a pin," the speaker said of Boland. "Eddie would spring-clean the place. Scrub floors, do the laundry. I'd come home at night and drop my coat over a chair, and Eddie would whisk it up and hang it in the closet. Eddie would get up at 6:30 in the morning, shower and shave, and then he'd tell me, 'OK, big fellow, it's your turn.' Then he'd open all the windows, air the beds for 10 or 15 minutes, shake the sheets and blankets out, and make the beds."

Boland would pour orange juice from a carton. O'Neill would make the instant coffee, and they would drive to the Capitol, where they could get a real breakfast in the dining room.

The refrigerator in the Boland-O'Neill "crash pad" contained nothing more than beer, cigars, orange juice, and Fresca. "We never cooked a meal in there once, never," says O'Neill. They didn't know how.

But that didn't help O'Neill's waistline. He says he has lost "at least 1,000 pounds over the past few years." One year, when his weight neared 290, O'Neill, who is 6 feet 2, joined a Weight Watchers club.

At the first meeting he found he was the only man in the club. He stayed.

On a night out in January with Millie and a few friends, including Boston Globe columnist Mike Barnicle, Tip found what it was like having the wife in town. Becoming speaker didn't necessarily enhance his power.

Outside the 1789 Restaurant in Georgetown, not wanting to end the night, Tip growled, "Hey, whadda you say?" to Billy Morrissey, J. Joseph Maloney, and Leo Diehl. "Let's go next door for a couple of drinks."

There wasn't a murmur of dissent. O'Neill said to his wife, "Millie, I guess we'll go next door for a while and have a couple with the boys."

"No, you won't, Tom," Millie replied. "Come on. I'm taking you home right now."

As O'Neill likes to say, "All I can tell you, she's the speaker of my house."

YOUTH CAMP SAFETY

Mr. RIBICOFF. Mr. President, shortly after the 95th Congress convened I introduced S. 258, the Children and Youth Camp Safety Act of 1977. This measure seeks to remove those conditions which lead to the many tragic deaths and accidents occuring each summer at camps throughout the Nation. It is aimed at providing some meaningful protection for the approximately 8 million youngsters who attend an estimated 10,000 summer camps each year and to provide their parents with some peace of mind.

As most of my colleagues know, I have devoted over 10 years to the effort to achieve substantive youth camp safety standards. Unfortunately, comprehensive legislation has yet to be enacted by both Houses of Congress. The House Education and Labor Committee has recently cleared legislation similar to S. 258 and I am hopeful that the Senate Human Resources Committee will soon follow suit.

My deep interest in the issue of youth camp safety was originally sparked by Mr. Mitchell Kurman of Westport, Conn. In August 1965 Mr. Kurman's 15-year-old son, David, was drowned on a canoeing trip in Maine while attending summer camp. David's needless and tragic death could have been avoided had there been proper supervision by a trained instructor.

Last Sunday's New York Times carried a very timely article about Mitch Kurman and his crusade to have camp safety standards developed on a uniform basis and applied throughout the country. I ask unanimous consent that this article be printed in the RECORD.

Connecticut campers are fortunate that our State has had camp safety regulations for some 8 years. These regulations cover health care, safety and staffing and are aimed at promoting safe and healthy camping. Connecticut also has a Camp Safety Advisory Council which reviews a camp inspection program and advises on policy. The spring 1977 issue of the Connecticut Health Bulletin contains a very informative article on Connecticut's camp safety regulations and program and I ask unanimous consent that it also be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, May 8, 1977]

CRUSADER FOR CAMP SAFETY

(By Murray Ilison)

Mitch Kurman would rather go fishing on weekends as he used to do with his 15-year-old son, David, but he can't because he is driven by the memory of a personal tragedy. Nearly 12 years ago his son was drowned on a canoeing trip in Maine while attending a summer camp.

Mr. Kurman has termed his son's death needless and senseless, first because the canoe trip was taken on a raging, boulder-strewn river and, second, because none of the canoers was equipped with life-preservers.

From the time of David's death, the 56-year-old Westport father has been embarked on a relentless crusade to impose safety regulations on what he sees as a wantonly resistant camping industry across the country.

Since that day in August 1965 when he and his wife, Betty, learned of their son's death, Mr. Kurman has succeeded in pressuring for laws in Connecticut, New York, Massachusetts, New Hampshire and Maine requiring that small boats be equipped with life-preservers. But his consuming passion in the last decade has been campaigning for passage by Congress of a bill known as the Federal Youth Camp Safety Act, which camp lobbyists have succeeded in killing year after year.

The bill is once more before the House of Representatives in Washington, and Representative Ronald A. Sarasin, Republican from Connecticut's Fifth District, has announced that he will again seek its adoption. Mr. Sarasin, a cosponsor of such legislation in the last two Congresses, helped get the measure through the House last year, but it died in the Senate.

Mr. Sarasin, a member of the House Education and Labor subcommittee that is responsible for the bill, has said that evidence presented before his subcommittee in previous years has indicated that more than 250,000 young people sustain injuries while attending summer camps each year and that most of these accidents are preventable.

A recent announcement from Representative Sarasin's office in Washington said, "While a few states, including Connecticut, have adopted strong and effective youth camp safety programs, most still have not done so."

The goading force behind what limited improvements have taken place in camp safety and in seeking to promote it ever more widely is Mitch Kurman. Interviewed in his modest, colonial white-frame house where he and his wife have raised two grown daughters, Mr. Kurman—a short, somewhat stubby man—has at first an unimposing presence. But as he talks to a visitor, losing no time in recalling in detail the circumstances of his son's death and the experience he has had since then, he impresses the listener with his seemingly limitless inner strength and his sense of terrible urgency.

Mitch Kurman is a traveling sales representative for a wholesale furniture manufacturer and spends much of his time on the road. But where some other traveling salesmen may spend their off-hours over drinks in a bar, Mr. Kurman spends his visiting local politicians, legislators and newspaper editorial offices, where he may dump an armload of letters, leaflets, clippings and photographs all relating to deaths and injuries suffered by young people in summer camps. Mr. Kurman concedes that in some places he has become known as something of a pest, albeit a well-intentioned one, and if he has made some enemies he has also made friends.

Mr. Kurman says that more than eight million young people between the ages of 5 and 16 attend summer camps each year and that of the estimated 250,000 who are injured annually most require hospitalization of a day and a half or longer.

He says that his studies have shown that there are about 100 fatal camp accidents a year and that "most of these occur on waterfront areas." The second most frequent area of fatal accidents is in transportation to and from camps and on campsites, he says. Drivers of camp vehicles frequently have no licenses, he says.

"If 100 kids were killed all at once," Mr. Kurman observed, "there would be a national furor, but because five are killed here and one is killed there and so on, it's not considered important."

Mr. Kruman says he is appalled by what he sees as willful and even ferocious opposition to a bill whose purpose is to protect the lives and safety of children entrusted by parents to the care of those who operate summer camps. In this connection, he quotes a supporter of his who has said in effect, "You can get laws passed to save fish and birds and wildlife but you can't get a law passed to protect our kids in summer camps."

According to Mr. Kruman, a study conducted by the Federal Department of Health, Education and Welfare in 1974 found that 45 states had no regulations governing the hiring of camp personnel or of how out-of-camp trips should be conducted regarding matters of vehicle condition, adequate leadership and safety measures; 24 states were found to have no regulation governing personal-health qualifications and first-aid measures, and 17 states had no regulations covering the safety aspects of their programs.

Like himself before his son's death plunged him into his one-man camp-safety crusade, Mr. Kurman says, most parents have no idea of what dangers may confront their children in many summer camps. Among these dangers he lists inadequate and poorly trained personnel, inadequate and improperly maintained equipment, inadequate or nonexistent medical care and facilities, lack of proper supervision, poor hygiene and low-quality food.

Parents are frequently misled by what he terms the "slick brochures" they receive from camp operators. In some cases, he says, the brochures have no actual relationship to the camps they purportedly describe. In this connection, he cited an instance of camp promoters who allegedly devise their brochure with photographs and descriptions listed from a number of other camp brochures.

Mr. Kurman says that certain evangelical religious groups that have summer camps of their own are among the most bitter and influential opponents of Federal camp safety legislation. He reached into a box overflowing with documents of various kinds and fished one out that he said had been distributed to Sunday School children with instructions that they pass it on to their parents. This leaflet headed "Urgent," charged in part: "The Youth Camp Safety Act will deal a death-blow to youth and our nation."

"The bill," the leaflet went on to say, "will close many youth camps and Vacation Bible Schools by putting their control under the Department of Health, Education and Welfare. The eventual total control of all youth in the U.S.A. by socialistic, communistic, satanic Federal Government will be the end result."

Mr. Kurman says that messages such as this generate mail to Congressmen from irate parents fearful of Federal controls. And many Congressmen themselves may be opposed to the spread of "big government" in favor of leaving to the states the entire matter of camp-safety legislation.

"My hobbies are fishing and gardening," Mr. Kurman says, "but I haven't had any time for them since my son's death and I'm determined to win this fight for a national youth camp safety bill.

"I feel personally that the camps—and there are many good ones—are being hurt by not actively fighting to get this legislation, which would be for their own benefit."

THE ROLE OF THE STATE DEPARTMENT OF HEALTH IN SAFEGUARDING HEALTH AND SAFETY IN YOUTH CAMPS

(By David C. Wiggin, M.S. P.E., Paula Pendleton, B.S., R.S., Director, and Sanitarian, Environmental Health Services Division)

As many as 60,000 children under 16 years old attended Connecticut's youth camps during the year 1976. The health and safety of this large group of young people while in the camping environment has been a concern of the state department of health for generations. For many years prior to 1969, the department inspected residential camps for compliance with the sanitation requirements of the public health code.

Then in 1969 the Connecticut General Assembly initiated the licensing of all youth camps, including day camps as well as residential camps, and broadened the scope of regulations from sanitation only to include health care, safety and staffing. These requirements are now listed in public health code Sec. 19–13–B27a. As part of the effort to construct an effective program to promote safe and healthy camping, a Camp Safety Advisory Council was established. This group reviews the camp inspection program and advises on policy.

In 1976 the camps covered by the youth camp surveillance program included 113 residential camps and 136 day camps. Of these 73 were operated for profit and 176 were nonprofit based, including sponsorship such as Boy and Girl Scout, YMCA, YWCA and churches.

CAMP SANITATION

The list of factors which the department examined in camps prior to 1969 hinged primarily on physical environmental matters. Special consideration was given water supply, sewage disposal, food service, sleeping quarters, toilets, handwashing and shower facilities.

HEALTH CARE

With regard to "health care," what should parents, relatives, friends or campers expect at a youth camp in Connecticut in 1977? First of all, every youth camp has a camp physician licensed in Connecticut, either in camp or on-call. His responsibility is to supervise the health care of the campers, to be available for emergency calls, to prepare standing orders, to review and sign the daily health log at least weekly. There is also a qualified person in camp in charge of the health care unit: a physician, registered nurse, licensed practical nurse or person certified in Red Cross Standard First Aid and Personal Safety or equivalent. All health care personnel must also be certified in cardiopulmonary resuscitation. Of the 113 residential camps, 4 have a physician in camp, 111 have registered nurses, 8 have licensed practical nurses, 49 have certified first aiders, and 6 have certified emergency medical technicians.

General medical records are not reported to the state health department, but deaths and overnight hospital stays must be reported. Records for the year 1976, for example, showed there were 23 instances where campers were hospitalized for a day or more; 2 were due to falls from a horse, 9 were participants in running, active games, gymnasium etc., 2 were in the swimming and boating area, 1 involved an eye injury from the backfire of a B.B. gun, 3 others included a broken leg from a hayride fall, burned hands from a campfire, a possible snake bite, and there were 6 illnesses other than accidental injury.

TRAINED LEADERS ACCENT SAFE METHODS

Every parent can be assured that the management of each youth camp in Connecticut has taken adequate safety precautions to protect the campers against accidents, and they will be properly cared for if and when accidental injury occurs. Each youth camp has a Water Safety Instructor to supervise the waterfront activities. This is a key person in the safety program, for swimming and boating are among the most popular activities in most youth camps.

Safety experts say that the best protection against accidental drowning is learning to swim. Camps have the heavy burden of screening, testing and teaching campers the swimming skills, and many children start as non-swimmers. The stringent requirements insisted on by department inspectors on waterfront safety practices are fully justified. In spite of good faith performance by camp staff members, accidental drownings can and do occur. In 1970 there were two camp drownings and one in 1973.

Qualified staff is also required for other special sporting activities, such as riflery, archery, and horseback riding. In the past year, 34 camps provided riflery, 94 provided archery, and 38 provided horseback riding.

STAFFING

The key to effective staffing is an experienced, mature camp director. The state health department in reviewing applications for camp licensure, checks the educational as well as camping experience background of the proposed director. It is urged that parents meet the camp director prior to signing up their children for camp, to discuss camping programs and specialties and the camp's attitudes and objectives. Many larger camps also have assistant directors and program directors. The code requires an adequate number of counselors, at least 16 years old.

There must be a ratio of staff, exclusive of cooks, clerical and maintenace persons, in residential camps, of at least one person over age sixteen to six campers under age eight, and one to eight campers eight years and older. In day camps the ratio must be at least one staff person over age sixteen to nine campers under age six, and one to twelve campers age six years and older.

HOW PARENTS CAN HELP

Parents can help the camp staff by completely filling out and sending application forms and health records prior to their child's first day at camp. Health records of both staff and campers are required by the state health department to be on file at camp. Personal data should include expected first and last days at camp, who shall be notified in case of emergency, and a physical examination or health status certification with mention of any disabilities, signed by a physician.

Information which should be included are any allergies, especially to plants or insect stings, and the most recent date of inoculations, especially tetanus. If a child has medications which must be administered during the stay at camp, the medications should be of the individual prescription type, clearly labeled with directions and given to the person in charge of health care at camp. Do not assume that a child will take medications as he or she should. Parents are also asked to refrain from sending large amounts of "goodies" or "favorite treats" to children at residential camps. Children tend to hide, hoard, and forget these until the counselor finds an insect infestation in the cabin.

A parent may give general permission for local trips including shopping, theatre, state parks and walks near camp, but specific written permission from the parent should be required for all distant or overnight trips, especially for hazardous operations such as rock climbing and white water canoeing. The camp is required to keep a file for tripping, including permission, purpose of trip, itinerary, and qualifications of staff leadership.

YEAR ROUND PROGRAM

The department's activities in the camping program runs year round. November is usually the month that applications for licensure are sent out to previously licensed camps. New camps call the office for information and an application. Applications come into the office from December into the beginning of summer, where they are then reviewed and licensed if the camp sponsor fulfills the requirements. Sponsors or organizations not fulfilling the requirements on the application are notified of the deficiencies and such problems are corrected.

Particular emphasis is put on specific information needed on the directors' qualifications as to training and administrative experience at a camp, and the number of years in that capacity; details in addition include the camps' name, location, size, type, and duration. The camp application also must be signed by the camp physician who has agreed to be responsible for the health of the campers. All applications for licensure must be submitted thirty days prior to anticipated opening date. If it is a new camp, a preliminary inspection must be conducted prior to licensing. The facility is inspected structurally, a drinking water sample is taken for anslysis and administrative records are reviewed. A preliminary inspection prior to licensing may also be required if there were violations at the time of the previous reinspection. Complete staff is not usually at the camp at the time of the preliminary inspection.

INSPECTION UNANNOUNCED

The department policy is to inspect each licensed camp in the month of July. The inspector arrives at a camp unannounced and meets the director or his responsible designated agent. They review corrections that have been made on last year's violations and check the camp license, which must be prominently displayed. The inspector then is supplied with information, documents and materials necessary to fill out the inspection form. Such information and documents would include medical records on all staff and campers, waterfront and sport personnel, the most recent water analysis, a letter of understanding with the nearest hospital for emergency medical care, attendance, and tripping.

REVIEWING THE HEALTH SERVICES UNIT

The inspector, accompanied by either the director or a senior staff member, tours the complete camp. The infirmary is visited. If a person in charge of health care is a doctor, registered nurse, or licensed practical nurse, his or her license is checked. They must be licensed in this state and have an up to date license. Red Cross or other first aid personnel in the health unit must have current certification. Health records and log of cases signed weekly by the physician are checked as well as recent standing orders from the physician. The health lodge is inspected for refrigeration, hot water, isolation facilities, bed capacity, and telephone with posted numbers.

An emergency vehicle must be assigned for transporting emergencies to the hospital and be currently safety checked. Medications are checked. Prescription drugs must be under lock. Common kinds of violations

in medical care regulations found on the first inspection include non-current license or certification of personnel, emergency vehicles without safety stickers, and the presence of prescription or controlled type drugs at the camp other than those covered by individuals' prescriptions.

SAFE WATER, ADEQUATE SEWAGE DISPOSAL?

The drinking water supply is investigated at the camp. The source, whether public or private, is described. Wells or springs must be identified as to location, depth, diameter, construction, treatment, pumping rate and any possible source of pollution. A water analysis should be presented to the inspector indicating the potable water is satisfactory. Drinking fountains, and any non-potable supply are also inspected.

Sewage disposal must be checked as well as water supply. Toilet facilities at camps range from earthen pit privies to flush toilets. The facilities are inspected for cleanliness, ventilation, screening, lighting and for being in good repair. The inspector checks out and describes on the report, the type of sewage disposal system and frequency of cleaning of toilets if the camp has flush toilets. If privies are used, the wastes must be pumped and disposed of in a sanitary manner. The handwashing and shower facilities are also checked for being well maintained. Common deficiencies uncovered in water and sewage topic areas include incomplete information on wells or springs, and unscreened privies.

Refuse should be stored without hazard or nuisance. It should be collected regularly and disposed of in a sanitary manner. The inspector checks to see that the garbage barrels or dumpsters fulfill code requirements under the fiytight and rodent-proof provisions.

CAMP FOOD SERVICES

One of the most important disease-prevention roles of the department's inspection program is in the attention given the area of food handling. Food service arrangements in youth camps are held to the same sanitary standards as are restaurants and school cafeterias throughout the state. The same report forms with point rating factors are used, as detailed in the Connecticut Public Health Code Sec. 19–13–B42.

The inspection process is always a mixture of education and surveillance. When covering the food service area, for example, the inspector is accompanied by the supervisor of that function or another responsible person in food service. Inspectors investigate two main areas of concern, the sources of food, and protection of food after it is on the premises until it is consumed or disposed of.

Camps must obtain food from an approved source and such food must be properly labeled. The inspector makes sure that food items are adequately protected during storage, preparation, display and transportation. Family style service is common in camping situations. In this respect, quantities should be limited to what will be consumed. Leftovers on the table must be discarded because potentially hazardous foods support rapid bacterial growth.

A common violation which inspectors ask camps to correct involves food containers, boxes, bags, or cases stored on the floor because of a lack of sufficient shelves and cupboards.

Toxic items must be stored separately from food and paper goods. Labels are always needed on toxic items. Otherwise accidents can happen such as a camper mistaking laundry detergent for a powdered drink and ingesting the detergent. This is where the posted emergency phone numbers, including that of the nearest poison control center, are utilized.

Crucial to a continuing safe level of food service management is the knowledge and attitude of all food handlers. The mere presence of excellent, modern kitchen equipment cannot assure safe conditions if the food service staff is careless or disregards the rule, for example, that prohibits workers with infected hands from serving in a food preparation area. The inspector makes use of the contact with food service staff to teach good hygienic practices and encourage habits of personal neatness and cleanliness.

The inspector checks equipment and utensils for cleanliness, design, construction, installation and maintenance. He reviews the quality of housekeeping, and the premises for cleanliness, alert for signs of insect or rodent harborage. All outer openings are checked by the inspector to see if they are protected against entrance of rodents or insects.

SLEEPING ARRANGEMENTS

If the camp is a residential type camp, sleeping quarters, whether cabins or tents, are inspected. Beds should have proper spacing and be arranged head to toe. Campers should be cautioned to keep open fires and lighting fixtures away from the immediate area of the tent. Tent materials are a known fire hazard and great care is stressed. New tenting material is now being produced with a fire retardent within the cloth and should be checked periodically.

SWIMMING AND BOATING SAFETY

The pool or waterfront is a major point of interest to the camp inspector. All licensed camps with swimming and boating must provide a Red Cross Water Safety Instructor. Extra lifeguards are recommended. Items the inspector looks for include: one entrance, so the guard can maintain crowd control, a buddy board tag system, set procedures understood in advance in case of emergency, and an adequate number and types of rescue equipment. The waterfront and location of guards are described on the inspection form by the inspectors. If boat craft are available on the waterfront, a buddy board is advisable. Life preservers should be available to each person in a boat. All life preservers should be Coast Guard approved and tested periodically.

Additional information must be obtained by the inspector if the swimming facilities include a pool. Information requested would include type, construction, condition, clarity, type of filter, type of chlorinator, pH reading and chlorine residual. A pH reading should be between 7.2 and 7.8 and an acceptable free chlorine residual reading would fall between 0.4 to 1.0 p.p.m. Common violations found at a waterfront or pool that call for correction include less than adequate numbers and types of rescue equipment, and a pH or chlorine residual reading not within optimal limits.

MINIMIZING RISKS IN SPORTS

Sports areas are checked by the inspector for any hazards. Rifle ranges should have instructors with National Rifle Association certification. The range should be flagged and backstops provided at targets such as a dirt bank. Brass should be counted and equipment kept under lock when not in use. Archery ranges should also be flagged and provided with a backstop such as baled hay. Equipment again should be under lock when not in use. Instructors should be specially trained and experienced. Horseback riding should have an instructor with experience and training. The camp inspector checks the maintenance of the horse, equipment, and riding ring. Common violations in sports areas that have to be corrected are: inadequate maintenance of equipment, experience and training certification of instructors, and equipment not under lock. Other safety areas inspected include pesticide and gasoline storage and flammable solvents in art and craft buildings.

CORRECTIVE PROCEDURES

After the inspection is fully completed, the inspector leaves a copy of a summary report with the director including a list of code violations. Copies of the report are sent to the camp organization and town director of health. Major violations incurred such as a nurse registered outside of Connecticut, an overflowing septic system, or a recurring violation must be corrected immediately with a response being sent to the environmental health services division within two weeks.

All licensed camps are inspected by the deadline date of August 1st. Reinspections are conducted during the month of August, camps with major violations being reinspected first. Tabulation of data is completed at the end of the summer and submitted to the State Camp Safety Advisory Council in October. New guidelines and regulations are promulgated during the winter for the second council meeting in March, before the following camping season commences.

In summary, the youth camp program is an on going program year round, with major emphasis during the summer months between June and September, when six regular departmental sanitarians and an additional force of six summer camp inspectors are utilized. Since the beginning of the licensing program, initiated by the late Dr. Harold Barrett, the quality of youth camping in the capacities of health and safety have improved to the benefit of campers, camps, and parents.

SIX-DAY DELIVERY OF MAIL

Mr. MATHIAS. Mr. President, on April 18, the Report of the Commission on Postal Service was issued. According to that report, five of the seven Commissioners recommended that the frequency of delivery of mail be reduced from 6 days a week to 5 days a week. The report states that the majority recommended this change "to reduce the rate at which postal costs increase hereby reducing the pressures for postal rate increases or more appropriations."

Commissioners James H. Rademacher and Paul J. Krebs dissented from this view. In that dissent they stated:

Five of our colleagues recommend that the delivery of mail be reduced from 6 days a week to 5 days a week, and the level of public service appropriations for each fiscal year be fixed at 10 percent of the prior fiscal year's operating expenses. We dissent and urge the President and Congress to retain 6-day-a-week delivery and set the appropriations level at 13 percent of operating expenses to cover the costs of maintaining present delivery standards.

The Commission conducted no research on the impact of reducing deliveries to five days a week. We do know, however, from testimony presented at our hearings, that in rural areas farmers rely on delivery of agricultural reports to keep them abreast of market developments. We also heard from senior citizens on their need and reliance on the mails as a primary source of contact with other people.

The recommendation of the majority will result in the elimination of 20,000 jobs through attrition. The Commission should not be recommending that jobs be abolished at the time when the United States has high unemployment. This recommendation comes at a time when Congress is expressing a different policy in passing a $23.5 billion appropriations bill to increase employment.

Elsewhere in its report the Commission recommends substantial elimination of processing of mail at night. Reducing deliveries to five times a week, coupled with virtual elimination of night processing of mail, compounds the delays and results in unacceptable levels of service.

To maintain the present 6-day delivery standard, we urge that the percentage of the public service appropriations be increased to 13 percent of the prior year's operating expenses. This slight increase in public ap-

propriations recommended by the majority of the Commission is a small amount to pay to maintain our present standard of delivery service.

Mr. President, those are important considerations. This is a time when we should be talking about creating and saving jobs, not eliminating them, and discussing how we can improve, not reduce, mail service. I urge my colleagues to give every consideration to maintaining a mail delivery schedule of 6 days.

THE RELATIONSHIP BETWEEN DOMESTIC AND INTERNATIONAL FOOD POLICY

Mr. HUMPHREY. Mr. President, I know of no subject that is more complex than food policy. Food policy has both a domestic and an international edge. Economists disagree with each other as to the proper approach, as do politicians, political scientists, and others. What we do in food policy here in the United States has ramification throughout the world.

I have seen very few clear discussions of food policy. Most are fraught with the biases of the author or fail to consider possible alternative analyses or interpretations. One exception is a recent speech by Howard W. Hjort, Director of Agricultural Economics at the Department of Agriculture. Mr. Hjort, who is a Montana wheat farmer, made his comments before the USDA's International Food Policy Issues Conference here in Washington on April 28.

Mr. Hjort's comments describe the role of the United States in the world food economy. A number of other food export nations have nationalized marketing systems, and can manipulate their prices to gain a comparative advantage over the United States in the marketing of foodstuffs. As Mr. Hjort points out, movement toward international agreements might change our traditional role as the residual supplier of food for the world.

Food policy must be carefully weighed for its effects on producers, consumers, foreign markets and food aid. The policies we adopt must be reviewed constantly, to assess their relevance to a changing environment. For example, our policies, for better or worse, are bound to initiate a chain reaction from both our friends and enemies.

The setting of food policy becomes a meaningless exercise unless it is established within a framework of objectives. And those objectives must fit within the goals of a nation.

The objectives of our food policy, as Mr. Hjort sees them, are as follows:

First. To moderate extreme swings in prices;

Second. To maintain and expand our markets;

Third. To expand farm income; and

Fourth. To increase food security in poor countries.

There are, as Mr. Hjort points out, a whole host of tools and alternative policy approaches that must be considered in formulating and executing our food policy. Mr. Hjort has delineated these in a very fair and systematic manner, a manner which elucidates the complexities involved and the consequences that are likely to occur to any policy adopted.

This speech comes at a particularly relevant time. As my colleagues in the Senate know, the Committee on Agriculture, Nutrition, and Forestry is currently marking up the omnibus farm bill. While Mr. Hjort did not directly address this legislation, his comments provide a very useful background framework for understanding these complex issues as deliberations continue.

Mr. President, I ask unanimous consent that the text of Mr. Hjort's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RELATIONSHIP BETWEEN DOMESTIC AND INTERNATIONAL FOOD POLICY

During my previous tenure at USDA, agricultural economists and policy markers were largely preoccupied with excess supplies. This posed a domestic dilemma: How could we hold farm surpluses down while keeping farm prices up?

It was not until the 1970's when shortfalls in world agricultural production, the large increase in U.S. agricultural exports and the skyrocketing of prices changed the concerns about our agricultural problems and policies. It became immediately clear that what happens in the rest of the world has extremely important consequences for the United States.

Our farm sector today is highly dependent on what happens in international markets. Agricultural exports are now contributing substantially to farm income. Roughly one-fourth of the cash receipts of farmers now comes from exports. Farm exports have also led to surpluses of as much as $12 billion in our balance of agricultural trade, which have helped pay for costly petroleum imports.

The other side of the ledger, however, is also important. Associated with the surge in commercial farm exports was a reduction in supplies available for domestic use, which in turn led to much higher food prices. Food aid shipments were also curtailed at a time when developing countries needed them the most.

As we have become more dependent on foreign markets as a source of income, so have the importing countries of the world become more dependent on the United States as a source of supply. During the 1970's the United States accounted for about 90 percent of the increase in world wheat exports and for about 80 percent of the increase in coarse grain exports. The U.S. now supplies about 44 percent of world wheat exports, about 55 percent of the coarse grain exports, three-fourths of the soybean exports and one-quarter of the world cotton exports. We have also been the world's main donor of food aid, accounting for about 60 percent of total world food aid during the 1970's compared with about 90% during the 1960's.

World agriculture always is in state of imbalance. This year food grain supplies are excessive, feed grain supplies are slightly in excess of market requirements, oilseed supplies are inadequate, cotton supplies tight, sugar supplies excessive, coffee and cocoa supplies inadequate, and meat supplies still abundant.

A major development this year is that we may see a replenishment of our depleted grain stocks. Because of record world grain crops in 1976, world carryover stocks may increase by as much as 50 million tons and reach their highest level since the early 1970's. U.S. stocks, particularly wheat, are also expected to increase dramatically. Grain prices have weakened from their previous highs and this is having a dampening impact on the incomes of farmers; however, the reverse is true of soybeans with minimal supplies expected at the end of the current season.

The experience of the last few years has given rise to concern that widely fluctuating trade and price levels could be a recurring phenomenon causing all sorts of havoc for farmers, consumers, government planners, and food aid recipients.

In order for the United States to develop appropriate policies to deal with fluctuating trade and price levels, the causes of these impacts must be identified. In large part, these impacts have been caused by the effect of weather on agricultural production and by policy changes in particular countries. In recent years, we have seen how a few countries relied on world markets as a buffer, instead of cutting back on consumption or depending on their own reserves, thus shifting a large part of the adjustment process to others, primarily the United States. This was particularly true of the Soviet Union which has accounted for a very large part of the variation in world production and trade levels, particularly for wheat. Policies of other countries also contributed to the instability, notably the European Community's policy of insulating its agriculture from world markets, Canada's and Australia's policy of varying their export prices, and Japan's policy of subsidizing consumers.

The United States not only has been forced to bear the brunt of the adjustment burden in periods of tight supplies, it also bears it during periods of abundant supplies. This is now evident in world wheat markets, where our market share is being eroded by the other wheat exporters. These countries rely on marketing boards which have complete authority to sell when, where and at almost whatever prices they choose. These marketing boards have a whole array of competitive tactics which include special subsidies, quality discounts and "flat" pricing.

The merchandising of U.S. grain, on the other hand, is handled by private enterprises which must compete with the monopoly power of marketing boards. The open marketing system in the United States generously provides price signals to the whole world. Such information is effectively used by our competitors to adjust their own marketing practices to gain the advantage in world markets. As a result the United States may build up stocks, or be forced to take acreage out of production.

INTERNATIONAL AND DOMESTIC IMPACTS OF U.S. POLICY

I have just argued that it is the policies of other countries that the United States should be concerned with. While this is true, it neglects the important relationship between our own domestic and international policies. Our policies are a double edged sword. Policies aimed at international problems invariably have domestic impacts, while policies aimed primarily at domestic problems have international impacts. With the present transition in policy, these relationships need to be reviewed. Some examples of the relationships that concern me are:

The relationship between our domestic support prices and our competitive position in world markets. If price support levels are set above world equilibrium prices our market share and in turn farm income will suffer;

The relationship between the level of stocks to future domestic and world food prices and growth in markets. Inadequate stocks, high and erratic prices reduce the rate of growth in demand for our farm products;

The relationship between export controls used to stabilize domestic prices and long-run growth in exports. The periodic use of export controls is likely to lead to loss of markets as importing countries reduce their dependence on U.S. supplies by encouraging

domestic production or purchasing elsewhere;

The relationship between a generous food aid policy and domestic food prices. Given a tight domestic supply situation, an increase in food aid shipments potentially leads to higher domestic prices; and

The relationship between export growth, budget outlays, and domestic food prices. Maximizing exports may lead to large budget outlays for export subsidy payments at one extreme and reduced domestic supplies and higher prices at the other.

It is essential that these relationships be taken into account in establishing U.S. domestic and international food policies.

We are now faced with the job of doing just that—establishing new policies on a number of key issues. These issues fall into three major categories I've already alluded to: instability in supplies and prices of basic foodstuffs, maintenance and growth of markets for agricultural products, and food security for low income countries.

THE POLICY OBJECTIVES

In order to develop policies that speak to these issues it is necessary to look closely at our domestic and international objectives. Our overall goal is to achieve stable economic growth, a high level of employment and a low rate in inflation. By my count there are four specific objectives within agriculture which, if met, would help achieve this goal.

The first objective would be to moderate extreme swings in prices. For the United States, feed grain prices are especially important since major surges in feed grain prices can lead to adjustments in the livestock sector which, in later periods, impact on consumer food prices and the general level of inflation. Wheat prices, on the other hand, tend to be more important internationally since wheat makes up a larger proportion of total consumption in the rest of the world.

The second objective would be maintenance and expansion of agricultural markets. We should seek new commercial markets in the developing world, stable and expanding markets in the centrally planned world, and more liberalized markets in the developed world. A third objective tied closely to the first two is the expansion of farm income with a reduction in its year to year volatility.

Finally, from a humanitarian perspective, we want to help increase food security and overall production levels in low income countries. The U.S. will need to meet its fair share of the critical food needs of the poorest countries.

It is evident that we are faced with a multiple set of objectives in which the maximization of any one objective could jeopardize the achievement of other objectives. Thus the trade-offs between objectives will need to be fully analyzed so that there is a reasonable degree of success in achieving our overall goal of stable economic growth.

POLICY TOOLS

In pursuing our objectives, there is a diverse set of policy instruments available to Government. The question I would like to raise, is have we sufficiently evaluated the tools we have at hand and fully utilized those tools capable of meeting our objectives?

The policy tools fall into two categories. Tools which have a primary domestic focus include: (1) nonrecourse loans and target prices, (2) storage incentives, (3) supply control measures, and (4) trade management tools, including subsidies, tariffs, licensing and export controls. Tools with a primary international focus, which require cooperation of other nations, include: (1) bilateral trade arrangements, (2) multilateral trade or commodity agreements, including trade liberalization, (3) food aid, and (4) financial assistance.

The challenge is to design an integrated package that uses these tools to achieve all of our objectives. In designing such a package, the relationships and primary and secondary impacts of the use of these domestic and international policy tools must be taken into account.

ALTERNATIVE POLICY APPROACHES

For your consideration, I would like to suggest three basic policy strategies which incorporate the policy tools I've listed. These possible approaches fall into the general categories of being either unilateral, bilateral, or multilateral. A fourth strategy is a mixture of these, but I will leave this one up to your imagination in the interest of time.

Unilateral approach

The unilateral or go-it-alone approach would not depend on negotiations or cumbersome agreements. Under this option there would be several ways of combining the available policy tools.

The important issue is how well does this strategy meet our objectives on price instability, trade, farm income growth, and food security.

On the stability question the major issue is whether at the extremes the Government should intervene to manage trade flows and production levels or rely on reserve stocks as the principal policy tool.

We have seen in prior years the on again-off again hand of Government in using trade controls, set-aside, and export subsidies. These tools were usually applied in an ad hoc manner to resolve crisis situations. In an effort to minimize some of the apparent conflicts in the use of policies to meet objectives, this Administration has already decided that one major element of its policy will be a farmer-held reserve to help reduce the extremes in domestic and world commodity prices. This type of reserve scheme will help assure that supplies are available to meet domestic and international commitments. It will permit farmers to gain the benefits from future price increases, and it will provide safeguards for consumers and the national economy against sudden surges in food expenditures and rekindled inflation.

We have established this reserve unilaterally; however, only as a partial, positive step leading to the development of an international system of reserves. We have indicated to the international community that world reserves must be a cooperative and participative venture, that the United States will not be the granary of the world.

If we should approach the problems unilaterally, the question of what to do about the objective of maintenance or expansion of our markets, particularly in times of abundant supplies is to my mind unresolved. In order to prevent loss of markets and at the same time protect domestic farm income, we could be forced to resort to export subsidies to compete with other exporters. The principal question here is whether or not the use of export subsidies actually results in any net economic benefit for the United States, particularly if the other exporters are willing to follow our lead. If the answer is no, then we might have to reduce our expectations of meeting some of our trade objectives under the unilateral option.

The question of food security under the unilateral approach I suppose would mean the giving of food aid to the voluntary agencies for distribution to the neediest counties. There would be real limitations on the amount of food that these agencies could handle, so it is unlikely that this approach by itself would meet our food security objectives.

On balance, the unilateral option has limitations. It is appealing to those who do not put much faith in international agreements. However, bilateral and mutilateral options may hold more promise for they could lead to more orderly and, for us, less costly trade and food security arrangements.

Bilateral approach

At present, the United States has several bilateral trade arrangements which include two East European countries, the Soviet Union, Japan, Israel and Taiwan. The objective of these arrangements is to offer assurance of supplies to importing countries in return for access to a particular share of a country's market over time. Other grain exporting countries have used bilateral agreements to help stabilize their share of world markets. The question that we need to answer is, "How well do bilateral agreements meet our domestic and international objectives?"

It has been claimed that the use of bilateral agreements can lead to increased market stability. The example of the U.S.-Soviet agreement is often used. However, whether or not such an agreement successfully insulates the U.S. domestic market depends largely on how other exporters react to unusually large Soviet purchase intentions. If the other exporters divert their exports from other buyers to the Soviets and then these buyers turn to the United States, the bilateral agreement, by itself, would not be effective in protecting the U.S. market. Furthermore, if we went too far in overcommitting supplies to bilateral agreements, given the uncertainties of weather, the choice would be on one hand not to honor those commitments, or on the other hand accept the severe domestic price consequences when supplies were tight.

For the United States the issue is even more complicated, since grain marketing is handled by private enterprises and not the Government. The crucial question is how would the Government guarantee that forward supply commitment would be met. One option is to stand back of these commitments with a grain reserve. The other option would be a rationing scheme, where those countries with bilateral agreement would have first choice on available export supplies. This approach, however, could lead other countries, which did not have or want bilateral agreements, to seek alternative sources of supply.

Bilateral agreements, given the above limitations, however, may be an effective tool for gaining a competitive trade advantage in particular country markets. They also could be an effective tool in meeting food security objectives in low income countries. This could be done through our food aid program, which would tie a multi-year food aid commitment to a commitment by recipient countries to encourage local food production. As countries moved through the development process the bilateral food aid agreements could be converted to multi-year commercial agreements.

Multilateral approach

Multilateral approaches toward meeting our objectives could reduce the cost of going-it-alone and enlarge the benefits to the world. At present there are a number of international initiatives going on which are closely related to our domestic and international objectives on prices, trade, and food security. What can the United States do to turn these discussions into productive negotiations for the advancement of our objectives?

On the instability issue, discussions have been going on in the International Wheat Council (IWC) on developing a new wheat agreement with possible provisions for grain reserves. However, the U.S. proposal, made by the previous Administration, for an international system of grain reserves oper-

ated by quantitiative indicators, has been rejected by other IWC members. These countries apparently want to negotiate an agreement that includes provisions for both prices and quantities. The implementation of our new farmer held reserve program related to a price based mechanism may enhance the development of an international reserves system. However, the specific details of linking national reserves to an international system have not been resolved and will need further attention if productive negotiations are to result.

In another forum the developing countries are seeking to implement an integrated commodity program in which commodity buffer stocks would be financed by a common fund, in order to increase the level and reduce the volatility of their foreign exchange earnings. In a positive gesture the United States has recently said it will agree to a common fund approach to the financing of commodity stocks after individual commodity agreements are made. I have as yet not seen a definitive study on the UNCTAD proposals and their impact on the trade and stability problem. It is too soon to tell whether this program will meet any of our objectives or the developing countries' objectives. I would urge further study of these proposals.

The other major international thrust is the multilateral trade negotiations. For some time these negotiations have been hung up on procedural issues. Progress in the MTN in reducing agricultural trade barriers could have important implications for the United States if, in that process, we can gain greater access to markets. It could also mean a wider sharing of the adjustment process in times of future shortages and surpluses, and reduce the degree of price instability in the United States. Thus, through trade liberalization it would be possible to make progress in meeting several of our objectives.

In addition to the possible multilateral approaches I've just discussed, there are other options that should be evaluated in terms of meeting our objectives. There are many types of possible cooperation with various combinations of exporting and importing countries dealing with different kinds of commodities. There may be useful consultative agreements, buffer stock agreements, market sharing agreements and specialized agreements on trade and food aid to meet the needs of the developing countries. We should be innovative in our approach to international cooperation and should not let past successes and failures limit our view of the potentials for solving problems.

I have talked about the relationships between domestic and international food policies, the objectives of these policies, the policy tools we have available, and possible ways to combine these tools into an effective and comprehensive food policy. The task before us now is to evaluate each of these possible approaches and combinations of approaches in terms of their costs and benefits and their primary and secondary impacts on the domestic and world economy, so that policy makers can choose the right strategy. I hope this conference and follow-up efforts will help us in defining an overall food policy for the United States.

THE NEED FOR REGULATORY REFORM

Mr. PERCY. Mr. President, on May 3, Dr. Richard L. Lesher, president of the U.S. Chamber of Commerce, delivered a perceptive address to the 65th annual chamber of commerce meeting. His remarks were entitled "The Philosophy of Regulation in a Free Society."

With rapid-fire examples, Dr. Lesher demonstrates the cost to society of Government regulation:

Standard Oil of Indiana employs people at a cost of $3 million a year just to comply with Federal Energy Agency rules.

It costs Eli Lilly $15 million to prepare the 27,000 government forms and reports it must submit every year. That adds about fifty cents to the cost of every prescription produced by that company.

Goodyear has to spend $30 million a year on government regulations . . .

And last, but not least, there is the small businessman who complains that OSHA and EPA requirements added 22% to the cost of new processing equipment he just added . . . to his peanut warehouse . . . in Plains, Georgia.

The litany seems endless. Mr. President, I ask unanimous consent that the full text of Dr. Lesher's address be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PERCY. Mr. President, it was Frank Lloyd Wright who labeled Government "a kind of gangsterism." While somewhat overstated, fewer and fewer people find themselves in substantial disagreement.

The responsibility—and mandate—for reform rests with us. Government's leaders created today's regulatory system and it is up to us to reform it to fit today's needs.

The Regulatory Reform Act of 1977, S. 600, is an attempt to do just that. It establishes a discipline and an agenda for careful reform. It provides for a joint Presidential-congressional effort to relieve the consumer of the burden of unneeded regulation. Reform attention will be turned first to question the need for any regulation at all in a particular area. Where regulation is needed, S. 600 asks how much, and what forms it should take. A sunset provision of the legislation makes this reform difficult to smother.

After carefully reviewing this important legislation, the U.S. Chamber of Commerce has come out in favor of it. In a recent letter to me, Dr. Lesher informed me of his organization's full support of the agenda and sunset provision as embodied in S. 600. I welcome the chamber's assistance in helping to accomplish comprehensive and meaningful reform of the regulatory process so that, 10 years from now, Dr. Lesher will not have to deliver the same speech.

It will not be easy. Real achievements seldom are. But systematic reform is a mandate which we would be foolhardy to ignore.

Mr. President, I ask unanimous consent that Dr. Lesher's letter to me on behalf of the U. S. Chamber of Commerce be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHAMBER OF COMMERCE OF THE
UNITED STATES OF AMERICA,
Washington, D.C.

Hon. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: Thank you for sending me a copy of your Regulatory Reform Act of 1977 (S. 600). While keeping within the scope of S. 2812 submitted in the 94th Congress, it represents an important improvement on a very significant piece of legislation.

The National Chamber, as a backer of the concept of regulatory reform, found much in your earlier bill, S. 2812, such as the agenda, that could be useful in advancing reform.

In our testimony before the Senate Government Operations Committee last year, we identified some problems concerning the sunset discipline. We have since re-examined the sunset concept and now feel that we can support it fully. In particular, the reduced severity of the sunset discipline seems to provide the necessary controls, while not sacrificing the protection of health and safety.

There is one new point that I particularly applaud—the requirement that there be a second and additional cycle of reform. This would ensure that the regulators continue to be concerned with their actions after they have conducted the reform mandated by this bill.

The National Chamber continues its strong support of regulatory reform. We will be backing it through our various informational and educational programs. Please do not hesitate to call upon us for any assistance on this subject.

Sincerely,

RICHARD L. LESHER.

EXHIBIT 1

THE PHILOSOPHY OF REGULATION IN A FREE SOCIETY

We meet here today to discuss the topic of regulation. It is—to paraphrase Dickens—the best of times and the worst of times for that.

It is the worst of times because our government is larger, more costly and more pervasive than it has ever been.

It is the best of times because there is now a widespread cynicism about the ability of government to control the smallest details of our lives.

Running against "Washington" was popular in the last election. Indeed, that's how President Carter gained office.

Since that election, many of our legislators have reverted to the tired, old mode of behavior: Tax-tax, spend-spend. As Lowell Harriss put it, "the candidate who uses his own money to buy votes is called corrupt, the one who promises to use someone else's money is called a liberal."

But the President himself still seems sincere about his promises to reform and reorganize the Federal Government. I believe he is going to make an honest effort.

That being the case, we should give some thought to how to help him. What degree of regulation is essential? How much more than that is desirable? And what mechanisms are best suited to the accomplishment of the essential and the desirable?

These questions touch upon very old and very basic problems of political philosophy. Liberty is ever at war with order. And as many great thinkers have pointed out, the tyranny of the majority can be as oppressive as the tyranny of the few.

Nowhere is this danger more evident than in disputes over that freedom we exercise more than most: Our economic freedom.

At one pole is the Adam Smith-Milton Friedman philosophy: That the object of government is the maintenance of order, the protection of property, the enforcement of contracts, and the neutral arbitration of disputes between free citizens—citizens who are presumed responsible for their own welfare.

At the other pole is the paternalistic philosophy: That government must protect man from exploitation by his fellow man and also from the consequences of his own bad judgment.

The problem with this latter philosophy is not its ends, which are admirable. The problem is means. The paternalists are always in the position of substituting the judgement of

one person for that of another. This process of substitution moves the decision-making power farther and farther away from those most directly affected by the decision. Make no mistake about it, each time this happens we have lost one more degree of freedom.

In theory, this "distance" between the regulators and the regulated should lead to impartiality and "justice." In practice, however, it leads to regulators who are indifferent to conditions in the real world. It also builds up an enormous "overhead"—the cost of supporting an ever-larger, decreasingly efficient decision-making apparatus.

As the paternalistic government grows, it gets more obstructive and less responsive. Thus, it becomes progressively more difficult for what's left of the private sector to function efficiently. With slower growth in the private sector, a higher proportion of private sector income must go to finance the public sector. This loss further weakens the private sector. It is a vicious circle, one that increasingly looks like Great Britain, as it is today.

The process should not come as a surprise. We have had plenty of warning. Nearly all of the Founding Fathers knew there is more to fear from government oppression than from the excesses of the private sector.

As Jefferson said, "The natural progress of things is for liberty to yield and government to gain ground."

Perhaps their vision was especially clear because they had just freed themselves from the same kind of bureaucratic burden we now carry.

When you think about it, it's striking the parallels between the issues that bother us today and those that troubled our colonial ancestors.

They were angered by high taxes, suffering from inflation, resentful of "big government" and "big business," outraged by abuse of government authority.

One of the British practices that most upset the colonists was the issuance of "writs of assistance." These were general search warrants. They permitted agents of the government to break into homes on "fishing expeditions."

Today, "writs of assistance" are issued by Congress to the regulatory bureaucracy. For example, agents of the Occupational Safety and Health Administration can raid a business anytime they want—without warning, and without a search warrant.

And who can fail to appreciate—in this day and age—the complaint in the Declaration of Independence that the King "has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance"?

The businessmen of 1775—like the business people of today—were frustrated by excessive government regulation. As one colonial New England merchant put it, "Men of war, cutters, marines with their bayonets fixed, judges of the admiralty, collectors, comptrollers, searchers, tide waiters, land waiters, with a whole catalogue of pimps, are sent hither not to protect our trade but to distress it."

"Not to protect our trade, but to distress it."

I'm not sure what "land waiters" and "tide waiters" were, but if OSHA gets a copy of this speech, we'll probably find out.

What have we done, since we won our freedom, to correct these problems?

For 127 years we grew and prospered with no personal income tax. Since 1913 we have seen a steadily growing tax imposed on the earnings of the American people, and there has been an even larger concentration of centralized power over the people.

During the last 60 years the federal government has become increasingly involved in business. Today it runs directly some 19,000 commercial and industrial enterprises in its civilian branches alone.

Indirectly, it is beginning to run much more than that, through the comparative new mechanisms of, first, "economic," and then "social" regulation.

From 1970 to 1975, no less than seven major new federal regulatory agencies were created. During this same—brief—period, the regulatory environment was changed by enactment of 30 important new laws. Thirty major changes in five years!

In 1936, the Federal Register's text of new rules ran 2,411 pages. By 1970, it had reached 20,000 pages. Now, it is well over 60,000 pages.

You may recall that one of President Carter's early orders to his agency and department heads was that they read, personally, all the regulations published under their authority. Ironically, he had to cancel that order. He had to cancel it because his cabinet members found it to be physically impossible to read them and still have time left to do their jobs.

All of this wouldn't be so hard to take if we were really getting something for our money. But take a look at just what we are getting for our money and you turn pale. Here are some choice examples of recent federal expenditures:

$6,000 to study the Indian Whistling Duck.

$46,000 for a dictionary on witchcraft.

$69,000 on the long-term storage of acorns.

$84,000 to learn why people fall in love.

$500,000 to find out why monkeys clench their teeth.

Please don't ask me why—or how.

Those are just the petty expenditures. Get into the excesses of the environmental protection movement and you make the big time.

The snail darter—a small fish—has stalled a $116 million dam in Tennessee.

The Furbish lousewort—a useless weed—blocks a $600 million hydroelectric project in Maine.

The soft-shelled clam has halted a $2 billion nuclear power plant in New Hampshire.

And a $3.5 billion coal-fired power plant in Utah was sacrifiecd on the altar of the black-footed ferret and the kangaroo rat.

I suggest there is something seriously wrong with the value-system of a society that puts the needs of its human population behind the comfort of snail darters, Furbish louseworts, soft-shelled clams and kangaroo rats.

Doesn't it boggle your mind—four major energy facilities being held up for petty reasons while the President reminds us of the energy crisis?

The rules themselves—and their enforcement—are often as nonsensical as the expenditures.

Pity the poor Navaho Indian who was ordered to install a two-way intercom in his mine . . . even though he works it alone.

He's as perplexed as the Portland employer who was told that 15% of his two secretaries and one bookkeeper must be of minority extraction. Fifteen percent of three people!

Then there's the small businessman who was fined for having too many fire extinguishers. That's right, too many.

In Chicago, they confiscated a batch of rubber squeeze toys . . . for squeaking too loudly.

The head of a meatpacking operation recalls being ordered by one federal agency to put an opening in a conveyor line, and being ordered to close it by another federal agency. "We have been told by various federal agencies," he says, "to provide smooth and rough floors in the same area, salt and not salt the same area, paint and not paint the same area, and so on."

So far, no one in the bureaucracy has tried to make his horse a consul but I expect it any day now.

I had a letter the other day from a writer who asked me to explain the contradictions of the government. He said, "I understand there is a move to legalize marijuana while at the same time they are outlawing saccharin!"

This bizarre behavior is certainly reminiscent of the eccentricities of history's mad kings and emperors. And yet it occurs—with increasing frequency—right here in the democratic, middle-class U.S.A.

The excesses of the bureaucracy are amusing, but the pernicious effects of these excesses are no laughing matter.

We are losing both our privacy and our freedom of choice.

We are encouraging dependence and discouraging initiative.

We are stifling innovation.

And we are imposing a crushing burden on the consumer, through the hidden costs of regulation that are—of necessity—passed along in prices.

Some examples:

Standard Oil of Indiana employs 100 people at a cost of $3 million a year just to comply with Federal Energy Agency rules.

It costs Eli Lilly $15 million to prepare the 27,000 government forms and reports it must submit every year. That adds about fifty cents to the cost of every prescription produced by that company.

Goodyear has to spend $30 million a year on government regulations . . . enough to pay 3,400 workers in Akron their regular wages for a full 12 months. And we wonder why we have unemployment.

And last, but not least, there's the small businessman who complains that OSHA and EPA requirements added 22% to the cost of new processing equipment he just added . . . to his peanut warehouse . . . in Plains, Georgia.

Estimates of the total consumer cost of government red tape vary widely. But the educated guesses usually run between $700 and $2,000 a year, for each and every man, woman and child in the country.

Who—I would like to know—is "protecting" the consumer from this? The government's efforts at consumer protection remind me of the elephant who stepped on the quail, then tried to help her out . . . by sitting on her eggs to keep them warm.

In the words of Bert Lance, "We consistently talk about 'wages' and 'prices' being the causes of inflation. (But) the most serious perpetrator of all is government itself."

With such refreshing common sense coming from the director of the Office of Management and Budget, there may be grounds for hope. Hope, at least, of stemming the tide.

Obviously we cannot abolish all regulation. That is neither possible nor desirable.

The frequency allocation function of the Federal Communications Commission is a perfect example of the type of regulation that is essential. If frequencies were not allocated, the electro-magnetic spectrum would be equally useless to all.

But to admit the need for the function is not to say that we have found the most efficient way to perform it. As Casey Stengel said, "In many areas we have too strong a weakness." There is much that we can do—and must do—to reform the regulatory process.

We have submitted to President Carter—at his request—some specific, detailed suggestions for reducing the paperwork burden on the private sector. The major recommendations are two: First, split the Office of Management and Budget into two subdivisions, a budget office and a management office. The management office would help control red tape. And second, require a "paperwork impact statement" for all new bills and regulations.

In addition to these changes, we suggested some "common sense" procedural reforms:

The persons to be affected should have a chance to comment on proposed reporting requirements.

There should be a process through which burdensome requirements can be appealed.

Agencies should have to give their reasons for disregarding comments.

Proposed forms should be pilot tested on a representative group before use.

Sufficient time should be allowed to respond to a brand new report.

Forms should contain a clear explanation of the purpose of the request, and the penalty—if any—for noncompliance.

The smallest businesses should be exempted from frequently recurring information requests.

Finally, we recommended that the Federal Government reimburse businesses for the cost of providing information, when it is not collected for the specific benefit of the businesses affected. Thus, the costs would be visible and subject to the disciplines of the budgetary process, rather than a hidden tax on certain businesses and their customers.

These limited measures should be relatively easy to implement, and they would help.

But in truth, much more fundamental, sweeping changes are needed in both the objectives of regulation and the methods. Because of this need, we salute the President's recognition of the problem and his interest in the executive reorganization and regulatory reform. And we stand ready to give him what assistance we can.

As a further contribution to this cause, I urge consideration of the following guidelines for both objectives and methods.

The objectives of intelligent regulation should be:

1. To promote maximum freedom of choice for the consumer, not limit it.

2. To promote competition, not reduce it.

3. To help consumers make informed decisions, not to make decisions for them.

4. To produce a net benefit—a net benefit—for the consumer. Too often we fail to compare costs with results.

To accomplish these objectives, I recommend the following methodology:

1. Regulation should specify objectives, not prescribe methods.

2. Regulation should offer incentives, not rely exclusively on penalties.

3. Regulation should use the market mechanism, not substitute for it.

Ladies and gentlemen, it is time to regain control of our government, before that government gains complete control over us. I have to wonder how much longer we are going to permit this to go on.

As the late Walter Lippmann wrote, 40 years ago.

"In a free society the state does not administer the affairs of men. It administers justice among men who conduct their own affairs."

WHY NOT TAKE A CHANCE ON FREEDOM?

Mr. PROXMIRE. Mr. President, earlier today I testified at the oversight hearings on television broadcast policies being conducted by the Subcommittee on Communications of the Senate Committee on Commerce, Science, and Transportation.

The theme of my remark was, "Why not take a chance on freedom?"

I was invited to participate because I have introduced a bill—known as S. 22, the First Amendment Clarification Act of 1977—which would give full meaning to our first amendment's guarantee of freedom of the press by abolishing the so-called fairness doctrine, equal time rule, and other restrictions on broadcasters.

Today's oversight hearing was not an appropriate forum for a discussion of that bill. But I was pleased to have the opportunity to touch briefly on some of the major considerations that have convinced me that broadcasters should be on an equal footing with publishers regarding first amendment rights.

Mr. President, so that all my colleagues may have the chance to read the full text of my testimony, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF SENATOR WILLIAM PROXMIRE

Mr. Chairman, I commend you for holding these oversight hearings on the broadcast industry.

As you know, I introduced in 1975—and again this year—a bill to give full meaning to our First Amendment's guarantee of freedom of the press by abolishing the so-called fairness doctrine, equal time rule, and other restrictions on broadcasters.

Today's oversight hearing is not an appropriate forum for a discussion of that bill, which is known as S.22, the First Amendment Clarification Act of 1977. I hope to appear before you at some later date to make a presentation of that kind.

But I would like to take this opportunity to touch briefly on some of the major considerations that have convinced me that broadcasters should be on an equal footing with publishers regarding First Amendment rights.

FIRST AMENDMENT: 24 PERCENT EFFECTIVE

The First Amendment forbids the Congress from passing any laws that might diminish our right to have a free press.

But, unfortunately, Congress has passed a law that does just that. And the executive and judicial branches have supported that law.

I refer, of course, to the Communications Act, which has abridged the rights of a part of the free press.

Not everyone recognizes that broadcasting is a part of the press. If they did, there would be little to argue about. The need to maintain the freedom of the printed press has, in general, not been attacked.

Other means of mass communication—newspapers, magazines, pamphlets, books, and motion pictures—have kept their free press rights. But not broadcasting.

This would be a grave omission under any circumstances. But broadcasting—radio and television—is the preferred source of news for 76 per cent of the American people. Yet, because of the fairness doctrine, equal time rule, and other governmental controls, broadcasters are second-class citizens when it comes to First Amendment rights.

In practical terms, this means that our First Amendment is only about 24 per cent effective when it comes to freedom of the press. Obviously, we can and must do better.

Denying broadcasters their First Amendment rights is wrong for many reasons. I wish I had time to discuss them all. But in the minutes that remain, I want to concentrate on three of the most important of these reasons.

First of all, this denial is unnecessary. Second, it is self-defeating. And third, it is dangerous. I shall consider each of these, in turn, in the remarks that follow.

UNNECESSARY DENIAL: IF NEWSPAPERS, WHY NOT BROADCASTERS

More and better professionalism has been demonstrated in recent years in broadcast journalism. Professionalism means that there is less bias in news coverage, that contrasting opinions are aired when it comes to editorializing, and that opinion and news are clearly separated.

But isn't that what the fairness doctrine seeks? Unfortunately, it has not worked that way. Rather, the fairness doctrine has stifled professionalism.

On the other hand, newspapers, operating without government regulation and with full constitutional freedom, have improved vastly in fairness, objectivity, accuracy, and relevance.

About 30 years ago I started to write my Harvard Ph.D. dissertation on developing standards to evaluate the political content of newspapers in the United States. I never finished that undertaking. But in the course of my research, I determined that newspapers had improved enormously over the past 100 years, thanks largely to the atmosphere of freedom permitted by the First Amendment.

Broadcasters deserve that same opportunity to be free. And if they get it, broadcasters will demonstrate, as newspapers have done, that it is not necessary to "deny freedom" in order to "gain fairness."

We know, of course, that newspapers, down through the years, have not always been fair.

These front page headlines from editions of the San Francisco Examiner in 1898 remind us all of yellow journalism at its worst. "The Spirit of War Pervades the Breasts of All Americans." "M'Kinley Pursues His Laggard Policy and Still Fears to Deal With Spain."

I might point out, too, that I grew up with the Chicago Tribune. That was the newspaper I read regularly as a youngster, being raised in the Chicago area. The Tribune was, during those years, often marked by biased and subjective reporting. But today, with its op-ed page and other features, the Chicago Tribune is a fair and objective newspaper.

But let's contrast this with, for example, what appeared in the April 29, 1977, edition of the solidly conservative Wall Street Journal. Now we all know that particular newspaper favors a tax break for business. But what headline did it carry on page 12 that day? "Business Doesn't Need a Tax Break." And what followed was an article espousing that position by liberal economist Lester Thurow.

Clearly, newspapers have come a long way. Today, many newspapers carry op-ed pages. Today, most newspaper editors try to make their news columns unbiased and informative. And when an error is made, it is usually corrected. In fact, more and more newspapers are clearly labeling corrections—and they are doing it voluntarily.

In what other ways have newspapers become more fair and unbiased? Here's how:

For one thing, by expanding their coverage. There was a time—not too long ago—when we could not read stories about environmental and health hazards, such as those caused by insecticides, food additives, and other previously arcane chemicals.

There was a time, too, when we did not see stories about social concerns, such as crime-ridden neighborhoods, venereal diseases, old age, population growth, race relations, and school curricula.

Women's rights, it is true, have been reported on since long before the Bloomer Girls. But now we get searching reports on what women's rights really mean.

The list is endless. But fair coverage means that problems, advances, and experimentation in areas of life affecting all of us are covered in all their aspects.

Nearly all newspapers police their advertising, watching for misleading ads and refusing to run them, even though it means lost revenue.

What about big advertisers trying to influence an editor, threatening to pull their ads

unless some news is left uncovered? That abuse is almost unheard of these days. I suspect the reason is that enough fearless editors and publishers have stood up to such advertisers to discourage attempts of this kind.

Errors and excesses can still be found on the pages of today's newspapers. I concede that. But the fact remains that the press, overall, acts responsibly.

The press of this country has accomplished what it has because it has not been controlled by the government. There are no licenses. There are few restraints, other than those dealing with libel and obscenity, and the press wants to live with those.

Responsible, professional newspaper journalism has risen out of necessity: to satisfy demanding readers.

And, of course, it has also come about through the need to compete with the nearly instantaneous delivery of news by radio and television.

But what would happen if we had something like an FCC for newspapers? The First Amendment Committee of the National Association of Broadcasters has recently speculated on this possibility by producing a newspaper—dated 1984—with the ominous headline, "Congress creates Newspaper Commission."

Let us never seriously contemplate the establishment of a Federal Newspaper Commission. Newspapers have become responsible and professional voluntarily. Fairness has not been imposed by government fiat.

Yet, television and radio broadcasters have the FCC and its fairness doctrine to contend with. By law, they must be fair.

Newspapers are fair without goevrnment control. And I maintain that radio and television would also be fair without government control.

Simply put, again, it is not necessary to "deny freedom" in order to "gain fairness."

SELF-DEFEATING DENIAL: CONTROVERSY AVOIDED

Denying broadcasters their First Amendment rights is also wrong because it is self-defeating.

Under the fairness doctrine, for example, broadcasters are required to (1) devote a reasonable amount of time to the discussion of controversial issues and (2) afford reasonable opportunities for opposing viewpoints.

This sounds fine. But, in actual operation, the fairness doctrine has not stimulated the free expression of diverse ideas. Rather, it has had the opposite effect. It has promoted the "sameness" of ideas. Stations avoid the airing of controversial issues because they fear a challenge to their license renewal or expensive litigation resulting from a fairness complaint.

NBC's problems in airing two television documentaries help to illustrate the point.

In 1972, NBC broadcast a documentary entitled, "Pensions: The Broken Promise," which dealt with corporate pension plans and how they often do not keep faith with the workers they are intended to benefit.

The airing of the program led to the filing of a fairness doctrine complaint with the FCC.

NBC claimed in defending itself that the subject of private pension plans was not controversial because as far as it knew the subject had not been dealt with previously on network television.

Accuracy in Media, Inc., complained that contrasting viewpoints were not aired on the program.

The FCC rejected AIM's allegation of distortion but did decide that NBC had violated the fairness doctrine. It then ordered the network to broadcast balancing material.

NBC said that it had done a fair job and had no intention of giving the subject more air time.

Before moving on to what happened in the courts, I should point out a "Catch 22" aspect of this situation. I do so because it is but one example of the nightmare of complexities that accompanies the attempt to administer the fairness doctrine. Had NBC devoted more time to the subject, giving additional viewpoints, there would have been no issue before the FCC. So in order to prove its point, to test the matter in the courts, NBC could air no more shows on the subject without making its case moot.

Now back to the courts. A three-judge panel of the District of Columbia Court of Appeals ruled in favor of NBC, saying that this country needs investigative reporting. Subsequent court actions left this ruling intact.

What is the lesson of the "Pensions" case? It is this. The fairness doctrine can interfere with journalistic discretion, particularly in investigative reporting.

Just think of the implications if the court had decided the other way. Such a ruling would have meant that Government could, in the words of fairness doctrine analyst, Fred Friendly, "substitute its judgment for that of the network as to what issue was involved in a broadcast documentary and order that more air time be given to elements that the journalist never thought central to the story."

The end result would be to restrict broadcast efforts at investigative reporting because of the difficulty in airing any program that took a point of view or was controversial.

But wait a minute, you might say. There's no problem here. NBC won its case. It was home free and clear. There is no lingering "after-effect."

True? Not necessarily. Let's look at how NBC reportedly agonized over its 1975 television documentary on handguns entitled, "A Shooting Gallery Called America?"

According to New York Times writer John J. O'Connor, complaints from the public even before the program was shown caused a rewriting of the script to avoid fairness doctrine complaints to the FCC after the fact.

And O'Connor further reports, this documentary on a controversial issue of public importance—gun control—drew little response from a national television audience of about 10 million (381 complaints out of the 441 letters received in the two weeks after the show) because it failed to take a stand.

If O'Connor is right, then this is a good example of the chilling effect on journalism caused by governmental control of broadcasting.

I believe NBC executives should not have felt the hot breath of the FCC and its fairness doctrine on the backs of their necks. For if O'Connor is correct, the existence of the fairness doctrine indirectly restrained the producers of "Shooting Gallery."

And if O'Connor is right, if NBC news executives ordered a new script for the "Shooting Gallery" because of the fairness doctrine, I wonder if it was because of the time and expense NBC went through before the FCC and the courts in the wake of its 1972 documentary on "Pensions: The Broken Promise?" I do not know the answer to that question. But it is more than rhetorical.

I firmly believe that broadcast journalists would not be chilled into blandness and sameness if it were not for governmental controls as exercised through the FCC's fairness doctrine.

I believe that without the fairness doctrine there would be more, not less, programming of controversial issues.

Restrictions like the fairness doctrine are, in my view, self-defeating. Their proponents want diversity of ideas and the presentation of controversial and contrasting points of view. What they promote, instead, is sameness, blandness, timidity, and conformity. The American people are the losers.

DANGEROUS DENIAL: THE TYRANNY OF GOVERNMENT

Denying broadcasters their First Amendment rights is wrong for a final reason. It is dangerous.

Letting Government be the final arbiter of "fairness," for example, confers immense power. This is especially true when that same Government decides on the granting of broadcast licenses.

Three examples from the recent past remind us how the power of Government—although often exercised in the name of "fairness"—can amount to the tyranny of Government.

These examples all involve past Presidents of the United States. The President, of course, is the head of Government, the same Government that controls broadcasters through the Federal Communications Commission.

In recalling the stories that follow, it is important to remember, too, that the President himself appoints the members of the FCC and designates who shall be Chairman.

My first example comes from the Nixon Administration. Relevant episodes from that period are still fresh in our minds. I need only cite some of them briefly here.

FCC Chairman Dean Burch called CBS President Frank Stanton in November 1969 to request a transcript of that network's news analysis after a Nixon address the night before.

Vice President Agnew made his famous Des Moines speech nine days later blasting the network's news coverage and reminding them that they held licenses at the pleasure of the FCC.

CBS President Stanton reported that there were a number of White House phone calls over the succeeding three years conveying displeasure with news broadcasts.

There was a memo of September 1970 from Charles Colson to H.R. Haldeman proposing that the White House get a ruling from the FCC on the "role of the President, when he uses TV." This, Colson argued, would have "an inhibiting impact on the networks."

There was, too, the December 1972 Indianapolis speech by Clay T. Whitehead, director of the White House's Office of Telecommunications Policy, condemning the "ideological plugola" and "elitist gossip" of network news.

And there was, finally, President Nixon on tape telling Haldeman that, "The main thing is the Post is going to have damnable, damnable problems out of this one. They have a television station. . . . And they are going to have to get it renewed."

But this is not a partisan matter. Fred Friendly has reported that the Kennedy and Johnson Administrations, with financial backing from the Democratic National Committee, used the fairness doctrine to subdue right-wing radio commentators who were critical of Administration goals.

These clandestine campaigns, which reportedly began in 1963, were also meant to inhibit stations from carrying commentary supporting Senator Barry Goldwater, who was then a prospective Presidential candidate.

Friendly reported that both the Kennedy and Johnson Administrations maintained professionally-staffed organizations that monitored stations carrying right-wing commentary and then demanded time for reply under the fairness doctrine.

Such demands for air time, which the stations would have to provide at no cost, were regarded by many broadcasters as harassments that they chose to avoid. As a result, they either dropped the commentaries or diluted them. This, according to Friendly, was exactly what the White House had in mind.

What do these three examples of the abuse of government power tell us?

It is wrong to deny broadcasters their First Amendment rights because a free press—and that should include free broadcasters—is needed to protect us all from the tyranny of government power.

WHY NOT TAKE A CHANCE ON FREEDOM?

What I have been saying today can be reduced to this simple thought—why not take a chance on freedom?

If it's power we're concerned about, and we should be, the power of the electronic media is as a pygmy compared to the power of government.

Recently, U.S. News & World Report surveyed the leading citizens of this country in business, labor, the universities, the newspapers and the government as to who were the people who ran America.

Where did the electronic media rate?

The only person from the media who was rated in the 10 most influential Americans was Walter Cronkite and he was a distant ninth. In fact, Cronkite was the only electronic media person in the 30 most influential Americans.

Who are the most influential? The answer is emphatic.

It's government. Eight of the top 10 persons who run America were government officials.

By denying the electronic media their full First Amendment rights, we give the big guy—government—more power and from the less influential—the media—we take it away.

To those who would claim that it is safer to take a chance on Government than a chance on freedom and a free press, there are two clear rebuttals.

First, Governments traditionally have gathered more and more power unto themselves without regard to the liberties of their citizens. Europe and South America and Asia are replete with such examples. And we in this country can cite some near-misses, the most recent being, of course, what we have come to know by the shorthand term of Watergate.

And second, it is easy for a government, with its power to give jobs and favors, to present a solid front in controlling information about itself. But it is impossible, with members of a free press competing among themselves, to conspire to suppress information about government or anything else. As Jefferson once said, whoever heard of a newspaper suppressing a government?

Freedom of the press can be abused by individual reports, papers, magazines, broadcasters, or broadcasting stations. But, with competition—the drive to be best, to be first with the news, to make money—there is little or no danger of all elements of the press forming a clique or cabal to take over the Government, or—and most important—to deceive the citizens, their customers.

As long as the Government is kept from the neck of the press by the First Amendment, the public should be informed. And that is why the First Amendment was written the way it was—as a direct prohibition against governmental interference with five basic freedoms· Of religion, of speech, of press, of assembly, or redress.

Let us not brush away the wisdom of the men who wrote the Constitution and its Bill of Rights.

But it is easy to do that. Look at what the Government has done already through abridging the freedom of the press by imposing controls over the content of radio and television broadcasts.

If there is any risk in the belief that, in Jefferson's words, " the people . . . may safely be trusted to hear everything true and false, and to form a correct judgment"—and there is—then it is the risk inherent in any free society But a free society is not the safest way of life. It is only the best.

HOW SECURE IS A PIPELINE THROUGH CANADA?

Mr. STEVENS. Mr. President, yesterday, in a speech on the floor, I outlined for my colleagues some of the rather startling recommendations of the Berger Commission, an inquiry that the Canadian Government authorized to study the impact on the Canadian Natives if an overland gasline route were chosen.

That inquiry stated in no uncertain terms that no trans-Canada pipeline should be constructed through the Northern Yukon or through the Northwest Territory until 10 years after a Native Claims settlement is reached.

Today, in a full page ad in the Wall Street Journal, one of America's most distinguished diplomats and statesmen, Walter Annenberg, former Ambassador to Great Britain, and currently publisher of TV Guide, raised serious questions about any overland route across Canada for the shipment of Alaska's natural gas to the "Lower 48."

Without further comment on the views as expressed by former Ambassador Annenberg, I respectfully ask unanimous consent to have printed in the RECORD the text of the ad from the Wall Street Journal which will appear in the May 14 TV Guide.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

HOW SECURE IS A PIPELINE THROUGH CANADA?

(By Walter H. Annenberg)

Apparently the Federal Power Commission is not aware of Canada's burgeoning nationalism, a nationalism that started as a commendable effort to encourage distinctive Canadian culture and resulted in economic war against American business.

Publications based in the United States have been all but banned in Canada by laws specifically designed to make it impossible for them to operate there. American broadcasters are harassed by regulations and practices that can be described only as acts of an unfriendly nation.

Yet when the Federal Power Commission (FPC) had to decide whether to bring Alaskan gas to the 48 lower states via a pipeline across Canada or in tankers, it opted for the Canadian pipeline. Reportedly, the decision was influenced by the assertion that the pipeline would be less environmentally damaging than the sea route.

Such a parochial approach is unworthy of the FPC's responsibility to the citizens of this country. It is, in view of the Canadian government's determination to separate itself from the United States, at very least shortsighted. We are placing one of our energy lifelines under direct control of a less-than-friendly government. Should the trend of Canadian nationalism continue in its present direction, the FPC would be helping place in the hands of an unfriendly power a gun to hold against the heads of American citizens.

How unfriendly is the Canadian government? I speak from personal experience, which is why I am taking the rather unusual step of speaking out in this space on a subject that only peripherally concerns television. It is an experience I shared with other American publishers when the Canadian Parliament passed an act making it illegal for Canadian advertisers to deduct advertising in American-owned magazines as a legitimate business expense. This act effectively cut off Canadian advertising to American publications directed to the Canadian audience. TV Guide was fortunate to find a distinguished young French-Canadian executive who organized a group to buy our eight Canadian editions. Time magazine simply discontinued its Canadian edition. Reader's Digest has had to develop a device, including substantial Canadian ownership, to continue publishing there.

American television has felt similar blows. Although Canadians have clearly shown their preference for American programs, Canadian regulations provide that 60 per cent of the programs carried by the government-controlled Canadian Broadcasting Corporation (CBC) and by the other two networks must be Canadian. Most of Canada's population live close to the American border and can receive American stations as well as Canadian ones, thus they can watch an American network show from a station in, say, Buffalo, or from a station in Toronto that carries the same show via CBC.

CBC, however, insists in many cases that the network show be made available to its audience several days before the show is broadcast by the American network. This unfair advantage prompts Canadians to watch the Toronto station rather than Buffalo's.

Cable systems are quite important in Canada, one reason being the Canadians are so fond of American programming. This bothers the government in Ottawa, which doesn't like the idea of its citizens' being exposed to so much American television culture—and so many American commercials. It therefore encouraged cable systems there to drop some commercials from the American programs and substitute Canadian promotions. Most cable systems are doing this (a few used to drop in Canadian commercials occasionally), but the furor from American broadcasters was so great that new cable systems don't have to delete American commercials.

In limiting tax-deductible expenses, American law restricts the number of conventions an American company may hold, and the number of convention trips an individual may take, outside the U.S. This has reduced Canadian income from conventions and the Canadians want the restrictions lifted. American broadcasters suggested that such a change be contingent upon a Canadian promise to stop harassing them, but neither the Canadians nor Congress would go along.

How much Canadian harboring of draft dodgers and deserters during the Vietnam War period has contributed toward the anti-American attitude there is not measurable. But the anti-Americanism is evident, especially in government action and government-sanctioned actions. It should be possible to encourage Canadian contributions to the arts and a unique Canadian culture without using the United States as a scapegoat.

It is obviously to be hoped that the current Canadian attitude toward the United States, at least the attitude of the Canadian government, will give way to the friendly cooperation and interchange that once existed between our two nations. At this point, however, that is only a hope and we cannot dismiss the possibility—however remote—that matters will get worse instead of better.

That is the possibility that makes it imperative to act with extreme caution in the matter of planning to bring vital natural gas from Alaskan fields to the lower states. President Carter is to make the final decision by Dec. 1 concerning the means to make available Alaska's Prudhoe Bay reserve of some 20 trillion cubic feet of gas, enough to provide 5 percent of our consumption for 25 years. Two pipeline routes now favored by the FPC would each cost about $6.7 billion.

A third route involves a pipeline from Prudhoe Bay south to the Alaskan coast and then having the gas—by then liquefied—transported by tanker to West Coast ports.

The all-pipeline routes, environmentalists and the FPC say, are more reliable and less environmentally damaging.

The FPC and the environmentalists may have studied the matter carefully, but it is evident from the naive conclusion they reached that they gave little if any deliberation to the serious and immediate problem of the political situation in Canada and that nation's growing antagonism—well-displayed antagonism—toward the United States.

Unless there is a clear and immediate danger to the environment, or there is some recent development that makes tankers carrying liquified gas—as they have done safely for many years—suddenly less reliable than they always have been, we believe the FPC recommendation to the President should be considered.

We already have an oil pipeline crossing Alaska to ports where the oil is to be shipped south. Why not a gas transportation system paralleling that?

Whatever Canada's real—or imagined—differences with the United States, every effort must be made to regain our former friendly, easy relationship. Until that goal is reached, however, the United States cannot permit itself to be vulnerable to the whims of a government that has acted less than responsibly toward us.

Our safest course would seem to be the prudent one, and that is the course that avoids placing 5 per cent of our natural gas supply under what amounts to foreign control.

OUR TWO-TIER UNEMPLOYMENT PROBLEM

Mr. HUMPHREY. Mr. President, I was certainly heartened by the statistics last Friday from the Department of Labor showing that U.S. unemployment is going down. Before we take too much satisfaction from this, however, I think we have to take a closer look.

As Commissioner Shiskin noted, we are developing a "two-tiered" level of unemployment where teenagers, part-time workers, and minority groups are not fully sharing the gains made by other groups in the work force. In fact, the data shows that some groups, such as black women and teenagers, actually suffer higher unemployment today than they did at the beginning of this year.

To me, this clearly demonstrates that we cannot rely on a general resurgence of the economy to solve our unemployment problems. We need a remedy targeted on the problem areas, particularly youth and minority groups.

Along with other Congressmen and Senators, I have introduced legislation specifically aimed at solving these structural unemployment problems. The two-tiered nature of our unemployment problem makes enactment of the Full Employment and Balanced Growth Act of 1977, the Humphrey-Hawkins bill, an even more obvious necessity than it has been in the past.

Mr. President, I ask unanimous consent that Commissioner Shiskin's discussion of the two-tier employment problem, be printed in the RECORD.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

STATEMENT OF JULIUS SHISKIN

Mr. Chairman and Members of the Committee: I wish to offer the Joint Economic Committee a few brief comments to supplement our press release, The Employment Situation, issued this morning at 10 a.m.

The economy completed the 25th month of the current economic expansion in April with another sharp rise in employment and aggregate hours and a further decline in unemployment.

The labor force increased by 220,000 in April; employment rose by 550,000; and unemployment declined by 330,000.

Over the past 6 months, employment has risen by 2.3 million, an average of 380,000 per month; this compares with virtually no job growth during the previous six months. Unemployment has declined by nearly a full point since last October. Over the same period, other measures of economic performance have also improved substantially, including real GNP, industrial production, real retail sales, and real personal income (adjusted for transfer payments). Recent rises in the index of leading indicators suggest that expansion will continue in the months immediately ahead.

The decline in unemployment was not only substantial, but also widespread. With only an exception here and there, all economic, demographic, industry and occupational groups participated. Long-term unemployment also continued to drop. Even at the reduced rate, however, total unemployment remains at an unprecedented high level for this stage of economic expansion.

Total employment reached 90 million jobs, with increases of more than one-half million in March and again in April. Nonagricultural employment also expanded vigorously, and during the past two months there has been substantial growth in manufacturing and construction employment. Aggregate hours rose again, both in the total private economy and in manufacturing. The employment-population ratio continued to advance toward its all-time high in early 1974.

During the past two JEC hearings on The Employment Situation, there was considerable discussion of a two-tier pattern of unemployment, with younger workers taking one path—that of continuing high unemployment—and experienced workers taking another path—that of fairly strong decline. Empirical evidence BLS has assembled on this matter confirms the existence of such a dual pattern.

Since May 1975, the total unemployment rate has declined by 2 percentage points, or 22 percent. At the same time, there has been a much larger decline in the rate for job losers—experienced workers who have been laid off or terminated from their jobs—about 40 percent. On the other hand, there has been little change for everybody else—new entrants, re-entrants and job leavers—who are mostly teenagers and women.

The pattern also is evident—though not so clearly—in unemployment statistics by age. Thus, there has been a sharp drop in the unemployment rate for men and women 20 and over (26 percent) but a much smaller decline in the unemployment rate for teenagers, about 12 percent.

This pattern shows up again in divergent trends of full-time workers and part-time workers, with a decline of 25 percent for full-time workers since the beginning of the current expansion in the spring of 1975, and a decline of only 7 percent in the rate for those seeking part-time jobs.

It seems clear from these figures that substantial declines, more consistent with improvements in other sectors of the economy, have taken place among experienced, adult employees, while little improvement has taken place among younger persons and those seeking part-time jobs.

In the 3 previous periods of recovery (1971–73, 1961–63, 1958–61) the cyclical declines in the unemployment rates for adult workers also was greater than the decline in the rate for teenagers. Thus the present cyclical patterns appear to be typical. However, the declines for both age categories in the earlier expansions were greater and faster than in the current expansion.

In response to a request by Chairman Bolling, I am adding a few comments about recent developments in prices.

Recent fluctuations in prices are much more similar to those that took place prior to 1973 than those during the 1973–74 bulge.

The Wholesale Price Index showed a sharp drop in the rate of increase in late 1974 and early 1975 following the great bulge in 1973 and 1974. Over the past six months or so, the rates of increase in the components of the WPI, which include farm products and processed foods, have risen; however, the annual rate of increase in the wholesale prices of industrial commodities has fluctuated around a flat trend of 7 percent or so for about 2 years.

Following about two years of decline, the rate of increase in the Consumer Price Index has turned up during the past few months. This upturn is evident in all the major components.

While, on balance, most prices have risen in recent months, at this time the increases do not resemble those that took place during the rapid inflation of 1973–74.

INFORMATIONAL NOTE

Preliminary data to be released by the BLS next week show that the share of the consumption dollar going to automobile-related expenditures increased more between the early 60's and 70's than any other component, and much more rapidly than for the previous decade. Housing increased its share by a small amount, but the shares going to food at home and clothing continued their historical declines. The release will compare the results of nationwide surveys of consumer expenditures conducted by the government in 1960–61 and 1972–73.

My colleagues and I shall now try to answer your questions.

MOVE TOWARD AIRLINE REGULATORY REFORM ACCELERATES

Mr. PERCY. Mr. President, on April 26, 1977, Senator HOWARD W. CANNON, our dedicated, energetic, and creative colleague from Nevada, spoke on airline regulation before the Aero Club of Washington. His remarks, as chairman of the Aviation Subcommittee of the Senate Committee on Commerce, Science, and Transportation, represent a significant and farsighted statement on aviation policy in the United States.

The speech details in concrete and readily understandable terms the need for less Government regulation of the commercial airline industry. I agree with the comment by Senator CANNON that—

Protection of narrow competitive interests is a luxury we can no longer indulge. It is wasteful, it is inefficient, it is expensive. In the long run, it serves neither the airlines nor the public.

Senator CANNON should be particularly commended for his statement that, during the transition period proposed in the reform legislation, the Civil Aeronautics Board, CAB, should be expected to award new applications for innovative services, such as those filed recently for new service out of Midway Airport in Chicago.

When I testified several weeks ago on behalf of S. 689—the Cannon-Kennedy bill which I am cosponsoring—I noted the urgent need to approve the applications of several new carriers to institute service to as many as 14 cities from Midway Airport at fares up to 50 percent below current fares. I am pleased that

Senator CANNON agrees with my position that expeditious approval of these applications would bring tremendous economic benefits to the residents of Metropolitan Chicago, as well as throughout the Midwest. In expressing firm, continued support for competing, innovative service, and the procompetition and substantive entry provisions of S. 689, Senator CANNON has performed a service to the public which will redound to the ultimate financial well-being of the carriers.

Although I agree with most of his remarks, I take exception to a few specific points. First, I believe that fare reductions should be permitted to go beyond the 25 to 35 percent Senator CANNON suggests. Currently, Texas International is offering fares at 50 percent of regular coach fares, and the Midway applicants are proposing even more substantial cuts. I would hope, therefore, that significant fare reductions would not be limited. In the Midway case, a 53-percent fare reduction might well be viewed as critically important to putting Midway back on the Chicago aviation map. Such a fare would draw a sufficient number of new passengers to make the service economically feasible.

Second, I wonder if across-the-board protection of the routes of smaller carriers over those of the larger carriers might be discriminatory and anticompetitive. Admittedly, Senator CANNON has proposed protection of smaller carrier routes as only a transition mechanism. But perhaps the idea should be reexamined to make certain that route monopolies, whether by smaller or larger carriers, are not permanently frozen into any new legislation. Smaller carriers seem to do quite well when competing with larger carriers and may not—certainly not in every instance and perhaps not in most—need special attention or protection.

Third, in the area of entry, it is difficult to understand why an applicant for new service during the first 3 years of this act should be required to affirmatively demonstrate that its application is consistent with the public convenience and necessity. Senator CANNON suggests that, after 3 years, the burden of proof that the applicant is not serving the public interest be shifted to the opponents of the application. I would only urge that this provision become effective with the enactment of this legislation or perhaps within a year thereof instead of 3 years, if it is felt that a transition period is needed.

Additionally, I submit for the RECORD an article that appeared in the April 1977 issue of Miami magazine on Air Florida—an intrastate carrier. Almost all of the attention to low-fare, innovative intrastate service has focused on California and Texas. Yet, Air Florida is now beginning to provide low-fare service to millions of Floridians. It is known as the "grandpa line," because it carries so many elderly citizens who otherwise could not afford to fly to visit their children and grandchildren.

For example, between Miami and Jacksonville, the Air Florida fare of $38 one way is $9 cheaper than other carriers, and the after 7 p.m. fare of $20 is $19 less than—almost half-price of—that charged by CAB-certificated carriers. In January 1977, Air Florida carried 6,000 passengers between Miami and Jacksonville. The carrier notes that half of those passengers were new air travelers who previously used ground transportation or did not travel at all. The intrastate experience in Florida, as well as in Texas and California, offers a preview of the types of innovations that could be expected with less Government regulation of the airline industry.

Mr. President, I ask unanimous consent that the speech of Senator HOWARD W. CANNON and the Miami magazine article, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HOWARD W. CANNON

SOME PERSONAL OBSERVATIONS

In sitting through nearly three weeks of hearings on the airline industry, I was struck by the near unanimity among airline chief executives in opposition to any significant change in the aviation regulatory structure and surprised by the shrill tone of the predictions that doom and Armageddon would befall us if regulatory changes were made in the present system. It is a bit astonishing to one who has been a close observer of the airline business over the years having heard countless times of the evils of CAB regulation, to hear the litany switch to predictions that the sky will fall if we tamper with a statute that is, like Jack Benny, 39 years old.

In fact the Federal Aviation Act in the past few weeks has been sanctified and annointed so often and so profusely that I have begun to have the feeling that Moses brought it down from the mountain as footnotes to the Ten Commandments. God forgive any mere mortal if he should even murmur that this venerable old law may be in need of having its cobwebs swept away.

It was amusing and ironic that the CAB's most vociferous and consistent critic, the champion of free enterprise, Bud Maytag of National, said after reviewing the Cannon-Kennedy bill, that he was falling in love with the CAB.

But the dinosaur of the month award went to Al Casey of American. Casey apparently thinks American can't do what it does best without total governmental regulation and control of all facets of the business including scheduling.

It is interesting that businessmen usually decry governmental intervention and regulation of business activities except in cases where such governmental interference gives them a competitive advantage or an opportunity to be lazy and rest on their oars. Businessmen in the airline industry have said loud and clear that they want as little free enterprise as possible.

The principles of American free enterprise—innovation, price competition and the opportunity to build the better mouse trap should not be outlawed in the airline business simply because the regulatory system for 39 years has discouraged such enterprise.

However, when public policy makers suggest changes in the way the game is played in order to encourage innovation and competitive forces, the din from the industry and its workers, apparently stampeded by management, is deafening.

Take as an example a quote from our hearings:

"Both bills permit unrestricted entry by any carrier into any market, causing a fundamental shift in the nature of the system which we believe would be bad for the public, bad for both scheduled and supplemental air carriers, harmful to shippers, and detrimental to the smooth working of the American economy . . . Enactment of such legislation could spell the beginning of the end of the Nation's air transportation system as we know it today."

Are those familiar refrains? Are those the prophesies of doomsday from one of the witnesses from the airline industry testifying on regulatory reform? No, they are not. Those are the words of Paul Ignatius of the Air Transport Association on May 15, 1974, testifying on a bill which would have permitted more liberal rules for inclusive tour charters.

Despite that shrill and erroneous prediction, the CAB did exactly what the bill would have done and authorized single stop inclusive tour charters. Evidence of the past two years has conclusively demonstrated that this concept has been a bonanza for the airlines, the traveling public, the tour operators and the tourism industry. And of course, the biggest beneficiary in the industry has been that company that pays 25 percent of Mr. Ignatius' salary, United Airlines, which incidentally was the first air carrier to support the concept of less regulation.

THE MYTHS ABOUT DEREGULATION

In the course of the hearings before the committee, a host of myths were voiced in an attempt to turn attention from the real issues involved. The most outrageous of these myths is that we will have an unsafe airline system if regulatory reform is adopted. Of course, nothing could be further from the truth. However, those who wish to divert attention from the imperfections of present regulation have cleverly seized on an idea to scare the public with the fear that regulatory reform will cause airplanes to fall out of the sky. The answer to that is quite simply, hogwash.

First of all, entry to the business, as is the case today, will be open only to operators who the Board finds fit, willing and able. That means fly-by-night operators, poorly financed speculators and those with past safety problems need not apply. Second, there will be no change whatsoever in the manner in which the FAA regulates the safety practices of the airline industry. The same stringent operating standards of Part 121 of the FAR's will apply to all operators whether new or old. And third, most of the new entry into the passenger business will come from experienced airline people who, in the past, have been kept from joining the club.

Another myth that is tops on the hit parade is that air service to small communities is going to decline further or disappear altogether. Of course this comes from the same airline executives whose companies have been leaving small communities steadily for the past ten years. And this in spite of the testimony of the nation's largest operator of small community air service, United Airlines, who has said it has no plans, under a new regulatory structure, to abandon service to the small towns it serves. In fact, United has recently told me that it plans to introduce 737 Jet service into two small towns in my state, Elko and Ely and cancel a long-standing wet lease with Frontier which has been providing service with Convairs.

It was amusing to note that the President of the one carrier that doesn't serve any small communities, TWA, was the most outspoken in protecting small community interests.

The fact is that air service to small town America will be improved by bringing commuter air carriers fully into the system under legislation I am developing in cooperation with Senator Pearson. The commuters are today's specialists in local air service. I'll have more to say about this issue in a few moments.

The third totally unfounded myth is that thousands or tens of thousands of employees

in the airline industry will lose their jobs with enactment of legislation on regulatory reform. This is sheer nonsense, voiced by executives of companies who don't want to face the challenge of changing the hoary and unimaginative way they have always done business. It is also parroted by the chieftains of the labor movement who have enjoyed, over the years, a built-in incentive, provided by regulatory protection, to seek and attain bargaining achievements, frequently out of line with employee productivity. When the average airline pilot in the United States flies only 45 or 50 hours a month when the law says he can fly 80, and sometimes at salaries exceeding $80,000 per year, it is hard not to perceive the inefficiencies the regulatory structure has built into the system.

The plain fact is that employment in the industry is bound to rise under a system which places more emphasis on competition and innovation. New jobs will be created by the stimulation of lower fares in some markets as passengers leave their automobiles for airplanes as they have in Texas. Efficient and innovative companies will be rewarded in a regulatory system emphasizing competition and they will grow and prosper creating the need for additional employees.

While it is certainly true that dislocations may occur as economic conditions change and as market forces operate, such dislocations are very real and prevalent in the present system. One need only count the thousands of employees laid off during the early and mid 70's to understand that employment in the airline industry fluctuates greatly with changes in the economy. And labor, particularly those employed by the less efficient airlines, must sharpen its pencil at the bargaining table to ensure that its demands are in line with productivity needs. Airlines cannot be efficient and innovative when hamstrung by work rules and restrictions, the type of which have pushed many railroads into bankruptcy.

A final myth worth discarding is that airline fares will go up rather than down with regulatory reform. Those peddling this myth are as guilty as those who say that deregulation will result in lower fares. Neither, in my judgment, is right. First, air fares like all other goods and services in our economy will rise as the general costs of doing business rises. Five years from now airline fares will doubtless be higher than they are today. However, that is not to say that a change in the regulatory structure will not bring downward pressure on prices. I think it most certainly will. It is even happening today in isolated situations under the present system of rigid price controls.

The experience with PSA and Southwest shows that innovative pricing coupled with efficient operations in markets with significant traffic density can produce lower cost service to the public. That type of operation is not possible in every market—perhaps not even in the majority of markets in the United States. But a regulatory system which does not even permit the public to benefit from such services when they may be made available is not serving the people or the industry well.

I am convinced that enormous opportunities for more efficient and price-conscious airline services exist, which will be of great benefit to the public and to the industry. But under the highly exclusionary and inefficient policy mandates of the present act, as administered by the CAB, these benefits will not materialize.

NOW, WHERE DO WE GO FROM HERE?

After three weeks of hearings, I'm convinced that unless regulatory changes are made soon, the airline industry will go the way of the railroads. A system that over the long run discourages, ignores, or penalizes efficiency, will dry up investment, promote wasteful practices, lead to higher costs and ultimately destroy that which we are all seeking to preserve—a profitable, privately-owned airline system.

We have all heard the tiresome rhetoric that today's airline system is the finest the world has ever known. While that is undoubtedly true, it is also irrelevant. It probably could have been said a half-century ago, that the United States had the best railroad system in the world. Restrictive, iron-clad, and unfair regulatory policies strangled that industry to death. And I submit that present airline regulation is headed down the same path.

The trouble signs are all too obvious: A rapidly aging airline fleet that is showing its age in higher than necessary fuel consumption and limited ability to add more seats. A paucity of new investment, either equity or debt, except in a few firms that have, so far, bucked the trend. Declining employee productivity which is driving unit costs up faster than is necessary, and most important, a lack of long-term profitability. While none of us can predict the future with unerring accuracy, it seems that given the present regulatory climate and structure, all the signs point to severe problems in the years ahead.

It has been popular in recent weeks to paint this examination of regulatory policy as a drive to deregulate the airline industry and allow free market forces to determine the extent of and the quality of airline service.

However, the plain fact is that no responsible voice in this exercise is advocating deregulation of the airline industry. On the contrary, regulation should and will be preserved while at the same time being redirected. There will not be free entry into the system, pricing will not be decontrolled and the order and facilitation which characterizes today's airline system will not be destroyed.

But the structure of the system will be changed so that every operator, whether he be an existing airline or a newcomer to the business, will feel the pressure of competition and innovation. And such pressure will reorient the system toward efficiency with rewards for those who perform well and penalties for those who don't. The system will not be structured to prop up the least efficient, as it is today, nor will it continue to bar those who might have a better idea.

In the coming weeks I plan to develop a new legislative proposal toward those ends. The bill that I introduced earlier this year along with Senator Kennedy has much to recommend it. However, evidence from the hearings indicates that sound policy also requires significant changes.

The key to my new proposal will be a greater emphasis on transition and moderation during the first few years as the airlines and the Board adapt to a more competitive system.

In the area of entry, for example, for the first three years an applicant for new authority will be required to demonstrate that such authority is consistent with the public convenience and necessity. After a three year period the burden of showing that an application for new authority is not consistent with the public convenience and necessity will be on those opposing such an application.

Nonetheless from the enactment date forward, P C & N will be defined in such a way so that a proposal which provides for innovative service options, more efficient and less costly methods of operation or services at significantly lower fares would undoubtedly be approved by the Board.

During this transition I would expect to see the Board award new authority such as that filed for in the Midway Airport applications.

I remain of the view that in a move toward less regulation and more market-place-oriented decision making, existing airlines including the supplementals and the large intrastate operators in California and Texas, should be able to more or less automatically add to their systems in a modest amount each year. For existing scheduled carriers this will provide an opportunity to rationalize their route structures without long and drawn out route proceedings. This discretionary route entry authority will, however be limited and restricted with appropirate safeguards. For example, the present provision in my bill which allows the smaller carriers to add as many as four new routes a year may be excessive. In keeping with a gradual transition to a more competitive system this number will be reduced. In addition, I am seriously considering a proposal which would further protect the smaller carriers by permitting them to protect all but one route a year from discretionary entry of other carriers. This protection would be phased out after three years. Again, in keeping with a gradual approach to new competition, I will not support a plan to eliminate all route restrictions at the present time. Removal of such restrictions would create vast new authority and could well be excessive unless phased in over time. I will however propose that all current closed door restrictions be limited.

In the area of all-cargo authority, testimony developed during the course of our hearings has been convincing. All of the evidence suggests that regulation of entry and rates has had a depressing effect on the development of all-cargo services. These operations should be open to any entrant on the showing of fitness, willingness and ability only. A free market system should promote the development of nation-wide all cargo services as have been proposed by Flying Tiger and Federal Express. With the market place serving as a price restraint mechanism, and with the pressure from competing modes, there is no longer a need to regulate rates except to ensure that they are not unjustly discriminatory or unduly preferential or prejudicial. The time has come to abandon the attempts to regulate the cargo business in the same manner as we regulate the passenger system. I'm convinced it hasn't worked, it won't work, and the shipping public has been the loser.

In the areas of mergers, agreements and anti-trust immunity, I believe the airlines have made a strong case that the Board should retain basic authority in this area. While I doubt that removing the anti-trust immunity for agreements would result in their being declared unlawful, the opportunity for litigious mischief is apparent.

If such litigation acted as a barrier toward establishing agreements which serve the traveling public, then the system is the loser. I will however propose tough new standards under which agreements may be judged so as to protect the public from patently anti-competitive agreements such as pooling or capacity fixing agreements.

Under a regulatory system which emphasizes competitive market forces, the airlines must be given the opportunity to raise and lower their fares in relation to market conditions. The extent to which fares need be controlled is directly related to the ability of competitors to enter the market or the threat of entry into the market.

During a transition to a more competitive system there needs to be greater regulation of air fares by the Board than would be the case when a more competitive system is fully developed. Particularly in the area of fare increases, the public needs the protection from unwarranted fare increases which might result from less regulation if a meaningful competitive threat is absent. Accordingly, a pricing zone of reasonableness should not extend upward above 10 percent a year. As a

practical matter carrier costs are not increasing that quickly anyway. However, to avoid the opportunity for price gouging in monopoly markets which are not of sufficient size to support competition, price control on the upward side is warranted. Even with price control however, the Board should grant carriers fare increases based on anticipated future cost increases.

In markets where the 10 percent upward flexibility is not appropriate, a mechanism could be established whereby the carriers could submit, in advance, their prospective cost increases and obtain advance approval of fare increases which take into account rising costs in the future. On the downward side, the direct cost test used in S. 689 is not practical. It would create administrative difficulties as the Board would have to determine, on a route-by-route basis, what direct costs were. It is preferable to use a percentage figure on the down side below which a carrier could reduce his fares but subject to CAB suspension. I am considering a figure in the 25 to 35 percent range.

Any air carrier should be allowed to exit a market after reasonable notice to the Board and to the affected communities. Such a period might be six months with the possibility of extension for 6 months. If the Board has determined that the community losing certificated air service is entitled to government supported air service, the Board should be obligated to certificate, by limited certificate, a commuter air carrier to provide the service on a subsidy-eligible basis. The policy should also provide that after a transitional period of perhaps five years, the subsidy system should be entirely constructed on the basis of costs associated with the operation of commuter type aircraft and in line with the general cost patterns of the commuter airlines. This may result in some of the locals entirely leaving the subsidized air service system, and others returning to the business of operating small aircraft. The result will be that small communities will probably get more frequent and timely air service—with smaller planes— and the government's subsidy costs will decline significantly.

The legislation I have broadly outlined here today will not be popular in many quarters. The less-efficient members of the airline industry will attack it on the basis that business-as-usual will no longer be the rule of the day. Some of the largest airlines may not like it because it will mitigate against further economic concentration in the industry and provide more incentives for the small airlines than the large. The smallest carriers may cry that it doesn't adequately protect them from competition from the larger carriers.

But protection of narrow competitive interests is a luxury we can no longer indulge. It is wasteful, it is inefficient, it is expensive. In the long run, it serves neither the airlines nor the public.

Passing this legislation will be a tough job. But I will not shirk from the task. While uncertainty for us all lies ahead as we move toward a more competitive airline system, there is no doubt in my mind that failure to pass leigslation such as that which I have described will provide even more uncertainty and in the end, the chaos, disarray and huge public bailouts which are now characteristic of the nation's railroad system.

I appreciate this opportunity to appear before you today to discuss this issue of vital importance to us all. Thank you very much.

[From Miami magazine, April 1977]

IT LOOKS LIKE TAKEOFF TIME AT AIR FLORIDA

Air Florida, a Miami-based Florida airline, began service in 1972 as an intrastate carrier, authorized by the state Public Service Commission to establish routes and fares between destinations within the state.

Despite plans to begin as a jet aircraft line, Air Florida operated with propjet (propeller) planes until last December when introduction of Boeing 727 service triggered large increases in schedules and in passenger use. This February, Air Florida carried in excess of 17,000 passengers and on one Sunday set a company record of 97 per cent sold seats out of its total capacity for the day.

As of now, Air Florida may not sell connecting tickets or have its own sold in conjunction with interstate airlines, nor may it exchange baggage with them. A bill before the United States Congress would amend Civil Aeronautics Board (CAB) regulations to permit such exchanges known as "interlining."

After four years of losses, viewed by management as part of the risk of giving birth to a new airline, Air Florida shows a market increase and the company is negotiating for five DC–9 jets, three targeted to arrive in 1977 and two in 1978.

Board Chairman and Chief Operating Officer Eli Timoner, who has already proved his mettle by building a successful candy business and a successful floor products and snowmobile manufacturing firm, sees Air Florida's success as a certainty, considering the records of intrastate lines in California and Texas. In those states, with low fares and thoughtful scheduling Southwest of Texas and PSA of California have become remarkably busy. They are, in essence, flying buses, and have replaced, to a substantial degree, heavy loads of what probably would otherwise be ground traffic between major cities in their states. Timoner hopes to emulate their service and success and to prove, as they have, that air travel can be inexpensive, safe and part of a state's economic development mix.

"Tell 'em we'll fly them," said Air Florida chairman Eli Timoner. 'We'll take Indian beads if necessary."

Some Dade County employees needed to get to Tallahassee, so they reserved space on Air Florida. Dade County uses Eastern "Flite-Checks" to pay for employees' travel. But Air Florida is an intrastate line and it has no "interline" agreements with the big trunk carriers such as Eastern. "We can take the Flite-Checks," Timoner said. "The question is whether Eastern can redeem them."

But Timoner's fashion, as he says, is to "live and suffer for every passenger." He wasn't about to forfeit county passengers to another carrier. It's typical of the Air Florida operation that such a problem at the ticket counter would find its way to the desk of the board chairman. With 10 passengers in the balance, Timoner launched a series of quick telephone calls, told the county its credit was good with Air Florida, promised credit cards, pinned down the reservations and turned to the next order of business. The next business happened to be an upcoming board of directors' meeting involving new stockholders and a $1.5 million financing shot-in-the-arm for the fledgling line, now entering its fifth year.

As for the county, Miami-Tallahassee at $47 one-way is $9 cheaper by Air Florida than any other line and at the pleasure fare of $25 is $31 cheaper than others. In fact, Air Florida low-cost flights run a few cents cheaper than bus fare on the Miami-Tallahassee, Miami-Jacksonville and Miami-Tampa turnarounds.

Indeed, low fares and convenient schedules, plus jet equipment, explain why a well-run intrastate operation can look forward to the prosperity in Florida enjoyed by successful intrastates in Texas and California. Their service tends to generate air passengers from a previously non-flying public rather than luring passengers from existing trunk lines that make in-state short hauls as part of their interstate services.

As it obtained new financing and laid firm plans to add three DC–9 jets this year and two more in 1978, Air Florida scored 111 per cent passenger increase in February 1977 over the same month in 1976. On February 27, a Sunday, Air Florida flew 971 passengers in its 1,003 available seats, a 97 percent load factor. Traffic continues to increase with the Boeing 727 Air Florida uses in operation about nine hours each day.

Of more significance is another statistic—average passengers per flight—Timoner watches with the intensity of a parent measuring the temperature of a convalescing child. In February, Air Florida carried an average of 51 passengers per flight, up seven per flight from January. With the line's mix of fares, a 60-passenger average per flight marks a cash-flow break-even point. Timoner predicted a 55 average in March and the 60 breakthrough in April. The mix now includes flights on the 727 and on Air Florida's two Lockheed Electras. Additional jets available will provide, and serve to fill, more seats. The uninitiated passenger seems to prefer jets these days.

In January, Air Florida carried 17,200 passengers, 102 per cent more than January, 1976. A record 9,595 flew between Tampa and Miami, a route served by seven major trunk lines as well: Eastern, Delta, National, Northwest, Braniff, United and TWA.

Flights to Jacksonville began December 16, 1976 with five daily round trips, a business-hours fare of $38 and a "pleasure" fare (departing Jacksonville at 9 p.m. with a stop in Tallahassee) of $20. The evening and weekend pleasure fares chop 58 per cent off other carriers' coach fares. The $20 fare works out to 4.8 cents per mile for the passenger, an economy difficult to achieve even in one's private automobile.

Passengers tell flight attendants: "This is the first time it's made sense for me to visit my grandchildren in Miami . . . I can afford to take the trip and the time now . . ." And things like that. Timoner monitors communications from passengers and letters of commendation are running nine to one over complaints. "They call us 'the grandpa line!'"

Getting the airline to this point hasn't been easy, and the battles seem never to end. Florida's Miami-Jacksonville-Tallahassee run (MIA–JAX–TLH) is not yet approved by the Florida Public Service Commission for the JAX–TLH leg. Timoner's application for service was forced into a hearing by objections from Charter Air, a taxi service using small aircraft (Cessna 402) carrying about 12 passengers and charging $45 one way. Hearings have been concluded and Air Florida expects a favorable ruling about April 1. Air Florida proposes a $30 ticket one-way for daytime schedules, with morning and evening roundtrips to permit travelers to spend a working day at either end and return home, avoiding an overnight stop. The pleasure fare will be $15 one way. National also serves this route with a 2 p.m. JAX–TLH flight and a 3 p.m. TLH–JAX flight daily for $33 one way.

Prices and schedules build traffic, in Air Florida's opinion. Timoner wants businessmen to use his planes at schedules so frequent and convenient travel will cause barely an interruption in the day's activities. Air Florida's second jet, when it arrives, will go on full-route service but the third he plans to use to start a shuttle service between Miami and Tampa. "Out on the even hours, back on the odd hours, or something like that," he says, "so the businessman knows there's a flight and a schedule and doesn't even have to call us up. He just comes to the airport."

Lower fares and schedules timed to Florida cities as destinations, rather than as way stops toward more distant destination cities, seem to work. In January of this year 12,000 passengers (estimated) flew JAX–MIA on all carriers. CAB figures show that the historical market average for January is 9,000. Air Florida carried 6,000. Timoner assumes that 50 per cent of Air Florida's traffic was gen-

erated from the existing market and the other half, 3,000, consisted of new air travelers created out of people who would otherwise have used ground transportation or not have traveled at all. Because of Florida's geography and her farflung urban centers. Timoner thinks Air Florida can build—as have Texas and California carriers—on the theory of one-day turnarounds, flexible schedules, prices.

As he moved to get Air Florida into the air, and later to bring in more capital and increase jet availabilities, Timoner kept in mind the Texas Southwest and PSA (California) models. PSA's fare between Los Angeles and San Francisco is $18.75. That's a 338-mile trip. Low coach fares for interstate—meaning CAB-regulated—carriers for comparable distances, for example New York-Pittsburgh, are $37.96 for 335 miles; or Chicago-Minneapolis, 339 miles, $38.89. A recent congressional report from a subcommittee headed by Sen. Edward Kennedy asserts that intrastate fares run 50–70 per cent of CAB-regulated fares for approximately the same distances and kinds of routes.

Sen. Kennedy is sponsoring a bill to reduce the degree of CAB power to regulate fares and routes. President Jimmy Carter last month stated he favors considerable deregulation of air routes and tariffs. Much of the evidence pushing Senate and White House leadership in the direction of unfettered air competition arises from comparisons of nonregulated rates with regulated ones. All this suggests further to Timoner and his colleagues opportunities for schedules within Florida that will generate add-on business for Air Florida without impacting seriously on the business of the trunklines.

His experience suggests that the big trunk lines (Eastern, National, Delta, etc.) and the growing regional services (Piedmont, Southern, Allegheny, etc.) will be helped, not hurt, by this short-haul service. He gives such examples as this: a long-haul carrier taking people from Miami to Houston might be overbooked on the Miami-Tampa leg and thus lose the long-haul passenger; by increasing traffic to major airports from outlying cities, more passengers can use long haul service more conveniently; Air Florida will not be affected in its schedules by bad weather 1,000 miles from Florida and so can remove short-haul pressures from major trunks when their planes are grounded in New York or Boston or Chicago.

Look at the TLH–JAX route. Highway department origin and destination studies show that 5,900 vehicles per day including trucks use the route. Estimating one of every three vehicles as a truck, Timoner figures that 4,000 people a day drive the distance in cars. National now carries a total of 14,000 passengers a year on its one flight each day each way. In one year, if granted the route by the PSC, Air Florida expects to boost total air passengers to 60,000 per year. His model, again, comes from Texas where air passengers increased from 300,000 a year to 1,000,000 a year between Dallas and Houston after Southwest started service, and where formerly 10 per cent of all travel between the two cities was by air and now 33 per cent of all travel is by air. Timoner makes a strong case for conservation of fuel resources out of these figures, too. But the big lines haven't convinced themselves that Air Florida is going to be all that great a buddy to share the skies with. Reactions to Air Florida have been mixed. Eastern supplies maintenance for Air Florida jets. Other firms supply ground services in Miami but Air Florida supplies its own in Tallahassee and Orlando (McCoy Field).

Eastern's economists disagree that Southwest and PSA prove the value of deregulation at the federal level or the viability of intrastate low fares. PSA faces difficult financial problems, according to Dr. Morton Erlich, Eastern vice president, and Southwest in Texas enjoys monopoly use of Dallas' Love Field, the "old" airport close in to the city, while other carriers use mammoth Dallas-Fort Worth airport, which means extensive ground transport before flying. To Eastern's thinking, their experience is not transferable to Florida.

Whether Air Florida provides "relief" to the trunk lines on short flights depends on traffic. "We have no crystal clear data on that and it's hard to translate what we know into a positive or negative position," Dr. Erlich commented. He said that Eastern has elected not to attempt to match fares with Air Florida because it thinks there isn't enough traffic to justify the change, "If Air Florida thinks it can profit from this relatively small market, it has every opportunity to try. But the jury is still out on that one and we note that Air Florida's regular fare trips are rather lightly traveled."

Erlich noted that Air Florida recently received approval for a $5 increase in its Orlando fares but considers on that route the line is more in competition with the bus than with other air carriers. Timoner regards himself as much in compeition with ground transport on all his routes as with the big airlines.

When Air Florida began flights into McCoy (Orlando) its planes loaded and unloaded in a cargo area and three buses were required to take passengers from the apron to the terminal. Air Florida built a temporary facility at McCoy. Now permanent, this facility is near gates which other airlines won't permit Air Florida to use, except for Delta. Trouble is, the Air Florida counter is about as far from Delta's gate as you can get without leaving the terminal altogether. In Jacksonville, Air Florida fought for counter space in the bright new airport, finally subleasing space from United. However, all the jetways (the telescoping covered ramp connecting waiting space directly to aircraft) are leased to other carriers so Air Florida took space without a jetway despite the fact that unused ones stand idle elsewhere. This means Air Florida passengers must walk down to ground level and then climb stairs to the airplane: no big deal, of course, but not quite what experienced passengers are used to. There was limited space in Tallahassee so Air Florida started in a kiosk near the baggage area. Now, the airport will build space in the terminal to replace a temporary counter now in the main lobby, though passengers will still drop their luggage on a baggage truck at the street entrance.

In Dade County, Timoner found cooperation excellent, the airport administration and staff cooperative. "They recognized the need and they like to see traffic build up," he said.

How can an intrastate carrier offer lower fares? If Air Florida can cut rates, why can't others? President Carter and the Kennedy committee think all rates can come down in response to competition and that such frills as movies, meals, ticketing by computer, champagne and so forth add only a few dollars to each ticket on high-volume routes. The carriers respond, according to testimony before Sen. Kennedy's committee, that offering a wide range of schedules, maintaining service to smaller cities that produce low volumes of passengers and in general providing a flexible and useful national air transport system all cost money and that the system iself would be seriously damaged if price became the single determinant in their operations.

Indeed, if the total costs of operating a major airline were allocated on a seat-mile basis there would be no way a relatively short flight could produce breakeven. If a major line by some fluke consistently handled a high number of short flight tickets and a low number of long flight tickets, it could face disaster.

The intrastates keep prices down through low overhead, relatively simple ticket selling and scheduling services and by buying maintenance and ground services as needed instead of having to capitalize and administer such services at a satisfactory level whether or not they are utilized fully. With shorter hauls they can generate more flexible schedules and with lower prices create traffic from people who never before considered flying available to them. The intrastate carrier does need a higher load factor for breakeven. If everyone flew Air Florida only on its low fare (pleasure fare) flights, the line would require about a 75 per cent load-factor break-even. But within its total mix of flights, when its additional jets are in service, the line can break even at about or under 50 per cent. Some of the trunk lines can break even at under 50 per cent load, but most require a mid-50s percentage load within their total mix of flight lengths and ticket prices to cover their operating costs.

Timoner, convinced he has a favorable deal for the public, expects full utility for the new equipment now on the way. He has been disappointed before with jet aircraft promised but not delivered. Air Florida was supposed to have started with jets but when leased aircraft were not delivered turned to the faithful, comfortable Lockheed Electra, a propjet. Somehow, in this age of flying, people do not accept propeller-driven aircraft with the same confidence as they do jets. No explanation for that—it is merely one of the public perceptions concerning flying that you're up against when you run an airline.

Air Florida people share the high morale that comes with being an underdog starting to assert itself. The line has 140 employees. It is into the airline game of pretty stewardesses and new uniform designs. Everyone wants to know the daily count of seats sold and advance reservations booked. The board of directors in early March authorized a committee to write and adopt a profit-sharing plan modeled on Southwest's Air Florida's Offices in the Atrium complex just off NW 36 Street bustle. People move about purposefully. The easy informality and enthusiasm of a rally headed for victory comes through. Carol Gersten, University of Georgia journalism graduate and public relations officer of the company, moves in and out of Timoner's office, and that of general manager Ted Griffin, without regard to protocol. Dennis Merola, reservations manager, dashes in unannounced to tell Timorner that a particular problem has been straightened out. Merola studied airline management at Miami-Dade Community College and his total work experience is with Air Florida. While Merola and Timoner chat about how they will handle someone's credit or what's happening on the telephones, the company's comptroller emerges from an office adjacent to Timoner's with some tidbit of information or another.

Timoner works in a double office that is carpeted and draped in a businesslike manner but is hardly a designers' dream. His office is furnished for work, not show. One room contains his desk, where he rarely sits. It opens to another with a large table surrounded by chairs and bearing an assortment of advertising proofs, pictures of airplanes and various reports. The boss sits first one place then another. He confers at the table, then at the desk. His secretary, June Roy, fields his calls, finds reports, responds to visitors and with relative calm matches the Timoner style of switching from one subject to another and one caller to another with aplomb. The chairman is not a shouter. His voice remains soft, his instructions simple and clear, his confidence in his associates obvious as the day's work proceeds through routine and crises.

Something's working. On Dec. 1, 1976, Merola's forces handled 700–800 calls a day and placed 300 reservations. By March 1, 1977, calls were up to 2,500 per day producing 1,250 to 1,500 reservations.

Air Florida is approved also for so-called commercial operations. It may carry passengers whose fares are paid by a third party, such as groups flying to Bahamas casinos. So, on weekends, an Air Florida craft may journey to Freeport or somewhere else and add to the cash flow Timoner needs as he grooms his birds toward profitability.

When space is available, Air Florida carries employees of other airlines anywhere on the schedule for $8. The generosity is not reciprocated at this time. No discounts and no freebies. "We aren't really another airline to them," Timoner smiles.

At Miami International Airport on a Sunday night, Timoner stopped by the Air Florida counter on his way home (Gables Estates) from an afternoon at the office. "Are you selling tickets out there?" he was asked on the phone. "No," he said. "I'm emptying ashtrays, sweeping up and watching us fill up flights . . . four full ones today. How else do you expect to get an airline off the ground?"

The line's new financing and new advisors brighten that light at the end of the tunnel and cheer Timoner's spirit. It was not always thus. The startup has been rough and only the unflagging confidence born of absolute conviction could have survived some of the blows.

Losses since 1973 come to half a million annually. In 1976, net losses were $671,000 on operating revenues of $2.8 million. Timoner watched traffic decline in 1974–75 from 155,256 passengers in '74 to 138,648 in '75. Revenues were up because of fare increases, but expenses increased because of fuel and service raises. In 1976, passengers declined again to 101,466, about 27 per cent, and expenses went up again. Interest went up, selling and general administrative expenses went up and the Florida Sales Tax department completed an audit that resulted in a $140,000 assessment.

So what's going to turn all this around, other than Timoner's personal dedication and convictions?

For one thing, jets. Jet service started only in December 1976. The 727 lifted spirits in the company as well as a lot of Florida people. Now, more jets are on the way. Another 727 was expected early this year but DC–9s will go on the line instead.

For another, schedules. Air Florida builds its scheduling around getting Floridians someplace in the morning in time for a day's activities and getting them back again in the evening. Its pleasure fares fly early enough in the evenings and on weekends to avoid classification as "red-eye specials," the after-midnight low-fare flights of the major carriers.

Down the line, perhaps, a change in federal regulations that would permit Air Florida to "interline," which means to write tickets and have tickets written for it by other airlines so that Air Florida could be used in conjunction with flights outside Florida. This would also permit passengers cancelled on another line, because of weather or overbooking, to use their tickets on Air Florida without having to buy a new one and wait for a refund on the original. Florida's Congressional delegation has introduced a bill to allow Florida intrastate lines to accept tickets and baggage from other carriers and Timoner pushes a petition which, when signatures mount, will be forwarded to Florida's congressmen. The House already has passed such a bill applicable to California.

And, for more optimism, new money. In December, Air Florida signed with a group of investors for a private placement of 3,000,000 shares of the company's $.50 par value common stock at par price. This means the infusion of $1.5 million of new capital during early 1977 and also guaranteed interim bank loans.

The new capital will finance the transition to a pure jet fleet and handle financing of earlier loans and two series of convertible debentures, one at 9 and a quarter per cent and the other at 11 per cent.

As for the airline's long-range goal, let Timoner say it:

"Air Florida is dedicated to providing the public with the best air service at the lowest possible cost. We have now embarked on a total program to introduce Air Florida as a new jet airline. We have new, lower fares, increased scheduling to new and existing markets; we're featuring new hostess uniforms, instant ticketing, carry-on baggage and other services to make Air Florida more convenient and affordable. Air Florida's future plan is to expand this improved jet service to the major population centers throughout our state . . . we believe that Air Florida will be the true catalyst in the economic development of commerce between Florida's cities and for greater utilization of Florida's unequalled recreation facilities by Floridians and visitors within our state."

NATIONAL CONSUMER COOPERATIVE BANK ACT

Mr. PROXMIRE. Mr. President, I was very pleased to see that the proposed National Consumer Cooperative Bank Act is moving forward in the other body. The legislation has been reported by the House Banking Committee, and apparently stands an excellent chance of passage by the full House.

Cooperatives are a very useful form of enterprise that provide jobs and housing for moderate income people and reasonably priced goods for consumers. Farm co-ops have had enormous success, in part because the Congress had the wisdom several decades ago to provide a central banking facility for them. Although there have been successful retail co-ops and housing co-ops, the consumer co-op movement has not grown as rapidly in the United States as in other Western countries, in large part because of a lack of capital and a lack of adequate management expertise.

The proposed National Consumer Cooperative Bank Act would help provide both. An expansion of consumer co-ops of all kinds—including those providing consumer goods, services such as health care and auto repair, producer co-ops, and of course co-op housing would be ideally suited for this period of inflation and belt-tightening. All of these enterprises would be eligible for loans by the proposed bank system.

Although I have serious reservations about the inflationary impact of new Federal spending programs, I view the legislation introduced by my friend, the Senator from New Hampshire, as an anti-inflationary measure. It is a loan program, not a handout, and the initial equity capital to be subscribed by the Treasury over a period of 4 years would be gradually bought out by participating co-ops, on the model of the farm credit banks. Thus, the initial public contribution would be reimbursed over time.

The legislation was considered by the Senate Banking Committee last session, and action was postponed because of questions about whether the bank should be on budget. As a matter of fiscal responsibility, I believe that it must be on budget, and I am pleased to note that the House Banking Committee has reported it on that basis. I also note that the House Banking Committee has cut the original bill in half, and that action also may well be prudent. I can assure my colleagues that we will give this useful measure prompt consideration once it has been approved by the other body.

I ask unanimous consent that two articles from the American Banker and the Washington Evening Star be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

[From the American Banker, May 6, 1977]

HOUSE BANKING CLEARS CONSUMER COOPERATIVE BANK BY 24–11 VOTE

(By Lynn Conover)

WASHINGTON.—The House Banking, Finance and Urban Affairs Committee Thursday approved 24–11, legislation creating a national consumer cooperative bank.

The final bill was a scaled-down version representing a compromise between Congress and the Administration, which had advocated a two year pilot program instead.

The committee had turned down Wednesday an effort by one Republican member and one Democrat to offer the Administration's position in bill form.

The move by Reps. J. William Stanton, Ohio, the committee's ranking Republican, and John J. LaFalce, D., N.Y. was defeated 17–23.

"It's a piddling substitute," commented Rep. Parren J. Mitchell, D., Md., a strong supporter of the national consumer co-op bank concept.

Working against a May 15 budget deadline, the committee instead agreed to a substitute offered by Rep. Fernand J. St Germain, D., R.I., a sponsor of the original legislation.

The bill approved Thursday would create a cooperative bank patterned after Farm Credit System lenders such as the Bank for Cooperatives.

The Federal government would provide the bank $500 million over a five year period. The original bill would have provided $1 billion to the bank over four years.

The Treasury Department had told a House subcommittee last week that it should hold off passage of the co-op bill until completion of a proposed two-year pilot lending project for cooperatives.

"We must have more evidence concerning the need for, and cost-effectiveness of creating a consumer cooperative bank," an agency witness declared.

However, Rep. St Germain took issue with the Treasury stance, saying it did not represent the real judgment of the Administration. Several members of the Administration previously endorsed the concept.

The co-op bank is strongly supported by labor, consumer and cooperative groups which charge that traditional lenders have neglected lending to cooperatives.

Under the legislation, the bank would be run by a 13-member Board nominated by the President and approved by the Senate. Seven members would be chosen from among several Federal agencies and the remaining six would be from outside the government, with experience in co-ops.

Credit unions and mutual savings banks and savings and loan associations are specifically excluded from being eligible to borrow from the bank.

"An eligible cooperative is an organization chartered or operated on a cooperative, not-for-profit basis for producing or furnishing goods, services or facilities, primarily for the benefit of its members or voting stockholders who are ultimate consumers," the bill states.

[From The Washington Evening Star, May 5, 1977]

CONSUMER COOPERATIVE BANK BILL ADVANCES IN SCALED-DOWN VERSION

(By John Holusha)

The House Banking Committee, over administration opposition, has approved a bill that could pump up to $5 billion into cooperatively owned alternatives to commercial food stores, housing and other businesses and services.

The committee approved a scaled-back version of the bill to establish a National Consumer Cooperative Bank, which would lend to neighborhood cooperatives. The bill calls for capitalization of $100 million for the bank next year and up to $400 million more in succeeding years.

In addition, the bank would be entitled to borrow up to 10 times its capitalization.

As originally written, and as passed by the committee last year, the bank would have had a capitalization of $1 billion, with a twentyfold borrowing power, plus another $250 million for a special program aimed at poor city areas.

It was reduced in scope after Treasury Department official Roger Altman said the administration opposed creation of a new agency and additional spending until the credit problems of coops are better known.

However, as approved today by a 25–11 vote, the bill is still considerably more than the two-year, $20 million pilot program suggested by Altman.

It could conceivably be the first veto decision faced by President Carter, since the bill has broad support, with more than 100 cosponsors in the House and more than 30 in the Senate.

The cooperative bank bill is one of the major objectives of consumer, housing and labor groups, who contend cooperative organizations have been starved for financing by commercial lenders. In the words of a principal sponsor, Rep. Fernand St Germain, D-R.I., "the bank is a recognition that commercial banks . . . have, for the most part, red-lined cooperatives at the loan window without regard to credit-worthiness."

Ralph Nader has termed the bank bill one of the most important in the current Congress and I. W. Abel, head of the AFL–CIO Industrial Union Department called it "one of the great legislative innovations of the 1970s."

It is almost uniformly opposed by retailers and financial organizations, who contend the bank would be a subsidy to tax-exempt competitiors.

Consumer cooperatives range from small neighborhood groups that buy food in bulk from wholesalers, bypassing local food stores, to the Berkeley Cooperative, which has 28 stores and had a sales volume of $78 million last year.

Co-ops exist for a variety of enterprises, with some of the more successful in retailing and health care.

Sponsors of the bill noted that despite the official administration opposition, Vice President Walter Mondale was one of the sponsors of the Senate bill last year and that his wife, Joan, belonged to a food co-op.

They also pointed out that the opposition seems centered in the Treasury Department, since previous strong sponsors of the bill, including consumer advocate Carol Tucker Foreman and Geno Baroni, now occupy high positions in other departments.

The bill's plan is patterned after the highly successful Farm Credit System, whose Bank for Cooperatives has assisted in the development of producer co-ops. All the government capital in these organizations has been repaid and the coop bank bill for urban locations includes a similar payback provision.

Banking committee aides noted that President Carter's father served on the board of directors of a rural electrification coop backed by the Farm Credit System.

The current bill would entrust the operation of the Co-op Bank to ACTION, an independent agency encompassing a variety of foreign and domestic self-help bureaus. The earlier version would have established a separate agency to manage the bank and assist local co-op groups.

Mr. McINTYRE. Mr. President, I thank the Senator from Wisconsin for his support.

As he knows, this legislation has the endorsement of a wide range of consumer, labor, farm, co-op, and public interest organizations and was the subject of extensive hearings last session. As the principal sponsor of the bill, I plan additional hearings in the Financial Institutions Subcommittee as soon as we get House passage. The conventional banking institutions of this country, unfortunately, have not been very receptive to financing cooperative organizations. Just as the farm co-ops needed their own banking system in order to flourish, consumer co-ops will receive the same kind of stimulus from the proposed consumer co-op banks. As a loan program, it will have negligible costs to the taxpayer, and great benefits for the consumer.

I am very gratified that the chairman of the Banking Committee has promised early and sympathetic consideration of this measure once it has cleared the House, and I am hopeful that we can pass this bill by a wide margin.

SOCIAL SECURITY FUNDING

Mr. DOLE. Mr. President, when it was first established, the social security system was designed to give working contributors a way of insuring against loss of income in their retirement years. It was never intended to be a general public pension or welfare program. But benefits have been increased and more people covered far beyond what the payments of their generation would finance. The Social Security Trust Fund is being drained faster than the payroll taxes are coming in.

Consequently, there is both a short-run financing problem and a more drastic long-range question. Our immediate concern must be how to keep the fund solvent over the next few years. Looking ahead into the next century, when there will be more retirees and proportionately fewer wage-earning workers, the program will either have to be revised or new sources of financing found.

SLIGHT PAYROLL TAX INCREASE NECESSARY

I believe we should reinforce the fund and calm any fears about its financial integrity by providing for a slight increase in the payroll tax rate—whatever is necessary to meet the short-term obligations. It would be wrong to remove the ceiling over the amount of annual wages taxed. The payroll tax already takes a big bite out of the paychecks of middle-income earners. More than half the work force now pays more in social security taxes than in income taxes. Under current plan, the wage base—or annual wages subject to social security tax withholding—increases automatically as average wages of all workers go up. Buffeted by inflation, middle-class families cannot be made to bear a still greater share of the social security financing load for the retired generation. Applying the tax on employers to total payrolls—without limitation—would be equally ill-advised. By adding to business costs, prices would go up still further and some employers would be forced to eliminate jobs. So it would simultaneously cause more unemployment and higher prices.

GENERAL REVENUE FUNDING COULD JEOPARDIZE STABILITY

I do not favor the mixture of funds from the general Federal Treasury with the Social Security Trust Fund. During their working years, Americans have been willing to pay into the fund to help support those who are retired because the system was viewed as an insurance and not a welfare program. A decision now to convert social security into a guaranteed annual income scheme for the entire elderly population would be a serious mistake that could jeopardize the stability of the program. Our workers have been generous with their support of social security because they believed their contributions were being put aside and the Government was acting as trustee. A gigantic income maintenance system financed partly by payroll taxes and partly by general revenues would be unacceptable to the American people. The President's proposal to dip into general tax revenues whenever the unemployment rate is over 6 percent would be only the opening wedge. Once the general revenue financing precedent was set, there would be no stopping the siphoning of more and more resources from the Treasury to replenish the trust fund.

Basic decisions affecting the long-term future direction of social security should be made only after the American people have thoroughly considered what they want the program to be in the 21st century. That reassessment should begin immediately. But in the meantime, we are not ready to make the necessary choices on a matter so vital to unborn generations.

CARING FOR THE RETARDED IN THE COMMUNITY

Mr. HUMPHREY. Mr. President, whenever I go back to Minnesota, I renew contact with the important events in my community, and the concerns of my constitutents. These are truly valuable sessions. Sometimes they are heartwarming, as well.

One such occasion was the dedication, last Saturday, of an outstanding facility for the severely handicapped. This new complex, Homeward Bound, represents the collaboration of private and public sector resources to meet the needs of retarded children with compassion and

conscience. Homeward Bound provides the best of care in an easily accessible community setting. It will house 60 children, in four seperate homes, that permit a maximum of personal attention. These children are severely handicapped. But they are not being consigned to lives without hope or joy.

The commitment to their welfare represented by this home in New Hope, Minn., has a message that is valid in the national context as well. For that reason, I would like to share the remarks I addressed to the fine group of persons assembled to dedicate completion of the facility.

My purpose was to summarize very briefly some of the developments that are earning for the 1970's the title of the era of civil rights for the handicapped. I also outlined what I believe to be the principles that must guide our continuing efforts to integrate the handicapped, including the mentally retarded, into our national life.

Mr. President, I ask unanimous consent that my remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HUBERT H. HUMPHREY

It is very good to be back with you. It has been my privilege to be identified with the progress of this fine institution. I helped inaugurate its fund drive. I broke ground for the construction.

And now I have the great satisfaction of seeing a vision materialize and Homeward Bound become a reality that brings hope and comfort to the parents and families of the chilldren to whom it is dedicated.

Most important, it provides these severely handicapped children with a wholesome and agreeable environment and treatment and training of the highest quality.

Although this achievement reflects this community's sense of responsibility and commitment, it is not an isolated event. It reflects a growing national concern for the well-being and development of this Nation's handicapped citizens.

In a short span of years, we have seen a revolution in the treatment and the public attitude toward the retarded.

The retarded once were seen as a family affliction or disgrace to be hidden from public view. Little thought was given to their own feelings, needs and rights. The potential of the retarded for development was underestimated and ignored.

Too often, large institutions grouped together persons of all ages with widely differing needs, and could provide little better than custodial care.

Whatever our intellectual endowment, there is a universal trait of human nature.

We all tend to respond to the expectations of others and of society. To dismiss the learning capabilities of the retarded is a self-fulfilling prophecy.

Curiosity that is not stimulated turns to apathy. Skills that are not exercised die away. Disadvantages too often are compounded by the arbitrary limits of a negative self-image and a sense of defeat.

Fortunately, the approach to retardation has changed dramatically. We no longer believe that institutions exist to segregate the retarded from their relatives and society, and to do little else. As the focus shifts from custodial care to development, there is a corresponding shift from despair to hope; and from public indifference to active and supportive concern.

It is true that resources remain limited. We still are a Nation of private wealth and public poverty.

But we now are committed under public policy to provide retarded persons the least restrictive environment possible. We have pledged to integrate the retarded into the community wherever it will help them live happier, more meaningful and more productive lives.

We believe that where institutional care is necessary, it should be accessible to community activities and services, and to visits from families and volunteers.

Moreover, there is encouraging progress in our methods to prevent and to treat retardation.

As we better distinguish the causal factors—such as birth injury, heredity, metabolism or environment—we can respond with more effective treatment.

Many cases can be helped by early detection; others can profit by new techniques of education and vocational training. Home-like living arrangements can help develop normal social and functional skills.

The crucial step has been taken. New steps should be progressively easier as we build a record of success that provides its own human and economic justification.

The United States Congress has gone resolutely on record in support of enabling the retarded to live their lives as close as possible to a normal life, with all its challenges and satisfactions.

For the retarded, and other handicapped, the progress of the 1970's is comparable to the great civil rights breakthrough for black Americans in the 60's.

The 94th Congress enacted major legislation in the areas of developmental disabilities, education of the handicapped, vocational rehabilitation and mental health.

The Developmental Disabilities Act provides support to state efforts to plan, coordinate and implement programs for developmentally disabled, a high proportion of whom are the retarded. To qualify for aid, states must submit plans for both deinstitutionalization and institutional reform.

Another very significant feature of this legislation is the inclusion of a Bill of Rights, which asserts the right of the mentally retarded to appropriate treatment and services. And it backs up those rights with the demand that a specific system be devised to protect and advocate those rights.

Another legislative step, with revolutionary potential for the welfare of the retarded, was passage of the Education for All Handicapped Children Act. Under this law, in order to be eligible for federal aid a state must provide a free and appropriate public education for all handicapped children by September, 1980. And priority attention must be given to the most severely handicapped.

For the less severely handicapped who are able to learn work skills, and even to become self-supporting and contributing members of the community, the Rehabilitation Act of 1973, as amended, provides important support for training programs. But this law also mandates priority attention for those with the most severe handicaps.

One measure of the impact of this law is the increasing number of severely disabled being served in this nation's rehabilitation programs, including sheltered workshops. In the past, these people had little hope of achieving the sense of purpose, satisfaction and self-respect that comes with successfully performing a useful and productive task.

Many of the severely handicapped cannot hope to earn a decent wage based on productivity alone. I have introduced a proposal to provide wage supplements that will reward the efforts of long-term workers in sheltered workshops with a living wage. I sincerely hope that Congress will enact this measure.

As you may know, federally financed programs are now subject to the prohibition against discrimination in section 504 of the Rehabilitation Act. This will open doors and widen opportunities available to the retarded in education, jobs, health care and public services. Only recently, after years of study and revision, the Secretary of HEW has issued the regulations to implement this provision of the law.

But I do not want to dwell today on changes in the law. Not that they are unimportant. Legislation may not always change attitudes, but it does change behavior. I have noticed that the two have a very high correlation.

What I want to emphasize today are those changes of heart, and changes in attitude, that will make our society a more humane and civilized environment for the disabled.

Curiously enough, when the stigma is removed from a physical or mental handicap, a fresh breeze of creativity stirs.

It is as if scales fall from our eyes, and we begin to see the fallacies in a lot of conventional thinking, and to dare to think beyond care and treatment, to prevention and cure of retardation.

I stay in touch with many spokesmen for the handicapped, so I very frankly confess that I find food for thought in their views.

I am particularly impressed by an exciting prophecy of the National Association of Retarded Citizens that has come to my attention.

The theme is that the effort to incorporate the retarded in the mainstream of community living has been successful. If its objectives are not universally realized, they are at least accepted in principle.

So, the association has identified a new goal for the future, and that is to seek a *cure* for retardation. It is pointed out that a whole series of new developments removes this ambition from the realm of fantasy or science fiction, and puts it in the area of attainable national goals.

The hope for cures is based on achievements in regenerating nervous systems that have been damaged, and on experiments in controlling the automatic nervous process. It is built upon advances in metabolic chemistry and in our understanding of basic cell machinery.

Hope and promise also result from our growing knowledge of the role of nutrition, microsurgical techniques, and even prenatal intervention.

But despite the rapidly expanding horizons of science, the persons who are afflicted with an illness or a handicap *now* must have the best attention, training and care available to our present state of knowledge. This is important.

We should not praise only those who are making remarkable progress toward future solutions. We should also express our deep respect for pragmatic people who are willing to move forward one step at a time.

Homeward Bound is a tribute to the new spirit and the high hopes of the 70's for the retarded. All of you who devoted time, effort and resources to constructing this exemplary institution understand that action is better than dreams. And, best of all, is the action that is impelled by a dream.

THE MILITARY RETIREMENT OF COL. WARREN H. ABERNATHY, U.S. ARMY RESERVE

Mr. THURMOND. Mr. President, on May 31, 1977, Col. Warren H. Abernathy, U.S. Army Reserve, will be retired from the Army after 34 years of dedicated and faithful service.

Colonel Abernathy served as an infantry noncommissioned officer in World War II, including participation in the Battle of the Bulge. He was commis-

sioned a second lieutenant on June 28, 1945.

Mr. President, after World War II, Colonel Abernathy continued his military service in the U.S. Army Reserve. For the past 11 years, he has held several key positions with the 360th Civil Affairs Brigade in Columbia, S.C. He has been the deputy commander of the 360th for the past 4 years.

Colonel Abernathy graduated from the University of South Carolina in 1948. During his Army Reserve service, he completed many Army schools, including the Infantry Officers' Course, Civil Affairs Schools, Command and General Staff College and the Industrial College of the Armed Forces.

As deputy commander of the 360th Civil Affairs Brigade, Colonel Abernathy helped direct the execution of the unit's operations. Under the leadership of the commander and deputy commander, the 360th Brigade participated in an outstanding manner in several major command post exercises—CPX—and field training exercises — FTX — and Army training tests—ATT. Colonel Abernathy played a major role in winning approval for the unit to undertake a civil defense assistance program for the Office of Civil Preparedness of South Carolina.

This radical and innovative departure from the unit's normal mission required the deputy commander to help reorganize the unit and its training program. The results of the first year's work, as stated by the Governor of South Carolina and the regional Civil Defense Director, "were an outstanding accomplishment and will serve as a landmark in the U.S. Army Reserve support to State governments."

Mr. President, Colonel Abernathy is also an outstanding leader in civilian endeavors. He served as president of the Spartanburg Life Underwriters and the Spartanburg Optimist Club. He previously served as a deacon in his church, as well as a member of its finance committee. He was president of his Sunday school class for many years.

For the past 27 years, Mr. Abernathy has served as a member of my staff. When I was Governor of South Carolina, he was my administrative assistant. Since my election to the Senate in 1954, Mr. Abernathy has been my chief State assistant in South Carolina.

As I stated on a previous occasion, "Warren Abernathy is a born leader who has continually grown in ability and capacity to accomplish difficult and detailed tasks with a minimum of guidance and supervision. He is a mature individual especially adapted at handling a wide variety of sensitive and confidential matters with outstanding results. His trust and loyalty are beyond reproach. As my State assistant, he continuously demonstrates an exceptional command and organizational ability. He is a complete man tested in the field and fully capable of assuming greater responsibility and authority."

Mr. President, on April 30, 1977, Colonel Abernathy was awarded the Meritorious Service Medal by the Army at a retirement ceremony at Fort Jackson, S.C., in recognition of his distinguished service and outstanding contribution to the readiness of the 360th Civil Affairs Brigade. On May 2, 1977, the State newspaper in Columbia, S.C., published a news story about the military retirement ceremony in honor of Colonel Abernathy and the award of the Meritorious Service Medal for his outstanding contribution to the U.S. Army Reserve.

Mr. President, I ask unanimous consent for the citation for the Meritorious Service Medal awarded on April 30, 1977, and for the news story in the State on May 2, 1977, to be printed in the RECORD.

There being no objection, the citation and article were ordered to be printed in the RECORD, as follows:

CITATION

The Meritorious Service Medal to Col. Warren Henry Abernathy, 249-16-0205, Civil Affairs, U.S. Army Reserve for outstanding meritorius service during the period 27 September 1973 to 1 May 1977 by his performance as Deputy Commander of the HHC, 360th Civil Affairs Brigade. Colonel Abernathy's exemplary leadership and staff coordination abilities have added materially to the performance of this Brigade. The outstanding accomplishments and national recognition received by this command are exemplified by the receipt of the Reserve Officers Association's Large Unit Award for the training year 1974–75. Because of his unusual facility to communicate with superiors and subordinates alike he has been able to perform his duties with professionalism and merit. Colonel Abernathy's truly outstanding performance of duty reflects great credit upon himself, the 360th Civil Affairs Brigade, the 120th United States Army Reserve Command and the United States Army Reserve.

COL. WARREN H. ABERNATHY ENDS LONG MILITARY CAREER

Col. Warren H. Abernathy of Spartanburg, state secretary to U.S. Sen. Strom Thurmond, R–S.C., ended a 34-year military career over the weekend when he retired from the 30th Civil Affairs Brigade of Columbia.

He was presented the Meritorious Service Medal by Col. Peter D. Hyman, 360th commander.

Abernathy was drafted into the army while attending Wofford College during World War II. He was commissioned in France in 1945 shortly after participating in the Battle of the Bulge with the 36th Division.

He was graduated from the University of South Carolina in 1948 and became the administrative assistant to then-Governor Thurmond. After a period in the insurance business, he rejoined Thurmond in 1955 after the latter was elected to the U.S. Senate and has served as state (home) secretary ever since.

His Army Reserve career began with the 108th Division (Training) and he transferred in 1966 to the 360th, which was organized by Thurmond while governor in 1950, and served as deputy commander for the past four years.

He and Mrs. Abernathy have a daughter, who teaches at Brookland-Cayce High, and a son, who is a student at USC.

IN PRAISE OF CAPITALISM

Mr. RANDOLPH. Mr. President, at a time when capitalism is under attack in many parts of the world and from some quarters in our country, it is a welcome change for someone to come to its defense.

Such an endorsement of the system is stressed in an article by Dr. Perry E. Gresham, president emeritus of Bethany College in West Virginia. It was originally written for "The Freeman" and reprinted in part in the current issue of the Weirton Steel (W. Va.) Employees Bulletin.

Dr. Gresham is an able educator and I have valued him as counsellor and friend. I commend for your attention his thoughts and ask unanimous consent that the text of the excerpted article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN PRAISE OF CAPITALISM

The word "capitalism" has fallen into disrepute, asserts Dr. Perry E. Gresham, and as a form of political economy, is misunderstood. In an article in *The Freeman,* Dr. Gresham, President Emeritus of Bethany College, calls for a renewal of "this simple, reasonable, versatile and open system . . . which worked, is working, and will work if freed from the fetters of limitless state intervention." Following are excerpts from Dr. Gresham's article, "*Think Twice Before You Disparage Capitalism.*"

What is the nature of a political and economic system which has made the poor people of America more prosperous than the rich of many countries operating under State control? Here are my paragraphs in praise of capitalism.

Capitalism is the one system of political economy which works, has worked and, given a chance, will continue to work. The alternative system is socialism. Socialism is seductive in theory, but tends toward tyranny and serfdom in practice.

Capitalism was not born with *The Wealth of Nations,* nor will it die with *Das Kapital.* It is as old as history and as new as a paper route for a small boy. Capitalism is a point of view and a way of life. Its principles apply whether or not they are understood, approved and cherished.

Capitalism is no relic of Colonial America. It has the genius of freedom to change with the times and to meet the challenges of big industries, big unions, and big government if it can free itself from the restraints of interest-group intervention which eventuates in needless government expansion and spending. Let the market work, and the ambition of each individual will serve the common good of society.

LIMITED GOVERNMENT BEST

Capitalism recognizes the potential tyranny of any government. The government is made for man; not man for the government. Therefore, government should be limited in size and function, lest free individuals lose their identity, become wards of the State.

Capitalism denies the naive and mystic faith in the State to control wages and prices. A fair price is the amount agreed upon by the buyer and seller. Competition in a free market is far more trustworthy than any government administrator. The government is a worthy defense against force and fraud, but the market is much better at protecting against monopoly, inflation, soaring prices, depressed wages and the problems of scarcity. Capitalism works to the advantage of consumer and worker alike.

Capitalism believes that every person deserves an opportunity. "All men are created equal" in terms of opportunity, but people are not equal nor should they be. How dull a world in which nobody could outrun anybody! Competition is a good thing no matter how much people try to avoid it. Equality and liberty are contradictory. Capitalism chooses liberty!

Capitalism is color-blind. Black, brown, yellow, red and white are alike in the market place. A person is regarded for his ability rather than his race. Economic rewards in the market place, like honor and acclaim on the

playing field, are proportionate to performance. The person who has the most skill, ability and ingenuity to produce is paid accordingly by the people who value and need his goods and services.

Capitalism is a belief that nobody is wise enough and knows enough to control the lives of other people. When each person buys, sells, consumes, produces, saves, and spends at will, what Leonard Read calls "the miracle of the market" enables everyone to benefit.

Capitalism respects the market as the only effective and fair means of allocating scarce goods. A free market responds to shortages and spurs production by rising prices. Arbitrary controls merely accept and keep the shortages. When rising prices inspire human ingenuity to invent and produce, the goods return and prices fall.

Capitalism derives its name from the fact that capital is essential to the success of any venture whether it involves an individual, a corporation, or a nation-state. Capital is formed by thrift.

MORAL STRENGTH NEEDED

Capitalism is a natural ally of religion. The Judeo-Christian doctrines of stewardship and vocation are reflected in a free market economy. Churches and synagogues can be free and thriving with capitalism. When the churches falter, the moral strength of capitalism is diminished.

Capitalism depends on the family for much of its social and moral strength. When the family disintegrates, the capitalist order falls into confusion and disarray. The motive power for the pursuit of life, liberty and property is in the filial and parental love of a home with its dimensions of ancestry and posterity.

Work is a privilege and a virtue under capitalism. Leisure is honored, but idleness is suspect. The idea that work is a scourge and a curse has no place in the climate of capitalism.

Capitalism holds profits derived from risk and investment to be as honorable as wages or rent. Dividends paid to those who invest capital in an enterprise are as worthy as interest paid to a depositor in a savings bank. The idea abroad that risk capital is unproductive is patently false.

Capitalism encourages invention, innovation, technological advance. Creativity cannot be legislated. Only free people can bring significant discovery to society. Thomas A. Edison was not commissioned by the government.

The renewal of capitalism could be the renewal of America. Nothing could be more radical, more timely, or more beneficial to the responsible and trustworthy common people who are now beguiled by the soft and seductive promises of the new socialism.

No political and economic system is perfect. Plato's *Republic* was in heaven—not on earth. If people were all generous and good, any system would work. Since people are self-centered, they are more free and happy in a system which allows the avarice and aggressiveness of each to serve the best interest of all. Capitalism is such a system. It is modestly effective even in chains. The time has come for daring people to release it and let us once more startle the world with the initiative and productivity of free people!

THE RIGHT TO FINANCIAL PRIVACY ACT—S. 1460

Mr. GARN. Mr. President, I am pleased to join in sponsoring the Right to Financial Privacy Act to amend the Bank Secrecy Act to provide limitations on the Government's power to obtain access to bank and credit card records of American citizens.

The bill will protect the fundamental right to have one's financial records held by banks and credit card issuers to be treated confidentially. It also calls for a review by Congress of the recordkeeping provisions of the Bank Secrecy Act to determine whether the costs in terms of individual privacy and the burden upon the record holders is justified by increased law enforcement.

When the Bank Secrecy Act was proceeding through Congress a few lone voices including those of the American Civil Liberties Union were raised in protest that the proposal would result in an invasion of the privacy of individuals and would be burdensome. The testimony of banker's groups was discounted on the basis that they were merely concerned about recordkeeping costs and were ignoring the social interest in the prevention of crime. Unfortunately, broad powers were given to the Federal Government to effectively surveil the commercial bank accounts of at least 100 million people without any procedural safeguards. Nor was consideration given to the recordkeeping costs which would eventually be passed on to the depositors and borrowers.

The purpose of the bill is to protect the confidential relationship between banks and credit card issuers and their customers. It also limits the authority of the Secretary of Treasury under the Bank Secrecy Act to require retention of records for supervisory purposes and the monitoring of foreign or domestic currency movements. Under the bill, the financial records of a customer may be disclosed only if the disclosure is authorized by the customer or if it is pursuant to a search warrant, administrative summons, or judicial subpena which has been served on the customer as well as the record holder. The customer is given standing to contest the process in a court of competent jurisdiction. A court may grant an agency a subpena with a 90-day delay of delivery of notice to the customer upon a finding that notification would jeopardize a continuing investigation of a serious crime. The record holder would be reimbursed by the U.S. Government for the cost of the production of records required by its agencies. Exempted from the disclosure restrictions are: Internal Revenue Service summons, grand jury subpenas, statistical data, supervisory data, tax data, records used in the prosecution of a crime, and records disclosed under the provisions of the Fair Credit Reporting Act. There are both criminal and civil sanctions.

This bill will give Congress an opportunity to determine whether in light of the experience under the act since 1971, the benefits in terms of law enforcement justify the recordkeeping burden. It is equally important that Congress promply act on the provisions contained in the bill to provide safeguards against the unauthorized disclosure of financial records required to be retained under the Bank Secrecy Act.

NATIONAL SCIENCE FOUNDATION AUTHORIZATION ACT OF 1978

Mr. CRANSTON. Mr. President, on May 5, the Senate passed the National Science Foundation Authorization Act of 1978, H.R. 4991. I support that bill as reported from the Senate Committee on Human Resources. The distinguished Senator from Massachusetts (Mr. KENNEDY) has authored a bill that will provide the National Science Foundation with a level of financial support fully adequate for that agency to carry out its mandate.

That mandate is an important one not only to the Nation's current scientific endeavors, but to the future of those endeavors. The National Science Foundation's primary responsibility is to advance scientific progress in the United States. This is achieved through NSF support of both basic scientific research in all the scientific fields and by supporting applied scientific research where that research can have the greatest impact on improving technology and economic productivity.

In addition, the NSF has the primary responsibility within the Federal Government for strengthening science education in order to insure the Nation has sufficient scientists to conduct the highest quality of scientific research and to improve the effectiveness of science education now and in the future.

Eighty-seven percent of the NSF program is performed by colleges and universities. The overall U.S. basic research effort relies heavily on the support provided through these institutions, and the effectiveness of our college and university systems in broadening scientific knowledge depends substantially on the assistance provided them by the National Science Foundation.

There are a few specific provisions in the committee bill which I would like to mention at this time.

First, I am delighted that the bill provides for the authorization of the appropriation of $20 million in fiscal year 1978 and $30 million in fiscal year 1979 for earthquake engineering research. The administration had recommended an identical amount for fiscal year 1978 in its bill.

I am also pleased that there is a projected fiscal year 1979 increase in the authorization of appropriations for science education programs, particularly science education resources improvement. Part of this increase is due to the anticipated reemphasis of the comprehensive assistance to undergraduate science education—CAUSE—program in fiscal year 1979. The committee report suggests that this program be subjected to a careful analysis in fiscal year 1978 with the expectation that analysis would provide a basis for a strengthened CAUSE program in fiscal year 1979. I am confident an analysis of this program will show that it has great merit and has been of tremendous value to undergraduate institutions in enabling them to scrutinize their programs, determine their deficiencies, and develop curriculums to correct any deficiencies and improve these programs. However, I am concerned that the suggested ceiling for fiscal year 1978 on CAUSE may be too low and may result in severe hardships for some schools which have undergone intense self-evaluation in the hopes

of instituting improved science education programs in fiscal year 1978. I am gratified by the reassurances given by the distinguished Senator from Massachusetts (Mr. KENNEDY) that full attention will be given in conference to the effects of such a ceiling on undergraduate science education programs.

I am also concerned that a provision in the bill as reported from committee that would seek to insure that researchers in the industrial sector are permitted to compete for grants for basic research on an equal basis with researchers in the academic sector, might seriously impact on the ability of our educational institutions to maintain the level of scientific endeavor and achievement necessary to support education programs of superior quality.

This provision in the bill, as reported, has its basis in a request made by the Senate committee in its report which accompanied the National Science Foundation authorization last year which suggested a task force be assembled by the National Science Foundation to review the role of scientific research in nonacademic institutions with particular attention to National Science Foundation programs and policies relating to private industry. A wide range of industrial and academic experts was consulted, and four major recommendations were made relating to the funding policies of the Foundation. The task force recommended that the Foundation:

First. Continue to place major emphasis on providing adequate long-term support to the most creative research workers;

Second. Expand the support of cooperative research projects in both basic and applied research among researchers in private profit-seeking industrial laboratories and universities;

Third. Develop a sabbatical or fellowship program to allow faculty members to spend 1 or 2 years working in an industrial environment and industrial research workers to work in a university for similar lengths of time;

Fourth. Allow researchers in industry to compete on an equal basis with researchers for basic research funds.

Mr. President, in November 1976, the National Science Board reviewed the task force report and acknowledged the first three recommendations. The Board, however, adopted a resolution to strike recommendation No. 4; that is, it voted to retain special criteria for all grants to private profit-seeking organizations.

The task force explanation of the intent of recommendation No. 4 indicates a departure from the current NSF policy established and followed by the National Science Board since the 1960's.

The task force report states:

This recommendation proposes opening to the profit-making sector the competition for basic research funds under the same criteria as those required of the academic community. The special criteria which currently must be met by unsolicited proposals for support of basic research by industrial organizations are:

(a) The project is of special concern from a national point of view and shows promise of solving an important scientific problem;

(b) Unique resources are available in industry for the work; or

(c) The project proposed is outstandingly meritorious.

Implementation of this recommendation requires only that the above criteria be deleted.

It should be noted that the criteria for selection of basic research projects are those established by the NSB for Scientific Research Project Support. The primary emphasis is "overwhelmingly upon the criteria of intrinsic scientific merit." Opening the competition to researchers from profit-seeking organizations would require their adherence to the other criteria and policies detailed in "Grants for Scientific Research" (NSF 3-12).

I believe the Board's action in moving to strike recommendation No. 4 showed the Board's intention to maintain the general policy that "noneducational institutions would be excluded from the NSF research competition." Appendix 3 of the NSF December 1976 "A Report on Research in Industry: Holes of the Government and the National Science Foundation," stated the underlying rationale for this policy reflected the limitations of available funds, the value of training scientists in research projects at educational institutions, and the possible conflict of interest of profit seeking institutions, and the general recognition that public funds should not go to private persons without substantial assurances of public benefit.

Mr. President, caution is required before making a major change in Federal policy affecting basic research support for universities and colleges. The special criteria proposed to be deleted have applied for a substantial number of years to National Science Foundation grants to persons in private industry. These criteria were established by the National Science Board to carry out the primary role of the National Science Foundation in the national research and development effort to strengthen the total science capability of the Nation through support of fundamental research of the highest quality. Because the academic environment is the unique source of new scientists and engineers in basic research the Board felt that the most important role for the National Science Foundation was to assure the support necessary to enhance the potential of basic science disciplines in academic institutions to enhance their ability to train scientists for the future. However, in recognition of the value to the national scientific effort of basic research conducted by private industry, the National Science Foundation has supported limited research in the private sector, but only under conditions where it meets one or more of three special criteria, that is, shows promise of solving an important scientific problem, unique resources are available in industry for the work, or the proposal is outstandingly meritorious.

I do not believe that implementation of the fourth recommendation of the task force should occur at the expense of university supported research which relies heavily on Federal support. The availability of that support for basic research in the universities has served as an inducement to young scientists to remain at such institutions and to retain the strength of the institutions' training capacity and scientific capability. The special budget analysis for fiscal year 1978 for research and development indicates that only 12 percent of all Federal research and development expenditures are given to universities and colleges; and that only 6 percent represents basic and applied research other than medical research. However, the Federal awards represent two-thirds of the research and development budgets of these institutions. A significant reduction in the amount awarded to universities and colleges would have a severe impact on the stability of university science programs and their training potential.

Mr. President, I recognize private industry can be a source of important research breakthroughs, and urge greater efforts to develop cooperative research programs among researchers in industrial laboratories and in universities.

Private industry and academic researchers alike should be subject to a standard of excellence based on scientific merit, the technical adequacy of the researcher and his institutional base, criteria relating to utility or relevance, and criteria relating to future and long-term scientific potential. I fully support continued implementation of existing NSF policies which call for cost sharing and with NSF patent policy which requires that the Government receive royalty-free licenses and the right to require licensing of others on reasonable terms.

S. 855 also directs the National Science Foundation to increase support for cooperative research projects involving researchers from the industrial and academic sectors and to make fellowships available to enable academic researchers to spend up to 2 years in an industrial environment and to allow industrial researchers to spend up to 2 years in an academic environment.

It is our view that these programs should be carried out under the basic research budget recommended by the committee—a budget which is 12.4 percent above the fiscal year 1977 level—without imposing any significant restrictions on the availability of basic research support to university-based scientists and engineers.

It is our intention to monitor the impact of this change in policy on the strength of the Nation's basic research effort and on colleges and universities whose researchers have made such an outstanding contribution to the advancement of science over the 27-year history of the Foundation. It is not our intent that this new policy erode the strength of academic scientific research, and the National Science Foundation is expected to guard against such erosion.

Mr. President, we recognize the potential competition between academic and industrial organizations for the services of researchers who have proven themselves successful in obtaining National Science Foundation funding for their research projects. The committee thus expressed its expectation that the Foundation will guard against industrial "raiding" of academic research staffs based on an assumption that the Foundation funds automatically will follow the researcher.

The committee also emphasized that research funds allocated to industrial-based research should not be used to displace or substitute for private funding support of existing research efforts. NSF support should be limited to new research efforts which would not and could not be undertaken without that support.

Mr. President, I feel these few reservations should be brought to the attention of the Senate. However, I believe that it is important to approve the bill as reported from committee so that the authorizations of appropriations can be enacted in time for the Appropriations Committee to have the benefit of the thinking of the authorizing committee.

TRIBUTE TO FATHER HESBURGH

Mr. HUMPHREY. Mr. President, there appeared in the May 2 issue of Time magazine a splendid article about one of our great Americans—the Reverend Father Theodore Hesburgh, president of the University of Notre Dame.

The article speaks for itself. Those of us who have been privileged to share in the friendship and fellowship of Father Ted Hesburgh are, indeed, fortunate. Just to know him is to enrich your life. To work with him is to experience a renewal of spirit. This good man has given so much not only to our country, but to all of mankind. He is an inspiration in a time when cynicism, suspicion, doubt, and despair seem to claim so many of our fellow human beings. The life and the work, the spirit and the faith of Ted Hesburgh are an inspiration to all of us. We are deeply indebted to him for lifting our eyes to what can be and what ought to be while recognizing what is and what should not be.

I ask unanimous consent that the article about Father Ted Hesburgh be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRINCE OF PRIESTS, WITHOUT A NICKEL

(In 1952 Father Theodore Hesburgh, then only 35, was appointed president of the University of Notre Dame. Over the following quarter-century—a longer term than that of any other major university president—he has changed the school profoundly and become one of the most influential figures in the country. As Notre Dame prepared for its 25th graduation of the Hesburgh era, Time Correspondent Robert Ajemian talked with the priest and wrote this report:)

The familiar Roman collar had been pulled off and hung up with the black jacket. It was well past midnight and Father Hesburgh was still working through the piles of mail in his old, high-ceilinged office. He routinely stays up until 3 or 4 o'clock in the morning.

Traces of his fame are all around him. On the walls and tables of the big room are autographed photos of a younger Ted Hesburgh standing comfortably beside Popes and Presidents. His hair is less black now and his heavy jaw fuller, but he still has the handsome black-Irish looks of his mother. There is an inscribed silver plate from Jackie Kennedy and an emerald-studded ring from Pope Paul. He has become a virtual prince among priests. The sound of a Beethoven recording, a gift from the president of RCA, plays softly in the background.

MONASTIC LIFE

On the other hand, Hesburgh for all his years at Notre Dame has continued to sleep on the same iron cot in his tiny room at nearby Corby Hall. The shelves of his outer office are stacked with cans of orange juice and Campbell soup, a sharp reminder of his monastic life. His rickety hot plate sits on the counter. It is the mark of an asceticism that Ted Hesburgh seems to impose on himself—almost as though he felt a need to reassure himself that he still is a priest. "After all these years, I haven't got a nickel in the world," he says, "and I like that."

Hesburgh's batch of mail touched on the widely contrasting aspects of his life—appealing to the simple pastor as well as to the clerical entrepreneur. There was a letter from Cardinal Franz Koenig of Vienna congratulating Hesburgh on his recent elevation to the chairmanship of the Rockefeller Foundation. A woman friend in terrible emotional trouble begged for help. Teddy Kollek, the mayor of Jerusalem, wanted Hesburgh to fly over and help stop the rapid development of high-rise buildings. There was a hopeful note from the freshman class asking if Hesburgh would attend their formal dance. Another letter told him that the Chinese Communists, who generally view priests as only slightly more admirable than locusts, were interested in inviting him to China.

Hesburgh searched for one letter in particular, a reply from Alexander Solzhenitsyn, who had been offered a Notre Dame degree this year. He finally found it: a polite no. Hesburgh was disappointed—but he had already landed his friend Jimmy Carter as the commencement speaker. The graduation ceremony will be a deliberate show of support for Carter on human rights, one of Hesburgh's passions. Hesburgh will award degrees to Bishop Donal Lamont, who was ousted from Rhodesia; Stephen Cardinal Kim, who has fought against government repression in South Korea; and Paul Cardinal Arnes, who has spoken out against human rights violations in Brazil.

When Hesburgh took over the university in 1952, Notre Dame was best known for football and dedicated to the production of believing Catholics. In those days students had to attend Mass three times a week or face disciplinary reprisals. Notre Dame boys were even advised to pray before dates with girls at nearby St. Mary's. Outside lecturers were picked for orthodoxy more than for probing intellect.

Hesburgh, who had been a prison priest as well as a chaplain for the armed forces—and was no great lover of football—soon began changing all that. He steered Notre Dame away from the control of the church and into the hands of a lay board of trustees. It was a painful and uncommon achievement, which freed the school from a burdensome authority and historically redefined Catholic higher education in the U.S. At the same time, Hesburgh struggled to retain the moral quality of his school. "We stress values here," he says. "American universities have become obsessed with objectivity. They turn out highly competent but morally neutral people." Hesburgh upgraded the quality of faculty and curriculum, and in 1972 instituted his second dramatic reform: Notre Dame became co-ed.

Almost from the beginning, the priest made a remarkable impression on the Establishment. He began getting invitations to join more and more of America's powerful private foundations and Government commissions. At times he was considered simply "the necessary Catholic," but Hesburgh eagerly accepted the chance to make himself heard. Eisenhower named him to the Civil Rights Commission in 1957. He became a member of the Carnegie Commission on higher education, later accepted a place on the board of David Rockefeller's Chase Manhattan Bank. The Vatican appointed him representative to the International Atomic Energy Agency.

He did not always accept. When Lyndon Johnson asked him to take over the space program in 1964, Hesburgh declined. "I couldn't see a Catholic priest handing out $6 billion in contracts." He similarly turned down Richard Nixon's offer in 1969 to head the poverty program. His priesthood always had to be reckoned with. Says he: "I didn't want to become some sort of Cardinal Richelieu."

OVER THE ANDES

Nonetheless, the clergyman became irresistibly more and more involved in power and politics. He was soon crisscrossing the globe, logging as many as 150,000 miles a year. His messages often included lines like "I am writing this from over the Andes." Back home, his spectacular travels were at first greeted with pride and then, as the years passed, a certain amount sniping. A campus statue of Moses, with hand pointed skyward, inspired the gag: "There goes Hesburgh."

No matter that he was a place dropper, Hesburgh had the ear of the elite. He remembers waiting for Lyndon Johnson outside the Oval Office late one evening with his civil rights team until Johnson, looking limp, ushered them in. Johnson was so exhausted he lay down on a couch, gathered the group around him like visitors to a sickbed and kept his eyes fastened on the ceiling as Hesburgh outlined the difficult goals. Johnson accepted all of them.

Hesburgh's advice was often blunt. He once told Richard Nixon, with whom he developed a special closeness, that young people were scornful of the President. He urged Nixon to end the draft and allow 18-year-olds to vote. When Hesburgh's civil rights commission sharply criticized Nixon, the President's patience ran out. A White House secretary soon called Hesburgh and demanded that he resign by 6 o'clock the same day.

Carter offered Hesburgh a job working in the State Department for Cyrus Vance, but Hesburgh again held back. Of all the political leaders he has encountered, Hesburgh says that he finds Carter by far the most forthright. When Carter told him during the election that he was worried about Catholic support, Hesburgh reassured him. Then he offered a typically direct piece of advice: "I don't think people like to hear a man yakking about religion all the time."

Hesburgh is a fascinating, if exhausting, conversationalist, with strong opinions on an enormous range of subjects. Racism is the world's biggest problem, in Hesburgh's mind, although he is hopeful because he finds young people round the world much less prejudiced than their parents. It shows up, he says, in their confessions. "They feel worse about their sins of omission than they used to." Today's theologians, on the other hand, bother Hesburgh. "They have no faith," he says. "They teach theology like a science. They're not believers themselves. At least the scientists do believe in a chemistry table or the speed of light." Hesburgh worries about educators too. "We've got a bunch of faint fellows who don't want to make educational waves. The '60's took a terrific toll. We lost a whole generation of university presidents. Only King Brewster [of Yale] and I survived."

BIG MISTAKE

On some of the moral issues that confront his students, Hesburgh is fairly traditional. He is opposed to young people living together before they marry. "I think the girls get shortchanged," he says. "Some of these young people get so jaded they can't ever settle down with anybody." He is proud of some statistics indicating that 93% of the marriages of Notre Dame alumni hold together. Although he is against abortion, he believes that the Vatican encyclical forbid-

ding artificial contraceptives was a big mistake. He supports more work on a reliable method of determining the ovulation cycle. He ends up sounding ambivalent on celibacy. "I don't recommend it for everybody," he says with a shrug. "It's not easy, but it's right for me. For some priest on the Amazon, it might not be. After all, priests in the Middle Ages lived with women, and all the Apostles were married."

Hesburgh sounds more confident on the subject of happiness. "It can only come," he says, "from giving at least a corner of yourself to others. People today are so egocentric. God help the person who goes through life doing nothing for someone else. He's doomed." He finds that young people today are less ambitious than a generation ago, duller than in the '60s but more eager to find some meaning in their lives. Hesburgh keeps a close rein on his own ambitions, even as he enjoys the trappings of success, smoking a Cuban cigar and sipping a Grand Marnier. Ambition among churchmen, says Hesburgh, is corrosive: "I've seen it ruin so many."

Hesburgh the outer man seems unfailingly optimistic. Close friends say they never find him in a bad mood. But his is a calling where true feelings are often submerged. For all his heartiness, the inner Hesburgh seldom surfaces. "I think he's probably a lonely man who makes up for it by work and talk," says a colleague. Hesburgh laughs at this. He says his religion protects him from loneliness. While he says Mass every day, whether in a Moscow hotel room or at the South Pole, he seldom quotes the Bible in conversation. He is not a scholar or even especially profound. "Ted is a doer," says one close friend, "not a tormented intellectual seeking some kind of truth."

Though he is popularly viewed as a kind of Catholic Mr. Chips, Hesburgh is now held in such awe by Notre Dame students that they seldom deal personally with him. Student Body President Mike Gassman says he would not dare interrupt the president with ordinary school problems because "he's too important now." Another student says, "Father Ted is usually too busy playing world savior." Both of them are swift to add, however, they think Hesburgh is the main force behind Notre Dame's stress on values.

Even as Hesburgh buries himself in his work, no one really understands what drives him. Is it his need for prestige or power, or is it his need to keep building for the greater glory of his God? His answer is just to keep working. He turns 60 this month and has no plans to retire. Instead, he announced a week ago that Notre Dame is undertaking the largest fund-raising drive in its history: $130 million. "Show me the top ten endowments," says Hesburgh, "and I'll show you the top ten schools in the country." Notre Dame's campaign will lift it close to the top ten, but everybody knows in the long run that will not be good enough for Ted Hesburgh.

PROPOSED ARMS SALES

Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the RECORD the notification I have just received.

There being no objection, the notification was ordered to be printed in the RECORD, as follows:

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., May 10, 1977.

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 77-36, concerning the Department of the Air Force's proposed Letter of Offer to Iran for supply support, not major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $125.0 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF.

TRANSMITTAL NO. 77-36: NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS REPORT CONTROL ACT

(i) Prospective Purchaser: Iran.

(ii) Total Estimated Value: Major Defense Equipment * $0.0; other 125.0 million; total $125.0 million.

(iii) Description of Articles or Services Offered: Supply Support Arrangement (SSA) for annual requirements for spare parts for Iranian Air Force equipment.

(iv) Military Department: Air Force.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: May 10, 1977.

THE GENOCIDE CONVENTION: A SIGNAL TO THE REST OF THE WORLD

Mr. PROXMIRE. Mr. President, in the world of international politics, symbolism can be all important. What a nation does or does not do can often influence the decisions and behavior of friendly and rival nations. This concept has been accepted by international relations experts and policymakers for as long as international relationships have been necessary.

For almost 30 years the U.S. Senate has failed to ratify the Genocide Convention, despite the endorsement of every American President since Harry Truman. One cannot help but wonder what our inaction indicates to the rest of the world.

If one recalls the sequence of events in the pre-World War II years, it is strikingly apparent what American inaction meant to the flow of world history. Adolf Hitler did not set out to conquer Europe immediately after assuming power in Germany. He first tested the waters, taking this piece of territory, then that piece of territory. He slowly moved into the process of eradicating the Jews. He put his plans and strategies into motion only after seeing the inaction and lack of response from both sides of the Atlantic.

It is not a pretty thought to consider, Mr. President, but it is a thought forcefully put forth in a book by Arthur D. Morse entitled "While 6 Million Died: A Chronicle of American Apathy." It is difficult even to conceive of any American action providing support to Hitler's horrible crimes, but I am afraid our inaction, our failure to swiftly condemn the acts of Hitler, may have added momentum to his plans.

Mr. President, I do not want our Nation to make that possible mistake again. We must ratify the Genocide Convention to put the United States on the side it belongs, to indicate to the rest of the world that we abhor genocidal acts and will provide no support to their perpetrators.

FARM DEBT AND FARM PRICES

Mr. HUMPHREY. Mr. President, there is a crisis in the countryside. The crisis has been depicted in a recent USDA survey of the financial status of farmers in nine States. The survey demonstrates the accelerating credit problems of America's farmers. According to this report, a growing number of farmers are reaching the limit of their credit capacity. A sizeable number, in fact, are faced with immediate financial disaster.

I would like to share with my colleagues an editorial from the May 5 issue of the Mankato, Minn., Free Press. In my view, this editorial accurately analyzes this credit problem. The issue is simple: Farm prices simply are not keeping pace with operating and other costs. From 1972 to 1975, farmers achieved long overdue good levels of income. But the past 2 years have marked a serious downturn. Prices that farmers receive are falling, yet the cost of operating a farm—machinery, credit, land, energy, and so forth—stay at record high levels.

Our family farms are being hit hard. Increasingly, the only option left to them is to sell out to limit their losses.

There is no question in my mind that America must continue to value the family farm. It is a highly efficient form of agricultural production. And it is highly important to maintain diversity in American agriculture.

I recently introduced the Farm Security Act of 1977 (S. 598), the purpose of which is to help young farmers gain access to credit. A similar State program has worked admirably with rather limited resources in Minnesota. While we need to look for ways to strengthen programs for young farmers, we also need to explore options to enhance the credit capacity for other producers as well.

Credit is not a new problem in American agriculture. It is a problem that is as old as farming itself. As producers seek to improve their efficiency in the production of food, we must continue to seek new ways to shape public policy toward agriculture in a manner that capitalizes on the strength of this vital industry.

Mr. President, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

* As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

DEBT AND PRICES: WHY FARMERS GRIPE

First the good news: The U.S. Department of Agriculture surveyed 20 per cent of the nation's farms in mid-March, in nine states (Minnesota, Montana, Texas, North Dakota, South Dakota, Colorado, Nebraska, Kansas and Oklahoma)—570,000 farms in all. And now, with release of the study's results. Minnesota's farmer are seen to be in clearly better financial shape than those in any of the other states surveyed.

Now the bad news. Despite healthy financial circumstances on a relative basis for Minnesota farmers, 18 per cent of them will have to refinance loans, sell property to make ends meet, or not be able to meet loan obligations at all.

The cause is simply stated: farm prices.

Comparing "worst case" statistics against "best case" figure may have some consolation to Minnesota agriculture. In Oklahoma (the worst-off of the nine states surveyed), only 47 per cent of the farmers will this year face no farm credit problem, compared to 82 per cent in Minnesota (the best-off of the nine states studied). Nearly 40 per cent of Oklahoma's farmers expect to have to refinance loans or sell farmland parcels to stay above the red ink line, compared to 15 per cent in Minnesota. And 13 per cent of Oklahoma's farmers will be unable to repay bank loans, compared to only 3 per cent in such straits in Minnesota.

Small comfort is to be gained from parochial feelings of "We lucked out," however, for it is in the nine-state averages that the across-the-board severity of the problem is seen most graphically: Whereas 67 per cent of the farmers in all nine states will be able to meet debt obligations to lenders, 27 per cent will have to refinance or sell property, and 6 per cent will not be able to repay. These are dismal figures.

And how many of that fortunate 67 per cent will just be scraping by into solvency, just making ends meet, just able to repay loans, with little left over for anything else? Farmers gripe a lot—about the weather, about Washington, about price supports, about the cost of fuel and fertilizer; but they are also a proud, individualistic group. And thus one has to wonder how many of that 67 per cent who predicted no repayment difficulty for themselves were being optimistic, or at the very least, unwilling to commit themselves to an attitude of hardship-pleading on a government questionnaire.

Yes, farmers gripe a lot. They have seen niggardly price support increases tossed their way by the administration. And they now see the Senate trying to up the ante to figures more in keeping with farm operational cost realities, but with an explicitly stated threat from President Carter to veto any price support bill that exceeds the ceilings his administration has set.

We think farmers would prefer acceptable prices to welfare or to CETA jobs-retraining because of failure of the family farm. If support—financial and moral—comes in at any level from the federal government, it should come in early, to address the major problem of inadequate prices. After-the-fact assistance, when all is lost, is the kind of thing that makes farmers gripe a lot, especially about Washington. For they know help must come when and where they need it, not when it doesn't matter any more.

CONFEREES REACH AGREEMENT ON FIRST CONCURRENT BUDGET RESOLUTION

Mr. MUSKIE. Mr. President, I am pleased to report to the Senate that the conferees on Senate Concurrent Resolution 19, the first concurrent resolution on the Federal budget for fiscal 1978, have reached agreement. The conference report appears on the House side in today's RECORD. I hope the Senate can consider this matter on Friday, May 13 in order to meet the statutory deadline of the Budget Act.

Mr. President, I wish to commend the conferees on the Senate and House sides for their exemplary cooperation in reaching a compromise today. I am very pleased to report that the overwhelming majority of the conferees have endorsed this agreement and we are confident of the adoption of this resolution in both Houses of the Congress. I would note Mr. President that this has been a bipartisan effort with all members of the conference working diligently to achieve the best possible solution in the interest of preserving and promoting the congressional budget process.

ADDRESS TO NEW AMERICANS

Mr. HELMS. Mr. President, one week ago today, in my home town of Raleigh, N.C., a fine group of men and women officially became American citizens. The oath of citizenship was administered by the Honorable Frank Dupree, judge of the eastern district of my State.

Immediately afterwards, an eloquent welcome to these new American citizens was extended by Rev. W. W. Finlator, pastor of Pullen Memorial Baptist Church in Raleigh. Bill Finlator is a longtime friend of mine; and in addition to his vigorous ministry he is well-known for his willingness to speak out on various issues, and sometimes controversial ones.

I do not always agree with Bill Finlator, Mr. President, nor he with me. But I respect him always, even when we most strongly disagree. In the instance of his remarks to the new citizens last week, I wholeheartedly applaud not only his eloquence, but the substance of his message as well.

Mr. President, I ask unanimous consent that the text of Mr. Finlator's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

ADDRESS TO NEW AMERICANS

(By Rev. W. W. Finlator)

Judge Dupree, I thank your Honor for the high privilege of this court to extend to these friends our heart-felt welcome and congratulations.

My Fellow Americans, you need no reminder from me that this is an awesome and dramatic moment. You have of your own free will and volition just accepted in reverence and deep seriousness the rights and the responsibilities of plenary citizenship in the United States of America. You have just renounced all former allegiance to the land where your fathers died. You have forsworn all loyalty and obeisance to every sovereignty save that of this nation. You have committed yourselves to the forgetting of that which lies behind and to the reaching forth to that which lies before. And by this very act you have become as truly Americans as we who were born Americans!

The oath of allegiance you have taken is essentially the same as that administered to political leaders when they assume office in the United States. Your solemn and sacred vow is to uphold and defend the Constitution of the United States. You have not pledged allegiance to the American Way of Life, nor to the American high standard of living, nor to the economic system of free enterprise, nor to the ethos of Middle America, nor to the ethics of America civil religion—however good these things have proved to be to most Americans. But they are not the sum and scope, the heart and soul, of America, nor are you required, in becoming citizens of this nation, to vow any loyalty thereto. But you *have* given your pledge and promise to uphold and defend the Constitution of the United States and the Bill of Rights and that is what makes you true Americans. Please always remember this.

And remember also that in abjuring your former citizenship you are not turning your back on the traditions and the heritage and the treasures of your past. All of that must remain bone of your bone and flesh of your flesh and blood of your blood as the wine must forever taste of its grapes. Naturalization does not mean homogenization. Becoming American does not require amnesia. There never has been, and there never should be, a melting pot to brew some bland concoction of undifferentiated humanity in this land. We need your total commitment to justice and equity and freedom under the Constitution but we also need the variety and enrichment and beauty of the culture and faith that produced you, and the measure of your loyalty to that will determine the measure of your loyalty to your new nation.

But most of all we need your full and joyous participation in helping us to realize the dream that is America. For America is both an achievement and a process. We can never claim that we have become, that we have fully arrived. We have set before us the high task of turning a vision into a reality. And we are less a finished product than an unfinished symphony. We dare never forget the warning of our Founding Fathers that eternal vigilance is the price of our liberties.

So your oath today, your pledge of allegiance, means that you are to help us make this indeed a land in which everyone is born free and equal, where government shall be of the people and for the people and by the people, where day by day we experience what President Lincoln once called a new birth of freedom, where the strong gladly bear the infirmities of the weak, and where we have bound ourselves into an indissoluble union whose purpose is to insure justice and promote the general welfare and secure the blessings of liberty to ourselves and to our children.

Welcome to the vision and the venture that is America!

IN PRAISE OF RILEY L. B. YEE, A PUBLIC SERVANT OF THE HIGHEST ORDER

Mr. MATSUNAGA. Mr. President, I wish to take this opportunity to extend my congratulations and best wishes to Mr. Riley L. B. Yee upon his recent retirement from the State of Hawaii Commission on Aging.

For more than 30 years, Riley L. B. Yee has served the great State of Hawaii with much pride and true dedication. Throughout his years of productive service with the State Commission on Aging, as well as with other, numerous community, civic, and State agencies, Riley L. B. Yee has consistently demonstrated his genuine concern for and warm compassion to the problems and needs of the elderly and the handicapped who require greater attention and better care.

I have long admired Riley Yee's total commitment and unfailing, vigorous efforts to improve the coordination and effectiveness of local and State programs and services designed to suit the needs of

Hawaii's senior population. During my chairmanship of a subcommittee in the House Select Committee on Aging, I found Riley Yee's assistance and views on issues and concerns in the field of aging and the elderly most helpful. It is my hope that his interest and involvement in improving the lot of the senior citizens in Hawaii and across the Nation will be maintained.

Echoing the appreciation of Hawaii's senior citizens and the State Commission on Aging, I offer my warmest "Mahalo" and congratulations to Riley L. B. Yee, a public servant of the highest order.

Mr. President, in recognition of his outstanding service I ask unanimous consent that the resolution adopted by the State of Hawaii Commission on Aging honoring Mr. Riley L. B. Yee, be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION No. 52

Whereas, Mr. Riley L. B. Yee has been an employee of the State Commission on Aging since July 1, 1969, and the State of Hawaii since January 1, 1948;

Whereas, Mr. Riley L. B. Yee came to the State Commission on Aging with the polish and know-how acquired through many years of experience, and has been stable, productive, and very dependable throughout his employment at the Commission;

Whereas, Mr. Riley L. B. Yee has played a key role in developing and nurturing the growth of the grants management program of the State Commission on Aging, starting from the simplistic procedures of the early 1970's to the present sophisticated methods for Title III of the Older Americans Act, as amended;

Whereas, Mr. Riley L. B. Yee was the Director of Rehabilitation at Leahi Hospital for 20 years, prior to coming to the State of Hawaii Commission on Aging;

Whereas, Mr. Riley L. B. Yee served as a Special Vocational Consultant to the Bureau of Hearings and Appeals of the Social Security Administration from 1962 to 1969;

Whereas, Mr. Riley L. B. Yee unselfishly dedicated his free time during his active career towards community service and leadership as President of the Hawaii Rehabilitation Association; State Chapter of the National Rehabilitation Association; President of the Oahu Tuberculosis and Health Association; Chairman of the Advisory Council for Adult Education, Department of Education, State of Hawaii; and Chairman of the Special Events and Awards Committee of the Governor's Committee on Employment of the Handicapped;

Whereas, Mr. Riley L. B. Yee is a true gentleman, with patience and understanding for the shortcomings of others, attested to by the many comments received from various people and agencies dealing with the State Commission on Aging;

Whereas, Mr. Riley L. B. Yee has faithfully served the State of Hawaii for a total of more than 30 years and now has found it fit to retire;

Whereas, Mr. Riley L. B. Yee will be sorely missed by the staff and the members of the State Commission on Aging and by all others who have worked with him;

Whereas, the staff and members of the State Commission on Aging wish to bestow honor and gratitude to Mr. Riley L. B. Yee for work well done; now therefore, be it

Resolved, That the State Commission on Aging does hereby extend its congratulations to Mr. Riley L. B. Yee and honor him for the many years of dedicated service he has given to the State Commission on Aging, the State of Hawaii, and the general community; and be it further

Resolved, That true copies of this resolution be forwarded to Mr. Riley L. B. Yee, Governor George R. Ariyoshi, members of the Senate and House of Representatives of the State Legislature, members of Hawaii's Congressional delegation, the Federal Administration on Aging, and other interested parties.

THE CARTER ADMINISTRATION'S SOCIAL SECURITY PROPOSALS

Mr. KENNEDY. Mr. President, I welcome the Carter administration's responsible and progressive proposals for dealing with a problem that must be solved—the financial difficulties of the social security system.

Obviously, there are a variety of possible approaches to this complex issue. Perhaps Congress can improve on the details of the Carter proposals. But I believe the administration has avoided some of the most serious objections that have plagued past efforts, such as the Ford administration's unwise proposal in 1976 for an immediate increase in the payroll tax rate, which would have heavily burdened low and middle income workers.

I have long supported a general revenue contribution to social security as a way of easing the burden of the regressive payroll tax and dealing with the shortfall in the trust funds caused by the severe recession and slow recovery of recent years. By adopting this approach the Carter administration has taken an important and long overdue step toward a more equitable method of financing the social security system.

According to economists, both the employer's and the employee's share of the payroll tax is borne by workers. It is a fallacy to argue that the tax will come out of business profits, or that it discriminates unfairly against business. The approach taken by the administration is simply a way of healing the system and preventing future deficits, without the imbalance that would occur in the current benefit structure if the past 50–50 ratio of the employer's and employee's share were to be retained.

I do have some concern over where the general revenues will come from to pay the social security contributions, especially in light of the administration's concern for a balanced budget in the future. But the first general revenue allocation will be only about $3 billion and will not be made until 1979. Thus, the amount involved is modest and will have no serious immediate impact on our current problems of inflation or unemployment. The program is gradual, and it is also well designed to solve the social security problem, without producing a setback to the current national economic recovery and without making the current payroll tax more regressive.

In recent months, there has been too much scare talk about these problems. The social security system is sound, and both Congress and the administration are determined to keep it that way. There are shortrun and longrun challenges we have to face. The proposals of the Carter administration are a major step toward a responsible and fair solution. They deserve a better reception than they have received so far, and I hope that Congress will act quickly on them.

(This concludes additional statements submitted today.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

AMENDMENT OF THE STANDING RULES OF THE SENATE

The ACTING PRESIDENT pro tempore. The clerk will state the pending motion.

The legislative clerk read as follows:

A motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

The Senate continued with the consideration of the motion.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk called the roll, and the following Senators entered the Chamber and answered to their names:

[Quorum Call No. 17 Leg.]

Allen	Ford	Mathias
Anderson	Griffin	McGovern
Baker	Hart	Nelson
Bellmon	Hayakawa	Sparkman
Byrd, Robert C.	Helms	Stone
Cranston	Lugar	Wallop

The ACTING PRESIDENT pro tempore. A quorum is not present.

Mr. ROBERT C. BYRD. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The ACTING PRESIDENT pro tempore. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from West Virginia (Mr. ROBERT C. BYRD) to direct the Sergeant at Arms to request the attendance of absent Senators. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Delaware (Mr. BIDEN), the Senator from Arkansas (Mr. BUMPERS), the Senator from Iowa (Mr. CULVER), the Senator from Arizona (Mr. DECONCINI), the Senator from New Hampshire (Mr. DURKIN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Hawaii (Mr. INOUYE), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washing-

ton (Mr. MAGNUSON), the Senator from North Carolina (Mr. MORGAN), the Senator from Michigan (Mr. RIEGLE), and the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Missouri (Mr. DANFORTH), the Senator from New Mexico (Mr. DOMENICI), the Senator from Michigan (Mr. GRIFFIN), and the Senator from Kansas (Mr. PEARSON) are necessarily absent.

The result was announced—yeas 75, nays 7, as follows:

[Rollcall Vote No. 141 Leg.]

YEAS—75

Allen	Hansen	Nelson
Anderson	Hart	Nunn
Baker	Haskell	Packwood
Bartlett	Hatch	Pell
Bayh	Hatfield	Percy
Bellmon	Hayakawa	Proxmire
Bentsen	Heinz	Randolph
Brooke	Helms	Ribicoff
Burdick	Hollings	Roth
Byrd, Harry F., Jr.	Humphrey	Sarbanes
	Jackson	Sasser
Byrd, Robert C.	Javits	Schmitt
Cannon	Laxalt	Schweiker
Case	Leahy	Scott
Chafee	Long	Sparkman
Chiles	Lugar	Stafford
Church	Mathias	Stevens
Clark	Matsunaga	Stevenson
Cranston	McClellan	Stone
Curtis	McClure	Thurmond
Dole	McGovern	Tower
Eagleton	McIntyre	Wallop
Ford	Melcher	Young
Garn	Metzenbaum	Zorinsky
Glenn	Moynihan	
Gravel	Muskie	

NAYS—7

Goldwater	Metcalf	Weicker
Huddleston	Stennis	
Johnston	Talmadge	

NOT VOTING—18

Abourezk	Domenici	Kennedy
Biden	Durkin	Magnuson
Bumpers	Eastland	Morgan
Culver	Griffin	Pearson
Danforth	Hathaway	Riegle
DeConcini	Inouye	Williams

So the motion was agreed to.

The PRESIDING OFFICER (Mr. MELCHER). With the addition of Senators voting who did not answer the quorum call, a quorum is now present.

Mr. JAVITS. Mr. President, I ask unanimous consent that during the debate on Senate Resolution 5, Chuck Warren and Barbara Washburn of my staff may have the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from West Virginia is recognized.

Mr. ROBERT C. BYRD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ROBERT C. BYRD. Mr. President, it is not my intention to offer a cloture motion at this time on the motion to proceed. I may or may not offer such a motion today. I am not, by making this parliamentary inquiry, indicating that I am going to offer the motion today.

I preface the parliamentary inquiry by reading a paragraph from section 2 of rule XXII:

> And if that question—
>
> The question being whether or not the debate will be brought to a close—
>
> shall be decided in the affirmative by three-fifths of the Senators duly chosen and sworn—except on a measure or motion to amend the Senate rules, in which case the necessary affirmative vote shall be two-thirds of the Senators present and voting—then said measure, motion, or other matter pending before the Senate, or the unfinished business, shall be the unfinished business to the exclusion of all other business until disposed of.

My question is this: In view of the fact that the language excepts from the three-fifths requirement on the motion to invoke cloture only a measure or motion to amend the Senate rules—in which case, the necessary affirmative vote shall be two-thirds—would it not then logically result that, on a motion to take up a measure or motion to amend the Senate rules, a vote by a three-fifths majority on the motion to invoke cloture would indeed invoke cloture?

The PRESIDING OFFICER. In response to the Senator's parliamentary inquiry, the Chair will state that since the pertinent provision of rule XXII was amended a little over 2 years ago, there have been no precedents on this point, and the legislative history of the measure that so amended the rule at that time is silent on the question. Therefore, the language of the rule itself, as amended, is all we have and that language states:

> And if that question shall be decided in the affirmative by three-fifths of the Senators duly chosen and sworn—except on a measure or motion to amend the Senate rules, in which case the necessary affirmative vote shall be two-thirds of the Senators present and voting. . . .

The exception made is on a measure or motion to amend the Senate rules, which does not include a motion to proceed to a measure to amend the Senate rules. Cloture on the pending motion would be invoked by an affirmative vote of 60 Senators—three-fifths.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. BAKER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The minority leader will state his parliamentary inquiry.

Mr. BAKER. Mr. President, am I correct in assuming that the statement just made by the Chair in response to the parliamentary inquiry of the distinguished majority leader is in the nature of advice and is the opinion of the occupant of the chair and is not a ruling on the measure at hand?

The PRESIDING OFFICER. That is correct.

Mr. BAKER. Mr. President, a further parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. Am I correct then in assuming that notwithstanding the opinion just stated by the Chair it is not necessarily binding on any future occupant of the chair?

The PRESIDING OFFICER. That is also correct.

Mr. BAKER. Mr. President, I propound one further parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. That is, that having stated the opinion of the Chair on this matter and further stated that it is not a ruling on the matter at hand, that the opinion of the Chair is not appealable at this point?

The PRESIDING OFFICER. That is also correct.

Mr. BAKER. So the status of things at this point is that the response to the parliamentary inquiry of the distinguished majority leader is advisory in nature and that if a similar ruling is made at the time of the announcement of a vote on some future cloture motion filed against and voted on with respect to the motion to take up, then a parliamentary inquiry or a point of order could be made against that announcement if it were the same and an appeal taken from that ruling at that time?

The PRESIDING OFFICER. The Senator is absolutely correct.

Mr. BAKER. So the right to appeal from the ruling of the Chair in that regard at that time is unimpaired by this advisory statement today?

The PRESIDING OFFICER. That is correct.

Mr. BAKER. I thank the Chair.

Mr. DOLE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Kansas will state it.

Mr. DOLE. If cloture were invoked on a motion to proceed, then would we move to amend the rules or would there be another cloture motion?

The PRESIDING OFFICER. Then the measure would be before the Senate and would be wholly debatable.

Mr. DOLE. Then on that measure, it would take two-thirds?

The PRESIDING OFFICER. On that measure, amending the rule, it would take two-thirds of those present and voting, and a quorum, of course, must be present.

Mr. BAKER. Mr. President, this is in the nature of a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. I state now that it is the opinion of the Senator from Tennessee that that is not the correct ruling on this issue and, since it is not an appealable ruling at this time, I will not proceed further except to say that if the Senate is confronted with a ruling on that basis, it is my intention to discuss the matter further and appeal such ruling.

The PRESIDING OFFICER. The Chair appreciates the comments of the distinguished minority leader.

Mr. ROBERT C. BYRD. Mr. President, I commend the Chair for the response to the parliamentary inquiry which I made earlier.

In my judgment, the opinion of the Chair is correct. I think that any fair and realistic interpretation of the reading of the very clear language expressed in the section of the rule which I read, would have to conclude that inasmuch as the language does not mention a motion to proceed to take up a motion to amend, the two-thirds requirement does not apply to a motion to proceed.

The language specifically states, "and if that question"—in other words, the question on the motion to close debate—"shall be decided in the affirmative by

three-fifths of the Senators duly chosen and sworn, then said measure, motion, or other matter pending before the Senate, or the unfinished business, shall be the unfinished business to the exclusion of all other business until disposed of."

There is one exception to the three-fifths requirement, and that is as follows: "except on a measure or motion to amend the Senate rules, in which case the necessary affirmative vote shall be two-thirds of the Senators present and voting."

The motion before the Senate today is a motion to proceed to the consideration of a measure to amend the Senate rules. The language of section 2 of Rule XXII which I have read does not direct itself to a motion to proceed. It only directs itself to the measure—to wit, in this instance, a resolution—to the measure to amend, or to a motion to amend.

The motion presently pending before the Senate is a motion to proceed.

If one is to interpret a motion to proceed as a motion to amend, then what we would have now before the Senate is a motion to amend, and cloture could be applied directly thereto.

But to get to a motion or measure to amend, one has, first, to adopt the motion to proceed. That motion to proceed is excluded from the exception in the paragraph which I read.

In section 3 of rule XXII, the following language is found:

> The provisions of the last paragraph of rule VIII (prohibiting debate on motions made before 2 o'clock) shall not apply to any motion to proceed to the consideration of any motion, resolution, or proposal to change any of the Standing Rules of the Senate.

What is being talked about there is the general rule that motions to proceed to consider during the morning hour are not debatable. But section 3 says that a motion to proceed during the morning hour to the consideration of any motion, resolution, or proposal to change the rules of the Senate, shall not be subject to that general rule that precludes debate.

So a motion to proceed to take up a motion to change the rules, if made during the morning hour, is debatable.

What I am saying is this: Senate rule XXII is very specific in section 3 in directing its attention to a motion to proceed. But in section 2, the fact that measures and motions to amend the Senate rules are specifically referred to, specifically mentioned, and a motion to proceed is excluded from any mention, can only mean that a motion to proceed is not under the two-thirds requirement for cloture, and needs only three-fifths.

So, Mr. President, I again commend the Chair. The language is clear. It is not ambiguous. It specifically refers to a measure or motion to amend the rules as falling within the exception. It says nothing about a motion to proceed to take up a motion to amend the rules.

Mr. BAKER. Mr. President, I do not intend to debate this issue at this time, because, as the Chair has correctly pointed out, the opinion of the Chair, given in response to the parliamentary inquiry, is advisory only and could not be appealed from, in any event. But I have an idea, as I also said earlier, that the Senate will have to face the interpretation of this rule. No doubt it will come up, if the ruling is the same, when I appeal or someone else appeals from the ruling of the Chair, if that is the ruling of the Chair. I am sure the Chair would submit that for the consideration of the Senate, as the rules require.

I think the Senate should give careful attention to this matter. Not only is the measure before us important—that is, the determination of the future of the course of debate and the range of opportunities available to each Senator to express his point of view and to proceed to the consideration of his amendments and measures—not only is the substance of that resolution important, but also, the precedent, the history, and the interpretation we make of this relatively new provision of rule XXII is important, and the Senate can decide that.

I, too, commend the occupant of the chair for pointing out that this is a matter of first impression, that there is no precedent, that there is nothing to go by in the legislative history. I asume that is so. I have not yet researched the legislative history. But the Senate must determine the issue on the basis of the language before it.

It is interesting to me, however, that this provision says that the three-fifths vote will obtain except on a motion or measure to amend the rules. A measure to amend the rules, I assume, would be a bill or a resolution. That is what we ordinarily think of as a measure. I do not know what a motion to amend the rules is, unless it is a motion to proceed to the consideration of a measure to amend the rules.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. BAKER. I yield.

Mr. ROBERT C. BYRD. A motion to amend the rules is simple: For example, I could move that rule XXII be amended in such and such a way. I could then ask unanimous consent to proceed to the immediate consideration of that motion. In the event that I had previously given 1 day's notice and a Senator were to object to the immediate consideration of it, my motion to amend the rules would appear the next day on the Calendar of Resolutions and Motions over under the rule. That would be a motion to amend.

Mr. BAKER. That is one interpretation with which I do not happen to agree.

Mr. ROBERT C. BYRD. I daresay that the Chair would agree.

Mr. BAKER. I am not sure that the Chair would.

Mr. ROBERT C. BYRD. Why does not the Senator ask the Chair?

Mr. BAKER. Why do I not let the majority leader have that opportunity a little later? Right now, I will continue with my remarks.

The point is that the rule, itself, does not provide a definition for what a motion to amend the rules may be, or a resolution to amend the rules. In the ordinary and routine parlance of the Senate, it seems to me that a motion to proceed to the consideration of a resolution to amend the rules fits squarely into the dual language of that provision of the rules.

Mr. President, once again it is up to the Senate to decide this. It is up to 100 Senators, not up to the occupant of the chair or the majority leader or the minority leader. It is up to 100 Senators to decide whether or not we can do by indirection what the rules says we cannot do directly, and that is to obtain cloture on a motion to change the rules by three-fifths of the Senators. It runs directly contrary to the intentment of this provision of rule XXII, which is that cloture can be obtained against a motion to proceed to the consideration of the rule change on three-fifths, when clearly, in my view, rule XXII provides that it takes two-thirds of the Senators present and voting in order to invoke cloture against a rules change.

Mr. President, I have conferred at length with the distinguished majority leader and with the distinguished Parliamentarian on this matter. It is no betrayal of confidence to point out that this matter has been discussed at great length, and today I have heard interpretations on both sides of this issue. So clearly it is before us.

First, I was advised by the Parliamentarian that it took two-thirds. Today, I understand the Parliamentarian has advised the Chair that it takes three-fifths. That is certainly the prerogative of the Parliamentarian. But I make the point only to underscore the fact that the matter is not free of any conflict or misunderstanding.

So, Mr. President, there is no appeal to be made today. There is no vote to be taken today. But I assure my colleagues that I think this is a matter of extraordinary importance to the Senate, in the determination of the effectiveness, the determination of the scope and extent, and the determination of the efficacy of rule XXII.

If we were going to change the rules on the three-fifths, we should have said that. I do not think we said that. If the ruling of which the Chair advised us today were to be given in respect to a point of order against the announcement of the result of a cloture vote, I would hope that the Senate would sustain an appeal from that ruling.

Mr. ROBERT C. BYRD. Mr. President, I can understand the position that is taken by the distinguished minority leader. I disagree with it completely. I agree 100 percent with the response of the Chair to the parliamentary inquiry. If cloture should be invoked on the pending motion to proceed, and the Chair so declares, by 60 votes, of course an appeal would lie. I recognize that as being within the rules of the Senate and within the rights of any Senator to appeal. So far as I am concerned, I would be willing to discuss that appeal before offering a motion to table it.

In the final analysis, it will be up to the Senate to sustain the ruling of the Chair or to reject it. But I say that the Chair is on solid ground, by any fair and reasonable interpretation of the language, which is clear and unambiguous. I would be prepared to argue in support of the Chair's ruling at such time as there is a ruling. If the authors of the language had meant to include a motion to proceed to take up a motion to amend the rules, it would clearly have so stated. In-

stead, any reference to a motion to proceed was clearly omitted.

It refers to a measure or motion to amend the rules. But to get to a measure to amend the rules, or to get to a motion to amend the rules, one first must proceed to take it up, and he proceeds either by unanimous consent or by motion.

In this case, I had asked unanimous consent to proceed to take up the resolution to amend the rules, and that unanimous-consent request was objected to. I thereupon moved to proceed to take up the measure to amend.

One cannot have it both ways. If the pending motion to proceed is the same as a motion to amend, then a motion to amend the rules is right now before the Senate, and if I were to offer a cloture motion on it then, if that were the correct interpretation, I could argue that my cloture motion goes to a motion to amend.

Obviously, that argument would have no foundation in fact. So there is a difference between a motion to proceed and a motion to amend.

The adoption of the pending motion to proceed to Senate Resolution 5 would bring Senate Resolution 5 before the Senate for debate. Senate Resolution 5 is what amends the rules. The pending motion to proceed does not amend anything.

Mr. President, I again commend the Chair, and if, indeed, the situation ever arises that the Chair rules that cloture has been invoked by a vote of 60 Senators on a motion to proceed to a measure or motion to amend the rules, I will certainly be happy to do all I can to support that ruling.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. Yes.

Mr. ALLEN. Mr. President, this is a moot question, of course, but we do not seem to have a great deal to consider this afternoon, and I think that I could join in this discussion.

I certainly am going to vote against cloture if a cloture motion is filed and voted on, and would continue to support the right of those who wish to debate this issue, and would under no circumstances vote to end the debate.

I think a somewhat analogous situation to this would be the case of a constitutional amendment which requires a two-thirds vote of each House to be submitted to the States, yet amendments to that constitutional amendment can be adopted by a majority vote.

So just because the end issue requires one particular vote does not indicate that all issues which must be decided as a condition precedent to considering the main issue have to be decided by the same vote.

So it is quite obvious to me and, I believe, this was the advice I gave the distinguished Senator from Tennessee, that this motion to proceed could be clotured with a vote of 60 of the Senators.

It has been the position of the Senator from Alabama on appeals from the Chair that irrespective of how the decision might affect the issue, as the Senator from Alabama sees it, to support the Chair when he thinks the Chair is right and to oppose the Chair when he feels he is wrong.

Possibly other Senators follow a different rule and vote on appeals on the basis of which side would suit their opinion best.

So in the event—and I hope it does not come to pass because I hope it will remain a moot issue—that 60 votes are cast for a cloture motion to bring to an end debate on a motion to proceed, but fewer than two-thirds so vote, it would be the judgment of the Senator from Alabama that cloture would have been involved and, of course, on appeal the Senator from Alabama would vote to sustain the Chair.

I hope the issue does not arise, but if it does arise I really hope the Senator from Tennessee will not appeal because it is quite clear that this is not an amendment of the rules. It is merely a motion to proceed to a resolution seeking to amend the rules.

Furthermore, I would feel that some Senators are going to vote to proceed to the consideration of the measure feeling that the measure ought to come up before the Senate. I am not going to vote to force it to come up before the Senate, but some Senators will say,

We ought to decide it on the basic and fundamental issue.

So I believe we are going to have more votes on the motion to proceed than we are going to have to have on the fundamental issue.

Since the fundamental issue, the amendment of the rules, requires a two-thirds vote, I would hope that even if 60 votes are obtained on this preliminary motion that there would be no appeal and that we would go on to the main issue.

It seems very clear under the rules that all that is excepted out from the three-fifths requirement is the vote on the main issue, that is, amending the Senate rules.

So we have some time yet before this matter does come up. But I hope there will be no appeal from the decision of the Chair if this matter does come to fruition and a ruling is made because I really believe that might prejudice the main issue, the main issue being whether this debate shall end and, as I have said it repeatedly, I am going to vote in such a way as to seek to allow the debate to go on and on. But I do hope there will be no appeal from the ruling of the Chair in this area.

The PRESIDING OFFICER. The Chair appreciates the remarks of the distinguished Senator from Alabama and notes that the distinguished Senator is a great student of the rules, and his opinion is well taken and very much appreciated.

The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, in the language of the rule, rule III of the Standing Rules, paragraph 1, where the words "unanimous consent" occur, I move to strike the following semicolon and insert the words "or by majority vote on a nondebatable motion," and I ask unanimous consent for the immediate consideration of my motion.

Mr. BAKER. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. ROBERT C. BYRD. Does that motion now go on the calendar of resolutions and motions over under the rule?

The PRESIDING OFFICER. Under rule XL, no motion to amend any rule shall be in order except on 1 day's notice in writing. The motion is not in order.

Mr. ROBERT C. BYRD. Mr. President, a motion to amend is in order because I gave notice on January 4 when I introduced Senate Resolution 5, which included language to suspend the reading of the Journal by majority vote on a motion without debate. That in itself constituted the notice required under the rule.

Mr. ALLEN. Mr. President, under the rules I request that the motion be put in writing before it is considered.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from Alabama makes a valid request.

The PRESIDING OFFICER. The Senator has the right to have the motion put in writing.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, while we are waiting, I ask unanimous consent that there be an extension of the period for routine morning business of not to exceed 20 minutes, with statements therein limited to 5 minutes each.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MOTION NO. 1—MOTION IN WRITING TO AMEND SENATE RULE III

Mr. ROBERT C. BYRD. Mr. President, I submit a motion in writing, and ask for its immediate consideration.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The motion will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) moves as follows:

MOTION NO. 1

I move that the Senate Rules be amended as follows:

Amend rule III by striking out all after the words "unless by unanimous consent" and insert "or on motion decided without debate. Motions to correct the Journal shall

be privileged and proceeded with until disposed of and shall be confined to an accurate description of the proceedings of the preceding day."

The PRESIDING OFFICER. Is there objection to the immediate consideration of the motion?

Mr. BAKER. Mr. President, reserving the right to object——

The PRESIDING OFFICER. The Senator from Tennessee, the minority leader, reserves the right to object.

Mr. BAKER. Mr. President, a parliamentary inquiry. Are we in the morning hour?

The PRESIDING OFFICER. The Senator is correct; we are in morning business.

Mr. ROBERT C. BYRD. Mr. President, I object to the immediate consideration of the motion.

The PRESIDING OFFICER. Objection is heard. The motion will go over, under the rule.

Mr. BAKER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. BAKER. Notwithstanding that the matter is framed as a motion on the demand of the Senator from Alabama that it be reduced to writing, does it take on the character and form of a resolution, under the rules and precedents of the Senate?

The PRESIDING OFFICER. It is treated the same way.

Mr. BAKER. Mr. President, a further parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. Are there precedents in the proceedings of the Senate for considering motions which have been reduced to writing as resolutions within the meaning of the Senate rules?

The PRESIDING OFFICER. Yes, there are precedents. The Senator will note the heading on page 10 of the Calendar, "Resolutions and Motions Over, Under the Rule."

Mr. BAKER. According to the rules and precedents of the Senate, then, after this motion is reduced to writing, notwithstanding that it is characterized as a motion, is it not in fact a resolution?

The PRESIDING OFFICER. It is a motion, but it has the same effect as a resolution if agreed to.

Mr. BAKER. I thank the Chair.

Mr. ROBERT C. BYRD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The majority leader will state his parliamentary inquiry.

Mr. ROBERT C. BYRD. The motion will appear on the Calendar of Resolutions and Motions Over, Under the Rule on tomorrow, will it not?

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. And, Mr. President, it qualifies as a motion, does it not?

The PRESIDING OFFICER. It qualifies as a motion; the Senator is correct.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. BAKER. Mr. President, does it also qualify as a resolution?

The PRESIDING OFFICER. If it is agreed to, it will be a resolution—that is, it will have the same effect as a resolution if agreed to.

Mr. BAKER. Mr. President, is there a unanimous-consent order entered that nothing come over under the rules for tomorrow?

The PRESIDING OFFICER. No, not at this point.

Mr. BAKER. I thank the Chair.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business?

If not, morning business is closed.

AMENDMENT OF THE STANDING RULES OF THE SENATE

The Senate continued with the consideration of the motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

The PRESIDING OFFICER. The question recurs on the pending motion.

Mr. STEVENS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Alaska will state the parliamentary inquiry.

Mr. STEVENS. What is the effect of the motion of the Senator from West Virginia when it comes over under the rule tomorrow in regard to pending business?

The PRESIDING OFFICER. If the Senate adjourns tonight and we complete morning business while we are still in the morning hour, the Chair, under the rule and the precedent, will have to start laying before the Senate the measures on the calendar coming over under the rule in the order which they appear.

Mr. STEVENS. Is the Senator from Alaska correct in understanding, then, that the effect of carrying this motion over under the rule will be to displace the pending business tomorrow?

The PRESIDING OFFICER. It will only be possible until the hour of 2 o'clock, still providing that the Senate adjourns.

Mr. STEVENS. And we resume consideration of the pending business?

Mr. BAKER. Mr. President, a parliamentary inquiry: If we do, in fact, adjourn, today, will the motion of the distinguished majority leader expire at that point?

The PRESIDING OFFICER. Yes, the Senator is correct. The motion will die if we adojurn.

The question is on agreeing to the motion.

Mr. ROBERT C. BYRD. Mr. President, what is the motion before the Senate?

The PRESIDING OFFICER. The clerk will state the pending motion.

The legislative clerk read as follows:

Motion to proceed to consideration of Senate Resolution 5 to amend the standing rules of the Senate.

Mr. ROBERT C. BYRD. Mr. President, the Chair's response that the motion would die has reference to the pending motion.

The PRESIDING OFFICER. That is correct.

Mr. ROBERT C. BYRD. It does not have reference to the motion which I submitted, on which I asked unanimous consent for its immediate consideration and then objected to on my own. That motion now goes on the Calendar of Resolutions and Motions Over, Under the Rule.

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. And that motion will not come over, may I say, until the preceding five resolutions have come over under the rule, and they will not come over under the rule except at the close of morning business, following an adjournment of the Senate, and then only if the morning hour has not expired.

Mr. President, may I say also that no motion would be in order to proceed to consider any resolution or motion over, under the rule. Am I correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

I withhold my suggestion.

The PRESIDING OFFICER. The Senator from Utah is recognized.

Mr. HATCH. Mr. President, the issue facing this body at the moment is purely and simply this: Will rule XXII of the Senate be further changed in a manner to emasculate the protection accorded small States and minority viewpoints by altering the procedure on extended debates? I say absolutely no.

I appreciate the distinguished majority leader and his approach to this particular rule and his desire to conciliate, his desire to try to resolve difficulties between the differing factions in this matter, and I have deep and great respect for him.

From 1917 until 2 years ago, Senate rule XXII protected the right of extended debate by requiring the votes of two-thirds of the Senators present and voting to invoke cloture, or shut off debate. Extended debate, often called a filibuster, has always been one of the major differences between the House of Representatives and the Senate of the United States. Resort to the extended debate has been made over the years by Senators of all persuasion, liberal and conservative. It has been cherished as a vital protection of minority viewpoints against the will of a majority, particularly an intolerant majority which is impatient to act. Historically, one of the minority interests which have been protected have been the interests of small States. In the House, where population determines representation, small States are often overwhelmed by sheer numbers. This has been offset in the Senate, where each State has equal representation. At this point in time, many true interests are in the minority.

When the 94th Congress was organizing in January 1975, the cloture rule was attacked by many who claimed that extended debate was often used to block social, economic, consumer, and reform legislation. After 7 weeks, those who pressed for change obtained it. During the 94th Congress, obtaining cloture required a vote of 60 Senators—rather than the 67 required previously, if 100 Senators had been present and voting.

By way of illustration, the attempt to legalize secondary boycotts in the construction industry, through common situs picketing in the 94th Congress would have been killed in the Senate under the old rules on the vote which lost the filibuster under the new rules, and would never have come to the floor.

Proponents of further restricting extended debate again cite the need to expedite the legislative process.

I say that further encroachments on rule XXII which maintain minority rights, including the traditional rights of smaller States, will be trampled by any more changes.

The Senate, it seems to me, is a continuing body, always retaining a two-thirds membership. Its rules are continuing from Congress to Congress and are changed only pursuant to those rules. All precedent is to that effect.

The Senate is the only legislative body in the world with the right of extended debate. It is designed for careful and deliberate debate, and its history is filled with examples of the minority wisely tempering the haste of an overly zealous majority. If the Senate should now allow 60 of its Members to gag the other 40, the advocates of cloture would not rest until 51 of them could silence the remaining 49. Or, even worse, as few as 26 Senators constituting a majority of a quorum could gag the other 74.

Extended debate is needed in the Senate because it protects the rights of the minority. It slows down, on occasion, the hurried enactment of legislation in the Congress. Few cases exist where the interests of the country have been jeopardized by delay. In most cases, the country had benefited by delay and further consideration. Extended debate, it seems to me, also gives the country an opportunity to come abreast of what is happening in Congress. There is no meaningful debate in the House of Representatives, so that when a bill comes to the Senate it should be subjected, when necessary, to the closest scrutiny.

Efforts should be made to reach compromises on controversial legislation. The ability to compromise on legislation can exist only if there is the right of extended debate.

Extended debate in the Senate is a protection against big government getting bigger, as protection against a mushrooming Federal bureaucracy.

It is one of the few protections that we really have, and it is one of the few great rights that we have in the Senate.

There are a number of rights in the Senate, but the right to be able to have extended debate is one that I want to protect, that I want to preserve, and that I want to fight for.

(At this point, Mr. GLENN assumed the Chair.)

Mr. HATCH. Mr. President, rule XXII serves a vital need in our democracy. Liberals and conservatives should preserve this tool.

There are many examples where the determined opposition of a minority has effectively forestalled objectionable legislation. It is doubtful that any legislation which would arouse the stubborn opposition of one-third of the Senate, or that could be stopped by simply threatening a delay, could necessarily be very effective legislation. After all, ours is a Government by consent; and its powers are divided so that what is legislated might not be administered, might not be funded, or might not be supported by the courts. Our task is to anticipate and reconcile conflicting pressures in this society as we formulate its laws.

The presence of rule XXII guarantees that both sides are aware of the necessity of producing the logic, the argument, the accord, the compromise, and the accommodation that ultimately produces sound, useful legislation.

Why was the two-thirds majority necessary to overrule? Why not a simple majority? Or if not that, why not three-fifths majority? Why permit a tyranny of a minority? These are not new questions. Up until 1917 the Senate had no instrument by which debate could be terminated. But in 1917 the Senate approved a rule by which two-thirds of those present and voting could stop discussion. In 1949 the rule was changed to call for two-thirds of the entire membership of the Senate, but in 1959, the rule reverted back to two-thirds of those present and voting.

The rule of a simple majority is by no means a basic concept in our democracy. Our judicial system rests on trial by jury, but nowhere at the lower court level do we find guilt or innocence determined by majority rule. If swift justice is desired, majority rule would be the instrument. But the Founding Fathers knew that if one iota of uncertainty remained, the benefit of the doubt should go to the minority view. Ratification of treaties requires a two-thirds vote of the Senators present, as does impeachment. The consequences of what nearly happened during the reconstruction period must be recalled, when but for one vote, President Andrew Johnson would have been removed from office. Expelling a Member of Congress also requires a two-thirds vote. To override a Presidential veto requires a two-thirds vote and an amendment to the Constitution requires the support of a two-thirds vote of both Houses of Congress, followed by acceptance of three-fourths of the States. In each of these instances a two-thirds or greater majority has been required—all to guard against any but the wisest and most temperate decisions. The American form of government evidences the greatest respect for minority opinion. The making of any law should not be impervious to the strongly held will of the minority. A simple majority vote is not an infallible indication of wisdom and right. Much is heard about the tyranny of one-third, but one should be just as fearful of the tyranny of the majority.

In spite of rule XXII historic social legislation has been enacted, including civil rights acts and medicare.

Democracy is a slow and deliberate process. It requires patience and tolerance for opposing views. But when in the passions of the moment these virtues do not dominate, unlimited debate becomes a necessary instrument in the arsenal for defending the rights of the minority.

Rule XXII is sometimes characterized as a procedural rule rather than a substantive rule. But the word "procedural" must not be allowed to downgrade the importance of the rule. It is procedural in the sense that the Constitution itself was a set of procedural rules. It was of such importance that it could dictate the environment of the Senate.

If ever the Senate is reduced to the point where a substantial minority of its Members could not stand on the floor of the Senate and speak their opinions, the Senate will lose its value as a unique institution in our system of government and the liberties of all Americans will be imperiled.

I think we are in danger of that particular problem right now because when we talk about reducing the hours down to 50 hours and then having those reduced by quorum calls and rollcall votes, we are asking for problems that really consist of denying each Senator his right to speak his piece before the Senate, his right to debate, his right to file amendments, germane amendments, at that time. I think we can have problems like we really do not deserve in the Senate.

So some of these, obviously, create great alarm in me.

Unlike the House of Representatives, the membership of the Senate is not renewed in its entirety every 2 years. Instead, the terms of only one-third of its membership expires every 2 years. Moreover, unlike the House of Representatives, the Senate does not have to contend with problems that accompanied a large membership. This tolerance of individuality and, therefore, of minorities is a considerable prize. The protection of the rights of the minority is, after all, the primary reason for the existence of the Senate and is as precious an element of democratic government as is the fulfillment of the will of the majority.

One of the striking features of our Government is the difference that exists between the House of Representatives and the Senate. Representation in the House is determined on the basis of population and a majority of its Members could thus truly be said to represent a majority of the people on any particular matter before that body.

In the Senate, however, each State is entitled to an equal number of Senators, regardless of the population of the State, and each Senator is entitled to one vote.

A brief look at the history of the Senate shows that the Senate continued de facto from Congress to Congress. Seldom, if ever, had there been an occasion in recent years when a third of the Senators in 2 years had been new to this body, as was permitted by the Constitution.

The Senate should not be beguiled by the contention of proponents of a three-fifths rule that they are willing to stop there. They would continue to chop the dog's tail inch by inch. Before the Senate now is another modification. Very few of the advocates of the 60-percent rule would stop at this point and fight to resist any further reduction in the number. It seems to me that the decision before the Senate is clear. It is not over the right to debate, for that right under existing rules is limited. Nor is it the Senate's inability to act at all, for a majority which is truly determined in their pursuits cannot fail eventually to achieve their ends. It is instead the power of the minority

to reflect a proportional share of its views upon the legislative result that is at stake in this debate.

Mr. President, one of the things I have appreciated very much is the commitment of our distinguished majority leader on the floor of the Senate to maintain the three-fifths vote with regard to cloture. I have deep respect for him. He has been abundantly fair to me personally and I think to everybody in the Senate since I have been here.

I suspect that with his kind of leadership we should be able to maintain that role. But I am concerned that maybe we are making some mistakes here, that maybe these mistakes are of great moment, that maybe, instead of having expedited procedures, instead of having simplified approaches in the Senate, what we are going to do is stop debate, that we are going to deter a strong minority and, ultimately, that we are going to hurt the Senate and hurt this country.

I had lunch with one of the great Americans the other evening. This man was one of the advisers to FDR. He told me—and I think this is true and I think it is important—that the majority should never be more than five members in majority. The reason is because a strong minority will create a great majority. If we have a great minority, we are going to be able to have a greater majority because the refinement that comes from extended debate and from knowing that on any given issue we can have that extended debate have made America great.

I think it is pretty important for us to realize that.

I am standing here now because of the depth of feeling I have that we have to maintain that system and in this particular role as presently constituted we have that particular benefit to the minority.

Unfortunately, we have a much greater majority advantage than five excessive Members. We have 62 Members of the majority party. On any given issue they can do almost anything they desire to do, especially since the vote only requires 60 at this particular point.

Of course, a rule change requires 67.

But I think that, since we do not have that close alinement between minority and majority, we should not tamper with this rule at this time. I think it is a detriment to the debate and I think it is a detriment to the Senate. I think of some of the great issues that are about to come before this body and how important it is going to be to have extended debate and not to cut off debate: The repeal of 14(b) of the Taft-Hartley Act, the right-to-work laws, the right to make a choice, whether we belong to a union or whether we do not, in this society.

That is a choice we have to cherish.

They want to do away with that rule, and I think many freedoms would be done away with if they can. I do not think they can.

If these rules are tampered with continually, sooner or later we are going to lose some freedoms in this society we otherwise might not have had because of the strong minority point of view and the refinements that came from people who worked to refine our legislative process.

I look at some of the other demands of labor. Keep in mind that my background was as a Democrat, in my youth—in fact, almost up to the time I finished law school. My background was as a young union man who entered into an apprenticeship after my 16th birthday. I worked in the construction field for a year and became a journeyman lather. I became a foreman on construction jobs and became a member of the AFL–CIO.

I have deep respect for the good accomplishments of organized labor. But I found that the big labor union bosses really are not fighting and working for the men.

Let me list some of the things that can happen if we do not have extended debate—if we do not have people here who fight to refine our laws and fight for an effective legislative program in our society.

In terms of the repeal of 14(b), which I have mentioned, common situs is going to rear its ugly head, as it has for the past 16 years. People wonder why organized labor would fight for common situs picketing, which is going to create all union or all nonunion people on a construction site. Nonunion people, it is said, have an advantage, because they will work holidays, weekends—many other reasons why they have competitive advantage. It was thought that they could get common situs picketing through because of the overwhelming majority in Congress, even though, on its face, it seemed to be detrimental to the average union construction worker. The next step was to repeal 14(b) of the Taft-Hartley Act; and with the right-to-work laws, it could put another chink in the armor; so that we ultimately would come to what they want, and that is mandatory union labor throughout our society.

Why do I say that? Right now there is a bill in the House, H.R. 77, which says, among other things, that it will do away with the secret ballot and the determination of the collective bargaining agent in any given election process conducted by the National Labor Relations Board. If only 55 percent of those men—either through peer group pressure or other pressure—sign a card stating that they want a union, that is the election. Imagine what that will do for America—or against America, in this case. It will hurt our country. If 55 percent of the men in any given unit about to be organized will sign a card saying that they would like a union and that becomes the election, without a secret ballot election, we are not going to have the freedoms we have today, and we will have the next step—mandatory unionization throughout our society.

I am not against unionization, but I think it should be fair. People should have a choice as to whether or not they want a union. They never will have a choice if this measure is agreed to.

There is the matter of mandatory collective bargaining in the public sector. In othe words, they want to organize public employment throughout the State, local, and Federal governments, so that the taxpayers never can rectify any situations in those units of government. They want to have compulsory arbitration and the right to strike by municipal, State, and Federal Government employees. Imagine the crippling effect to this society if that occurs.

Everybody in this society should be concerned about having filibusters, extended debate, the right to hear both sides, the right to have it continue, and the right to refine legislation.

After all, what is so bad about requiring, in a piece of legislation that is hotly contested, that it be good enough to obtain 60 votes in favor of it? What is so tough about that in such hotly contested legislation? What is wrong with it? In fact, I find a great deal of value in it, because sometimes in doing that we make the compromises, we make the refinements, we make the decisions and the determinations and the changes that are essential to that great legislation, rather than having it done by an overwhelming majority—sometimes an arrogant majority.

Think in terms of some other labor law legislation. I am just choosing one area. They want to repeal the Hatch Act. It may seem a little strange, since my name is Senator HATCH, to be fighting for the Hatch Act. That was enacted years ago, at the behest of a Democratic Senator named Carl Hatch, from New Mexico. That act prevents political pressure being brought upon Federal Government workers. Now they want to do away with that—and why? So that they can utilize Federal workers to reinforce the already overwhelming majority they have in our society and to bring pressure and to see that they make donations and to see all the other things we have seen in the ward-heel politics of the large cities of our country, time after time.

In addition, according to the Secretary of Labor, according to all his Under Secretaries, according to everybody at the Labor Department—because there is really only one point of view there—they want to reinforce the Davis-Bacon Act, which provides that on any Federal construction site where $2,000 or more of Federal tax moneys are being utilized, they have to pay the highest available union wage rates, even though the people in that area are used to working for less.

That is merely because the big labor boys want that, in this day and age, and that has cost the American taxpayer between $50 billion and $150 billion, depending upon one's perspective, during the last 30 years, the lifetime of that bill. Now they even want to reinforce that, so that we can pay more taxes.

Look at the minimum wage. If the minimum wage goes to $3 an hour, it is going to hurt every small business in America. They already are in a great deal of difficulty—hiring young people, training them, giving them responsibilities and opportunities to grow. If we have a $3 minimum wage, we are going to have problems all over America and inflation is going to increase.

Now they also want indexing. Indexing means that every time we have inflation,

the minimum wage automatically goes up in proportion to the inflation. It is not only incredible; it is something that is going to hurt this country immeasurably.

At the time of its enactment, the minimum wage law served a purpose, and that was that there should be a wage floor. But the floor and the slavish devotion we have had to it for the number of years since its inception have diminished jobs for youth all over our society, to the extent that 50 percent of our young blacks are unemployed today, 20 to 50 percent of other minority youth are unemployed, and we have problems in this country that are unbelievable.

The majority has been given the credit for being the party of the people. When it comes right down to it, I find that every time the minimum wage argument comes up, they are right there, to spend more; they are right there, to spend more; they are right there, to enact more. When the appropriation bills come up, they just spend everything they want to spend—and more and more and more, until we are being taxed to death in our society today.

If you do not think we are being taxed to death directly, then consider the indirect taxes we all are paying. To be frank, it is one segment of society that is causing almost all of this in our society. If we do not solve the unemployment problem among our youth, we are going to have problems throughout our society that we never before have seen. To have 50 percent of our young men and women unemployed, in this day and age, regardless of which group they come from, is unthinkable. It is unacceptable to me. It is a cancer on our society that is going to rise up and create more rebellion than we have had in the past, if we do not solve it.

The problem is that we have the same old ideas we have had for 41 of the last 45 years, many of which have ruined this country in the past.

Our national debt is approaching $800 billion, as I see it. We have a $2 trillion to $4 trillion unfunded debt in the social security program, a $3 billion or $4 billion unfunded debt in the pension program. This Government is $6 trillion in debt, and nobody seems to care, and we come to this floor and spend more and more. Nobody seems to care. One would think that we would start paying attention.

James Callaghan stood up in the British Parliament and said that we no longer can spend our way out of a slump, if that ever did work—a thorough denunciation of Keynesian economics, if I have ever heard it.

Then he said profits are a good thing and, finally, he said wages have to be kept down to competitive levels if England is going to survive.

The Chancellor of the Exchequer comes over here and he says: "I am not a Keynesian," because John Maynard Keynes believed in deficit financing of government spending. Is that not amazing, because some people say we are 20 years behind England? I am telling you we are not 20 years behind England; we are 8 to 12 years behind England, and if we do not do something about it we are going to be in that same incredible mess they are in right now, and they are hoping and praying the North Sea oil will bring them out of that mess.

I can tell right now it is not going to do it because of the problems they have had that we seem to ignore because we are walking right down the very same pathways they have already gone. We have historical perspective. We are ignoring history and, in the process, we are hurting this country.

If we do not watch it, this country is going to be just like England, and others in this world are going to walk right over us. The fact of the matter is there is no excuse for it because it is the greatest country in the world, the greatest system in the world, has the greatest resources in the world, the greatest leadership in the world, the greatest Senate in the world, and maybe we are about to lose some of that greatness because of some of the changes in the rules, changes in the rules which, to me, at least the one or two that really are the change—some of the others we are glad to change because they are basically technical changes—but one or two of the rules really are going to make a difference as to whether or not we can refine this legislation, whether or not we can really have and are going to have a minority point of view in this society.

Remember sometimes the shoe fitting works the other way, and I think it is important that we maintain these heralded traditions.

Last, but not least, I might just mention that, continuing my little short consideration, some of the labor problems we are being faced with and which are trying to be foisted upon us in our society today, problems which really have hurt our society and have really hurt every union man in America, and union men are starting to feel it, and in recent polls taken by the Roper organization we are finding even the majority of the union people do not think big union leaders are doing right by them—that is a fact.

As I go around the country many union men, I find, are pretty fed up to hear the way some of these rules and regulations are foisted on us in the name of helping society and it really does not help society.

Talk about the Federal deficits, do you really understand that every man, woman, and child owes on the unfunded debt right now $30,600 per person? We have to pay off that debt in the future because of the lack of restraint and irresponsibility of our legislative bodies here in the U.S. Government.

We are even in danger of having that worse if we have a tyrannical majority that can work its will any time it wants to and changes the traditional heralded rules in the Senate, and I think it is time we kind of stand up against it.

I remember with regard to mandatory unionization of the public sector, a businessman coming to me and saying:

Senator, you know, we had a problem in our particular plant in the East.

He owned this plant, and he said:

The Teamsters struck that plant and they started to create havoc and to create difficulty, and they even threatened the plant, to burn it down and to destroy it, and they would call on the telephone and tell the executives' wives they were going to kill their children if they did not capitulate.

Of course, hardly any union man in our society would act like that, but these people are doing it.

What happened was that the police never seemed to do anything about it. There was almost a riot at or near the plantsite by the Teamsters.

This businessman was in England, and he called back to the chief of police, and he said to the chief of police, "My God, they are rioting, they are threatening to ruin our plant, threatening to destroy it, which means loss of jobs, and they are threatening the wives of executives. What are you going to do about it?"

The chief said, "Nothing, because we belong to the Teamsters Union."

These kinds of things are worrisome to me as a former union member who believes in the union movement, who believes it has done many services in the early days but now is leading us down the primrose path of Keynesian economics, and I am one who believes that with changes like this we will have changes foisted on us that will hurt America and not create a strong minority point of view and the right of a minority to debate and to express its particular beliefs and will.

Last but not least, I think you can talk about just two other things. There is a great movement in our country today to unionize the military. There are many people in this society who believe that is a very wise thing, mostly union leaders. I can tell you this is not very wise, and I can tell you this: I will stand on the floor of the Senate and filibuster that as long as I possibly can, and I hope we will have some rules by which we can filibuster, and we are not stripped of them because of a tyrannical majority's desire of this or any other kind.

I look at this or other pieces of legislation that are about to come before this Senate. Take, for instance, the Agency for Consumer Advocacy. It sounds good, does it not? The problem is they are going to create another bureaucratic agency of the Federal Government to start dominating our lives by legislating against our agencies of government and by judicially interferring with other agencies of Government. If that is not going to create havoc I do not know what is.

All I am saying is I think they treat us consumers in America as if we are all stupid, and we are not stupid. The American housewife is the greatest consumer advocate in the history of this country. She will walk 2 miles to return a rotten apple, and we do not need to be told every step of the way where we are going.

If you want to have problems in America now, in addition to those we already have—we are all overregulated to death. We have agencies upon agencies; we have 3,000 different agencies, bureaus, and commissions in this society all dominating every aspect of our lives—if you want to have real problems just have the Agency for Consumer Advocacy.

Every citizen of this country ought to be writing to this body and saying, "We do not want that." Let us start believing in the American citizens and in the American consumers. We do not have to be told every step of the way what we should buy and what we should select.

We are the smartest Nation, the most intelligent people; we have more going for us than anybody in this world, and we are about to lose it because of overfederalization of our society and of our lives.

I think we have to do something about it, and I think this particular rules change, it seems to me, is an important place, an important time, to stand up against. I think not only Republicans but Democrats ought to stand up for no more stripping of the rules, no more losing opportunities for debate, no more cutting down on the opportunities to file amendments, no more taking away the right to speak on the floor of the Senate. I think if we will do this we will all be better off for it. I certainly am going to work the very hardest I can to try to maintain the liberties that really we in the Senate deserve and the people of this country so much need and deserve also.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I rise to lend my support to our distinguished colleagues, Senator BAKER and Senator GRIFFIN, who, as Republican members of the Rules Committee, have so ably pointed out the dangers embodied in Senate Resolution 5.

I share their concern over this measure, because, in my mind, there is no doubt that Senate Resolution 5 further erodes free and open debate in the Senate and further restricts the rights of the minority even though it only involves postcloture procedure.

Mr. President, I understand that the distinguished majority leader has pledged to resist any additional efforts to reduce the 60-vote requirement to invoke cloture and has pledged that he will not seek to amend the rules except in compliance with the rules. I commend the distinguished majority leader for his position on these matters.

The issues at hand, however, are just as important to preserve the minority's right to full debate. If the minority gives on the issues raised in Senate Resolution 5, it will be a step toward majority cloture and more restricted debate. Even though the majority leader has given his pledge on amending the rules and on the 60-vote cloture requirement, others are not bound by that pledge.

Mr. President, I predict that if this resolution is agreed to, at the beginning of the next Congress the appetites of those who favor more restricted debate will be increased, and we will be called upon to fight the battle of majority cloture at that time.

Briefly, Mr. President, I want to examine the major provisions of Senate Resolution 5.

The first provision which concerns me is the 50-hour limitation on debate. As I read the resolution, after cloture is invoked, no Senator may speak more than one-half hour on the measure or related issues. Maximum debate after cloture would be limited to a total of 50 hours—compared to the current rule which allows each Senator 1 hour for a total of 100 hours—on a motion adopted by a two-thirds vote of the Senators chosen and sworn, the 50 hours may be reduced or extended. If the Senate votes to reduce the time below 50 hours, and 24 of the 50 hours are expanded, the time limit can be further reduced to not less than 2 hours by a two-thirds vote of those Senators chosen and sworn. The allotted time below 24 hours is then controlled by party leaders. The 50 hours will be inclusive. Votes and quorum calls will not be counted against an individual Senator's time, but will be charged against the 50-hour total. The 50 hours may be allocated on a first-come-first-served basis.

Now, Mr. President, let me express my concern about this provision. The time between the invoking of cloture and the vote on final passage would be cut by half and, under some circumstances, more than half. All legislative tactics used during this time would be charged against the 50-hour total, thus reducing each Senator's time. It is possible that several Senators could use their full 30 minutes, interspersed or followed by votes, quorum calls, or other legislative tactics. As a result, Senators still waiting to speak may have less than 30 minutes, and those at the end of the schedule could find themselves with little or no time because the 50 hours had expired.

A second provision which concerns me deals with calling up amendments. Once cloture has been invoked and the 50-hour limitation is in effect:

> The Senate shall proceed, without any further debate on any question, to vote on the final disposition thereof to the exclusion of all amendments not then actually pending before the Senate at that time and to the exclusion of all motions, except a motion to table, to recommit, or to reconsider and one quorum call on demand to establish the presence of a quorum (and motions required to establish a quorum) immediately before the final vote begins.

This, too, tends to restrict debate.

A third provision involves motions to correct the Senate Journal. They would not be debatable and must be confined to an accurate description of the previous day's proceedings in the Senate. Again, debate is restricted.

Fourth, quorum calls would be restricted in that no appeal could be made from the ruling of the Chair that no business had been transacted since the last quorum call if the minute book or the transcript of debate supports the ruling. This limitation would also apply to a ruling on a point of order immediately following a vote by which the presence of a quorum was established and no business has intervened. I know of no similar situation where a ruling of the Chair is unappealable, and I seriously question this proposed procedure.

Mr. President, I would call to the attention of my colleagues the section entitled "Appeals Not in Order" on page 100 of Senate Procedure. It reads as follows:

> Appeals cannot be taken: (1) from an opinion expressed by the Chair in response to a parliamentary inquiry; (2) from a decision of the Chair as to recognition of Senators; (3) or from a ruling that a Senator, who having declined to yield, could not be taken from the floor by a parliamentary inquiry; or (4) from the action of the Chair in submitting a point of order to the Senate for its decision thereon.
>
> An appeal from a decision of the Chair is not in order after business has intervened.
>
> An appeal will not lie as long as a Senator refuses to yield since he may not be interrupted or taken off the floor against his will.
>
> It is not in order in the absence of a quorum to take an appeal from the decision of the Chair.

Mr. President, these are inane, uncontroversial types of situations which differ sharply from the proposed amendment to the rules. I believe such an amendment will put the Chair in an uncomfortable situation, as the debate around cloture and subsequent motions are often heated and controversial.

Fifth, no cloture motion may be presented covering any pending question unless 24 hours have elapsed since the Senate began consideration of the measure. Mr. President, this is one redeeming factor in the resolution, and I would support this provision as it would allow greater debate.

A final limitation would allow Senators to offer a nondebatable motion to dispense with the reading of an amendment or a report when the amendment or report has been identified by the clerk and is available to Senators in printed form.

The essence of this resolution is to further restrict debate. It is but another link in a chain of events which will lead us down the road toward a greater loss of minority rights in the Senate. Therefore, Mr. President, I must oppose Senate Resolution 5.

In order to put this matter in proper perspective, Mr. President, I shall now examine some scholarly articles written on the subject of free debate in the Senate.

The first article I would like to call to the attention of my colleagues was written by the late Senator Richard B. Russell. He argued forcefully in favor of free debate, and all of the arguments he advanced, while they must be considered in historical context, are applicable today in our effort to prevent a further erosion of minority rights.

Senator Russell's article appeared in the March 15, 1964, issue of the New York Times Magazine and is entitled "Russell Defends the Filibuster."

Mr. President, the article reads:

> For the greater part of our history, the right of full and free debate in the United

States Senate has stood as a vital safeguard over the right of the minority to protest against legislation it believes to be injurious or oppressive.

Since 1841, there have been no fewer than 53 occasions on which Senators have exercised the right of extended debate—popularly known as the filibuster—to oppose some measure that was counter to deeply held convictions.

The first filibuster about which much is known occurred in 1841 in opposition to a bill to remove the Senate printers. Most subsequent filibusters have involved more substantive questions.

In 1863, an unsuccessful filibuster was conducted against a bill involving President Lincoln's wartime suspension of the writ of habeas corpus. More successful was the prolonged debate in 1890 that resulted in the defeat of the "Force Bill," which would have provided Federal supervision of elections. Two other celebrated filibusters were the 28-day battle by Senator Robert La Follette, the elder, against the Vreeland-Aldrich Emergency Currency Act in 1908, and the bitter fight in 1917 that blocked President Wilson's armed-ship bill.

In more recent years, Senate liberals resorted to the filibuster in their opposition in 1953 to the so-called tidelands-oil bill of the Eisenhower Administration and to the communications-satellite bill sponsored by President Kennedy in 1962. Southern Senators have exercised the same parliamentary tactic in opposing so-called civil-rights bills during the past two decades.

The issues that have generated prolonged debates or filibusters (the term used often depends on which side of the question one is on) cover a vast range of economic, political, and constitutional conflicts. The filibuster is not the exclusive weapon of any philosophy, party or section; distinguished Senators of both parties, representing every shade of political thought and every area of the country, have taken part on occasion in extended debates in support of a minority position.

Some of the towering giants of the Senate have been the most eloquent champions of the right of full and free debate in that body. These men—and they include many of the greatest liberals as well as conservatives of this century—believed that limitation of free speech in the Senate—gag rule—would undermine the rights and liberties of all Americans.

The late Senator Eugene Millikin of Colorado, a leading and enlightened spokesman of the Republican party of a decade ago, looked upon freedom of debate in the Senate as an important check on the excesses of an unbridled majority. In a Senate speech in opposition to one of the periodic attempts to gag the Senate, Senator Millikin declared:

"The majority of any party in power would find the suppression of free speech a convenient method of expediting what it considered useful and urgent legislation.

"It is always annoying to have errors exposed, and it would not be long before a majority of one decided that for political purposes it should retain the illusion of infallibility by preventing exposure here of its errors. And then it would not be long until corrupt and even ominous legislation might be shepherded through this chamber in enforced silence."

Senator Millikin, of course, was an eminent conservative. But his position on this issue was the same as that held generally by the great school of liberals that held sway in the Senate during an earlier part of this century. Men like William Borah, Robert La Follette and George Norris were outspoken in support of the filibuster as a perfectly valid parliamentary device for the protection of the just rights of the minority.

La Follette, particularly, was an ardent advocate of unfettered debate in the Senate. He once summed up his position in this ringing statement: "Believing that I stand for democracy, for liberties of the people of this country, and for the perpetuation of our free institutions, I shall stand while I am a member of this body against any closure that denies free and unlimited debate. Sir, the moment that the majority imposes the restriction contained in the pending rule, that moment you will have dealt a blow to liberty, you will have broken down one of the greatest weapons against wrong and oppression that the members of this body possess."

The present rule of the Senate that allows a high degree of freedom of debate—as will be seen later, it is not absolute—is the natural outgrowth of the peculiar position that the Senate occupies under our constitutional system. Indeed, the right of an individual Senator to insist on full discussion of any question or issue is the essential element which distinguishes the Senate as the greatest deliberative body yet devised.

The unique characteristic and composition of the Senate grew out of one of the most violent controversies to confront the Constitutional Conventon of 1787. In fact, the composition of the Senate was the rock that, for a time, threatened to wreck the Convention.

(At this point, Mr. DECONCINI assumed the chair).

Mr. THURMOND (reading):

In the Convention, the smaller states of the Confederation were determined that they would not be overwhelmed by the sheer force of numbers involved in the representation based on population as was prescribed for the House of Representatives. Delegates from the smaller states wanted assurance that the individual laws, interests and customs prevailing in their states would not be placed in jeopardy through the surrender of a great amount of their sovereignty to the new union of states.

Under the compromise fashioned by the founding fathers, every state regardless of size, population or wealth was accorded equal representation in the Senate. Indeed, such great stress was placed on this principle of equal representation in the Senate that the framers included in the Constitution a provision that no state could be deprived of representation in the upper chamber without its consent. This is the only section of the Constitution that can be changed only by the unanimous consent of the states.

The Senate lies at the very heart of the careful division of powers and the delicate system of checks and balances that form the buttress for our constitutional form of government. It is the forum of the states in which each stands on an equal footing with the others.

The principle of equality of representation is protected by the rules of the Senate that enable a Senator from the smallest and poorest state to speak with the same voice and authority as a Senator from the largest or wealthiest state. If the constant campaign to allow a majority to gag freedom of debate in the Senate should succeed, the cherished principle of equal representation would be greatly weakened. In my judgment, such a gag rule would throw the entire system of checks and balances dangerously out of kilter; it would reduce the Senate to little more than an ineffective appendage to the House of Representatives.

Under gag rule, Senators would serve little other purpose than to act, in effect, as additional members of their state's delegation to the House of Representatives. For once the Senate yields the right of its members to express themselves fully, it undoubtedly would be only a matter of time before Senators would find themselves begging for the privilege of speaking for five minutes—as can and does happen under the rules of the House.

It also is probable that the loss of freedom of debate in the Senate would be followed by an attempt to abolish the Senate's time-honored right of amendment, the other principal characteristic that distinguishes the Senate, in Gladstone's description, as "the most remarkable of all the inventions of modern politics."

The right of free speech in the Senate is particularly important because the Senate is the only institution of the Federal system in which the smaller states exercise an equal influence over the conduct of the affairs of the nation. This is obvious from the makeup of our political and governmental system. It is an elemental fact of political life that the small states are at a disadvantage when it comes to the nomination and election of a President.

As a practical matter, the parties usually look to the larger and pivotal states for their Presidential timber. The last President of the United States who was elected from one of the smaller states of the union was Franklin Pierce of New Hampshire in 1852.

Through the composition of the electoral college, the smaller states have a somewhat larger voice in the Presidential election itself than in the nominating conventions. Yet it is possible for as few as 12 of the most populous states to elect a President even in the face of the solid opposition of the remaining 38 states.

The smaller states labor under an even greater handicap with respect to their relative strength in the House of Representatives. The Congressmen from the nine largest states could, by voting as a bloc, pass any bill they might desire, even if it would affect adversely the remaining 41 states and be opposed to a man by every Representative from those states.

I believe few rational thinkers would maintain seriously that, under our system of government, the will of the numerical majority should prevail absolutely and at all times. Certainly this was not the intent of the founding fathers—and it is not what the Constitution provides.

Ours is a country of diverse interests as among the several states and the various sections. What may be good for the people of Maine is not necessarily good for the people of California, and what may be right for the people of Georgia may not be right for the people of Hawaii.

The Senate of the United States is the last bastion within our Federal system wherein the rights of the states and the rights of the minorities are protected. Without freedom of debate in the Senate, the United States eventually will go the way of the unlimited democracies; we will reach the stage where a misguided majority can destroy the liberties and rights of individual citizens in the name of some currently popular cause.

It should not be forgotten by those who would suppress and gag freedom of debate, that popular opinion can be a fickle instrument. Causes that may be popular today may very quickly sink into a sea of unpopularity, as the "noble experiment" of prohibition demonstrated. Those who find themselves on the majority side of an issue today may find themselves cast in the minority position tomorrow.

It is surely conceivable, and perhaps probable, that the day will come when, through some fluke of public emotion, the Senate is in the hands of the zealots of the left or the right. Those who shout for giving "the majority its way at once" should ponder the consequences of this if the Senate should come under the control of political extremists of whatever brand.

I cannot, therefore, escape the conclusion

that those who advocate restricting the rights of the minority by curtailing freedom of speech in the Senate may be sowing the seeds of their own downfall on some future question of burning national interest.

An untrammeled Senate exercising free and full debate has served this nation well for 175 years. I do not know of a single piece of legislation vital to the welfare of the country that has been killed by a filibuster. But many bad and vicious bills have been delayed, modified and sometimes defeated because a Senator or group of Senators possessed the courage and the conviction to talk and talk until they were able to expose the harmful and injurious provisions—even if it meant flying in the teeth of an impatient and wrathful majority.

I would be the last to deny that there have been abuses of freedom of debate in the Senate. There also have been abuses of freedom of speech, freedom of the press and all other constitutional guarantees. It is an abuse when the press, radio and television raise the cry of "filibuster" rather than report to the country the valid arguments and position of the minority.

Though few fair-minded persons would deny that there have been abuses in the constitutional freedoms enjoyed by all Americans, none would advocate striking these basic guarantees from the Constitution. By the same token, freedom of debate in the Senate should not be destroyed on the pretext that it is sometimes abused.

The present rules of the Senate are wholly adequate to prevent unjustified obstruction of the work of the Senate and the passage of vital legislation. Cloture can be invoked to stop debate on any matter before the Senate by a vote of two-thirds of the members present and voting.

In recent years, a determined campaign has been waged to discredit the right of full debate in the Senate—and thereby to discredit the Senate as an institution of government—through the specious charge that the Senate is the "graveyard" for civil-rights legislation. This charge is utterly absurd and without foundation on its face. Both the civil-rights acts of 1957 and 1960—which have been hailed endlessly by their proponents as the only legislation of this type to pass Congress since Reconstruction—were approved by the Senate after prolonged debate and discussion. Opponents of the legislation were criticized in both years for "filibustering."

In 1957 and 1960, the opponents directed their speeches specifically to the issues and questions raised by the legislation. They spoke at length, it is true, but their speeches contained facts and arguments as to why the minority thought the legislation to be in conflict with the best interests of the country and with the Constitution.

It should be recalled that fewer than 20 Senators voted against final passage of both these bills—a number woefully inadequate to have prevented cloture had two-thirds of the Senate desired to close debate.

The plain fact is that a majority of the Senate was not thwarted on these occasions because of determined opposition by a minority of Senators. In 1960, there were almost 30 roll-call votes on various phases of the bill—including final passage—which were decided one way or another by a majority. These votes included an attempt to invoke cloture which failed by a vote of 42 yeas to 53 nays—well below even a majority.

It is true, of course, that the action of a majority with respect to the civil-rights bills may not have satisfied either the dedicated advocates or opponents of this type of legislation. But the point is that a majority of the Senate was able to work its will and was able to pass the legislation within the existing rules of debate.

Indeed, these rules have enabled the Senate to function as a legislative body without serious detriment to the welfare of the United States throughout our history. They have enabled the Senate to discourage and prevent excesses by the temporary majority of the moment that may seek drastic change for selfish or partisan gain.

Freedom of debate in the Senate, so long as it is preserved, serves as a protection of the fundamental rights and liberties for which men for thousands of years have fought, sacrificed and died.

Mr. President, a second and equally scholarly article appeared in the May 1958 issue of the American Mercury entitled, "No Gag on Our Senate," and written by the distinguished senior Senator from Georgia (Mr. TALMADGE). Mr. President, I shall now quote excerpts from that excellent article:

Any proposal for further limiting debate in the United States Senate is a matter of grave consequence which, by its very nature, demands that it not be acted upon capriciously or without the benefit of thorough study and full consideration of all its ramifications.

The Senate of the United States, as an instrumentality of the States and their citizens, is the property of every American and does not belong to the individuals who transiently occupy the seats in its chamber. Individual Senators have no *proprietary rights* in the operation of the Senate, except as they act as creatures of the will of their states and constituents.

There is only one conclusion which can be drawn logically and dispassionately concerning the efforts of those who persist in their efforts to change Rule XXII. Their onslaught to stifle freedom of speech on the floor of the Senate is an attack not only on the Senate itself but also on the stature, prerequisites and prerogatives of each senator, international affairs and every other responsibility incident to senatorship. It is an attack which seeks to destroy the constitutional balance of federal and state power and to deal a death blow to the states as political entities.

Those now attempting to make cloture easier, and thus ultimately destroy freedom of debate in the Senate, complain that Standing Rule XXII in its application thwarts the wishes of the majority. However, authoritative observers of the American legislative process hold that a determined majority of Senators can find ways of passing any measure it desires without resorting to changing the very character and complexion of the Senate itself.

The ultimate objective of opponents of free debate in the Senate is cloture by a simple majority vote of senators *present at any given time*. Adoption of such a rule would make it possible for 25 out of 96 senators, a majority of a quorum, *to impose gag rule*.

Our wise founding fathers were aware that the excesses of democracy can be as fearful in their consequences as the excesses of totalitarianism. To safeguard against both extremes they gave us our *republican* form of government, with its delicately contrived system of checks and balances of which freedom of debate in the Senate is at least an implied, if not actual, part. Through the medium of free debate, the Senate thus provides the machinery by which all measures affecting the lives, fortunes and honor of the American people in *every* state can be put to the critical test of unhurried examination by the collective intellect of a body expressly created as *one* of our governmental checks and balances.

If minority rights are trampled in the Senate, there is only one remaining remedy available to those who do not happen to be with the majority; affiliation with a multiplicity of splinter parties. No greater catastrophe could befall our country than such enforced destruction of the two-party system and substitution of a countless number of political parties (as in France). Under such circumstances a small militant minority, exercising the balance of power, could be catapulted into a position of leadership where it would inflict great harm on Constitutional government and democratic processes.

Jefferson wrote in his Manual of Parliamentary Procedure: "The rules of the Senate which allow full freedom of debate are designed for protection of the minority, and this design is in part of the warp and woof of our Constitution. *You cannot remove it without damaging the whole fabric.*

During the last quarter of a century we have seen an unending encroachment on the powers of Congress by both the Executive and Judicial Branches. One by one its powers and the prerogatives of its members have been dissipated either by delegation or acquiescence. Congressional powers over the purse, over patronage, over the budget, over trade, over war powers and all other phases of government operation have slipped away or have been greatly reduced. It is time to reverse this trend. The proper place to start is by refusing to surrender the right of freedom of speech on the floor of the Senate.

We must not lose sight of a few simple facts about the origin and composition of the Senate. It is impossible to apply to the Senate, with any degree of accuracy, the principle of *popular* majority rule as we usually consider it. The very composition of the United States Senate where *all* States are equally represented, each having two votes, prevents such an application. It is possible for various combinations of 40 Senators to represent anywhere from 20 to 80 percent of the population of the nation.

All of the great injustices of history have been committed in the name of unchecked and unbridled "majority rule". The late Senator James A. Reed of Missouri, in one of the most forceful speeches ever delivered before the Senate, observed with great truth: "The *majority* crucified Jesus Christ; the *majority* burned the Christians at the stake; the *majority* established slavery; the *majority* jeered when Columbus said the world was round; the *majority* threw him into a dungeon for having discovered a new world; the *majority* cut off the ears of John Pym because he dared advocate the liberty of the press."

Have we forgotten that everyone at one time or another, belongs to a minority? Have we lost sight of the unchanging truth that unbridled majority sway, without proper restraint, is mob rule? Are our memories so short that we have forgotten the maxim that free government, by destroying dissenting opinion, thereby destroys itself?

With unlimited debate in the United States Senate, all Americans have the assurance that no act jeopardizing their rights will ever be proposed without *some* member of the Senate having the *opportunity to resist it and to warn the nation of its consequences.*

Mr. President, I would now like to read a letter written by Senator Sam Ervin on preserving the Senate's tradition of free speech. This was written to the editor of the New York Times, and is dated January 28, 1971:

USEFUL FUNCTION OF THE FILIBUSTER

Your Jan. 27 editorial concerning the current debate on Senate Rule 22 [filibuster rule], misrepresents the nature of Vice President Agnew's decision not to rule on the constitutionality of the Senate's rules and belittles one of the most significant debates in which the Senate is likely to be engaged in this year.

On Jan. 26, in reply to a parliamentary inquiry, the Vice President in his capacity as President of the Senate said: "In response to any point of order as to the constitutionality of the procedure or as to whether or not the Senate is a continuing body which involves a constitutional question, the Chair, under the uniform precedents of the Senate, will submit the same to the Senate for decision."

You called this "a significant departure from the decisions of his recent predecessors." Nothing could be further from the truth. While several Vice Presidents have issued "advisory opinions" concerning the relationship of Rule 22 to attempts to change that rule, only once has a Vice President attempted to usurp the Senate's constitutional power to determine the constitutionality of its procedures. That was in January, 1969, and Vice President Humphrey was promptly overruled by the Senate. The precedent is perfectly clear—as to the constitutionality of its rules, only the Senate itself has the power to decide.

More alarming than this careless error of fact was your description of the current Senate debate on Rule 22 as a "pointless filibuster." The Times obviously assumes that there is only one side to this issue and that there are no contrary arguments which deserve consideration. This attitude illustrates perfectly the danger that Rule 22 is designed to prevent. Unbridled majority rule inevitably becomes arrogant in the certainty of its own wisdom and disdainful of any other viewpoint.

Your apparent willingness to confer upon any majority sole title to universal truth and wisdom is particularly surprising to me. The unparalleled caution which characterized the Senate's consideration of President Nixon's Supreme Court nominations, the "extended debate" over our country's policies in Southeast Asia, and the refusal of certain Senators to acquiesce in the conference report on SST appropriations are only a few instances in which the cause you supported depended upon the threat of "extended debate" under Rule 22. Even a cursory examination of the history of the last Congress demonstrates the dangers of undiluted majoritarianism and the value of careful deliberation in the legislative process. Certainly this history requires at the least that the present Senate give more than a passing glance to a proposal which would threaten its deliberative character.

I am confident that what your editorial describes as a "pointless filibuster" will point out the wisdom of preserving the Senate's great tradition of free speech. Furthermore, I am also confident that the Senate, unlike The Times, will exercise great thoughtfulness and care as it resolves the important issues raised in this debate.

SAM J. ERVIN, Jr.,
Chairman, Senate Subcommittee on Constitutional Rights, Washington, Jan. 28, 1971.

Mr. President, I would now like to read what some famous Americans have said about freedom of debate in the Senate:

STATEMENTS OUTSIDE THE CONGRESS IN OPPOSITION TO DRASTIC FORMS OF SENATE CLOTURE

AMERICAN FEDERATION OF LABOR

The weekly news service of the Federation asserted on November 20, 1925, that the mild "Senate rules [relative to cloture] . . . permit the public to become acquainted with matters of vital interest to them." (Quoted in the New York Times. November 21, 1925, p. 2)

CHARLES A. BEARD

"Denunciations of delays (occasioned by filibustering) have often been renewed; but the Senate has been obdurate and not without reason . . . liberty of debate in [the Senate] acts as a salutary check on the administration, gives the minority the right to be heard, and assures at least one open forum in the country for the free consideration of issues which might otherwise be smothered." (American Government and Politics, 9th ed., New York, 1945, p. 135.)

SILAS BENT

". . . there [is no] need to limit the wordage output through alteration of the Senate rules. Vice-President Dawes has never unlimbered his sharp tongue in a cause more ill-considered than his campaign to limit debate in the upper house. Unlimited debate is a rampart erected against popular hysteria, the resistance to which is a Constitutional obligation of the Senate. The rules under which this body proceeds were engendered by its function. It is the last citadel of minority opinion and the surrogate of weaker states. That is why a Nevada voter has, in effect, seven times as much power when he speaks through the voice of his Senator as a New York voter. That was why the Senate, less subject than the House to popular clamor, was set up as a barrier to Executive aggression. When the Senate rejects a Charles Beecher Warren, or compels a President to dismiss members already admitted to his Cabinet, as it has done in recent years, it is not arrogating to itself powers outside its province. It is there for just such contingencies." ("In Praise of the Senate," the Outlook, March 14, 1928, p. 413.)

HAROLD BRAYMAN

"The Senate, by the freedom of its rules, gives a chance for progressive thought to make suggestions, debate them as long as it wishes, force a vote upon them, and compel members to stand up and say yes or no. The House rules are such that any except machine-made proposals have very little chance of ever rising from the ground. If they do rise their flights are short and usually end in a crash in some committee room so far removed that the sound of the impact is not even heard." ("In Defense of the Senate," Outlook and Independent, January 15, 1930, p. 89.)

C. F. BYRNS

"Democracy should function so as to protect the rights of the minority as well as to carry out the will of the majority. If those two objectives seem at times to be directly opposed, then they are directly opposed. Yet each is necessary at times. This was one of the times when the right of a Senator to talk as long as he likes has been used to accomplish an excellent end.

"If anyone thinks the Southern Senators who have fought so long against the Fair Employment Practice Commission bill were not truly representative of their people, then he is mistaken. Recently, Senator Harry Byrd, of Virginia, one of the southern filibusterers, sent telegrams to governors of all southern States and asked whether they felt their Senators reflected the views of their people. Without exception the replies asserted that the people of their States were opposed to FEPC and commended the stand of their Senators." "A Filibuster Defeated a Congressional Mistake," Fort Smith (Arkansas) Times Record, as reprinted in the Congressional Record (daily edition), February 22, 1946, Appendix, p. A974.)

JOSEPH P. CHAMBERLAIN

"The persistent refusal of the Senate to cut down the right of debate or amendment of its members shows the prevailing opinion in that body in favor of individual freedom, and the failure of all popular efforts to bring pressure to bear upon the senators to change their rules indicates that there is no overwhelming popular opinion against the exercise of the right of free expression of opinion in the Senate. While the power is frequently abused for selfish purposes, it probably could not, in the long run, prevent the passage of legislation for which there was a widespread and insistent public demand. Senators will get restive under the public indignation which is expressed against do-nothing sessions. A successful filibuster against an important bill usually indicates a strong opinion, popular as well as senatorial, against it, which may develop into a prevailing opinion, if time enough can be taken to let the arguments against it have wide circulation among the interested public. . . .

"Even under the worst of conditions, the filibuster does not prevent the Senate from grinding out a large grist of legislation. Vice-President Dawes, the determined enemy of the filibuster, pointed this out, suggesting, furthermore, that lack of effective cloture, 'contributes to multiplicity of laws,' but causes failure of important bills or their amendment.

"'A filibuster which threatens essential interests can be met by the cloture rule. Such a situation will not arise frequently, and the ordinary filibuster will have less chance now that the short session is abolished. A filibuster by a small minority can now be more easily taken care of by the usual procedure of continuing night sessions, which would have a tendency to wear out the filibustering group. The filibuster will nevertheless remain important as a means of securing a compromise on a bill, where there is a strong minority in opposition. On the whole it is probably wiser to allow the Senate its freedom to filibuster with the checks at present existing, than to bring it under such strict discipline as the House of Representatives." (Legislative Processes: National and State, New York and London, 1936, pp. 183–184.)

N. D. COCHRAN

"Mr. Dawes [Charles G.] is leading a fight to fool the people of the United States into making the Senate surrender its constitutional power into the hands of a political party machine. . . . An organized campaign is on to discredit the United States Senate, with Vice-President Dawes as chief spokesman.

"My belief is that the purpose is to strengthen the executive branch of the Government at the expense of the legislative.

"If the Dawes scheme works and the Senate ceases to be a check on Presidential power, future Presidents will be dictators." (In the Washington News, as quoted by the Literary Digest, May 9, 1925, p. 15.)

NORMAN H. DAVIS

"I quite agree . . . that it would be most ill-advised to stifle debate in the Senate by the adoption of the cloture rules of the House. Those who advocate such a measure on the ground that it would facilitate legislation and establish the rule of the majority seem to overlook the fact that a minority of Senators may represent States with a majority of the population of the United States, and that the Senators of the respective States were never intended to be the direct representatives of the people of the nation. We already have too much centralization of power.

"Under the present rules of the Senate, a minority bloc may retard legislative action, but it cannot prevent it. Under the cloture rule, a still smaller bloc, dominating the so-called majority, could force legislation through without discussion. Instead of making our Senators rubber stamps, and increasing the facilities for passing ill-digested laws, the people should encourage the best-equipped citizens to serve them, and to pass fewer and better laws for the benefit of the people, and the nation as a whole." (The Searchlight on Congress, June 1925, p. 13.)

ARTHUR WALLACE DUNN

"Every successful filibuster has the support of public opinion and could not succeed

without such endorsement. Filibustering in the Senate has been too infrequent for the public good. If a determined minority of sane and conservative Senators had more often exercised the privilege of unlimited debate to defeat measures sponsored by a majority, the country would be better off and there would have been less iniquitous and unenforceable legislation on the statute books. Majorities for bad legislation are often obtained by clamorous organizations and noisy propaganda. . . .

"Filibusters never have defeated nor can they defeat a measure which the people want. In the very nature of things filibusters must fail when directed against bills which have been decreed as essential. The most notable instance bearing out this statement occurred in 1893, when a prolonged filibuster collapsed under pressure of public opinion; this was the filibuster against the bill to repeal the Silver Purchase Act, which provided that the Government should buy 4,500,000 ounces of the metal every month and coin 4,500,000 silver dollars.

"President Cleveland called Congress in extra session in August, 1893, for the express purpose of repealing the Silver Purchase Act. All attention was focused upon the Senate when it became apparent that a filibuster had been organized to defeat the repeal. It soon developed that there was a determined majority in the Senate for the repealing bill. Under such conditions the minority was compelled to surrender. . . .

"Filibusters against river-and-harbor legislation have frequently been successful; at least four such bills have been defeated by filibusters, sometimes conducted by one man, or half a dozen men. Although there is always a majority of Senators in favor of river-and-harbor bills, their interest is not so great that they will defeat important supply bills and other necessary measures in order to force an extra session. Never has any harm followed the defeat of river-and-harbor bills.

". . . The filibuster has proved itself, of too much value to be sacrificed. It should remain as one of the most useful unwritten rules of the United States Senate." ("The Filibuster Defended," *The American Review of Reviews*, December 1925, pp. 634–638.)

JOHN T. FLYNN

"The filibuster has been used by all parties—both Democratic and Republican—and by the ablest and most high-minded men in the Senate. It is a device, however, not to be used lightly, as the men who engage in it must incur the risk of bringing down on their heads a certain odium which men in public life cannot afford to invite. It can be attempted, therefore, only when the senators who use it believe some great injustice is to be committed and when there is a considerable public opinion behind the cause to give it moral support. It has been used in good causes and has been successful in preventing very vicious legislation in more than one instance. It has, of course, also been used in some bad causes. . . .

"Through the years . . . the Senate has struggled to deal with the problem of the filibuster, and has introduced a number of wise restrictions which makes it now extremely difficult. And this is proper. Critics have a way of calling every extended debate in the Senate a filibuster. This, of course, is not true. Measures of the weightiest importance come before the Senate and senators at intervals insist upon a complete and thorough airing of these issues. Champ Clark . . . once expressed the opinion that speeches never change votes. This is perhaps true. But he was forced to admit later what is very well known, that while they do not change votes on the final disposition of the bill save in rare instances, they do have a profound effect upon the bill through amendments. Debates on amendments to a bill frequently change votes on important details of the bill, and many a bill emerges from the debate a far better and more workable and enforcible measure than it was when it reached the floor. It would be also truthful to say that it sometimes emerges a worse bill. Senators, therefore, will probably never consent—and I believe them to be right—to that kind of limitation of debate which is essential in the House because of its great numbers.

"In debating these grave questions, the Senate is doing no more than boards of directors of corporations or faculties of colleges and men everywhere concerned with important decisions. They discuss them. And always the proponents of a bill which is thus held up and sometimes threatened with dilution or defeat begin an outcry against discussion and call it filibuster. They forget that the opposite of a filibuster is the railroading process." (Meet Your Congress, New York, 1944, pp. 112–115.)

LYNN HAINES

"Instead of curing minority influence . . . cloture [that is, the strict variety, such as that which prevails in the House of Representatives] would establish a regime of 'leadership' so small in number that it could hardly be called a minority. The result would be a little coterie of bosses, with absolute dominance in every direction.

"Of course, under cloture, filibustering would be stopped. So would all real deliberation be destroyed, utterly and inevitably. . . .

"Cloture always has, and always will, mean just that—absolute and arbitrary bossism in the hands of the smallest possible number.

"And invariably the real dominance would originate with 'the powers that be' in executive circles.

"All legislative independence would disappear in exact accordance with the diminishment of deliberation. There would be a machine; it would be an administration machine. The power of the legislative bosses would be a puppet, pawnish power, having its source in and about the presidency.

"The 'one or two Senators to be seen' about legislation would be all-powerful because of their relations with the White House.

"The mechanics of it are exceedingly simple.

"Cloture is the foundation of machine rule. With that foundation established, one or two or three bosses can easily attain and exercise supremacy. They can accomplish the most arbitrary minority rule.

"The party caucus can be used, employing the vicious principle of control through a majority of a majority, which means a minority of the whole membership.

"A dozen different kinds of coercion are available. The 'leaders' are in a position 'to take care of' subservient members with local legislation; patronage favors would abound for those who proved 'faithful.'

"The ABC of Cloture, then, means Absolute Boss Control of the National Legislature, through a machine manipulated from the outside by such political or economic interests as may be dominant in the administrative field.

"Were that to be accomplished, which it will not be, our whole structure of representative government would be weakened perhaps irreparably." (The ABC of Cloture for the Senate," the Searchlight on Congress, May 1925, p. 6.)

Mr. President, quoting George H. Haynes:

That the Senate will so amend its rules as to permit cloture upon the vote of a mere majority of those present, as in the House, is to the last degree improbable. Reluctance to make such a change is mainly due to a sincere conviction on the part of Senators (and of many outside the Senate who have studied most closely the working of our system of government) that cloture thus applied would "destroy the deliberative function of the Senate, annihilating the very reason for its existence, and making it automatically, a mere annex of the House of Representatives. It was the intent of the framers of the Constitution to secure from the Senate a different point of view, a more matured judgment than that of the House. To those ends the longer term, the more advanced age, the smaller numbers, the equal representation were all expected to conduce. What is sorely needed in Congress is seldom greater speed but always more thorough consideration in lawmaking. Cloture by a vote of a chance majority in the Senate would have brought many a decision which would have accorded ill with the sober second thought of the American people. . . . In these days of weakened party discipline, the temporary majority that group combination may today give upon a pending measure may by no means indicate a responsible majority's conviction that the measure is wise. Nor is it safe to assume that in blocking a given piece of legislation a small minority or even a single Senator is "thwarting the will of the majority of the Senate." (The Senate of the United States, Vol. 1, Boston, 1938, p. 419.)

ROBERT LUCE

The very mild and moderate form of cloture adopted by the Senate will permit the majority in that body to assume responsibility in time of crisis, and threatens no great harm to minorities. After all, it is in large part a question of degree. Somewhere between the extreme contentions of majority rule and minority right is a point where dangers balance. If the Senate has discovered that point, so much the better. Whether the House has been successful in like discovery is not even yet clear, though almost a score of years have passed since Mr. Reed put forth his famous rules. There is grave reason to fear that a lessening of sense of responsibility has accompanied the limitation of debate, throwing too much of the burden of decision on the Senate. (Legislative Procedure, Boston and New York, 1922, p. 301.)

FREDERIC A. OGG AND RAY P. ORMON

Not even so vigorous a critic as Mr. Dawes . . . could stir up much response either at Washington or throughout the country, and no early change in practice appears probable. The weight of argument, indeed, is by no means entirely on one side of the question. Quite to the contrary, senators and others who honestly believe the existing lack of restraint to be on the whole advantageous bring forward a number of contentions, all of considerable validity: (1) that under the rules as they stand, the Senate (as Mr. Dawes was obliged to concede) gets through with a very creditable amount of business—in five recent Congresses, for example, passing 182 more bills and resolutions than did the House; (2) that the present oft-used device of "unanimous consent," by which the members agree in advance to limit speeches on a given measure after a certain day and to take a vote at a specified hour, serves all necessary purposes, being in truth itself a species of closure; (3) that by far the greater portion of the measures killed by filibuster are not wanted by the country and are never revived, a good illustration being the ship subsidy bill sponsored by President Harding in 1922; and (4) that the vigorous protests against filibustering sometimes voiced on the Senate floor come usually from members whose pet projects have suffered, but who, with circumstances reversed, would themselves stand quite ready to launch or aid a filibustering effort. (Introduction to American Government, 7th ed., New York and London, p. 313.)

LINDSAY ROGERS

The necessity of some agency in the congressional system which will keep legislation

of vicarious parentage from being rushed to the statute books is the more immediate because of the separation of powers, and because no definite groups of individuals stand sponsors for a particular proposal . . . with responsibility divided and confused, the check which is on occasion exerted by senatorial obstructionists is of great value and ought not to be given up. If filibustering senators have no justification for their course, they will speedily be hoist with their own petard. . . . Its [the Senate's] collective judgment on legislation cannot fail to be superior to the judgment of the House which too frequently represents no more than the hasty opinion of a few leaders. . . .

But it is as a critic of the executive that the Senate does its most valuable work. Here complete freedom of debate and the absence of closure except as a real emergency measure are more indispensable than in respect of legislation. Criticisms of the Senate because time is wasted, irrelevant and extreme talk is indulged in, and logrolling is prevalent, overlook the fact that scrutiny of administration—a normal function of legislative assemblies—can only in the United States be scrutiny by the Senate. Fixed terms and executive irresponsibility make the need for this scrutiny more urgent. The role of the American Senate, in short, is a paradoxical but convincing justification of the bicameral theory. (The American Senate, New York, 1926, pp. 247–248, 256.)

ADLAI E. STEVENSON, (VICE-PRESIDENT OF THE UNITED STATES)

It must not be forgotten that the rules governing this body are founded deep in human experience; that they are the result of centuries of tireless effort in legislative hall, to conserve, to render stable and secure, the rights and liberties which have been achieved by conflict. By its rules the Senate wisely fixes the limits to its own power. Of those who clamor against the Senate, and its methods of procedure, it may be truly said: 'They know not what they do.' In this Chamber alone are preserved, without restraint, two essentials of wise legislation and of good government—the right of amendment and of debate. Great evils often result from hasty legislation; rarely from the delay which follows full discussion and deliberation. In my humble judgment, the historic Senate—preserving the unrestricted right of amendment and of debate, maintaining intact the time-honored parliamentary methods and amenities which unfailingly secure action after deliberation—possesses in our scheme of government a value which cannot be measured by words.' (Farewell Address to the Senate, as reported in the Congressional Record, Vol 29, pt. 3, March 3, 1897, p. 2932.)

OASWALD GARRISON VILLARD

Debate [in the House of Representatives] can be and is limited; a steering committee of the majority outlines the parliamentary procedure, special rules for expediting legislation are easily passed—and, as a result, little important legislation originates in the House and what does is likely to be rewritten in the Senate. Undoubtedly there are still able and honest men in the House, but it is now so organized that it offers few if any inducements for a political career . . . .

No, the more I see of the Senate the more I respect it—even those whose political views I wholly abhor—and my feeling is shared by many of the journalists in Washington. The Senate is the one place where they get hope and encouragement, where they can learn, where, there is some color, some life, some vigor, some truth-telling, some hope of substantial achievement and much independence. They say frankly that if the Senate is reduced to the rank of the House they would wish to quit their jobs. They know, if 'Charley' Dawes in his pitiful ineffectiveness does not, that under Rule 22 of the Senate, on motion of sixteen Senators and by a two-thirds vote, debate can be shut off. They so value open debate of the Senate that they would unanimously vote against Dawes if the alternative were restricted talking and control by a little group of insiders—as used to be the case in the days of the 'giants,' before the rise of insurgency. They believed that if the House rules were to be clamped on the Senate it, too, would sink to the zero point. ("In Defense of the Senate," *The Nation*, March 25, 1925, pp. 314–315.)

CARL J. FRIEDRICH

The drama of the filibustering senator, though often arousing indignation, helps the citizen to appreciate the implications and significance of new legislation. The consequences of the lack of such contact between the government and the citizen is very apparent in totalitarian regimes. A great many measures of the government, which may intrinsically be necessary, meet with sullen indifference, if not hostility, from the people merely because they are not understood. (Constitutional Government and Democracy: Theory and Practice in Europe and America, Boston, etc., 146, pp. 415–416.)

Mr. President, I have some other quotes here, concerning rule XXII of the Senate rules. They were sent out to all Senators by former Senator Sam J. Ervin, Jr.

QUOTES CONCERNING RULE XXII OF THE UNITED STATES SENATE RULES

". . . the filibuster under the present rules of the Senate conforms with the essential spirit of the American Constitution, and it is one of the very strongest practical guarantees we have for preserving the rights which are in the Constitution."—Walter Lippmann, "The Essential Lippmann."

"Of those who clamor against the Senate, and its methods of procedure, it may truly be said: 'They know not what they do.' In this chamber alone are preserved, without restraint, two essentials of wise legislation and of good government—the right of amendment and of debate. Great evils often result from hasty legislation; rarely from the delay which follows full discussion and deliberation. In my humble judgment, the historic Senate—preserving the unrestricted right of amendment and of debate, maintaining intact the time-honored parliamentary methods and amenities which unfailingly secure atcion after deliberation—possesses in our scheme of government a value which cannot be measured by words."—Adlai E. Stevenson, Vice President of the United States, speech upon leaving office.

"Unlimited debate is a rarity among national legislatures, and the glory of the United States Senate."—Professor Raymond Wolfinger, "Readings on Congress."

". . . as the much vaunted separation of powers now exists, unrestricted debate in the Senate is the only check upon presidential and party autocracy. The devices that the framers of the Constitution so meticulously set up would be ineffective without the safeguard of senatorial minority action. . . . Abolish closure and the Senate will gradually sink to the level of the House of Representatives where there is less deliberation and debate than in any other legislative assembly."—Professor Lindsay Rodgers, "The American Senate."

"Obviously, the Senators, who are 100 well-educated, well-informed, and rather 'liberal' men . . . see something exceedingly valuable to their corporate and individual status in the privilege of unrestrained debate. That value is the right to resist in a most public manner policies that a President desires . . . (In the Senate) the notorious filibuster stands as an insufferable bar to presidential ambitions."—Professor Alfred de Grazia, "Republic in Crisis."

"The Senate's opportunity for open and unrestricted discussion and its simple, comparatively unencumbered forms of procedure, unquestionably enable it to fulfill with very considerable success its high functions as a chamber of revision."—Woodrow Wilson, in his doctoral thesis, "Congressional Government," written impartially before he was stricken by "presidential ambitions."

"As those who mock the Institution . . . might recall that the public is not always right all at once and that it is perhaps not too bad to have one place in which matters can be examined at leisure, even if a leisure uncomfortably prolonged. Those who denounce the filibuster . . . might recall that the weapon has more than one blade and that today's pleading minority could become tomorrow's arrogant majority."—William S. White, "Citadel."

"If I were to teach again a course in government, I would say if you really want to know the kind of manners and rules of conduct that you ought to have to assure the meaning of the First Amendment, particularly, as it comes to free speech, and the rights to redress for your grievances, the freedom of the press, the freedom to assemble . . . the Senate of the United States represents that in its fullest measure. And in that alone, it's worthwhile. If nothing else, that would make it a very worthwhile American institution."—Hubert Humphrey, U.S. Senator and Former Vice President, NBC–TV Interview, January, 1971.

"Many of the wise men who have served in the Senate have come to believe that it is important that there should be one place in the legislative journey where the opportunity for discussion is unfettered. They have found that this has not in the end prevented any decisions persistently wanted by the people, but on the other hand has stood in the way of much action that the country has come to conclude would have been unwise."—Honorable Robert Luce, "Congress: An Explanation."

"The ability of any Senator to speak for as long as he chooses is one of the most sacred of the institutions of the Senate and distinguishes it quite sharply from the House of Representatives, or, indeed, any other legislative body in the world."—Professor Lewis Froman, Jr., "The Congressional Process."

"If ever the free institutions of America are destroyed, that event may be attributed to the omnipotence of the majority. . . . Of all the political institutions, the legislature is the one that is most easily swayed by the will of the majority. . . . I am not so much alarmed at the excessive liberty which reigns in that country as at the inadequate securities which one finds there against tyranny."—Alexis De Tocqueville, "Democracy in America."

"The most significant difference . . . between the House of Representatives and the Senate is to be found in the provisions of limited debate in the House and unlimited debate in the Senate."—Professor Ernst Fraenkel, Free University of Berlin, "American System of Government."

Mr. President, there is so much to say on this subject, but I shall, in just a few moments, relinquish the floor and let somebody else express himself on this subject. I shall continue at another time.

Finally, Mr. Preident, I point out that the arguments I have raised in favor of free debate are germane to a discussion of Senate Resolution 5. It is my considered opinion that unless we defeat the move to further restrict debate now, we will face the more ominous threat of an effort to bring about majority cloture.

Mr. President, I just say in closing that the Senate has been known, throughout the history of this Nation, as

a great deliberative body. If we take steps to erode further the power of this body, if we take further steps to downgrade the Senate as we know it and as it has functioned throughout this country's history, we are going to make a great mistake.

Mr. President, I hope the Senators will think carefully over this matter before they vote any amendment to the rules that will weaken the so-called filibuster rule or that will weaken the power of a Senator. I repeat what I said a few moments ago, that no important measure has ever been defeated in the Senate, because of the filibuster. The Senate has defeated bad legislation. The filibuster has helped to do it. We hope that the power and strength now provided in the rules of this body can be retained.

I think it would be unreasonable to adopt the changes that have been suggested here, especially some of them. I hope the Members of this body will give most careful consideration before making any changes in the present rules of the Senate. We wish to keep this the greatest deliberative body in the world.

I yield the floor.

ORDER OF BUSINESS

(The following proceedings occurred during the presentation of Mr. THURMOND's remarks and are printed at this point in the RECORD by unanimous consent.)

Mr. PROXMIRE. Mr. President, will the Senator from South Carolina yield for 1 minute in order that I may bring up a matter involving the appointment of conferees, without losing his right to the floor?

Mr. THURMOND. Mr. President, I ask unanimous consent that I may yield to the able and distinguished Senator from Wisconsin without losing my right to the floor, and with the understanding that his matter will be printed in the RECORD after my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE EXPORT ADMINISTRATION ACT

Mr. PROXMIRE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 5840.

The PRESIDING OFFICER (Mr. DECONCINI) laid before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to the bill (H.R. 5840) to amend the Export Administration Act of 1969 in order to extend the authorities of that act and improve the administration of export controls under that act, and to strengthen the antiboycott provisions of that act, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. PROXMIRE. I move that the Senate insist upon its amendments and agree to the request of the House for a conference on the disagreeing votes of the two Houses thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Messrs. PROXMIRE, SPARKMAN, WILLIAMS, MCINTYRE, CRANSTON, STEVENSON, BROOKE, TOWER, GARN, and HEINZ conferees on the part of the Senate.

Mr. PROXMIRE. Mr. President, I wish to make it clear that the Senator from Illinois (Mr. STEVENSON) who has handled this bill in committee and on the floor, is agreeable to the conferees that have been appointed by the Chair.

There have been some differences of opinion between Senator STEVENSON and myself, but that has been resolved now. This has also been cleared with the Senator from Massachusetts (Mr. BROOKE), who is the ranking minority member of the Committee on Banking, Housing, and Urban Affairs.

Mr. President, I thank my good friend from South Carolina for so graciously yielding.

(This concludes the proceedings which occurred during Mr. THURMOND's remarks.)

ORDER OF BUSINESS

(The following proceedings occurred during the subsequent remarks of Mr. CHAFEE and are printed at this point in the RECORD by unanimous consent:)

Mr. SPARKMAN. Will the Senator yield briefly?

Mr. CHAFEE. Caught in full flight, I am delighted to yield to the distinguished Senator from Alabama.

Mr. SPARKMAN. This is for a unanimous-consent request.

ADDITIONAL DEPARTMENT OF STATE AUTHORIZATIONS, 1977

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 79.

The PRESIDING OFFICER. The bill will be stated by title.

The second assistant legislative clerk read as follows:

A bill (H.R. 5040) to authorize additional appropriations for the Department of State for fiscal year 1977.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

There being no objection, the Senate proceeded to consider the bill (H.R. 5040) which had been reported from the Committee on Foreign Relations with amendments, as follows:

On page 2, beginning with line 2, strike out through and including line 8, and insert in lieu thereof:

SEC. 2. Section 3 of the Act entitled "An Act to provide certain basic authority for the Department of State", approved on August 1, 1956 (22 U.S.C. 2670), is amended by—

(1) striking out "and" at the end of subsection (h);

(2) striking out the period at the end of subsection (i) and inserting in lieu thereof a semicolon and "and"; and

(3) inserting at the end thereof the following new subsection:

"(j) provide emergency medical attention and dietary supplements, and other emergency assistance, for United States citizens incarcerated abroad who are unable to obtain such services otherwise, such assistance to be provided on a reimbursable basis to the extent feasible.".

On page 4, beginning with line 11, strike out through and including line 13, and insert in lieu thereof:

"The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee.".

On page 5, line 5, following the semicolon, strike all through and including line 7, and insert in lieu thereof:

"The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee.".

On page 6, line 1, following the semicolon, strike all through and including line 3, and insert in lieu thereof:

"The Chairman or Vice Chairman of the House delegation shall be a Member from the International Relations Committee, and the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee.".

On page 7, beginning with line 7, strike through and including page 8, line 9, and insert in lieu thereof:

(3) Such Act is further amended by adding at the end thereof the following new sections:

"SEC. 4. Senate delegates to each conference of the Interparliamentary Union, and to all other parliamentary conferences, shall be designated by the President of the Senate upon recommendations of the majority and minority leaders of the Senate. For each such conference, the President of the Senate shall designate the Chairman and the Vice Chairman of the Senate delegation, at least one of whom shall be a member of the Committee on Foreign Relations. Not fewer than two Senators designated to be in the Senate delegation to each conference of the Interparliamentary Union shall be members of the Committee on Foreign Relations.

"SEC. 5. After December 31, 1977, the executive secretary of the American group of the Interparliamentary Union shall be an officer or employee of the Senate or the House of Representatives and shall be appointed—

"(1) by the Chairman of the Senate delegation for service during odd-numbered Congresses; and

"(2) by the Chairman of the House delegation for service during even-numbered Congresses.

"SEC. 6. The certificate of the Chairman of the respective delegation to the Interparliamentary Union (or the certificate of the executive secretary of the American group if the Chairman delegates such authority to him) shall be final and conclusive upon the accounting officers in the auditing of all accounts of the House and Senate delegations to the Interparliamentary Union.".

"(4) The second sentence of the nineteenth undesignated paragraph under the general heading "DEPARTMENT OF STATE" in title I of the Third Deficiency Appropriation Act, fiscal year 1937 (22 U.S.C. 276b) is deleted.

INTERNATIONAL AGREEMENTS

SEC. 5. (a) Section 112b, title I, United States Code, is amended by adding at the end the following: "Any department or agency of the United States Government which enters into any international agreement on behalf of the United States shall transmit to the Department of State the text of such agreement not later than twenty days after such agreement has been signed.".

(b) The second sentence of such section is amended by deleting the words "Foreign Affairs" and inserting in lieu thereof the words "International Relations".

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the amendments be agreed to en bloc and that the bill as thus amended be considered original text for the purpose of further amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 201

Mr. SPARKMAN. Mr. President, I have an unprinted amendment at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alabama (Mr. SPARKMAN) proposes an unprinted amendment No. 201.

The amendment is as follows:

On page 4, line 5 insert immediately after "'International Relations'" a comma and the following: "and by inserting 'upon recommendations of the majority and minority leaders of the Senate' immediately after 'President of the Senate'".

On page 4, line 16, insert immediately after the "and" a comma and the following: "unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise,".

On page 4, line 25, insert immediately after "Relations'" a comma and the following: "and by inserting 'upon recommendations of the majority and minority leaders of the Senate' immediately after 'President of the Senate'".

On page 5, line 10, insert immediately after the "and" a comma and the following: "unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise,".

On page 5, line 23, insert immediately after "House'" a comma and the following: "and by inserting 'upon recommendations of the majority and minority leaders of the Senate' immediately after 'President of the Senate'".

On page 5, line 24, strike out all after "(3)" and insert in lieu thereof the following: "by striking out in the third sentence 'five' and inserting in lieu thereof 'seven'; and".

On page 6, line 6, insert immediately after the "and" a comma and the following: "unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise".

On page 8, line 16, beginning with "For" strike out all through the period in line 19 and insert in lieu thereof the following: "Unless the President of the Senate, upon the recommendation of the Majority Leader, determines otherwise, the Chairman or Vice Chairman of the Senate delegation shall be a Member from the Foreign Relations Committee."

On page 9, line 3, insert "upon recommendations of the Majority and Minority leaders of the Senate" immediately after "Senate delegation".

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama.

The amendment was agreed to.

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–99), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The principal purpose of H.R. 5040 is to authorize $89,500,000 in supplemental fiscal year 1977 appropriations for the Department of State for three purposes:

(1) payment of UNESCO arrearages for calendar years 1975 and 1976, and partial payment of the UNESCO assessment for calendar year 1977;

(2) assistance for Soviet and Indochinese refugees; and

(3) construction of additional housing for the U.S. Mission in Cairo.

The bill also authorizes the Secretary of State to use appropriated funds for emergency assistance to American citizens incarcerated abroad (on a reimbursable basis when possible), makes certain technical changes in the basic laws authorizing U.S. participation in four interparliamentary groups, and amends the Case Act to facilitate compliance with its requirement that all international agreements be transmitted to Congress.

COMMITTEE ACTION

On March 21, 1977, the International Operations Subcommittee met in open session to receive testimony on the State Department's fiscal year 1977 supplemental requests. Principal State Department witnesses were Richard M. Moose, Deputy Under Secretary for Management; John M. Thomas, Assistant Secretary for Administration; Charles William Maynes, Assistant Secretary-designate for International Organization Affairs; and Patricia Derian, Coordinator-designate for Human Rights and Humanitarian Affairs. In addition, the Subcommittee heard testimony from Arnold Beichman, representing the Committee for an Effective UNESCO; and Sarah Power, representing the U.S. National Commission for UNESCO.

On March 25, having been passed by the House, H.R. 5040 was received by the Senate and referred to the Committee on Foreign Relations.

On April 1, the Subcommittee on International Operations met in open session and voted unanimously to report the bill favorably to the full Committee with amendments. Voting in favor were Senators McGovern, Pell, Biden, and Percy.

On April 19, the full committee met in open session, agreed to further amend the bill, and ordered, by voice vote without dissent, that the bill be reported favorably as amended.

SECTION-BY-SECTION ANALYSIS

Section 1.—The first part of this section amends the Foreign Relations Authorization Act, Fiscal Year 1977, to increase the authorization for "International Organizations and Conferences" so as to provide $60 million to pay United States dues and assessments to the United Nations Educational, Scientific and Cultural Organization for calendar years 1975–76 and part of the assessment for calendar year 1977. A contribution of $60 million will meet the following dues and assessments:

Calendar year 1975 dues	$19,472,499
Calendar year 1976 dues	19,472,500
Calendar years 1975–76 UNESCO supplemental	1,775,000
Increase in working capital fund	2,200,000
Total assessment, 1975–76	42,919,999
Tax equalization adjustment 1975–77	410,000
Calendar year 1977 dues (approximately one-half)	16,874,961
Credits from prior year surpluses	−204,900
Total authorization	60,000,000

The current arrearage resulted from Congressional action, taken in December 1974, which suspended further payments to UNESCO "until the President certifies that such Organization has (1) adopted policies which are fully consistent with its educational, scientific and cultural objectives, and (2) has taken concrete steps to correct its recent actions of a primarily political character." The specific cause of this Congressional measure was the 18th UNESCO General Conference, which had resulted in:

denial of Israel's request for assignment to UNESCO's European region (leaving it the only major member not assigned to a region);

suspension of technical assistance to Israel because of alleged damage to Muslim monuments resulting from archeological excavations in Jerusalem; and

criticism of Israeli educational and cultural policies for the occupied Arab territories.

After the cut-off, and in anticipation of the 1976 UNESCO General Conference in Nairobi, the State Department reportedly focused considerable diplomatic effort on achieving a reversal of UNESCO's anti-Israeli activity and also on blocking UNESCO passage of a Soviet-inspired declaration endorsing state control of information media. At least partially as a result of this effort, certain progress was made at the 19th General Conference: Israel was assigned to the European region, and action on the mass media declaration was postponed until the next General Conference in 1978. On matters relating to Jerusalem and the occupied territories, however, the Conference essentially reconfirmed its 1974 resolution.

Following the Nairobi Conference, President Ford sent to Congress the certification necessary for a resumption of funding; and the full $97.4 million necessary to cover U.S. payments through 1978 was placed in the President's budget: $69.3 million in fiscal year 1977 supplemental to cover assessments for 1975–1977, and $28.2 million in the regular fiscal year 1978 authorization request to cover the 1978 assessment. After assuming office, President Carter's Administration reaffirmed these requests.

While the $60 million provided in this bill would not meet the Administration's full request, it would provide for U.S. payments to be brought up to date through the middle of calendar year 1977. The Committee intends to continue to watch UNESCO activities closely, and will consider the question of further payments to UNESCO in connection with the fiscal year 1978 State Department authorization request.

The second part of this section amends the Foreign Relations Authorization Act, fiscal year 1977, to provide a supplemental authorization of $18,725,000 in the "Migration and Refugee Assistance" account: $11,325,000 for aid to Soviet and East European refugees not settling in Israel, and $7,400,000 for the Indochinese Refugee Program administered by the United Nations High Commissioner for Refugees.

The need for additional funds for Soviet and East European refugees arises from the increasing number of such refugees who are choosing not to go to Israel. These refugees cannot be assisted from the special appropriation for Soviet and East European refugee assistance because, by Congressional stipulation, those funds are limited to refugees going to Israel. In 1973, of the 35,000 refugees leaving the Soviet Union, only 2,000 chose resettlement in countries other than Israel. In 1977, however, from a total projected movement of 18,000 refugees from the Soviet Union, current trends indicate that as many as 11,000 will choose not to go to Israel. While this trend has meant the availability of larger per capita aid for Israel-bound refugees, it has, according to the State Department, placed strain on the U.S. Refugee Program (which is funded through the regular Migration and Refugee Assistance item) for Soviet and East European refugees resettling elsewhere, and has necessitated this supplemental.

The $7.4 million approved for contribution to the UN High Commissioner for Refugees (UNHCR) is intended to continue U.S. support for 80,000 refugees in Thailand who arrived from Vietnam, Cambodia and Laos in 1975. Initially, such assistance was provided through emergency funds; however, in that these refugees will constitute an unresolved problem for some time to come, the State Department requested that additional funds be provided through the regular Migration and Refugee Assistance account. For 1977, the UNHCR estimates expenditures in Thailand of $27 million. Of this, the Thai Government would reportedly contribute $12 million, the U.S. part would be $10 million ($2.6 in emergency funds, plus this $7.4 supplemental), and other outside sources would be drawn upon for $5 million.

Section 2.—This section amends the basic authority for the State Department (Public Law 84–885, as amended) to authorize the Secretary of State to use appropriated funds to "provide emergency medical attention and dietary supplements, and other emergency assistance, for United States citizens incarcerated abroad who are unable to obtain such services otherwise, such assistance to be provided on a reimbursable basis to the extent feasible." Having observed a number of situations in which such assistance could effectively have been brought to bear to help an incarcerated American receiving markedly inadequate treatment, the State Department requested this authority, which the Committee approved in the expectation of being kept fully informed as to its usage.

Section 3.—This section amends the Foreign Buildings Act of 1926 to provide, under the special foreign currency program, a net increase of $10,775,000 to provide funds for the construction of 108 apartment units for the U.S. Mission in Cairo—36 to be for the State Department and 72 to be available for employees of AID. The project will require overall appropriations of $24.7 million, but because the Department at present has unused authorizations, only a $10.8 million supplemental authorization is necessary.

The Committee is concerned that the construction of Foreign Service buildings, particularly for AID personnel, occur only in those cases where it is clear that a long-term need exists. The Committee therefore directs the Department of State to report to the Committee periodically on the progress of this project so that the International Operations Subcommittee and the Foreign Assistance Subcommittee can review the project in the context of evolving foreign buildings needs and foreign assistance objectives in Egypt.

Section 4.—This section amends the basic laws authorizing U.S. participation in four interparliamentary groups: Canada-U.S., Mexico-U.S., the North Atlantic Assembly, and the Interparliamentary Union. It provides that the Chairman or Vice Chairman of the Senate delegation to each of these groups shall be a member of the Committee on Foreign Relations; and similarly specifies that a member of the House International Relations Committee be involved in leading House delegations. In addition, this section increases, from 18 to 24, the size of the U.S. delegation to the North Atlantic Assembly (thus bringing the size of that delegation into line with the U.S. delegations to the other three groups), and specifies that at least four members of the twelve-person delegation from each body shall be from that body's foreign affairs committee. Section 4 also contains certain technical amendments to the basic laws governing U.S. participation in interparliamentary groups.

Section 5.—This section amends Public Law 92–403, otherwise known as the Case Act, which requires that the Secretary of State "transmit to the Congress the text of any international agreement, other than a treaty, to which the United States is a party as soon as practicable after such agreement has entered into force with respect to the United States but in no event later than sixty days thereafter." Since enactment of the Case Act in 1972, there have been a number of instances in which the State Department failed to transmit to Congress, within the required period, agreements entered into by other U.S. Government agencies, reportedly because those agencies failed to inform the State Department that agreements had been signed. The purpose of this section is to remedy that problem by adding to the Case Act the requirements that "Any department or agency of the United States Government which enters into any international agreement on behalf of the United States shall transmit to the Department of State the text of such agreement not later than 20 days after such agreement has been signed."

COST ESTIMATE

Section 252(a)(1) of the Legislative Reorganization Act of 1970 requires that committee reports on bills and joint resolutions contain an estimate of the costs of carrying out such legislation in the fiscal year in which it is reported and in each of the five years which follow. H.R. 5040 authorizes supplemental appropriations of $89,500,000 for the State Department for fiscal year 1977, and does not involve the initiation of any new programs with future cost implications.

BUDGET AUTHORITY

This bill creates no new budget authority.

EVALUATION OF REGULATORY IMPACT

In accordance with Rule XXIX of the Standing Rules of the Senate, the committee has evaluated the regulatory impact of H.R. 5040, and has concluded that the legislation provides for no new regulatory activity.

CONGRESSIONAL BUDGET OFFICE—COST ESTIMATE

1. Bill number: H.R. 5040

2. Description of bill: This legislation amends:

Section 171(b) of the Foreign Relations Authorization Act, fiscal year 1976, to authorize for appropriation an additional $10.775 million for fiscal year 1977 and reprogram $13.925 million authorized but unappropriated for fiscal year 1977 to finance the acquisition or construction of residential units for State Department and US/AID personnel in Egypt;

The Foreign Relations Authorization Act, fiscal year 1977, to authorize for appropriation for fiscal year 1977 an additional: $60 million for "International Organizations and Conferences," to pay the U.S. share of the UNESCO budget for calendar years 1975, 1976, and 1977; $18.725 million for Migration and Refugee Assistance; and various statutes, to increase the size of Congressional delegations to interparliamentary groups.

3. Budget impact:

[In millions of dollars]

	Fiscal year—				
Function 150	1977	1978	1979	1980	1981
Authorization amounts	89.5				
Estimated costs:					
Department of State	80.0	6.8	6.5	6	4.1
Department of Agriculture	−5.1	−3.0	−6.5	−6	−4.1

4. Basis for estimate: This estimate assumes enactment of this legislation on or before June 1, 1977, and is subject to subsequent appropriations of $103.6 million. The net budget costs associated with the acquisition or construction of residential units in Egypt are estimated to equal zero. The dollars appropriate to the Department of State for the acquisition or construction of these facilities will be used to buy Egyptian pounds from the P.L. 480 program. When the currency is purchased, however, a receipt is recorded for the P.L. 480 program; net budget costs associated with this program, therefore, equal zero. The timing of the purchases of currency is based upon an estimate of construction costs provided by the Department of State.

The estimated costs associated with the additional amounts authorized for International Organizations and Conferences, Migration and Refugee Assistance, and State Department Salaries and Expenses are based upon outlay rates for these programs provided by the Department of State.

This legislation does not increase the amounts authorized to meet the expenses of the larger delegations to the interparliamentary groups. Therefore, no additional budget costs are associated with the enlarged delegations.

5. Estimate comparison: None.

6. Previous CBO estimate: Estimates were prepared for H.R. 4619 and H.R. 5040, the companion bills in the House of Representatives. The House bills contained $0.150 million for medical care and dietary supplements for U.S. citizens incarcerated abroad not included in this bill.

7. Estimate prepared by: Joseph Whitehill,

8. Estimate approved by:

JAMES A. BLUM,
Assistant Director for Budget Analysis.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

Mr. SPARKMAN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. SPARKMAN. Mr. President, I thank the Senator from Rhode Island for yielding and I ask unanimous consent that the remarks we have had regarding this bill and the amendment not interrupt the discourse by the Senator from Rhode Island.

The PRESIDING OFFICER. Without objection, it is so ordered.

(This concludes proceedings that occurred during Mr. CHAFEE's remarks.)

HAPPY BIRTHDAY, SENATOR COTTON, AND HAPPY GOLDEN ANNIVERSARY

The PRESIDING OFFICER. The Senator from Rhode Island is recognized.

Mr. BAKER. Will the Senator from Rhode Island permit me to be recognized briefly?

Mr. CHAFEE. Yes, I yield.

Mr. BAKER. I rise to say I had the good fortune and privilege a few moments ago to talk to our former colleague, Norris Cotton, on the telephone. Today is a doubly important day for Senator Cotton. Today he is not only 77 years young, but today is his 50th wedding anniversary. He asked me, in the course of that conversation, to convey his good wishes and greetings to all of his former colleagues.

I wanted to call that to the attention of the Members of the Senate.

Mr. ROBERT C. BYRD. Will the Senator yield?

Mr. BAKER. I am delighted to yield.

Mr. ROBERT C. BYRD. Mr. President, I am delighted to hear that today is the 50th wedding anniversary of our former colleague, Norris Cotton. I rise to congraduate him on this event, which does not come into the lives of very many men and women, when we consider the many who do not enjoy that long tenure of working and living together.

I also congratulate him on this, his 77th birthday. The Scriptures say:

> The days of our years are threescore years and ten; and if by reason of strength they be fourscore years, yet is their strength labor and sorrow; for it is soon cut off, and we fly away.

He has gone beyond that threescore years and 10 by the magic number of 7. I am sure all who hold Norris Cotton in such great respect and who have for him the highest affection join with the distinguished minority leader in saluting and congratulating him and wishing him many more happy birthdays and wedding anniversaries.

Mr. BAKER. Mr. President, I express my deep appreciation to the distinguished majority leader for his eloquent and poetic words. I am sure Senator Cotton will appreciate them as I do.

I also point out, from a purely parochial view, that his delightful wife, who has been at his side for these 50 years, is a native of my own native State of Tennessee. I have always claimed Norris Cotton as a distinguished son of my State by reason of that fact.

Mr. THURMOND. Will the Senator yield?

Mr. BAKER. I yield.

Mr. THURMOND. Mr. President, I would like to be associated with the remarks of the distinguished Senator from Tennessee about the able and distinguished former Senator Norris Cotton.

He is one of the most delightful men with whom I have ever served. He made a great Senator. We were proud of him then and we are proud of him now.

I join in the felicitations to him and his wife on his birthday and, as I understand, their anniversary.

Mr. BAKER. Their 50th anniversary.

Mr. THURMOND. Their 50th anniversary.

I thank the distinguished Senator for yielding.

AMENDMENT OF THE STANDING RULES OF THE SENATE

The Senate continued with the consideration of the motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

The PRESIDING OFFICER (Mr. METZENBAUM). The Senator from Rhode Island is recognized.

Mr. CHAFEE. Mr. President, as we know, this is my first year serving in the Senate. It seems to me that all who come to the Senate find here something different than exists in all the other legislative bodies, and that I believe exists anywhere else in the world. Certainly, it is different than in the House in the U.S. Congress.

Our setting, of course, is no grander than any other, splendid though it might be, and our trappings no fancier, our emoluments and perquisites no richer, but we do have one priceless right. That is the right to have our say, to speak our piece as long as we wish, and in as much detail as we wish.

This is a precious right, Mr. President, one that men throughout long history have fought for and I suppose this was described better than most by Tacitus. I recall this so vividly because in the dome of the capitol of the State of Rhode Island, we look up and see inscribed in Latin around that dome these words:

> Rare felicity of the times when it is permitted to think as you like and to say what you think.

Mr. President, that is one of the privileges that comes to us here in the Senate.

Mr. President, I ask unanimous consent that Mr. William Roesing of my staff be granted the privilege of the floor during the pending debate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Mr. President, this recognition of uniqueness of the Senate and the privilege for everybody to have his say is nothing that has just come to this Senate, or any other. I think we all recognize that.

I wish to read from a statement on this subject from, certainly, one of the most distinguished Senators. I am referring to Senator Everett Dirksen. This is what he had to say:

> One of the nice things about the liberal rules of the Senate, we are expected to discuss matters at length in this great deliberative body and I am glad of it. It takes time. We have no rule of germaneness. We have no limitation on debates. After all those years of difficulty, trying to compress world-shaking remarks into five minutes, the time limit of the House, what sheer delight it is, what abandonment of spirit I experienced when I got to the Senate and discovered when I got to the floor I could keep it endlessly, as long as there was any breath in this poor, feeble body.

That is one man's explanation of how he felt about the rules of the Senate.

Of course, I find it perplexing, Mr. President, as to why we are engaged in this exercise under Senate Resolution 5. I am delighted that the distinguished majority leader is here because, obviously, he embarked on this course for a purpose, and he must have felt that we are not getting on with the business of the Senate swiftly enough.

But certainly, no one is more conscious than he of the long history of the Senate and the efforts to preserve the right of free debate.

This is nothing new. As long as men have been involved in parliamentary endeavors, they have fought about the right to debate, and also how we limit debate to some reasonable length.

In 1604, the practice of limiting debate in some form was introduced in the British Parliament by Sir Henry Vane. It became known in parliamentary procedure as the privileges question and it is described in Jefferson's Manual of Parliamentary Practice.

As far as the Senate of the United States goes, the first Senate adopted some 20 rules. I shall touch on the following rule related to debate and taking of the time of the Senate.

Rule II said:

> No Member shall speak to another or otherwise interrupt the business of the Senate, or read any paper while the Journal on public matters is read or when any member is speaking in any debate.

Rule III:

> Every Member, when he speaks, shall address the Chair standing in his place, and when he is finished shall sit down.

I might say that not much has changed since then.

Rule IV:

> No Member shall speak more than twice in any one debate on the same day without permission of the Senate.

Rule V:

> When two Members shall rise at the same time, the President shall name the person to speak, but in all cases the first rising shall speak first.

Over the course of the years, Mr. President, there have been various efforts to limit debate, as it were.

One of the great heroes of the Senate, in 1841, Henry Clay, became involved in a proposal for introduction of the so-called previous question, which he stated was made necessary by the abuse which the minority had made of the privilege of unlimited debate.

Who should rise to oppose Senator Clay but another great hero of the Senate, a great hero of the South, Senator Calhoun. This is what he said on the subject.

> There has never been a body in this or any other country in which, for such a length of time, so much dignity and decorum of debate has been maintained.

Clay's proposition, I can report, met with considerable opposition and was abandoned.

Clay also proposed adoption of the hour rule, but that proposal also was abandoned.

So, over the years various attempts were made.

I see the distinguished senior Senator from Rhode Island in the Chamber, and he might be interested in this. On December 6, 1870, in the 3rd session of the 41st Congress, Senator Anthony of Rhode Island introduced the following resolution:

> On Monday next, at 1 o'clock, the Senate will proceed to the consideration of the Calendar, and bills that are not objected to shall be taken up in their order, and each Senator shall be entitled to speak once and for 5 minutes only on each question, and this order shall be enforced daily at 1 o'clock.

The following day, December 7, 1870, the resolution was adopted; and this so-called Anthony rule for the expedition of business was the most important limitation of debate yet adopted by the Senate. The rule was interpreted as placing no restraints upon the minority, however, inasmuch as a single objection could prevent its application to the subject under consideration.

So, Mr. President, over the years various efforts were made, always with this concern about the rights of the minority.

Whenever you limit debate, you are limiting somebody from having his say.

It seems to me that we all are concerned about dilatory tactics. I know that the distinguished majority leader undoubtedly has brought forth this motion because of his concern about the inability to get on with the business. But as we look at the record, we find that the efforts at limiting debate have been rather successful in recent years. There is no problem that I can see—perhaps I need education in this matter—in having cloture successfully invoked and getting on with a vote on the matter at hand. It is rather interesting to see what has taken place over the years.

In the 53 years between 1917 and 1970—that is getting to be pretty recent history—there were 49 attempts to invoke cloture, of which only 8 were successful. That is not a very good batting average. But in the last 6 years, the whole idea of invoking cloture has gained momentum. Sixty-eight times it has been tried in the last 6 years, and of those 68 times, 30 have been successful. I do not know what the worry is around here. Why are we so concerned, if you can invoke cloture 30 out of 68 times?

Mr. President, in each year since 1970, the last 6 years, the percentage of success either has held its own or has increased.

For example, in 1971 there were 10 cloture votes and 2 succeeded, for a batting average of 20 percent. In the next year, there were 10 attempts, and 2 succeeded—20 percent. In 1973 there were 10 attempts and 2 succeeded, for a batting average of 20 percent.

Then we really pick up speed. I am not sure what happened in 1974, 1975, and 1976, but listen to these statistics.

In 1974, 21 attempts were made and 7 were successful, for a batting average of 33 percent. In 1975, I guess everybody got the feel of this and wanted to plunge in. Not 21 attempts were made; 23 attempts were made. That is half as many attempts as were made in 53 years. Twenty-three attempts were made and 13 succeeded, for a batting average of 57 percent.

Last year there were only four attempts, but they must have known what they were doing, because all four succeeded, for a rate of success of 100 percent.

Mr. President, as I understand what we are attempting to do here today, or what is suggested by the amendment under consideration, it is that once cloture has been invoked, there then shall be 10 hours, 5 to the majority leader and 5 to the minority leader, to dispense as they wish.

They can give any Senator up to 30 minutes, and that will not count against the subsequent time that a Senator might have. That consumes 10 hours. There are then 40 hours remaining. In those 40 hours, any Senator is entitled to speak for up to 30 minutes.

I do not think it takes a mathematical genius to figure out that if each Senator is going to get 30 minutes, there will not be enough time in 40 hours. One hundred times 30 minutes gives you 50 hours, no matter how you slice it. So somebody is going to be left out.

Furthermore, that does not even mean that 80 Senators are going to be able to speak for a half-hour each, because from those 40 hours shall be subtracted the times for rollcalls and votes on amendments.

Why is it necessary to change the rules? The present rules provide for 100 hours and for everybody to be given an hour to speak. Perhaps that is too much. Perhaps we should cut it down. So let us cut it down to a half-hour apiece.

However, I feel strongly that every Senator should be entitled to a half-hour to speak, and he should not have his rights at the whim of a majority leader or minority leader, beneficent though they might be. We are elected from our States, and each of us should have the same privilege. We should not be required to come on bended knee to a leader and say, "Give me a few crumbs. Let me speak for 10 minutes. Give me 15 minutes." Not at all. We should have that as a right.

Mr. President, if we go to Harvard Law School, we will see this inscription on the great Langdell Building: "Non Sub Homini Sed Sub Legis et Sub Deo."

Mr. President, not under man, but under laws and under God. That is what we are attempting to preserve here—the right of everyone to have his say under the rules, not at the whim of some leader, kindly though he might be—majority or minority.

I do not think that is a privilege we should give up. We do not have many privileges.

I recall the great speech William Pitt, the Earl of Chatham, made when he spoke on the excise bill in 1777, in the House of Commons. He was referring to a right. Perhaps it was not much of a right, but it was a right. He was talking about the right of every man in England to have his home inviolate from any invasion by the authorities, without proper warrant.

This is what the great Earl of Chatham, Pitt the Junior, had to say:

> The poorest man may in his cottage bid defiance to all the forces of the Crown. It may be frail—its roof may shake—the wind may blow through it—the storm may enter—the rain may enter—but the King of England cannot enter—all his force dares not cross the threshold of the ruined tenement.

Now that was a tiny privilege that that Englishman had, but they felt it was worth preserving and, Mr. President, I think this tiny privilege we have is worth preserving.

I do not suspect that most of us are going to take the half-hour, and I do not suspect that most of us are going to introduce amendment after amendment, but certainly we are entitled to that privilege, and I do not think we should give it up lightly.

Mr. President, I would like to refer back to the Senate debate on the whole matter of preserving rights, something that just did not come up today or yesterday. This goes back year after year after year and, of course, in the original days great efforts were made because of civil rights, and the Southern Senators, with their skill in debate and their knowledge of the rules, were able to fight off cloture, and that is why it was so rarely invoked in those years, those 53 years, in which it only succeeded eight times.

But times have changed now, and there is no problem, as I indicated, to invoking cloture. But the thing that makes this proposal so difficult for me to understand is that under the proposal as it stands, as submitted in Senate Resolution 5, a Member could submit a bill. At the same time he calls up his bill he could submit a cloture motion. Now, under this proposal, in 24 hours that cloture motion could be voted on. What kind of a deal is that? Is that giving solemn thought to some of the matters that come before this Senate? You bring in the bill, you submit a cloture motion at the same time, and up they come. You have a vote; the majority, let us say, prevails; and then under this proposal there are 50 hours of which 10 can be consumed at the discretion of the majority or minority leaders; the remainder of the 40 hours could be taken up with rollcalls and petitions, and I would just like to ask the majority leader, if I might, a question, if I could get his attention.

Mr. ROBERT C. BYRD. The distinguished Senator has my attention.

Mr. CHAFEE. The question I would like to ask the distinguished majority leader, and see if I have something wrong here, if I understand the proposal the majority leader has, and let us take this hypothetical situation: a Member could call up a bill. At the same time a motion for cloture could be submitted. Twenty-four hours it lays on the table. We then could proceed to a vote on cloture.

Mr. ROBERT C. BYRD. No.

Mr. CHAFEE. Am I wrong?

Mr. ROBERT C. BYRD. The Senator is not correct. The 24 hours he misunderstands. Under the provisions of Senate Resolution 5, as it was reported from the committee, a cloture motion cannot be offered on a measure or matter pending before the Senate until 24 hours have expired, except in certain circumstances which deal with an adjournment sine die or an adjournment or recess beyond a period of 30 days. The one exception from that 24-hour requirement would be a motion to proceed to take up.

Mr. CHAFEE. I thank the Senator.

Let us just take a hypothetical, and I am not suggesting that the majority would do this, but let us just take a hypothetical situation. We never know who is going to succeed the distinguished Senator from West Virginia. It is even possible to imagine some despot, unlikely though it might be, filling his shoes.

Mr. ROBERT C. BYRD. May I say I have been thought of as a despot at times.

Mr. CHAFEE. Never, never have I heard that publicly suggested and never privately suggested. [Laughter]. All right.

A bill is called up. Twenty-four hours later we get to the cloture motion. How much time, the minimum, let us take the worst situation, could there be in debate on that bill before the bill is voted on?

Mr. ROBERT C. BYRD. Before the bill is voted on?

Mr. CHAFEE. Let us go to cloture.

Mr. ROBERT C. BYRD. Yes.

Mr. CHAFEE. We could have cloture when? Just like that, 24 hours after the bill came up?

Mr. ROBERT C. BYRD. No, no. Once the cloture motion is entered, then the vote to invoke cloture occurs on the following day but one, so that if we were to offer, let us say, a cloture motion were to be entered today——

Mr. CHAFEE. Why do we not take on a Monday, why do we not start the whole process on a Monday. Suppose we call up a bill on Monday. Then could you proceed taking it from there?

Mr. ROBERT C. BYRD. If the bill were to be called up on Monday and made the pending business before the Senate, under the provisions of Senate Resolution 5 a cloture motion could not be entered that day. Twenty-four hours would have to transpire before the cloture motion could even be introduced, and that would be on Tuesday. On Tuesday the cloture motion, having been introduced, the following Thursday, 1 hour after the Senate convenes, and following the establishment of a quorum, the Senate would then proceed to vote on the motion to invoke cloture.

But all during Monday, all during Tuesday, all during Wednesday, and during the first hour on Thursday, the debate could go forward on the measure, amendments could be offered, voted on, and adopted or rejected.

Mr. CHAFEE. See if I follow this through. So the vote on cloture is Thursday?

Mr. ROBERT C. BYRD. Yes.

Mr. CHAFEE. Let us assume it succeeds. We then have 50 hours, of which the first 10 are 5 each at the disposition of the majority and minority leaders to parcel out as they wish, nobody receiving more than 30 minutes, but those 30 minutes are not to count against any subsequent time a Senator might have.

Is it not conceivable that the majority leader could keep that Senate in session for 24 hours? I am again giving the worst case and, as I understand the history of the Senate, it has sat for 24 hours.

Thursday we vote on cloture. Friday we have 24 hours go by, and by Saturday we have had 48 hours go by, and we could vote Saturday afternoon on the bill.

Mr. ROBERT C. BYRD. Well, it is certainly possible that the Senate would stay in session 50 hours running which could be 2 days of 24 hours each plus 2 hours.

Mr. CHAFEE. Mr. President, I know it seems to me in all of these matters you have to look at the worst case because we do not know who is going to be here controlling the time, sitting in the majority leader's position years from now, and I suspect that passions have run high in the Senate for many a day, and I suspect there have been majority leaders who have been quite angry and frustrated, dismayed, disconcerted, upset by the actions of a minority, and I do not want to say, Mr. President, the minority party because when we are debating this bill we are not just talking about the minority party, I think we are talking about a minority Senator.

And these are the people we are concerned about. So it is quite possible for a major piece of legislation, as the distinguished majority leader pointed out, to come up on Monday and be passed after all debate on Saturday.

Maybe the hypothetical is a little unusual, but certainly it is possible.

First, I thank the majority leader very much for answering my questions. I appreciate that. I learned a lot and I am grateful.

Mr. ROBERT C. BYRD. Mr. President, I thank the Senator. He is certainly asking pertinent questions. I can understand his concern. I doubt that the concerns that have been expressed by Senators on his side of the aisle would ever become a matter of recorded history. But, nevertheless, in theory they could conceivably occur.

Mr. CHAFEE. Mr. President, it is such a privilege to get the distinguished majority leader's attention that I wish to trespass on his time for another minute or two. The part I find difficult to understand under this Senate Resolution 5 is why not give every Senator a half hour? I mean the Senator is just lengthening it a bit. But it is quite conceivable under the proposal that a Senator would not have a chance to speak. I do not understand that. I am not trying to put any Senator on the spot, but the distinguished Senator from West Virginia represents the majority, to a considerable extent, and if some Senator could give me an answer, on a proposal why not give every Senator a half hour?

Mr. ROBERT C. BYRD. Under Senate Resolution 5 every Senator would have a half hour. Experience shows that not very many Senators, following the invoking of cloture, take their hour under the present rule. The great majority of Senators take no time out of the hour. So we said we will cut the hour down to a half hour, but we have to have an overall time ceiling which when it expires will bring about the final vote on the measure or the matter clotured.

Our problem heretofore—we have had many problems—one of the problems heretofore, once cloture is invoked, is the inability to charge quorum calls or the time on rollcall votes or the time that is utilized in dilatory tatics against any Senator. That time did not come out of the Senator's hour.

So, by having a 50-hour limitation overall, a Senator may suggest the absence of a quorum as frequently as he wishes, he may have as many rollcalls as he wishes on unmeaningful amendments, he may speak his half hour, but the clock will be running and at a point when the 50 hours are up, the Senate would wind up its work.

I simply cannot conceive of a situation in which the Senate would take the 50 hours in view of the fact that the great civil rights debates have long become part of the past.

So I think this is a reasonable, fair approach, and it does not deprive a minority of recognition. It does not deprive a minority of an opportunity to offer amendments, call them up, and get votes on them because a minority, if it should be a partisan minority, would be fully protected by the fact that its leader would have under his complete control at the beginning of 5 hours or 300 minutes, and then following that there would be a limitation on any amendment of 1 hour, which means that a majority could not monopolize the remainder of the time with one amendment, thus shutting out a minority from offering further amendments.

Mr. CHAFEE. Mr. President, I am very grateful for the majority leader taking this time, and I am reluctant to consume additional time. I know he has so many burdens. But it seems to me that if some Senator wishes to engage in dilatory tactics, why is that not charged to that Senator's time? It is perfectly possible under the proposal.

Mr. ROBERT C. BYRD. May I answer that question?

Mr. CHAFEE. Yes. I am seeking an answer. I seek light.

Mr. ROBERT C. BYRD. That is a very pertinent question. I am not sure how much light the Senator will get, but I can answer his question. Why is it not charged to his time? That is because he only has an hour under the present rule and one can only charge 60 minutes against an hour. So, if the Senator has utilized 58 minutes of his hour, he could not care less if a quorum call of 20 or 30 minutes is charged against his last 2 minutes. He would say, "I suggest the absence of a quorum," and all he would be deprived of would be his last 2 minutes. Then it would not be fair to charge a quorum call against the distinguished Senator who now holds the floor if he might wish to put in a quorum call to allow him a minute or 2 minutes in which to converse with the distinguished minority leader or with an aide, and if another Senator objected to the calling off of that quorum. The distinguished Senator from Rhode Island who put in a quorum, not for dilatory purpoces, but only in the hopes it would give him 2 or 3 minutes respite to take care of some other matter, might then be deprived of his entire allotted time because all of the time consumed for the quorum would go against his time. Then he has had all of his time taken away from him through no fault of his own.

So why not charge these dilatory tactics to a Senator's time? It would not be feasible to do so in many instances.

Mr. CHAFEE. I appreciate the difficulties, but it seems to me with the skill, knowledge, ingenuity, and intelligence of the majority leader, there should be some solution that would preserve every Senator his half hour. Mind you, we have come down from an hour. I mean that is progress if we can.

Mr. ROBERT C. BYRD. If the Senator will allow me to respond to that, there may be some solution. I have never said that Senate Resolution 5 is the alpha and the omega of intelligence, skill, and ingenuity. I have never said that. I have said, however, that this is a workable, reasonable, fair, and rational approach. And I have also said that if there are those who have suggestions or amendments that would constitute improvements, fine. That is fine with me. I am for utilizing the skill of the distinguished

Senator who now holds the floor, his insight, and his talents in coming forward with amendments that will improve the language of this resolution and still accomplish the intended results and be fair and equitable. So I say perhaps the Senator can contribute.

I only say let us get on with the job. Let us get the resolution up before the Senate. Then let every Senator offer his amendments. Let every Senator have his say, and I daresay that out of the combined will of the Senate there may emerge a better product than Senate Resolution 5.

Mr. WALLOP. Mr. President, will the Senator from Rhode Island yield so that I might ask a question of the majority leader?

Mr. CHAFEE. Yes.

Mr. WALLOP. I would ask the Senator, just as a curiosity, since he makes the statement in response to the Senator from Rhode Island that he could not conceive of a time when the Senate would use up the whole 50 hours in such debate, if that is the case, if it really is inconceivable, why clutter it up with potentials in the manner that the Senator from Rhode Island is referring to, which is causing so much concern?

Mr. ROBERT C. BYRD. I will turn the coin over on its other side. Why fight the proposal?

Mr. WALLOP. Because I can conceive of such.

Mr. ROBERT C. BYRD. Why fight the proposal if it is inconceivable that there will be a time when 50 hours will be needed, now that the civil rights issue has been relegated to the past? Why all the aroused passions and the sleepless hours that Senators on both sides of the aisle have obviously spent, when we are not going to have a situation that will use up those 50 hours?

Mr. WALLOP. From the standpoint of the Senator from Wyoming, it is good for the soul, once in a while, to get impassioned. But, second, it is not the viewpoint of the Senator from Wyoming that it is inconceivable. It is conceivable to me, the real fear expressed by the Senator from Rhode Island, that a Senator might be deprived of his legitimate chance to speak on an issue before the Senate.

With that I yield, but I appreciate the majority leader's response. I do in fact think it is conceivable, and perhaps that is the reason for offering the amendment.

Mr. ROBERT C. BYRD. I concede that the Senator is expressing a sincere concern. I concede the same for Mr. CHAFEE. But I think that the modifications I have offered address themselves adequately to those sincere concerns.

In most instances, after cloture is invoked, I would hope that the issue would not be a partisan one in which there would be Republicans pitted against Democrats. I would think that in most instances proponents and opponents would be on both sides of the aisle. But in the event it is a partisan issue, the Senator would have at least the two protections I have offered, one being that the minority leader would have control of 5 hours, and that any quorum and roll calls would not be charged against that 5 hours. The minority leader would certainly be protective of the Members on his side of the aisle.

The second protection is that once the 5 hours expired, there is a limitation on any amendment thereafter of 1 hour, so that the majority could not, as some Senators have said, call up an amendment and just hold the floor on that one amendment until the remainder of the 50 hours had expired.

Mr. WALLOP. No one Senator could be able to hold the floor for the 5 hours. It might perhaps be a point of departure that the controlled debate would be at the end of the 5 hours rather than the beginning, and that would take care of the majority leader's fear that the last 2 minutes would be uncontrolled. I would hope there would be an effort on the part of both the majority and minority leaders to control that time at the last minute.

Mr. ROBERT C. BYRD. Let me state that I appreciate the genuine concern expressed by these two new Members of this body. I congratulate them upon participating in this debate. I commend them on the stimulating and incisive questions that they have addressed to me. I think it reflects well on the body, that Members who have just come into the Senate can demonstrate this kind of interest and concern and dedication to the Senate and to its rules.

I appreciate the questions, and I hope that I have been able to respond in such a way as to provide the answers, perhaps not to allay the concerns, but I hope that my answers have been helpful.

Mr. WALLOP. I thank the distinguished majority leader for his kind remarks.

Mr. CHAFEE. Mr. President, I would like to thank the majority leader a great deal for his thoughtful and helpful remarks. I would like to convey to him, if I can, how very deeply we do feel about this, however.

I find myself rather astonished standing here on the Senate floor and participating in what used to be considered an anathema, a filibuster, or mini-filibuster, if you will. But as you get into these things, you begin to realize that some rights are extremely important.

It seems to me that the right to have one's say is a precious one, and I would hate to see it engulfed in some type of legislation designed to remedy dilatory tactics, delay, or whatever it may be, in such a way that in dealing with the problem we eliminate a right. That bothers me.

Mr. ROBERT C. BYRD. I know it bothers the Senator, and I congratulate him. But I have attempted here to provide what I deem to be a workable, fair, reasonable, realistic solution. If other Senators can improve upon it, fine. I just want us to get down to action on the resolution, and not further delay the business of the Senate.

I am open to persuasion. I am willing to hear others who may have amendments that will improve on the language. It is not so much that I take pride of some authorship of this language. That is not a matter of importance to me at all. I simply think that sometime, if not today, if not a week from today, if not a year from today, there is going to have to be a change in the Senate rules sooner or later to correct what many of us see as a flaw that does not contribute to deliberate action on the part of the Senate, but contributes rather to delay—unnecessary, undue, unjustified delay—from time to time.

I do not want to see that problem dealt with in a way that takes away from Senators the prerogative and the privilege of debating a matter in a responsible, enlightened, and meaningful way for a justifiable length of time. I do not want to see majority cloture imposed on this body. But the Senator would be surprised at how very easily that could come about.

I am seeking to avoid that, and I have presented what I deem to be an approach that will deal with the problem, as I see it, but will still allow this body to be a deliberative one and will not bring on majority cloture.

Mr. CHAFEE. Mr. President, I wonder if the majority leader will be good enough, just briefly, to inform us of some of his concerns and as to why we are doing this? As I look at the record of the last several years, when cloture has been invoked, I find that, last year, there were dilatory tactics that upset many people. But looking at the overall record, is this such a problem that we must take this action? Really, I suppose the question is: Is it worth making the sacrifice?

Let us say we cannot arrive at a solution that preserves every Senator a half hour. Thus we are into tradeoffs. Is it worthwhile trading off this limitation on a very fundamental and precious right that has made this body so different? Is it worthwhile doing that in order to achieve this goal? Has the problem been so paramount with us that we have to do something?

I do not know. I have not been here.

Mr. ROBERT C. BYRD. If the Senator is asking me the question, I do not consider that the resolution trades off a "precious right." I want to defend the right of Senators to engage in meaningful, sincere, serious debate, as long as it is necessary. I think that, as long as that kind of debate is going forward, there is a likelihood that the invoking of cloture will not occur on the first attempt, or perhaps on the second attempt, or the third, and maybe not at all.

I think there is something other than just a "precious right" of the Senators to talk. Each Senator has the responsibility, in my judgment, to see that the Senate acts on the people's business. I am not interested in taking any right away from a Senator, any justifiable right, as long as he exercises that right in a responsible manner.

I do say that there come, from time to time, situations in which this right under the present rule has, seemingly, been abused, thus creating an imposition on the Senate and on Senators. This is what is involved here.

Perhaps a better approach can be found, but I think I must say that I have seen the mood of the Senate be such that majority cloture can, at some point, become not only a possibility but a prob-

ability. If that happens, then the Senator would say, as to Senate Resolution 5, "I wish we had enacted it rather than rejected it."

This is not an empty warning, I say to the Senator. I do not want to see the Senate subjected to majority cloture. I have never supported the idea in the past. But I said yesterday that I shall never say "never" again.

So it is up to the Senate. If it wants to reject this proposal and do nothing about the problem now, that is the Senate's will.

But the matter will not rest and there will come a day when the problem will arise again. I hope that, when and if it does arise again, the Senate will not react in a way that will bring about majority cloture. If that day ever comes, the rules of the Senate, as we know them today, will not longer be recognizable.

Mr. CHAFEE. I thank the Senator very much.

Mr. ROBERT C. BYRD. I thank the Senator from Rhode Island.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MOYNIHAN). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HELMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

NO TRADE FOR CUBA

Mr. HELMS. Mr. President, the Committee on Foreign Relations yesterday approved measures which would relax the trade embargo against Cuba—measures which would obviously lead the way inexorably toward the growth of full economic and diplomatic relations with the Communist government of Fidel Castro.

Yet this is the worst possible time to make such overtures. Instead of showing any inclination to become a peaceful member of the community of nations, Castro has led his nation further and further into international adventures which threaten the peace and security of the world. With the financial and logistical support—and tacit approval—of the Soviet Union—and let us make no mistake about that—Castro is busy exporting his revolution throughout Africa and Latin America.

The Foreign Relations Committee proposal was modified in committee to permit U.S. sales to Cuba, but not to allow Cuban exports to the United States. But there is nothing in the proposal which will prevent Castro from continuing his main export—the export of subversion—not only throughout the world, but also to the United States itself. The evidence has long been clear, for example, that Castro has been a powerful supporter and instigator of the activities of the Puerto Rican FALN, both in Puerto Rico and on the mainland. His propaganda enters the United States freely, and can be found even in the libraries of some of our most prominent universities. The Venceremos Brigade has been a training ground for young radicals from the United States.

When President John F. Kennedy imposed the trade embargo on Cuba in 1962, he said:

> The present Government of Cuba is incompatible with the principles and objectives of the Inter-American system; and in the light of the subversive offensive of Sino-Soviet Communism with which the Government of Cuba is publicly aligned, (The OAS) urged the member states to take those steps that they may consider appropriate for their individual and collective self-defense.

One's first temptation is to say that nothing has changed. But the situation has changed—it has changed for the worse. Since President Kennedy's proclamation, the vast majority of South America—at least 80 percent, if one measures by land area or by GNP—has been deeply smitten by Castro-inspired and assisted Communist revolution, and has had to go through the agony of revolution and chaos before order has been restored. One need only mention Brazil, Chile, Uruguay, and Argentina to see the extent of the rejection of Castro's doctrines.

Now that the tide has turned—as the result of tremendous sacrifice by those nations afflicted by communism—Castro has switched operations to Africa and has imposed Communist minority rule on Angola and Mozambique.

As far as the United States itself is concerned, there are, today, more Soviet reconnaissance bombers in Cuba than there were at the time of the Cuban missile crisis.

Mr. President, only 3 weeks ago, Soviet reconnaissance bombers flew within 60 miles of the U.S. coast, flying over several American warships, including the carrier, U.S.S. *Saratoga*. This is a direct violation of the Soviet-United States agreement on nonharassment. The Soviet bombers stayed until they were chased away by two U.S. F–4 Phantom jet fighters which scrambled from Seymour Johnson Air Force Base in my own State of North Carolina.

It is ironic that this provocative act occurred only days before the signing of the 200-mile fishing agreement with Cuba.

The Foreign Relations Committee proposal has been limited to sales of food and medicine, as though Cuba were seeking purely humanitarian purchases. The fact is that both food and medicines are strategic items in time of conflict. The fact that Castro has 3,000 wounded troops in Angola right now in need of medicine speaks for itself. And even if an agreement were reached with Cuba not to reexport medicines, there is no way to guarantee that the American supplies would not merely replace what was being sent to Angola to aid the Communist military effort there.

Moreover, we must not forget that Castro is still holding 27 known American prisoners, eight of whom are designated to this day as political prisoners. At least 10,000 Cubans and probably as many as 40,000 Cubans are being held in prison camps and so-called reeducation camps. And nearly 800 Cuban-Americans with dual citizenship who are seeking to emigrate to the United States are being held in Cuba against their will.

Mr. President, I recently asked the Secretary of State to provide me with whatever information the Department had on political prisoners in Cuba. The names of the eight political prisoners supplied are as follows:

Frank Emmick of Ohio;
Everett D. Jackson of Illinois;
Lawrence Lunt of Massachusetts;
Claudio Rodriguez Morales of Puerto Rico;
John Tur of Florida;
Rafael Del Pino of Cuba;
Antonio Garcia Crews of Cuba; and
Carmen Ruiz of Cuba.

Mr. President, I ask unanimous consent that the letter I received from Assistant Secretary of State Douglas J. Bennett, Jr., be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, D.C., April 11, 1977.

Hon. JESSE HELMS,
U.S. Senate.

DEAR SENATOR HELMS: Secretary Vance has asked me to reply to your recent letter in which you request information about political prisoners in Cuba.

Cuba is presently holding eight Americans in prison on political charges. These people are serving 20 to 30 year prison sentences handed down in the 1960's:

Frank Emmick of Ohio;
Everett D. Jackson of Illinois;
Lawrence Lunt of Massachusetts;
Claudio Rodriguez Morales of Puerto Rico;
John Tur of Florida;
Rafael Del Pino of Cuba;
Antonio Garcia Crews of Cuba; and
Carmen Ruiz of Cuba.

19 other Americans are serving jail terms in Cuba on criminal charges.

The Department has no precise information on the number of Cuban citizens held on political charges. Cuba has consistently refused to permit inspection of its jails by the OAS Human Rights Commission or other international bodies. Based on information developed by private US groups, and on the public statements of Cuban officials, we estimate that there may be as many as 10–15,000 persons under detention in Cuba for political reasons. A large portion of this number are probably held in re-education camps and and perhaps 2,000 in maximum security-type institutions. We know that several prominent early opponents to Castro, such as Hubert Matcs, are still in prison serving sentences of up to 20 years.

Sincerely,

DOUGLAS J. BENNET, JR.,
Assistant Secretary for Congressional Relations.

Mr. HELMS. Mr. President, it is highly significant that the State Department admitted that Castro refused to permit any international organizations into Cuba to inspect the conditions of its prison camps and jails. A few days after I received this letter, however, the State Department itself was allowed to send two of its Foreign Service Officers to meet with the U.S. citizens. No word has been released on the results of these meetings, nor has any impartial international body yet been allowed to study the conditions of prisoners in general.

The case of Hubert Matos, mentioned in the State Department's letter, is a typical example of the way Castro treats

his opponents. Matos was once a ranking commander in Castro's rebel Army who became a military commander of Camaguey province in January, 1959, immediately following Castro's takeover of Cuba.

Ten months later, Matos resigned protesting increased Communist domination of the Castro regime. He was actually arrested on the ironic charge of "slandering the revolution by referring to it as 'Communist,' " a charge later changed to treason. Sentenced to 20 years, Matos has been in various political prisons since October 1959. He has been held incommunicado for the past 6 years. Members of his family in Cuba, including his father who is now over 90 years old, have repeatedly tried to visit Matos during this period, but without success. Chile has offered to release several top Communists in exchange for Matos' freedom, but Castro still refuses.

Yet, Mr. President, this is the regime that today we would begin to recognize.

Not with this Senator's vote, Mr. President. Not with this Senator's vote.

Mr. President, in my opinion, there should not even be any negotiations on resuming trade or diplomatic relations with Cuba until Cuba has done the following:

First, release of the Americans and the 15,000 to 40,000 political prisoners held by Castro.

Second, free access by the international media to Cuba and to the Soviet military bases there.

Third, withdrawal of Cuba's offensive forces in Africa.

Fourth, shutdown of the Soviet Union's advance military operational base in Cuba.

Fifth, the right of free emigration by anyone now in Cuba without restrictions or indirect repression.

Mr. President, only when Cuba has complied with those conditions can we even think of resuming normal relations with Cuba, that is, unless we have lost all of our standards in this country.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from North Dakota.

SENATE RESOLUTION 165—WAIVER OF CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF S. 1279

Mr. BURDICK. Mr. President, I ask unanimous consent to proceed to the immediate consideration of Senate Resolution 165.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 165) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1279.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. BURDICK. Mr. President, this is a waiver necessary in order to secure the passage or the consideration of S. 1279.

The waiver is necessary because the bill as reported authorizes $225 million for fiscal year 1977 for drought assistance in those areas of the country suffering severe shortages of water.

S. 1279 was the President's response to the drought in those communities with a population of 10,000 or more.

This is necessary to get the waiver at this time. That is the purpose of the resolution and I move its adoption.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 165) was agreed to, as follows:

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1279. Such waiver is necessary because the reported bill authorizes $225,000,000 for fiscal year 1977 for drought assistance in those areas of the country suffering severe shortages of water. S. 1279 is the President's response to the drought for those communities with a population of ten thousand or more. The recently passed Economic Stimulus Appropriations Act (H.R. 4876) contained an appropriation of $175,000,000 for this drought program.

The reported bill authorizes assistance to units of local government with a population of ten thousand or more, States, or Indian tribes. Areas eligible for assistance are those currently declared drought emergency areas under provisions of the Federal Disaster Relief Act, Small Business Act, Farmers' Home Act, or other relevant statutes. The Secretary of Commerce may also designate areas as drought emergency areas under this legislation.

Aid authorized by this bill is in two forms: grants of 50 per centum of the project cost or loans at 5 per centum; $150,000,000 of the program is for loans and $75,000,000 for grants.

Compliance with section 402(a) of the Congressional Budget Act of 1974 was not possible by May 15, 1976, because the drought conditions were not known at that time. The severity of the problem this past winter which is expected to continue through the summer of 1977 makes this an emergency situation not contemplated when fiscal year 1977 authorizations were reported to the Senate.

THE COMMUNITY EMERGENCY DROUGHT RELIEF ACT OF 1977

Mr. BURDICK. Mr. President, I ask unanimous consent that we now proceed to the consideration of S. 1279.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 1279) to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impact of the 1976–77 drought and promote water conservation, reported with amendments.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Environment and Public Works with amendments, as follows:

On page 2, line 20, strike "November 30, 1977" and insert "September 30, 1978";

On page 4, line 8, following the period, insert "Funds authorized by this Act shall be obligated by December 31, 1977.";

On page 4, beginning with line 10, insert:

TITLE II

SEC. 201. The first sentence of section 201(a) of the Public Works and Economic Development Act Amendments of 1976 (Public Law 94-487) is amended by striking out "one year" and inserting in lieu thereof "eighteen months."

SEC. 2. Section 202 of such Act is amended—

(a) by striking out "and" at the end of subsection (4);

(b) by striking out "chapter 57 and subchapter 53 of such title relating to classification and General Schedule pay rates" in subsection (5), and inserting in lieu thereof "chapter 51 and chapter 53 of such title";

"(c) by striking out the period at the end of subsection (5), and inserting a semicolon in lieu thereof; and

(d) by adding at the end the following new subsections:

"(6) accept and use gifts or bequests of services, moneys and property; and

"(7) use appropriated funds and act as may be necessary and appropriate without regard to the provisions of section 551 of title 31, United States Code, section 34 of title 40, United States Code, and section 5 of title 41, United States Code.".

Mr. BURDICK. Mr. President, on March 23, 1977, President Carter proposed to Congress certain legislative actions to provide assistance to many of the Western and plains States suffering from a prolonged and severe drought. One of those proposals is embodied in S. 1279, the Community Emergency Drought Relief Act of 1977, which I introduced on April 7.

The bill authorizes $225 million in grant and loan authority to the Economic Development Administration for assistance to communities of 10,000 or more population for drought-related projects. Such Federal assistance may be for the improvement, expansion, or construction of water supplies, and purchase and transportation of water, which in the opinion of the Secretary of Commerce will make a significant contribution to the relief of an existing or threatened drought condition.

The administration proposal is an emergency measure. The President proposes assistance to be available to communities for emergency water system improvements which can be completed quickly and which are essential to protect public health and safety. The Secretary of Commerce may designate areas as drought impact areas and thereby indicate eligibility of communities within such areas.

Of the $225 million in new authority, $75 million is to be in the form of grants not to exceed 50 percent of project costs. Loan assistance in the amount of $150 million at 5 percent per annum for not more than 40 years makes up the greater portion of the Presidential request. Eligible applicants are States, political subdivisions of States, Indian tribes, or public or private nonprofit organizations. Similar assistance for communities less than 10,000 is to be provided by the Farmers Home Administration.

Mr. President, the Subcommittee on

Regional and Community Development of the Committee on Environment and Public Works held hearings on the President's proposal on April 5. The bill was reported on May 2. The committee accepted an amendment changing the program deadlines. As introduced, the bill required that funds be obligated by September 30 and all projects completed by November 30 of this calendar year. The committee amendment extended the deadline for obligation of funds to December 31, 1977, and the completion date of projects to the end of next fiscal year, September 30, 1978. Committee members, while not wishing to alter the emergency character of the President's proposal, believed the September 30 deadline to obligate projects and the November 30 time limitation to complete them were not realistic, notwithstanding the provision in section 101(d) of the bill permitting the Secretary to extend the time for completion of projects beyond November 30, 1977, "in exceptional circumstances."

Secretary of Commerce Kreps wrote me on May 4 requesting that the Senate reconsider the administration-proposed deadlines for obligation of funds and completion of projects. Mr. President, I ask unanimous consent that Secretary Kreps' letter be printed in the RECORD at the conclusion of this statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BURDICK. Mr. President, on Monday, May 9, I understand that Senator DOMENICI talked with EDA Assistant Secretary Robert Hall concerning the deadlines. Senator DOMENICI was the author of the unanimously adopted committee amendment extending the time limits. He is prepared today to offer an amendment to the committee bill that would change the time of completion of projects from Septetmber 30, 1978, to April 30, 1978. That is agreeable to me.

Mr. President, Senator CRANSTON has offered an amendment to the reported bill that provides that communities that have already undertaken emergency drought projects this fiscal year before this bil lbecomes law would be eligible for assistance if these projects are found to be compatible with this act.

The Committee on Environment and Public Works has no objection to this amendment. Senator CRANSTON's explanation that communities that have begun such projects should not be penalized is entirely reasonable. I understand the administration has no objection to the amendment.

The stimulus appropriation bill sent to the President this past week contained the appropriation for this emergency drought measure. Although the President requested $225 million, the conferees provided $175 million. I am told concern was expressed that the larger amounts might not be obligated in the limited time provided. The majority and minority leadership of the committee recommends to the Senate and the administration that $75 million of the appropriated funds be available for grants and $100 million for loans. If additional funds are required before the end of this fiscal year, the administration may request a supplemental appropriation for the remaining $50 million.

Let me state that there is some apprehension among committee members whether this bill is flexible enough to meet the stated needs. A rigid 50-percent limit on grants has prompted the committee to state its preference in the report on the bill for the use of inkind services in lieu of local matching share, pursuant to regulations issued by the Secretary. However, in order to expedite passage of the bill and because of the administration's expressed wish that the bill not be amended extensively, the committee did not press for more changes.

Finally, a minor amendment to the bill requested by the administration has been added as title II. It would extend the time from 12 to 18 months from October 1976 within which a White House Conference on Balanced National Growth and Economic Development may be convened. Public Law 94-487, an act to extend the Public Works and Economic Development Act of 1965, as amended, for 3 years contained an authorization for such White House conference within 1 year of enactment of that act. The amendment further makes technical corrections in the earlier authorization relating to classification and salary requirements of staff.

I ask unanimous consent that a statement by the chairman of the Committee on Environment and Public Works, Senator JENNINGS RANDOLPH, be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

WASHINGTON, D.C.,
May 4, 1977.

Hon. QUENTIN N. BURDICK,
Chairman, Subcommittee on Regional and Community Development, Committee on Environment and Public Works, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The Senate will soon be considering S. 1279, the Emergency Drought Relief Act of 1977. As you know, this legislation is one part of the President's short-term program to relieve the Nation's drought crisis. When enacted, this legislation will provide loans and grants to fund short-term public works projects such as construction of a pipe to temporarily carry water to a drought stricken area.

The success of the drought program depends upon immediate implementation. The parts of the President's package which are administered by the Department of the Interior and the Farmers Home Administration require that all funds for drought projects be obligated by September 30, 1977 and that all work on the projects be completed by November 30, 1977. Senate Bill 1279, the Emergency Drought Relief Act of 1977, contained the same deadlines at introduction. The reported bill requires funds to be obligated by December 31, 1977 and work on projects to be completed by October 1, 1978.

So that projects authorized by this legislation can deal with the immediate drought crisis and for purposes of consistency within the government-wide drought program, it is my hope, and the hope of the President, that the original September 30, 1977 deadline for the obligation of funds and the November 30, 1977 deadline for the completion of projects can be restored to this legislation. Of course, the Secretary of Commerce would retain the power to waive such deadlines in extraordinary circumstances.

I have reason to believe that the emergency drought bill can be signed into law within a few days of Senate pasage if it is unamended from its original form. I appreciate your prompt action on this emergency legislation and strongly encourage its expeditious adoption by the Senate.

Sincerely,

JUANITA M. KREPS.

EXHIBIT 2

STATEMENT BY SENATOR RANDOLPH

For much of the past year various areas of this country, particularly the west and midwest, have suffered severe shortages of rainfall and other precipitation. The result has been a severe drought affecting all forms of activity in the regions.

The Committee on Environment and Public Works reported the pending legislation in response to the request of President Carter for legislative action to protect communities of 10,000 or more population which have suffered prolonged and severe drought. This bill is only one aspect of the Administration's response to this national problem. Other aid is provided to communities, agricultural interests, and small business under other authorities. The measure being debated today authorizes $225 million in grant and loan authority. The Federal assistance provided will be for improvements, expansion or construction of water supply facilities, or the purchase or transportation of water. This relief is expected to reduce the severity of an existing or threatened drought condition.

The situation facing many communities is of an emergency nature. The Committee on Environment and Public Works responded to this Presidential initiative as quickly as possible. The aid provided will not be a long-term solution but will allow communities to provide facilities reducing the severity of this situation.

The urgency of the situation was recognized by both Houses of Congress recently when an appropriation of $175 million was included in the Economic Stimulus Appropriations Act (H.R. 4876). I hope the Senate will continue to view this situation as an emergency and that the House will respond as quickly so that the President will have legislation to reduce existing or threatened hardships. I urge my colleagues to support this measure.

UP AMENDMENT NO. 202

Mr. DOMENICI. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. Until the committee amendments have been disposed of, floor amendments are not in order.

Mr. DOMENICI. I ask unanimous consent that this amendment be in order at this time.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes an unprinted amendment numbered 202.

Mr. DOMENICI. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 2, line 20, strike "September 30, 1978" and insert in lieu thereof the following: "April 30, 1978"

Mr. BURDICK. Mr. President, will the Senator yield?

Mr. DOMENICI. I yield.

Mr. BURDICK. Mr. President, I ask that the committee amendments be approved.

The PRESIDING OFFICER. Without objection, the committee amendments will be considered as original text for the purposes of amendment and are agreed to.

Mr. DOMENICI. Mr. President, I understand my amendment is in order at this time. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. DOMENICI. Mr. President, I have a detailed statement explaining this amendment, so I will quickly summarize my purpose. The subcommittee chairman, Mr. BURDICK, understands it, and I believe the amendment is acceptable to him.

This emergency bill came to the Committee on Environment and Public Works, because the principal administrator of the program will be the Economic Development Administration. The program is for communities of 10,000 and more. The Farmers Home Administration will have a similar program for communities of 10,000 and less. When the bill came to us, the administration was recommending a national program of $225 million of grants and loans, but it had some rather severe deadlines in terms of when communities could apply and how long they had to complete projects. Applications had to be in for emergency drought relief projects by September 30, 1977, and all projects had to be completed by November 30, 1977.

The full committee found those dates to be unreasonably short—both in terms of how long you had to apply and how long you had to do the work—to attempt to resolve the drought. At my suggestion and on my amendment the dates were moved to December 31, 1977, and the end of the fiscal year, September 30, 1978, respectively.

As a result of that change, the administration has had some genuine concern, because they feel that perhaps by such an extension we will become a bit confused on temporary relief and permanent relief for drought. I am not that concerned about it, but in an effort to accommodate I offer this amendment to cut the dates back so that all applications will have to be in by December 31, 1977, and all work will have to be completed by April 30, 1978.

The Secretary has some flexibility on a case-by-case basis to extend that completion time, if it is in the interest of a particular project and if in fact it meets the criteria set out in the bill.

I understand that the Appropriations Committee, as stated by the distinguished chairman, has appropriated $175 million to accomplish the purposes, although $225 million was expected originally. I do not think we can say here today that the drought is over, and I do not think we can say that $175 million will do the job. That is why my amendment will permit applications to be processed through December 31 of this year.

In the event EDA and the administration find, or the Appropriations Committee finds, that there are still pending substantial projects, we will have another opportunity to appropriate additional funds and we would have the months between September 30 and December 31, 1977, to do that. All applicants will still have until April of next year to get the money expended for projects.

It is with that in mind—an accommodation to the administration, because they are fearful of extraneous projects being included—that I cut back my dates. I believe that we still will be able to get done under this bill whatever work needs to be done during these time frames and with the added flexibility given the Secretary.

That was my original concern, and that of the entire Public Works Committee, for they unanimously supported the extension—as the Senator from New York, the present occupant of the Chair, knows full well. I think our purpose will be met and communities of need will be served.

Mr. President, if the chairman has no objection, I move the adoption of my amendment.

Mr. BURDICK. Mr. President, we accept the amendment and join in its adoption.

Mr. DOMENICI. Mr. President, I ask unanimous consent that my statement further explaining this matter be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DOMENICI

The amendment I am offering to S. 1279 would change the period of time available for completion of projects funded under the program. My amendment would change the completion date from September 30, 1978—the date in the bill as reported by the Committee—to April 30, 1978.

I offer this modification after discussions with representatives of the Administration who have expressed concern about the deadlines in the Committee bill. I have, also, talked with my colleagues on the Committee, particularly the Chairman of the Subcommittee, Mr. Burdick. I understand the amendment is acceptable to him.

The project deadlines are important to the overall effectiveness of the program. During Committee mark-up, I expressed concern about some of the provisions in the bill. I was particularly concerned that the short time deadlines in the measure were too restrictive in a new program of this size, and I offered an amendment to extend the time available for completion of projects and the deadline on obligation of funds.

I believed the amendment was necessary if we wanted to help communities and if we expected proper implementation of a multi-million dollar program. The full Committee agreed and adopted my amendment unanimously.

The Administration has raised concerns about the length of the extension. After some negotiations, I am offering this amendment to modify my original amendment on the completion date. I understand the amendment is agreeable to the Administration.

I appreciate that this is a temporary program responding to the drought emergency, but I believe the deadlines I am proposing offer a more realistic approach to the problem than the deadlines in the original proposal.

The bill, as introduced, required that all projects funded through the program be completed by November 30 of this year. There may be projects which could not be completed in only a few months. These are not simple projects. We have given the Secretary, within the determination of an emergency, the flexibility to consider more sophisticated projects, some which may be rather extensive. If additional time is needed beyond April 30th, the Secretary may waive the completion date required by the bill.

The time available for the completion of projects applies to all program funds—the $175 million appropriation, funds spent under the Cranston amendment and any funds which may be appropriated later.

A second part of my amendment adopted by the Committee extends the obligation date for funds from September 30th to the end of the calendar year. The second deadline remains as reported.

The original legislation required that the entire $225 million authorization be obligated by September 30th of this year. It is already May. The House has not yet considered the measure. I believe it would be difficult to get a program of this size—especially a new program—into place and operating sufficiently well in the time remaining before September. I considered the proposed time periods too short and I believed that many needy communities would be penalized in the process.

We must not be in a position of saying there is an emergency and we want to help but on the other hand imposing such restrictive time periods that needy communities may not participate.

The stimulus appropriation bill provides $175 million for the program for fiscal year 1977. I do not disagree with the Appropriations Committee position that $175 million is adequate for the remainder of this fiscal year. By retaining the December 31, 1978, obligation date, I am only saying that we will take a look at the program in a few months from now to see what is needed. We will have $50 million more in program authority and the first 3 months in F.Y. 1978 to appropriate if it appears necessary.

The additional drought assistance authorized in S. 1279 is greatly needed. I support quick action on the legislation so the program can get underway and communities begin work. I have other concerns about the overall effectiveness of this program. The urgency of the situation, however, requires action on a drought assistance measure now. I do not believe we can take the time required to draft a broad drought assistance package addressing the longer term issues. Because of the need for some form of assistance at this time, I voted to report the Administration's bill essentially as it was introduced. I believe my amendment will ease one problem which has been raised by several individuals at the local and state level who have studied this measure.

The drought in my state is serious and grows worse each day we go without rain.

The April 1 projections of spring and summer streamflow runoff range from 32% for the San Juan River at Navajo Dam to 85% for the Upper Pecos River system. Forecasted streamflow for most of our major stream systems ranges from 40% to 70% of the fifteen-year average, with the exception of El Vado Reservoir which contains about 62,000 acre-feet of imported San Juan-Chama Project water available for use in the Middle Rio Grande Conservancy District and Elephant Butte and Caballo Reservoirs which are near the 15 year average. Water stored in Conchas Reservoir for the Tucumcari Project is less than 10% of average and that project suffered a 90% shortage last year.

About 15% of our domestic and industrial

water requirements are met with surface flows. Thirty of our communities use surface water and some of these have wells from which a part of their requirements are met. Some of the communities relying totally or in part on surface water sources may experience problems if the drought continues another three to six months; as many as 85,000 people might be affected.

Stockmen and dry land farmers have already been seriously affected by the drought. Eight New Mexico counties have been designated drought disaster areas, making available in those counties the benefits of emergency agricultural programs.

The Congress must continue to monitor the effectiveness of this and other emergency drought measures in addressing the problem and the needs of States and communities as the dry spell continues.

There is a strong possibility that drought conditions in many areas will continue. We must, therefore, be ready to respond to an increasingly difficult problem. I think, however, that we will need to consider more than short-term measures. Regretfully, I do not think we have seen the end to the problem with the passage of this bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

Mr. DOMENICI. I move to reconsider the vote by which the amendment was agreed to.

Mr. BURDICK. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 203

Mr. BURDICK. Mr. President, on behalf of Senator CRANSTON I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from North Dakota (Mr. BURDICK) for Mr. CRANSTON proposes unprinted amendment No. 203.

The amendment is as follows:

On page 4, after the period on line 9, insert the following:

SEC. 106(b) Funds available to the Secretary for this Act shall be available for expenditure for drought impact projects conducted heretofore by eligible applicants during fiscal year 1977 if such projects are found to be compatible with the broad purposes of this Act.

Mr. BURDICK. Mr. President, this is the amendment to which I referred a few minutes ago, and I believe the other side is agreeable, and I ask for its adoption.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

The PRESIDING OFFICER. Are there any further amendments? If there be no further amendment, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The question is, Shall the bill pass?

The bill, S. 1279 was passed as follows:

An Act to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976–77 drought and promote water conservation

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act be cited as the "Community Emergency Drought Relief Act of 1977".

SEC. 101. (a) Upon the application of any State, political subdivision of a State, Indian tribe, or public or private nonprofit organization, the Secretary of Commerce is authorized to make grants and loans to applicants in drought impacted areas for projects that implement short-term actions to augment community water supplies where there are severe problems due to water shortages. Such assistance may be for the improvement, expansion, or construction of water supplies, and purchase and transportation of water, which in the opinion of the Secretary of Commerce will make a substantial contribution to the relief of an existing or threatened drought condition in a designated area.

(b) The Secretary of Commerce may designate any area in the United States as an emergency drought impact area if he or she finds that a major and continuing adverse drought conditions exists and is expected to continue, and such condition is causing significant hardships on the affected areas.

(c) Eligible applicants shall be those States or political subdivisions of States with a population of ten thousand or more, Indian tribes, or public or private nonprofit organizations within areas designated pursuant to subsection (b) of this section.

(d) Projects assisted under this Act shall be only those with respect to which assurances can be given to the satisfaction of the Secretary of Commerce that the work can be completed by April 30, 1978, or within such extended time as the Secretary may approve in exceptional circumstances.

SEC. 102. Grants hereunder shall be in an amount not to exceed 50 per centum of allowable project costs. Loans shall be for a term not to exceed 40 years at a per annum interest rate of 5 per centum and shall be on such terms and conditions as the Secretary of Commerce shall determine. In determining the amount of a grant assistance for any project, the Secretary of Commerce may take into consideration such factors as are established by regulation and are consistent with the purposes of this Act.

SEC. 103. In extending assistance under this Act the Secretary shall take into consideration the relative needs of applicant areas for the projects for which assistance is requested, and the appropriateness of the project for relieving the conditions intended to be alleviated by this Act.

SEC. 104. The Secretary of Commerce shall have such powers and authorities under this Act as are vested in the Secretary by sections 701 and 708 of the Public Works and Economic Development Act of 1965, as amended, with respect to that Act.

SEC. 105. The National Environmental Protection Act of 1969, as amended, shall be implemented to the fullest extent consistent with but subject to the time constraints imposed by this Act, and the Secretary of Commerce when making the final determination regarding an application for assistance hereunder shall give consideration to the environmental consequences determined within that period.

SEC. 106. (a) There is hereby authorized to be appropriated for the fiscal year ending September 30, 1977, $225,000,000 of which sum $150,000,000 is to be for the loan program herein, including administration thereof, and $75,000,000 of which is to be used for the grant program herein, including administration thereof, and such additional amounts for the fiscal year ending September 30, 1978, as may be reasonably needed for administrative expenses in monitoring and closing out the program authorized by the Act. Funds authorized by this Act shall be obligated by December 31, 1977.

(b) Funds available to the Secretary for this Act shall be available for expenditure for drought impact projects conducted heretofore by eligible applicants during fiscal year 1977 if such projects are found to be compatible with the broad purposes of this Act.

TITLE II

SEC. 201. The first sentence of section 201 (a) of the Public Works and Economic Development Act Amendments of 1976 (Public Law 94–487) is amended by striking out "one year" and inserting in lieu thereof "eighteen months".

SEC. 202. Section 202 of such Act is amended—

(a) by striking out "and" at the end of subsection (4);

(b) by striking out "chapter 57 and subchapter 53 of such title relating to classification and General Schedule pay rates" in subsection (5), and inserting in lieu thereof "chapter 51 and 53 of such title";

(c) by striking out the period at the end of subsection (5), and inserting a semicolon in lieu thereof; and

(d) by adding at the end the following new subsections;

"(6) accept and use gifts or bequests of services, moneys and property; and

"(7) use appropriated funds and act as may be necessary and appropriate without regard to the provisions of section 551 of title 31, United States Code, section 34 of title 40, United States Code, and section 5 of title 41, United States Code.".

Mr. BURDICK. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of S. 1279.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE STANDING RULES OF THE SENATE

The Senate continued with the consideration of the motion to proceed to the consideration of the resolution (S. Res. 5) to amend the Standing Rules of the Senate.

Mr. WALLOP. Mr. President, I wish to take up again the discussion leading up to the eventual consideration of Senate Resolution 5.

During the brief colloquy we had with the distinguished majority leader he raised several points which, I think, serve to enhance rather than to allay the fears of the minority as to the direction the Senate might take if it were to adopt Senate Resolution 5 as it is proposed.

The distinguished majority leader said it was the business of the Senate to act upon the people's business, and I am sure that no Senator would quarrel with that. But it is probably one of the single rights within the possession of any Senator that he may be the determiner as how he perceives the people's business. It is not the tyranny of the majority which should be the final deciding factor in that.

The distinguished majority leader said he expected every Senator to be respon-

sible in pursuit of that point. Again I would suggest that in a body of grown men it would be the individual's own decision as to what was a responsible pursuit of that point. Should he be in the eyes of his constituents irresponsible, I have little doubt but what they would determine for him in the next succeeding election what indeed was responsible.

The distinguished majority leader raised the specter of majority cloture as something that should be clearly in the minority's mind as a threat should the Senate resolution as proposed not be adopted as the new rule XXII. He said, and I quote him:

> There will come a day when it will arise again.

I would suggest, Mr. President, that whether or not we pass Senate Resolution 5 the move for majority cloture will arise again and again and again. It, in fact, leads me to believe that the maintenance of the standard of rule XXII essentially as it exists is the single best protection against the threat of majority cloture as raised by the distinguished majority leader.

He spoke of the great civil rights debates of the sixties. I would pose a question rhetorically in his absence: Were those not, in fact, debates about the rights of minorities?

He also said it was impossible to conceive of such a thing as the Senate's consuming the whole 50 hours proposed by him with Senate Resolution 5 as a limitation on the post-cloture period.

I questioned him as to why, if that was inconceivable, we even bother to tamper with rule XXII. If it is conceivable that we would consume the 50 hours, why is it conceivable that the 100 hours remain as a threat? I would suggest that that question is legitimate to the very point we are talking about, as to whether or not it is even legitimate or unnecessary or in any way the people's business to take up the time of the Senate in amending a rule that it is inconceivable now that in some manner or another we would transgress half as much.

But let us for a minute discuss the question of minorities. Both the distinguished minority leader and the Senator from Rhode Island distinguished between a minority and the minority, and I think it is an important distinction. The majority leader suggested it was very much his hope that these things would not divide along partisan lines, that the minority would be a group of Senators from both sides seriously interested in resisting the progress of a given piece of legislation because of deep-seated philosophical concerns about it.

Whether or not it is the minority or a minority is really irrelevant. There can be, and there has existed, in the country and in the Senate a tyranny of the majority. One of the protections in this body against such a tyranny is the rights of individual Senators, and the threat of infringing upon those rights is before us. The means of dealing with dilatory motions do in fact exist within the rules and within the capability of the rulings of the Chair.

We are dealing not with the present Presiding Officer, mind you, but with presiding officers in general who have been reluctant to rule tactics, motions, and other things as dilatory.

Much like Congress is wont to do in other things with the whole Nation, problems of the whole Nation, it pinpoints the problem, and rather than dealing with the problem it throws a blanket over it and assumes that somehow or other it will suffocate everything, and we will emerge without the problem.

I would suggest that that was not true, and would not be true. I would also suggest that if it were true the problem we would emerge with would be a far more serious problem, far more troublesome problem, to every individual Senator, minority or majority.

There are some interesting quotes that come out of history and the great philosophers of this country and others about majorities and minorities dealing generally outside the question of whether it is the minority or a minority.

Emerson wrote:

> What age was not dull? When was not the majority wicked? or what progress was ever made by society?

Abraham Lincoln said in his first inaugural address:

> If by the mere force of numbers a majority should deprive a minority of any clearly written constitutional right it might, in a moral point of view, justify revolution—certainly would if such a right were a vital one.

Now, Mr. President, I am not suggesting that the minority in the Senate at the moment is threatening justifiable revolution or any other kind of revolution. But it is a fact that there has been a recognized principle by many great philosophers that a majority can, in fact, inflict ill-will upon a minority.

And it is true that if that takes place without due consideration to the rights of that minority, and that minority could be as few as a single Senator, then the people's business has not been well served and the tack upon which we are launched at this moment in time is in fact not a service to the country and not in the interests of the conduct of the people's business.

Emerson wrote again in an essay entitled "The Conduct of Life: Considerations by the Way":

> Shall we judge a country by the majority, or the minority?

And he answers his own question, "By the minority, surely."

Is that not truly what the great civil rights debates were about? Is it not truly what people stand for when they talk of protecting the rights of minorities? Is it not truly the country's business, the people's business to look at that whether in the conduct of its business or in the conduct of the legislation that affects the people at large in the country?

Playwright Ibsen wrote that:

> The most dangerous foe to truth and freedom in our midst is the compact majority.

And using his words, Mr. President, not mine, he answers his question:

> Yes, the damned, compact, liberal majority.

The Senator from Wyoming would not suggest that Ibsen's words were applied to the Senate as it is presently constituted. It is meant as an illustration and not as an accusation which the Senator from Wyoming has pulled out of Ibsen.

But he also, in the same play, which was entitled "An Enemy of the People"—and it came from act IV of that play—in the same act he launched on a series of complaints as to what majorities could do to minorities, and I shall not bore the Presiding Officer with all of them, but surely some of them are worth listening to, and they couple right together.

> The minority is always in the right.

And:

> The majority never has right on its side.

Mr. President, sometimes the Senator from Wyoming wishes that were true but is practical enough to realize that there are those moments when wisdom and prudence would suggest that other things took place.

But in reviewing the whole business that sits before us as to whether or not it is legitimate business of this Senate to consider amendments to rule XXII, I have looked in the variety of papers as to how minorities fit into societies and, like it or not, the Senate is in its way a constructed society, constructed by the rules and participated in by the Members of it, and it has within it majorities and minorities, and they are fluctuating from one side to the other, depending on the course of legislation and depending on the philosophical concepts which one Member or another or a group of Members or others may have at a given time.

I think it is not inconceivable—in fact I think it is less than not inconceivable—I think it is highly conceivable, though it may come something as a surprise to the majority party, that it may not always be the majority party and could, in fact, be grateful to the Senator from Wyoming and others who are not sitting here trying to protect the rights of minorities as they constitute the bloc of voting members in the Senate from time to time.

Indeed, it would be my hope that the wisdom of the country would be expressed in that manner in a very short period of time so that we might demonstrate that what I said before; that is, not always is the majority a tyranny.

Mr. President, I shall briefly read from an article by a man named Arnold Rose, which appears in the International Encyclopedia of Social Sciences, because I think it is germane to what we speak of here, and he talks about the attitudes of hostility or prejudice with which a dominant group regards the minority and with which the minority may attempt to counter the dominant group, and this I think is particularly significant when we are dealing in terms of the phrase used "a minority" and not "the minority" because this is when it would take place within the Senate.

> The first is an attitude in which power is the main element: The dominant group wishes to exploit the minority for economic, political, or sexual purposes, or for prestige, and the minority group seeks to escape their exploitation. While the achievement of ascendancy in terms of one or more of these

scarce values may be brutal, including enslavement—

If you will—

of the minority, it is seldom personal, nor does it, except accidentally, result in the death of a minority person.

I suggest that is probably the truth in the Senate.

The second attitude—

More pertinent, in fact—

. . . is ideological: the dominant group believes that it has a monopoly on the "truth", as may the minority group also. The achievement of ascendancy by one ideological group over the other results in drastic efforts to convert the minority to the dominant group's version of the "truth"; failing that, it vanishes the minority by exile or death.

I suggest, in this instance, that the limitation on time is the physical exile by the dominant group, whatever it might be, and in the course of debate on a given issue would exile the minority.

Mr. President, that concludes my remarks on why I think it is essentially unnecessary for the Senate to really consider the amendments to rule XXII, especially in light of the distinguished majority leader's declaration that it is inconceivable that the Senate would today even use up the 50 hours called for under his rule change. I think that if that is the case the people's business would be better served if we proceeded to the consideration of the major issues before the country, such as the Clean Air Act, the strip mining bill, and other social bills of great benefit to the country.

I thank you, Mr. President.

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. BURDICK. Mr. President, I move that the Senate stand in recess subject to the call of the Chair.

The motion was agreed to, and at 5:50 p.m. the Senate took a recess, subject to the call of the Chair.

The Senate reassembled at 6:45 p.m., when called to order by the Presiding Officer (Mr. MATSUNAGA).

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I repeat my request of yesterday. I ask unanimous consent that the Human Resources Committee may be authorized to meet on Friday from 11 a.m. to 2 p.m.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object.

The PRESIDING OFFICER. The Sentor from Tennessee reserves the right to object.

Mr. BAKER. Mr. President, I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR TALMADGE ON TUESDAY, MAY 17, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on next Tuesday, after the two leaders or their designees have been recognized under the standing order, Mr. TALMADGE be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER THAT THE COMMITTEE ON THE BUDGET BE AUTHORIZED UNTIL MIDNIGHT TO FILE CONFERENCE REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on the Budget be authorized to have until midnight tonight to file a conference report on Senate Concurrent Resolution 19.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ROTH TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow after the two leaders or their designees have been recognized under the standing order Mr. ROTH be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

WAIVER OF CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF S. 11

Mr. ROBERT C. BYRD. Mr. President, I hold in my hand a waiver resolution, Senate Resolution 163, which is a waiver with respect to S. 11, the omnibus judgeship bill.

I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. The clerk will state the resolution.

The second assistant legislative clerk read as follows:

A resolution (S. Res. 163) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 11, a bill to provide for the appointment of additional district court judges, and for other purposes,

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. Res. 163) was considered, and agreed to, as follows:

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 11, a bill to provide for the appointment of additional district court judges. Such waiver is necessary to permit consideration of the authorization of additional Federal district and circuit court judges for fiscal year 1977. Similar bills, S. 286 and S. 287, were passed by the Senate prior to May 15, 1976, but failed of final passage because not taken up by the House of Representatives prior to the adjournment of the Ninety-fourth Congress. Final enactment of S. 11 will likely require encumbering of funds for the final quarter of fiscal year 1977 not in excess of $7,700,000, an amount equal to the estimate submitted by the Committee on the Judiciary March 15, 1976. If consideration of S. 11 is prevented, the current backlog of cases in the Federal district courts will continue to rise, the burden on sitting judges will also increase, and the administration of justice will be significantly impeded.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR TRANSFER OF MEASURE TO UNANIMOUS-CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is a measure on the calendar, Calendar Order No. 109, S. 126, a bill to reduce the hazards of earthquakes. It has been cleared for passage by unanimous consent.

I ask unanimous consent that the clerk transfer that measure to the Unanimous-Consent Calendar.

The PRESIDING OFFICER. Without objection, the measure will be so transferred.

ORDER FOR RECESS UNTIL 4 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 4 p.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 4 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 4 p.m. tomorrow afternoon.

The motion was agreed to; and at 6:49 p.m. the Senate recessed until tomorrow, Thursday, May 12, 1977, at 4 p.m.

HOUSE OF REPRESENTATIVES—*Wednesday, May 11, 1977*

The House met at 3 o'clock p.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Be not conformed to this world, but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect will of God.—Romans 12: 2.

O God, whose love never lets us go, whose strength never lets us down, and whose justice never lets us off, we thank Thee for the glow and glory of another day. May we make it a great day for Thee and for our country. Grant that each one of us may be faithful to the best we know,

loyal to the truth, eager to do what is right, and ready to love—keeping ourselves committed to Thee.

"Have thine own way, Lord! Have thine own way! Thou art the potter; I am the clay, mold me and make me after Thy will, while I am waiting, yielded, and still."

Not only be with us but bind us together in a vital fellowship of mind and heart as we seek to work for the good of our country and the benefit of all mankind.

In Thy holy name we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. YOUNG of Florida. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

The question is on the approval of the Journal.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. YOUNG of Florida. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 386, nays 12, answered "present" 3, not voting 31, as follows:

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 6810, AMENDING STATE AND LOCAL FISCAL ASSISTANCE ACT OF 1972

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Report 95–285) on the resolution (H. Res. 560) providing for consideration of H.R. 6810, to amend and extend title II of Public Law 94–369, to establish a new title to the State and Local Fiscal Assistance Act of 1972, and for other purposes, which was referred to the House Calendar and ordered to be printed.

PERMISSION FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO SIT DURING 5-MINUTE RULE TODAY

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce may be permitted to sit during the 5-minute rule this afternoon in order to get a bill out.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

THE UNFULFILLED PROMISE OF THE HELSINKI ACCORD

(Mrs. FENWICK asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. FENWICK. Mr. Speaker, I know firsthand of the promise and hope that the Helsinki accord has engendered in Eastern Europe and the Soviet Union because I traveled to the U.S.S.R. and Romania in 1975 immediately after our signing of the accord. Members of our congressional delegation met with a great number of dissidents, refuseniks and people who hoped for reunification with family members overseas. Many of these courageous people came to see us at great danger to themselves, for always the KGB watched their activities.

Today I would like to remind this House of the case of Eduard Kuznetsov who today is imprisoned in the Soviet Union. Arrested in 1970 and sentenced at first to death, the outcry of world opinion led the authorities to commute this to 15 years "at special regime," which means he may receive one visitor, one letter, and one parcel a year.

He is being punished for his desire to emigrate to Israel where other members of his family now live. Mr. Kuznetsov's wife applies each year for a visitor's visa so that she might return from Israel and visit her husband, but each year the application is denied. In March of this year, Mr. Kuznetsov was reportedly moved from Potma Prison to a tubercu-

losis hospital because of the serious condition of his health. It is my sincere hope that Soviet authorities are now giving Mr. Kuznetsov all the medical attention he needs and that he will soon be released to join his wife in Israel.

Signatories of the Helsinki accord vowed to facilitate the reunification of families, and it is indeed sad that the Kuznetsov family is just one of many that are still separated despite the international agreement which the Soviet Union and 34 other countries signed to improve human rights in Europe.

SWEETS TO THE SUITE?

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, President Carter is reported to favor a direct subsidy to sugar processors. Under the plan, the big boys in the executive suite will get a bit of sweetener from Uncle Sugar. Such a program would not only be of dubious legality but would be grossly inequitable to corn producers and processors. In an appearance before the House Agriculture Committee on March 24, 1977, Secretary of Agriculture Bergland stated he "would not recommend" such a policy to the President. Yet, we are now confronted with a plan that will damage the corn refining industries and the lives of American farmers who grow corn.

Farmers will be hit hard by this subsidy payment to the sugar processors, but President Carter seems to be saying to the American farmer: One lump or two?

No amount of honeyed words can hide the fact that the Carter administration is trying to keep its subsidy scheme as secret as possible. The "open administration" we heard so much about is a myth. No one can say for sure exactly what is going on concerning this sugar subsidy plan. All we know for certain is that this proposal may be pleasing to some but smacks of politics to others. In short, it is sweet and low.

I think the President would be "bitter off" if he would change his mind about this. If he does not, I predict the farmers of this Nation will become sour over this sweetheart contract between the Government and the sugar processors.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO SIT DURING 5-MINUTE RULE TODAY

Mr. FOLEY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have permission to sit during the deliberations of the House this afternoon under the 5-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

THE HOUSING AND COMMUNITY DEVELOPMENT ACT OF 1977

Mr. ASHLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6655) to amend certain Federal laws pertaining to community development, housing, and related programs.

The SPEAKER. The question is on the motion offered by the gentleman from Ohio (Mr. ASHLEY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 6655, with Mr. STUDDS in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Tuesday, May 10, 1977, title I had been considered as having been read and open to amendment at any point.

Are there any further amendments to title I?

Mr. ASHLEY. Mr. Chairman, I move to strike the requisite number of words.

I yield to the gentleman from New York (Mr. LAFALCE).

Mr. LAFALCE. Mr. Chairman, I rise today to voice my full and complete support for H.R. 6655, the Housing and Community Development Act of 1977. I believe it is a major achievement making much-needed changes in our basic housing and community development laws, and it is an honor for me to be listed as a cosponsor of it.

Before proceeding, I also want to express my deep admiration for the chairman of the Housing Subcommittee, the gentleman from Ohio (Mr. ASHLEY). His guidance during our detailed deliberations on this bill was invaluable and, as with all major housing legislation during recent years, his contribution was great indeed.

Many others have explained the details of the bill before us, Mr. Chairman so I will refrain, with one exception, from repeating what has been said before. The exception has to do with an amendment which I proposed at the subcommittee level and which requires some explanation from its author.

In the 1974 act the word "city" was defined to include towns or townships except for those that had incorporated places within them. Thus, a town or township with a population of 50,000 or more could qualify for an entitlement community development block grant, if it did not have one or more incorporated places within it.

It turned out, however, that this exception applied in New York State and nowhere else in the country. Large towns in the other 49 States qualified, as did large towns in New York that had no incorporated places within them. But 17 large towns in New York were excluded because they contained within their borders one or more incorporated villages. To illustrate the effect of this anomaly, New York had only 19 "metropolitan cities" participating in the CDBG program while California had 76, Texas 43, and Ohio 23.

I felt that the evolution of local government structures in a State which is celebrating its own bicentennial this year should not play so drastic a role with respect to the allocation of Federal funds. People who live in villages in New York State also live, by definition, in towns as well—they are citizens of two municipalities. They vote for local officials in both the village and the town, and they pay taxes to both jurisdictions. For some purposes the entirety of the town is one entity, while for others they carry out separate functions.

Two of the seventeen towns in New York are not located in urban counties; they were completely eliminated from the entitlement provisions of the act. The other 15—now 16—were within urban counties and could participate through that portion of the program.

But this year, with the formulation of the "dual formula" approach, the problem grew more difficult. For now some of these large towns—those which are older and which have experienced growth lag relative to the rest of the country—might be able to secure additional funding under the new formula if they were able to apply for CDBG funds on their own. Yet the 1974 act's definition prohibited this.

My amendment will permit towns, in conjunction with the village or villages within them, to apply for their own CDBG entitlement as if they were one jurisdiction. The government of the town will have to enter into cooperation agreements with the government of each village within the town to qualify for this approach, but once this is accomplished then HUD will have to treat the combined whole as a "city" for purposes of the CDBG program.

An example of the potential effect of the amendment, Mr. Speaker, comes in my own hometown of Tonawanda. That town, which has a population of 100,000, contains within it the Village of Kenmore—population 20,000. On their own, the Tonawanda/Kenmore combination will be entitled, according to HUD estimates, to approximately $350,000 more than their proportional share of Erie County's urban county allocation would have been. This is because Tonawanda and Kenmore are older and growing less rapidly than the balance of the county, so they benefit from the new formula.

I think that in most instances there is much to commend the urban county concept. It has helped to foster intercommunity cooperation and contributed to the devising of regional solutions to community development problems in our urban areas. I hope that communities presently participating in urban county programs in New York State which would not benefit monetarily from applying on their own will proceed cautiously before seeking to qualify under my amendment.

Mr. Chairman, I have taken enough time explaining my amendment to this important bill. I think that it is a balanced bill which has provisions of benefit to all sections of the country and to both urban and rural areas. I support it completely and urge my colleagues to join me in voting for it.

AMENDMENT OFFERED BY MR. PEPPER

Mr. PEPPER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PEPPER: Page 9, line 1, immediately after "and" insert the following:

"(C) prepared and will follow a written citizen participation plan, which plan provides the opportunity for citizens to participate in monitoring the implementation of the community development program and in the evaluation of how funds received under this title are expended, with special attention to the measures and to scheduled hearings described in clause (D)"

Page 9, line 1, strike out "(C)" and insert in lieu thereof "(D)".

Mr. PEPPER. Mr. Chairman, this amendment is to title I of the act. The bill provides for citizen participation in respect to the preparation of a plan, but it does not provide that the citizen shall have any part in the implementation or the evaluation of the expenditures incurred in the execution of any plan; so my amendment, which I submitted to the distinguished gentleman from Ohio handling the bill, simply gives the citizens the right in the manner prescribed in the amendment to participate in the implementation of the plan and in the evaluation of expenditures incurred under it. I would hope that the able gentleman from Ohio might accept this amendment.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. PEPPER. I yield to the gentleman from Ohio.

Mr. ASHLEY. Mr. Chairman, this provides that there will be a written citizen participation plan, which plan provides the opportunity for citizens to participate in monitoring the implementation of the community development program and in the evaluation of how funds received under this title are expended, with special attention to the measure and to scheduled hearings described in clause (D).

What I am trying to make clear is that there is no intention on the part of the gentleman offering this amendment, as I view it from the content of the amendment, for citizen participation to preempt the decisionmaking responsibility which falls on the locally elected officials as far as the final determination with regard to the content of the community development plan.

Mr. PEPPER. That is basically correct. In the earlier part of the bill just before where the amendment would appear there is a power given to citizens to participate in the preparation of the plan.

The able gentleman has modified my original amendment to insert the words, "participate in monitoring of the implementation," and so forth.

Mr. ASHLEY. Yes.

Mr. PEPPER. It is the intention of the author of the amendment that the citizen shall not only have a part in the preparation of the plan, but in the language the gentleman has accepted, or indicate he will not object to, in monitoring the implementation of the plan. I assume that monitoring means they will be informed about it, they will have a chance to comment upon it, they will be able to offer some input perhaps into the execution of the plan and the like. That is, whatever the fair definition of the word "monitoring" is.

Mr. ASHLEY. The gentleman is right. My concern is that there will be no misunderstanding with respect to the thrust of the gentleman's amendment. We do not mean to say, for example, that citizens shall participate in every aspect of the implementation. We are really not saying that. We are saying that they shall participate in the monitoring of the implementation. That is a very substantial difference.

Yes, there are times when citizens can participate in the implementation; there are times when they cannot. That is the differentiation which I am trying to point out. With respect to the evaluation, the same thing is true. We are not defining citizen participation to include citizen evaluation, but they should participate in the monitoring of the evaluation. In other words, the evaluations that are accomplished pursuant to the act must be available to the citizens in order for them to participate in an ongoing way in the devolving of plans that the city is undertaking.

Mr. PEPPER. This is a bill for the benefit of the citizens, and all this amendment does is give them a proper chance to participate in both the implementation and evaluation.

Mr. ASHLEY. In the monitoring of the implementation and evaluation.

Mr. MITCHELL of Maryland. Mr. Chairman, will the gentleman yield?

Mr. PEPPER. I yield to the gentleman from Maryland.

Mr. MITCHELL of Maryland. I appreciate the gentleman's amendment but I would like to see citizens even more deeply involved.

The CHAIRMAN. The time of the gentleman from Florida has expired.

(On request of Mr. MITCHELL of Maryland and by unanimous consent Mr. PEPPER was allowed to proceed for 2 additional minutes.)

Mr. MITCHELL of Maryland. Mr. Chairman, I asked the gentleman to yield primarily because the amendment offered by the distinguished gentleman from Georgia (Mr. FOWLER) was adopted yesterday. How does the amendment of the gentleman from Florida differ from the amendment of the gentleman from Georgia?

Mr. PEPPER. The amendment of the gentleman from Georgia gave the citizens the right to participate in the preparation of a plan relative to urban development. My amendment is in title I, and it gives the citizens the right not only to participate in the preparation of the plans, but in the monitoring of the implementation and evaluation.

Mr. MITCHELL of Maryland. The gentleman adds to it, then?

Mr. PEPPER. Yes. With this limitation, is the gentleman from Ohio agreeable to the amendment?

Mr. ASHLEY. Yes. Mr. Chairman, on the basis of the intent that has been established by our colloquy, I am very pleased to support the amendment of my good friend from Florida.

Mr. PEPPER. I thank the gentleman very much.

Mr. BROWN of Michigan. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I cannot be quite as charitable toward the gentleman's amendment because there are two things which bother me. One is that it seems to call for an additional plan other than that provided for in subsection (a), which provides for a written citizen participation plan with respect to the preparation of the application. If the gentleman is going to accomplish the change he attempts to accomplish by his amendment, it would have been better for him to have included it back in that section.

Second, it is my understanding that it is already in the regulations of the department that there has to be citizen participation in connection with the performance audit of the community development plans of the communities. I, therefore, both question its draftsmanship, where the gentleman proposes to put it in the bill, and I question its necessity.

Mr. PICKLE. Mr. Chairman, I think that the gentleman from Florida (Mr. PEPPER) makes a good point in his amendment to require that applicants for community development grants prepare and follow a citizen participation plan which gives citizens an opportunity to evaluate how community development grants are expended in the community. It is important to point out that it is the intent of Congress to give a great deal of credence to citizen evaluation of community development grants. It is true that having made that recommendation, the final judgment is left to the cities. In some instances, cities in stating the reason that they are not following the citizen participation plan is because the Federal Government will not fund them, when the fact is, that this decision was made by the city, not the Federal Government. The city must either follow the recommendation of the neighborhood citizen evaluation, or not follow the recommendation. Therefore it is improper to lay the blame on the Federal Government. The House is saying once again that we do intend neighborhood citizen groups to give advice and we hope that their advice is given great weight when the final determination is made by the city. If this course is not given credence we might as well go back to the old model cities concept.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. PEPPER).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. GRASSLEY

Mr. GRASSLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GRASSLEY: page 32 line 17, section 110 is amended by striking " "." at the end of subsection (i) and adding the following new subsection:

"'(j) not less than twenty-five per centum of the funds made available for grants under this section shall be used for cities under 50,000 population which are not central cities of a Standard Metropolitan Statistical Area.' "

Mr. GRASSLEY. Mr. Chairman, this amendment is being offered by myself and the gentleman from Oklahoma (Mr. WATKINS), a new Member of the House of Representatives. I thank him for his cosponsorship and the gentleman's effective leadership on the Housing Subcommittee.

Mr. Chairman, this amendment affects a totally new program in this bill, a program that we have not talked about before, called the action grant program. This amendment which I am offering would provide a guarantee that small communities have had in the main block grant program since 1974. It would guarantee 25 percent of this new program for communities of under 50,000.

There are two programs in this bill. First, the regular block grant program, which provides a set-aside of 20 percent for rural areas, and in fiscal year 1978, 5 percent for smaller communities within metropolitan areas. Second, it provides for a new categorical program called the urban development action grant program, authorizing $400 million for each of the next 3 years, with no set-aside for either rural or metropolitan small cities.

This new program, this action grant program, will be run from Washington and not from the HUD field offices. It requires applicants to develop—I quote from the bill, and if the Members are interested from where this comes in the bill, it is on page 29—

A concentrated Urban Development Action Grant Program setting forth a comprehensive action plan and strategy to alleviate physical and economic distress through systematic change.

It requires, additionally, that applicants document their eligibility against a host of criteria, including condition of their housing stock, residential abandonment, population outmigration, stagnating or declining tax base, and a lot of other things.

In this day of grantsmanship, in this day of a large amount of paperwork required for these grants, and considering especially in this day when small communities do not have the large staff that they need to prepare all these things, and the larger cities do, how are the smaller cities going to compete against the larger cities for their share of the action grant program? Smaller communities do not have the planning staffs, they do not have the money, including, even, block grant money, to pay for the staff and the consultant assistance, nor do they have the money to travel and to pay for Washington representatives to compete with the large cities, with the sophistication that is required to make their presentations to HUD, particularly to a HUD office here in Washington.

The committee, in other programs. has recognized the special needs of small communities in many ways under the regular program, including efforts to decrease the paperwork burden, and has continued the special discretionary funds for competition solely between smaller communities, in rural and in metropolitan areas.

But the committee has failed to take any action to assist smaller communities in a similar fashion under the action grant program. It is even more important in a new categorical grant program—and this is a new program—to reserve funds for the smaller communities, especially when the Department of Housing and Urban Development intends to use these funds—and I quote their own words—"to turn Detroit around."

I might add that the committee in another case took action to set aside funds where there was doubt that HUD would act favorably for a particular group of cities. This was the case where 20 percent of the 701 comprehensive planning grants was set aside for the large cities. It was not set aside for the small cities, but for the large communities.

The CHAIRMAN. The time of the gentleman from Iowa (Mr. GRASSLEY) has expired.

(By unanimous consent, Mr. GRASSLEY was allowed to proceed for 2 additional minutes.)

Mr. GRASSLEY. So, Mr. Chairman, we are saying that the small communities have already received less funds than were expected in the original 1974 act. Small community funds were minimal under the metropolitan discretionary balances, and a General Accounting Office study showed that 34 percent, not 20 percent, of the CD funds are needed by the small communities if they are to get their fair share. That is a GAO study that showed that 34 percent was needed.

The Grassley-Watkins amendment extends the 25 percent set-aside principle of the regular programs for smaller communities to the action grant program. It permits, if you please, smaller communities to compete among themselves, smaller communities against smaller communities, for a small section of the pie—25 percent. Then it allows the New York cities to compete against the Detroits for the vast majority of the funds that remain—75 percent.

Hundreds have carried out programs like urban renewal and model cities, and these small communities need these funds. The needs are there. All we have to do now is to put the money there.

I have received letters and other Members have received letters as well from the National League of Cities and the Congressional Rural Caucus in support of this amendment, and I ask the Members for their support.

Mr. SKUBITZ. Mr. Chairman, will the gentleman yield?

Mr. GRASSLEY. I yield to the gentleman from Kansas.

Mr. SKUBITZ. Mr. Chairman, I want to commend the gentleman from Iowa (Mr. GRASSLEY) for taking this position and for offering his amendment.

I want to assure my colleagues that without this amendment rural America has about as much chance of getting money as a one-legged man has of winning a foot race.

Mr. ASHLEY. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the basis of the Grassley amendment is that smaller communities not receive their fair share unless there is a statutory set-aside of 25 percent of the amounts authorized and appropriated for the new action grant program.

I can only say, Mr. Chairman, that this matter was thoroughly discussed in subcommittee and in the full committee. We invited the testimony not only of Secretary Harris but of Assistant Secretary Embry, not on one occasion but on repeated occasions, in efforts to try to satisfy the gentleman from Iowa (Mr. GRASSLEY) and others that the intention of the Administration is clear and that there need be no fears in this regard.

I have a letter here dated May 6 from Secretary Harris reiterating this assurance. She says, "I have proposed major new initiatives as part of our 1977 legislative package" to assure comprehensive treatment for smaller communities.

She says:

First, smaller communities in distress can establish their eligibility for Urban Development Action Grants. Second, we have established priority for funding comprehensive community development programs in smaller communities. Third, we have improved the availability of funds for smaller communities within metropolitan areas by computation of metropolitan balances on a statewide basis.

Mr. Chairman, I do not know what it would take to convince the gentleman from Iowa (Mr. GRASSLEY) that the Secretary is sincere and that the legislation means what it says when it includes all communities as being eligible for the new UDAG program.

The implication of the proposal of the gentleman from Iowa (Mr. GRASSLEY) that smaller communities are somehow excluded simply has no basis in fact.

I would point this out, too, Mr. Chairman: One of the great pitfalls of the legislative set-aside is that funds are very apt to be directed not on the basis of answering needs, but simply on the basis of answering a mathematical formula.

Should communities with a set-aside of under 50,000 be the recipients of funds because of that set-aside when, in fact, there are communities of maybe 5,000 or 6,000 greater in population with demonstrably greater needs? Is that fair and is that good public policy, to say community "X" will get the funds because we have a set-aside that imposes a rigidity that requires that a certain number of dollars will go to communities of a particular size?

Pray tell, I ask the gentleman from Iowa (Mr. GRASSLEY), if there is a 25-percent set-aside for communities of under 50,000 population, is not the next set-aside going to be for communities of a population between 50,000 and 100,000? Why not? If there is such a compelling justification for the cities which are the gentleman's concern, those of under 50,000, or communities with populations under 50,000, then what about the very substantial number of communities with a population between 50,000 and 100,000 and 100,000 and 200,000 and so forth?

Mr. Chairman, where does this set-aside approach end if we mean to be logical and consistent?

Therefore, I say, Mr. Chairman, that the smaller communities as well as the larger communities should compete for funds based on need and not on some kind of mathematical formula.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, first of all, I remind the gentleman from Ohio (Mr. ASHLEY) that he was the one in committee who proposed the 20-percent

set-aside for the larger cities in the 701 planning program.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. ASHLEY) has expired.

Mr. BLANCHARD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have a question for my colleague, the gentleman from Iowa (Mr. GRASSLEY). Perhaps we can engage in a colloquy.

Does the gentleman's amendment exclude cities under 50,000 in a metropolitan area?

Mr. GRASSLEY. Yes.

Mr. BLANCHARD. It does?

Mr. GRASSLEY. Mr. Chairman, I think I misunderstood the gentleman's question. Did the gentleman say it "includes"?

Mr. BLANCHARD. All cities of 50,000 are included in the set-aside of 20 percent, not just the rural cities of under 50,000 population; is that correct?

Mr. GRASSLEY. Yes, that is correct.

Mr. BLANCHARD. Mr. Chairman, I thank the gentleman.

Mr. WATKINS. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I have only been a Member of the House for 5 months. I might mention that this is the first time that I have taken the well of the House.

In my campaign for Congress, I ran on a platform to rebuild rural America because I think the rebuilding of our rural communities is the answer to many of our metropolitan problems in this Nation.

For the past couple of days we have been debating and discussing the housing bill. I am very sympathetic with the amendment yesterday that was discussed and debated. I was impressed in hearing some of our colleagues describe the problems of the inner cities. the dilapidated conditions of the houses, and the rotting conditions of these inner cities.

I would like to turn back the pages of history just momentarily, if I may. If we will look back upon the last three decades, one of the factors that has caused these problems in the metropolitan areas has been the loss of people from the rural communities of this Nation. During the last three decades the people from the rural areas have migrated out. They have left in search of a dream. They left in search of a job. They left the rural areas for the hearts of the metropolitan cities of this Nation.

I also understand the plight of the people who are leaving some of the cities today. Many of these people are the same ones who moved to the cities in the first place or they are the offspring of many of those people who left the rural areas. They would like to leave the inner cities and return to their rural communities.

But what do they find when they do return to the rural communities of this Nation? They find that there are no longer banks there, there are no longer businesses there. They find business buildings boarded up and they find the economic heart of rural communities gone. The business sections are gone and they find dilapidated housing.

That is why, Mr. Chairman, that I stand here in support of the amendment offered by the gentleman from Iowa (Mr. GRASSLEY).

I do not think we are asking too much for the Members of this Congress to assure the citizens of rural America that they are willing to see that our rural communities can be handled properly and be able to cope with the expertise of the cities of this Nation.

Why am I concerned? On page 28 of this bill, on line 24, it directs that the Secretary shall make her decisions on demonstrated results.

To my colleagues in the House I say that most of our rural communities have not been able to demonstrate the results of any actions taken. For 30 years they have had nothing but out migration. I might add that we could not meet that statement back in many communities in my district.

I am also concerned because as a Congressman, I do not represent a city above 25,000 population in my entire 25 counties.

I talked to Secretary Harris a couple of days ago and she indicated to me that all indications are that the moneys would be there. The indication is there. But I am asking my fellow Congressmen, as colleagues of the House of Representatives, to help assure your constituents in the rural areas—and most of the Members do have constituents in rural areas—that there will be some money there. I ask the Members to help the people in the rural areas, not only as we look to try to assist the people in the inner cities, but to help the rural areas that have lost their economic bases and who do not have the expertise needed to compete, to allow our people the choice of returning, living, working and making a living in these rural cities.

Mr. TSONGAS. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

I wonder if I could engage the gentleman from Iowa (Mr. GRASSLEY) in discussion. If the gentleman's amendment should succeed, 25 percent of these funds will be set aside for communities under 50,000, the rationale being that they are incapable of competing with the New Yorks and the Detroits in whatever expertise and grantsmanship is necessary to secure these funds. That would leave us in a situation where communities of, let us say, 53,000 would have to compete with the New Yorks and the Detroits, not for 100 percent of the funds but for what is left—75 percent; is that correct?

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Iowa.

Mr. GRASSLEY. I thank the gentleman for yielding.

The gentleman is correct, but one thing we want to remember is this extends the same principle to the action grant program that we have used since 1974 under title I, the block grant program, and there is a 50,000 cutoff in that one as well.

Mr. TSONGAS. Would the gentleman be amenable, to follow through the logic of his amendment, if we adopt on his amendment additional language that would set aside another 25 percent for communities between 50,000 and 100,000 so that they will not have to compete also with the New Yorks and the Detroits?

Mr. GRASSLEY. If the gentleman will yield further, I will support him if he will offer his amendment after I offer mine. But I think the gentleman forgets one thing about communities over 50,000, and that is that because of the entitlement program they are able to build up balances and carry on programs from one year to the next much easier than a community under 50,000. In staff capacity to make these applications, they are much more able to compete with the necessary information and particularly with the great amount of paperwork that is required.

Mr. TSONGAS. If the gentleman's amendment passed, would he rather be mayor of a city of 49,000 or mayor of a city with 51,000?

Mr. GRASSLEY. If the gentleman will yield further, he is asking me to split hairs here. Traditionally there has to be some cutoff point. If it were 51,000, it would be an entitlement community, and it would be able to have the staff built up over a period of years with Federal help so the community would be able to compete with the larger communities in my area.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. TSONGAS. I yield to the gentleman from Oklahoma.

Mr. WATKINS. I thank the gentleman for yielding.

I will say to my colleague that basically the figure 50,000 was not picked out of the air. This is the figure that was used, stating from rural communities and below. So the 50,000 was not just selected by our colleague, the gentleman from Iowa, out of the air, but it is one that has been used to recognize rural cities and communities of this Nation.

Mr. TSONGAS. The point is that if the logic of the gentleman's argument is correct, it has to be extended. It has to be extended beyond 50,000 again to resolve the inequity in terms of the grantsmanship that he referred to, and I think that is a consideration that would argue against the amendment.

Mr. LUNDINE. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I come from a rural district. I represent no city larger than 50,000. I represent small towns spreading across an area from the Finger Lakes to the Great Lakes in upstate New York. Until a year or so ago I was the mayor of a small city which under this law would have no entitlement.

I have great admiration for my colleagues, the gentlemen from Iowa and from Oklahoma. I have tried to be faith-

ful to my obligation and my responsibility to the small communities and the rural areas that I represent. However, I think this amendment is bad law. The UDAG program is the major new initiative of this administration. This administration did not come in and seek to set aside the housing programs, including section 8 and others of previous administrations. It did not come in and try to set aside a block grant system that I believe is working well. It asks for only one new initiative—the action grant program, and this amendment, simply stated, is trying to take some of those funds and earmark them for some communities as against others.

In the testimony of the Secretary of the Department of Housing and Urban Development asking for this particular section of the law, Secretary Harris cited as examples small communities, not only large communities, that needed these urban action grants. So we have testimony on the record indicating that the Department will be amenable to applications from small communities and rural areas as well as large metropolitan areas. I do not think that there is a misapplication of funds. In dollar terms the committee has greatly increased the funding for non-SMSA communities. In 1977 these communities are expected to receive $578 million.

By 1980 they will be getting $689 million, an increase of $111 million. In other words it has increased the funds available to those communities in nonmetropolitan regions.

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. LUNDINE. I yield to the gentleman from Ohio.

Mr. ASHLEY. Mr. Chairman, is it not fair also to point out that the community development block grant program has enormously increased the funding for smaller communities? As we go back and forth over the economics of the Community Development and Housing Development Act of 1974, we find 95 percent of the old HUD categorical grant program moneys went directly to the larger communities of this country and only 5 percent went to the smaller communities. That has been very substantially reversed by those of us who wrote the legislation. So that is not a big city versus smaller community kind of struggle.

I hope it will be remembered that it was the gentleman from Michigan (Mr. GARY BROWN) and others who are on the floor, along with myself, who said in 1974 that the method of allocating the funds for community development purposes is inequitable. The smaller communities are not receiving enough. Grantsmanship has been playing too large a part. There is no basis in equity for the distribution system that was taking place at that time.

We have reversed that, but we have not done it by fastening rigidities upon the new distribution system that simply cannot be justified on the basis of need. What we are trying to say here is the smaller communities as well as the larger communities will be able to participate and will participate, but on the basis of need.

I appreciate the gentleman yielding.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent, Mr. LUNDINE was allowed to proceed for 1 additional minute.)

Mr. LUNDINE. Mr. Chairman, the distinguished subcommittee chairman is correct and his leadership has provided that opportunity for small communities. In fact, the non-SMSA communities are now receiving $91 per capita of all Federal CD funds while the SMSA communities are receiving $80 per capita, so the point is very well taken.

I do not want it to be said I was unsympathetic to small communities or to rural areas. I have tried to provide some leadership. The gentleman from Oregon and I sponsored title VI of the housing part for rural areas. I am committed to work for those very rural areas and small communities.

I think, however, this amendment would be detrimental. In earmarking funds it would ultimately resound to the detriment rather than to the benefit of those small communities.

Mr. KELLY. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, the Members can start to get the drift that floats over this subject. The gentleman from Ohio, the chairman of the committee, is from one of the States that will receive a definite preference under this bill and has assured us that this is not a struggle between the large and the small communities. I agree with the gentleman. I think the bill provides that small communities can compete provided they come from the right part of the country. The criteria upon which the benefits of this bill are going to be granted on the basis of the condition of the housing stock. That means if it is old, that is good. It means that if there is a residential abandonment problem, that is good. If there is a population-out migration, in other words, if people are getting out of town, that is good. Then if there is a stagnating or declining tax base, this will help them get benefits.

Now, what area of the country does that describe? That sounds like a pretty exact description of New York City, does it not? Everybody is leaving town. The tax base is going down hill. Their housing stock is deteriorating. It is being torn up and abandoned or otherwise: so pretty clearly one is going to benefit if he happens to come from a district where the deterioration and the decline has set in from mismanagement and other causes; but if one happens to come from one of the areas of the country where the population is growing, where the cities are efficient and where the cities are attempting to get industry that is coming from the industrial northeast, then they are not going to benefit, whether they are large or small.

This is $1.2 billion that is locked in to go to the States who are losing the population from their cities and have a deteriorating tax base. This does not describe the cities in the West and South and in the Plains States. It describes the cities in the industrial Northeast.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield on that point?

Mr. KELLY. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. Mr. Chairman, in the print supplied to me, there are 23 cities in Florida that are tabled as to the results of the bill. Would the gentleman hazard a guess whether those percentages would go up or down in this program?

Mr. KELLY. I am sorry, I cannot go along with the gentleman on that. I understand we are all going to get more, but the gentleman's district is going to get more receipts and we are going to get more bills. So I do not want to go that route. The gentleman is going to send us the bills and the gentleman is going to get the money, so I am just smart enough not to want that.

Mr. TSONGAS. Mr. Chairman, if the gentleman will yield further, does the gentleman not want to hazard a guess, is that what the gentleman is saying?

Mr. KELLY. Mr. Chairman, let me get my time back.

Mr. Chairman, what we have done is simply increase the overall appropriation so we can give everybody more than they would take under the existing program however the increase will not be fairly distributed. Now, if all sections of the Nation pay fair share of the cost of the program and pay it on a pro rata basis, I will be glad to support it.

Mr. TSONGAS. Mr. Chairman, if the gentleman will yield further, the percentage of Federal money that goes into Massachusetts is less than the percentage that is paid into the Federal Treasury. That is not true in Florida. The gentleman should certify what is going to happen in Florida, in terms of this bill and in terms of the amount of money paid by my State into the Federal Treasury.

Mr. KELLY. I will tell the gentleman that the situation in Florida is not the same as it is in Massachusetts. It is worse with regard to the return taxes returned.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. KELLY. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, the gentleman from Massachusetts (Mr. TSONGAS) was telling us about the increases in Federal funds to small communities over the years, the same story which the distinguished chairman of the subcommittee was trying to tell us about increases over the years.

The CHAIRMAN. The time of the gentleman from Florida has expired.

(At the request of Mr. GRASSLEY, and by unanimous consent, Mr. KELLY was allowed to proceed for 1 additional minute.)

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. KELLY. I yield to the gentleman from Iowa.

Mr. GRASSLEY. Mr. Chairman, our opposition has been saying during this debate that there have been increases to the smaller communities over the years, so we should not be saving anything or asking for a set-aside, which our amendment does. I still remind the Members of

this House that if the needs of the small communities were met as they ought to be met and as has been laid out by the General Accounting Office in their report of late last year, communities would not be receiving 20 percent, but they would be receiving 34 percent of these funds. All we are asking is that we be allowed to compete fairly for 25 percent.

Mr. KELLY. Mr. Chairman, I thank the gentleman, but I would like to point out that under this legislation Jacksonville, Fla., will receive $12 million, while Cleveland, Ohio, will receive $40 million. The population of both towns is the same, and I think that is the structure of this entire bill, to give to a particular section of the country, based on the fact that they are losing out in the competition, the commercial competition that exists in this country, for jobs and industry.

Mr. JENKINS. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I have listened to the debate from both sides. I represent a portion of the metropolitan area and several small towns. As far as the argument that I have heard about the population cutoff, where some towns of 51,000 or 52,000 population would be hurt, I want to point out that we now have population cutoffs in various other bills, including SMSA's, as far as counties are concerned, with a 200,000 population cutoff. So, this is nothing new whatsoever.

Mr. Chairman, I would also like to point out that when we talk about 25 percent of the total of this program being distributed to the small towns, we are also saying that 75 percent is going to go for larger cities. So, what is the difference in saying 75 percent is going for the larger cities and 25 percent, at least 25 percent is going to the smaller towns?

I have represented small towns as a city attorney and as a county attorney. I recognize the difficulties that these small towns have in applying for these various grant programs. They simply cannot compete unless we have some funds locked in for them. The only thing I can look at is the bottom line, and I want to point out that the bottom line in my congressional district is that in the 1977 nonmetro program, there was one project in my entire district that was approved.

I simply say that this amendment makes good sense. It is good for the country, and we ought to adopt it at this time to preserve this program. Otherwise, we are going to find a lot of people who will be opposing this program in its entirety in the future. I urge the passage of this modest amendment to help our small towns and communities.

Mr. AuCOIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I come before you today as a member of the House Subcommittee and, along with my colleague from New York, I think I can safely say I took a back seat to no one in working for the interests of small communities. In fact, I think there were times when we worked so hard for the interests of the small communities that the chairman wished we would have gone out for a drink of water a time or two.

We won battles for small towns and if any reasonable person will look at this bill, he will see that it is a carefully drafted, very delicately balanced bill that does indeed address the needs of the small communities while also addressing the chronic problems of large urban centers of the country. I would like to tell my colleagues who were not at the committee some of the things we have done for the small communities which I think obviate the need for this amendment. Second, I would like to tell my colleagues what I think the fatal flaw in this amendment is.
